Department of State bulletin

Vol. 86 / Nos. 2106–2117

THE DEPARTMENT OF STATE BULLETIN, published by the Office of Public Communication in the Bureau of Public Affairs, is the official record of U.S. foreign policy. Its purpose is to provide the public, the Congress, and government agencies with information on developments in U.S. foreign relations and the work of the Department of State and the Foreign Service.

The BULLETIN's contents include major addresses and news conferences of the President and the Secretary of State; statements made before congressional committees by the Secretary and other senior State Department officials; selected press releases issued by the White House, the Department, and the U.S. Mission to the United Nations; and treaties and other agreements to which the United States is or may become a party. Special features, articles, and other supportive material (such as maps, charts, photographs, and graphs) are published frequently to provide additional information on current issues but should not necessarily be interpreted as official U.S. policy statements.

GEORGE P. SHULTZ
Secretary of State

BERNARD KALB
Assistant Secretary
for Public Affairs

PAUL E. AUERSWALD
Director,
Office of Public Communication

NORMAN HOWARD
Chief, Editorial Division

PHYLLIS A. YOUNG
Editor

SHARON R. LOTZ
Assistant Editor

The Secretary of State has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through September 30, 1987.

DEPARTMENT OF STATE BULLETIN (ISSN 0041-7610) is published monthly (plus annual index) by the Department of State, 2201 C Street, NW, Washington, D.C. 20520. Second-class postage paid at Washington, D.C., and additional mailing offices. POSTMASTER: Send address changes to Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

NOTE: Most of the contents of this publication are in the public domain and not copyrighted. Those items may be reprinted; citation of the DEPARTMENT OF STATE BULLETIN as the source will be appreciated. Permission to reproduce all copyrighted material (including photographs) must be obtained from the original source. The BULLETIN is indexed in the Readers' Guide to Periodical Literature and in the PAIS (Public Affairs Information Service, Inc.) Bulletin.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Sub-Saharan Africa and the United States

This 48-page illustrated publication discusses U.S. relations with sub-Saharan Africa and presents basic information on:

- Geography;
- History;
- People;
- Political processes;
- Economy; and
- Multilateral organizations.

It also includes data tables providing selected statistics on each of the 46 independent sub-Saharan African countries.

The Fireside Summit

S1.3:

(White House photo by Pete Souza)

President Reagan gives the "thumbs up" sign to members of the press just before his first meeting with General Secretary Gorbachev on November 19.

President Reagan and General Secretary Gorbachev Meet in Geneva

President Reagan and Mikhail S. Gorbachev, General Secretary of the Central Committee of the Communist Party of the Soviet Union, met in Geneva, November 19–21, 1985.

President's Radio Address, Nov. 9, 1985[1]

We're expanding the format of our radio broadcast today. During the next 10 minutes, I'll be speaking to the citizens of the Soviet Union over the Voice of America about the upcoming Geneva summit. My words will be directed to them, but I want you to hear what I say. My speech is also being broadcast to over 50 nations by the Worldnet Television Network.

Good evening, this is Ronald Reagan, President of the United States, speaking to you from Washington about my upcoming meeting with General Secretary Gorbachev in Geneva and my hopes for a better relationship between our two governments.

Your leaders can freely appear on American radio and television and be interviewed by our magazines and newspapers. I was grateful for my recent and rare opportunity to speak with representatives of the Soviet press. While I appreciate that, only parts of the interview were published in *Izvestia*, and much of what was left out I think is important. I wish to speak to you personally as a husband, father, and grandfather who shares your deepest hopes—that all of our children can live and prosper in a world of peace.

I grew up in a small town in America's heartland where values of faith in God, freedom, family, friends, and concern for one's neighbors were shared by all—values you also share. During my school years, I worked during vacations, for a time on construction and then for several summers as a lifeguard at a river beach. After finishing my education, I became a radio sports announcer, which led to acting in Hollywood where I was elected head of our actor's guild. I'm the only American President who was also president of a labor union.

Back then I had no intention of engaging in national politics, but America's a great country filled with opportunities. In the years that followed, including my years as Governor of California and as President, I have not forgotten the values I learned as a boy nor have my fellow Americans.

I know that much has been written in your press about America's hostile intentions toward you. Well, I reject these distortions. Americans are a peace-loving people; we do not threaten your nation and never will. The American people are tolerant, slow to anger, but staunch in defense of their liberties and, like you, their country. More than once, our two countries have joined to oppose a common enemy. During our War of Independence, Russia provided assistance to the distant American colonists. A century and a half later, we joined together to defeat the common enemy of fascism; before that, we were allies in World War I.

Even before we entered World War II, America was supplying massive quantities of food and equipment to those fighting the Nazis. We provided 14,795 aircraft to your forces, 7,056 tanks, more than half a million vehicles, and more than 6 million tons of food and other staples. Americans will never forget the valor, the pain, and, at last, the joy of victory that our peoples shared. I remember President Roosevelt's praise for the Russian people's heroism. How can any of us alive then forget that terrible year of 1941 when the Nazis were repulsed at the gates of Moscow, the courage of Leningraders during the 900-day siege, the victory at Stalingrad, or our historic meeting on the Elbe in 1945?

Americans fought for 4 years on all fronts. Many lie buried in northern Africa, Europe, Burma, China, the Pacific islands, and at the bottom of the

sea. Some are buried on Soviet soil—in the hero city of Murmansk, where they had brought precious supplies through the treacherous convoy route.

Yet after that victory, Americans gave generously to help rebuild war-torn countries, even to former enemies, because we had made war on a vicious ideology, not on a people. And we demonstrated our desire for peace by rapidly demobilizing. At the end of 1945, we had an armed force of almost 12 million men; by 1948 we had reduced that number to less than 1.5 million.

We were the only country with nuclear weapons. We proposed giving those weapons up altogether to an international authority so that no country would have such destructive power at its disposal. What a pity this idea was not accepted.

Today we must both face the challenge of eliminating nuclear weapons. I have said many times and will say again to you: A nuclear war cannot be won and must never be fought. I pray God that we can rid the world of these dangerous weapons, in part by finding a reliable defense against them. Our negotiators in Geneva are working hard to reach a breakthrough. I am pleased that the Soviet Union finally responded to our original proposals. We studied the response carefully and replied quickly. These are complicated negotiations, and satisfactory results will take long, hard work.

Let me be clear about our research and testing program on strategic defense technologies. Our goal is to make the world safer through development of non-nuclear security shields that would protect people by preventing weapons from reaching their targets and, hopefully, render ballistic missiles obsolete. Your own government has been conducting longstanding and extensive programs on its own defensive systems, including advanced research.

The United States is just beginning a long process of investigating defenses. If and when our research proves that a defensive shield against nuclear missiles is practical, I believe our two nations, and those others that have nuclear weapons, should come together and agree on how, gradually, to eliminate offensive nuclear weapons, as we make our defensive system available to all. We ought to start talking about this process at the Geneva arms talks.

We must live together in peace. America's whole history has been a search for peace and opportunity by pioneers seeking freedom, many from the old European order. We're proud of the Russians, the Ukrainians, the Jews, the Armenians, and many others who sailed by our Statue of Liberty and reached our shores. Diversity is one of our great strengths. This is partly why we're confusing to outsiders. Our government is elected by the people; it is not above the people or above the law.

We believe the truth is found through debate and discussion. Truth does not burn in the fire or drown in the water. Our system is often uncomfortable for elected officials, because one of our proudest institutions is a free press. The press criticizes me, and sometimes it hurts, but that is their role—to raise difficult questions and keep officials accountable to the people. But no one should mistake our freedoms for weakness. We favor free and open dialogue, not just for Americans but for all peoples. We believe in freedom of the individual. Freedom of worship, freedom of speech, freedom of the press are, as our Declaration of Independence says, unalienable rights of all men.

Ten years ago the United States and the Soviet Union, along with 33 other countries, signed the Helsinki accords. We all pledged to respect human rights, permit our citizens freedom of speech and travel, and improve communication among the peoples of the signatory nations. America asks the world's leaders to abide by what they have committed themselves to do. As the world's two strongest nations, we owe it to the rest of humanity not only to keep our word but to help find peaceful settlements to local and regional conflicts in Afghanistan, Africa, Latin America, and elsewhere.

We must also join forces against terrorism. There is no place in a civilized world for assassinations, terrorist bombings, and other mindless violence. I strongly urge you and your government to join us in combating terrorism and ensuring that no country will offer succor or comfort to terrorists.

We have much to learn from each other. Americans have long been enriched by your cultural giants. The works of Tolstoy, Dostoyevsky, Turgenev, Chekov, and Pasternak are taught in many American universities; just as American authors from James Fenimore Cooper, Mark Twain, and Jack London to Ernest Hemingway and William Faulkner are popular in your country.

I want expanded contacts between our two great societies, wherever there is mutual interest. I am particularly interested in increasing exchanges among our young people, for they are our future. We should open a dialogue between our nations, so leaders of each country would have the same chance to communicate to the people of the other on television. If more of your citizens visited us, you would understand that our people want peace as fervently as you do.

I hope my discussions with Mr. Gorbachev in Geneva will be fruitful and will lead to future meetings. We seek peace not only for ourselves but for all those who inhabit this small planet.

We share borders with three countries—Mexico, Canada, and the Soviet Union. We pride ourselves on our friendly relations and open borders with our two North American neighbors. And I hope the day will come when that narrow chain of islands stretching from Alaska to the eastern shore of Siberia will symbolize the ties between our two great peoples, not the distance between us.

Everything has a season. Let us hope as we near Christmas and the New Year that this will be the season for peace. Thank you for welcoming me into your homes. God bless you.

President's Address to the Nation, Nov. 14, 1985[2]

In 36 hours I will be leaving for Geneva for the first meeting between an American President and a Soviet leader in 6 years. I know that you and the people of the world are looking forward to that meeting with great interest, so tonight I want to share with you my hopes and tell you why I'm going to Geneva.

My mission, stated simply, is a mission for peace. It is to engage the new Soviet leader in what I hope will be a dialogue for peace that endures beyond my presidency. It is to sit down across from Mr. Gorbachev and try to map out, together, a basis for peaceful discourse even though our disagreements on fundamentals will not change.

It is my fervent hope that the two of us can begin a process which our successors and our peoples can continue—facing our differences frankly and openly and beginning to narrow and resolve them; communicating effectively so that our actions and intentions are not misunderstood; and eliminating the barriers between us and cooperating wherever possible for the greater good of all.

This meeting can be a historic opportunity to set a steady, more constructive course to the 21st century. The history of American-Soviet relations, however, does not augur well for euphoria. Eight of my predecessors—each in his own way, in his own time—sought to achieve a more stable and peaceful relationship with the Soviet Union. None fully succeeded. So, I don't underestimate the difficulty of the task ahead. But these sad chapters do not relieve me of the obligation to try to make this a safer, better world. For our children, our grandchildren, for all mankind, I intend to make the effort. And with your prayers and God's help, I hope to succeed.

Success at the summit, however, should not be measured by any short-term agreements that may be signed. Only the passage of time will tell us whether we constructed a durable bridge to a safer world.

Building a Foundation for Lasting Peace

This, then, is why I go to Geneva—to build a foundation for lasting peace. When we speak of peace, we should not mean just the absence of war. True peace rests on the pillars of individual freedom, human rights, national self-determination, and respect for the rule of law. Building a safer future requires that we address candidly all the issues which divide us and not just focus on one or two issues, important as they may be. When we meet in Geneva, our agenda will seek not just to avoid war but to strengthen peace, prevent confrontation, and remove the sources of tension. We should seek to reduce the suspicions and mistrust that have led us to acquire mountains of strategic weapons.

Since the dawn of the nuclear age, every American President has sought to limit and end the dangerous competition in nuclear arms. I have no higher priority than to finally realize that dream. I've said before, I will say again, a nuclear war cannot be won and must never be fought.

We've gone the extra mile in arms control, but our offers have not always been welcome. In 1977 and again in 1982, the United States proposed to the Soviet Union deep reciprocal cuts in strategic forces. These offers were rejected out-of-hand. In 1981, we proposed the complete elimination of a whole category of intermediate-range nuclear forces. Three years later, we proposed a treaty for a global ban on chemical weapons. In 1983, the Soviet Union got up and walked out of the Geneva nuclear arms control negotiations altogether. They did this in protest because we and our European allies had begun to deploy nuclear weapons as a counter to Soviet SS-20s aimed at our European and other allies.

I'm pleased now, however, with the interest expressed in reducing offensive weapons by the new Soviet leadership. Let me repeat tonight what I announced last week. The United States is prepared to reduce comparable nuclear systems by 50%. We seek reductions that will result in a stable balance between us with no first-strike capability—and verified full compliance.

If we both reduce the weapons of war, there would be no losers, only winners. And the whole world would benefit if we could both abandon these weapons altogether and move to non-nuclear defensive systems that threaten no one.

But nuclear arms control is not of itself a final answer. I told four Soviet political commentators 2 weeks ago that nations do not distrust each other because they're armed; they arm themselves because they distrust each other. The use of force, subversion, and terror has made the world a more dangerous place, and thus, today, there's no peace in Afghanistan; no peace in Cambodia; no peace in Angola, Ethiopia, or Nicaragua.

. . . nations do not distrust each other because they're armed; they arm themselves because they distrust each other.

These wars have claimed hundreds of thousands of lives and threaten to spill over national frontiers. That's why in my address to the United Nations, I proposed a way to end these conflicts: a regional peace plan that calls for negotiations among the warring parties,

withdrawal of all foreign troops, democratic reconciliation, and economic assistance.

Four times in my lifetime, our soldiers have been sent overseas to fight in foreign lands. Their remains can be found from Flanders Field to the islands of the Pacific. Not once were those young men sent abroad in the cause of conquest. Not once did they come home claiming a single square inch of some other country as a trophy of war.

American Commitment to Freedom and Democracy

A great danger in the past, however, has been the failure by our enemies to remember that while we Americans detest war, we love freedom and stand ready to sacrifice for it. We love freedom not only because it's practical and beneficial but because it is morally right and just.

In advancing freedom, we Americans carry a special burden—a belief in the dignity of man in the sight of the God who gave birth to this country. This is central to our being.

Freedom and democracy are the best guarantors of peace. History has shown that democratic nations do not start wars. The rights of the individual and the rule of law are as fundamental to peace as arms control. A government which does not respect its citizens' rights and its international commitments to protect those rights is not likely to respect its other international undertakings.

And that's why we must and will speak in Geneva on behalf of those who cannot speak for themselves. We are not trying to impose our beliefs on others. We have a right to expect, however, that great states will live up to their international obligations.

The Need for Increased People-to-People Contact

Despite our deep and abiding differences, we can and must prevent our international competition from spilling over into violence. We can find as yet undiscovered avenues where American and Soviet citizens can cooperate fruitfully for the benefit of mankind. And this, too, is why I'm going to Geneva.

. . . while we Americans detest war, we love freedom and stand ready to sacrifice for it.

A century and a half ago, Thomas Jefferson told the world: ". . . the mass of mankind has not been born with saddles on their backs. . . ." Freedom is America's core. We must never deny it or forsake it. Should the day come when we Americans remain silent in the face of armed aggression, then the cause of America—the cause of freedom—will have been lost, and the great heart of this country will have been broken. This affirmation of freedom is not only our duty as Americans, it's essential for success at Geneva.

Enduring peace requires openness, honest communications, and opportunities for our peoples to get to know one another directly. The United States has always stood for openness. Thirty years ago in Geneva, President Eisenhower, preparing for his first meeting with the then Soviet leader, made his "open skies" proposal and an offer of new educational and cultural exchanges with the Soviet Union. He recognized that removing the barriers between people is at the heart of our relationship. He said:

> Restrictions on communications of all kinds, including radio and travel, existing in extreme form in some places, have operated as causes of mutual distrust. In America, the fervent belief in freedom of thought, of expression, and of movement is a vital part of our heritage.

Well, I have hopes that we can lessen the distrust between us, reduce the levels of secrecy, and bring forth a more "open world." Imagine how much good we could accomplish, how the cause of peace would be served, if more individuals and families from our respective countries could come to know each other in a personal way.

For example, if Soviet youth could attend American schools and universities, they could learn firsthand what spirit of freedom rules our land and that we do not wish the Soviet people any harm. If American youth could do likewise, they could talk about their interests and values and hopes for the future with their Soviet friends. They would get firsthand knowledge of life in the U.S.S.R., but most important, they would learn that we're all God's children with much in common.

Imagine if people in our nation could see the Bolshoi Ballet again, while Soviet citizens could see American plays and hear groups like the Beach Boys. And how about Soviet children watching Sesame Street?

We've had educational and cultural exchanges for 25 years and are now close to completing a new agreement. But I feel the time is ripe for us to take bold new steps to open the way for our peoples to participate in an unprecedented way in the building of peace.

Why shouldn't I propose to Mr. Gorbachev at Geneva that we exchange many more of our citizens from fraternal, religious, educational, and cultural groups? Why not suggest the exchange of thousands of undergraduates each year and even of younger students who would live with a host family and attend schools or summer camps? We could look to increased scholarship programs; improve language studies; conduct courses in history, culture, and other subjects; develop new sister cities; establish libraries and cultural centers; and, yes, increase athletic competition. People of both our nations love sports. If we must compete, let it be on the playing fields and not the battlefields.

In science and technology we could launch new joint space ventures and establish joint medical research projects. In communications, we'd like to see more appearances in the other's mass media by representatives of both our countries. If Soviet spokesmen are free to appear on American television, to be published and read in the American press, shouldn't the Soviet people have the same right to see, hear, and read what we Americans have to say?

Such proposals will not bridge our differences, but people-to-people contacts can build genuine constituencies for peace in both countries. After all, people don't start wars, governments do.

Conclusion

Let me summarize, then, the vision and hopes that we carry with us to Geneva.

We go with an appreciation, born of experience, of the deep differences between us—between our values, our systems, our beliefs. But we also carry with us the determination not to permit those differences to erupt into confrontation or conflict. We do not threaten the Soviet people and never will.

We go without illusion but with hope—hope that progress can be made on our entire agenda. We believe that progress can be made in resolving the regional conflicts now burning on three continents—including our own hemisphere. The regional plan we proposed at the United Nations will be raised again at Geneva.

We're proposing the broadest people-to-people exchanges in the history of American-Soviet relations, exchanges in sports and culture, in the media, education, and the arts. Such exchanges can build in our societies thousands of coalitions for cooperation and peace.

Governments can only do so much: once they get the ball rolling, they should step out of the way and let people get together to share, enjoy, help, listen, and learn from each other, especially young people.

Finally, we go to Geneva with the sober realization that nuclear weapons pose the greatest threat in human history to the survival of the human race—that the arms race must be stopped. We go determined to search out and discover common ground—where we can agree to begin the reduction, looking to the eventual elimination, of nuclear weapons from the face of the earth.

It is not an impossible dream that we can begin to reduce nuclear arsenals, reduce the risk of war, and build a solid foundation for peace. It is not an impossible dream that our children and grandchildren can some day travel freely back and forth between America and the Soviet Union; visit each other's homes; work and study together; enjoy and discuss plays, music, television; and root for teams when they compete.

Should the day come when we Americans remain silent in the face of armed aggression, then the cause of America—the cause of freedom—will have been lost. . . .

These, then, are the indispensable elements of a true peace: the steady expansion of human rights for all the world's peoples; support for resolving conflicts in Asia, Africa, and Latin America that carry the seeds of a wider war; a broadening of people-to-people exchanges that can diminish the distrust and suspicion that separate our two peoples; and the steady reduction of these awesome nuclear arsenals until they no longer threaten the world we both must inhabit. This is our agenda for Geneva; this is our policy; this is our plan for peace.

We have cooperated in the past. In both World Wars, Americans and Russians fought on separate fronts against a common enemy. Near the city of Murmansk, sons of our own nation are buried, heroes who died of wounds sustained on the treacherous North Atlantic and North Sea convoys that carried to Russia the indispensable tools of survival and victory. While it would be naive to think a single summit can establish a permanent peace, this conference can begin a dialogue for peace. So we look to the future with optimism, and we go to Geneva with confidence.

Both Nancy and I are grateful for the chance you've given us to serve this nation and the trust you've placed in us. I know how deep the hope of peace is in her heart, as it is in the heart of every American and Russian mother.

I received a letter and picture from one such mother in Louisiana recently. She wrote:

> Mr. President, how could anyone be more blessed than I? These children you see are mine, granted to me by the Lord for a short time. When you go to Geneva, please remember these faces, remember the faces of my children—of Jonathan, my son, and of my twins, Lara and Jessica. Their future depends on your actions. I will pray for guidance for you and the Soviet leaders.

Her words, "my children," read like a cry of love. And I could only think how that cry has echoed down through the centuries, a cry for all the children of the world, for peace, for love of fellowman. Here is the central truth of our time—of any time—a truth to which I've tried to bear witness in this office.

When I first accepted the nomination of my party, I asked you, the American people, to join with me in prayer for our nation and the world. Six days ago in the Cabinet Room, religious leaders—Ukrainian and Greek Orthodox

bishops, Catholic Church representatives including a Lithuanian bishop, Protestant pastors, a Mormon elder, and Jewish rabbis—made me a similar request.

Well, tonight I'm honoring that request. I am asking you, my fellow Americans, to pray for God's grace and His guidance for all of us at Geneva, so that the cause of true peace among men will be advanced and all of humanity thereby served.

Mr. McFarlane's Statement, Nov. 18, 1985

This afternoon it was the pleasure of the President to meet and exchange views with President Furgler and members of his Cabinet—the Foreign Minister, the State Secretary.

The meeting held in Le Reposoir was extremely cordial and it afforded the President an opportunity to express his deep gratitude for all of the support provided by the Government of Switzerland in hosting this session with the General Secretary. He expressed his highest regard for the traditional role that Switzerland has played in making possible periodic meetings which, on many occasions, have fostered improved understanding between countries, a better climate, and the resolution of specific problems. Bilateral issues as well were discussed, to include civil air matters, technology transfer matters. However, both leaders acknowledged that the state of the relationship is excellent.

The President was pleased to hear of Switzerland's introduction, of making public, a proposal in the Stockholm conference where discussions have been underway for over a year on confidence-building measures. The President thought this an extremely constructive initiative on the part of Switzerland and looks forward to studying it in the days ahead.

The Swiss President expressed his deep sentiment of support for the objectives both countries coming to this meeting have expressed and hope that it may be an opportunity for a reduction in tensions in the establishment of an improved climate for the resolution of disagreements in the years ahead. It was in all an extremely worthwhile meeting typified by cordiality on both sides, gratitude, and mutual respect.

On the eve of his meetings with the General Secretary, the President feels a deep sense of responsibility, of challenge, and of opportunity. He believes that the meeting, as its central purpose, provides an opportunity for each leader to make fundamental presentations on their own countries. For his part, he intends a comprehensive presentation on the strengths, values, purposes, and goals of the United States looking to the end of the century. He will, as well, express the views of the United States of the Soviet Union and of its purposes, strengths, and so forth.

He will make clear in the opening session that we have concerns regarding the pattern of behavior of the Soviet Union in international affairs and looks forward to being explicit in these; but finally, to propose a framework for U.S.-Soviet relations that will encompass the full agenda of bilateral, regional, human rights, and security issues, devoted to a sustained dialogue in the interest of the resolution of the problems between us.

He has said, in coming here, that he has come on a mission for peace. And he believes that that mission requires frank, forthright discussions of the interrelated elements of these. As he told the American people last week, he will present his views on the need to strengthen and stabilize the nuclear balance, to restrain the use of force and subversion, to increase respect for human rights, and to improve communication between both peoples and governments.

The President's goals and specific proposals in each of the four areas I've mentioned are very well known to all of you. They are on the table, and he will have more to say in detail about each of them with Mr. Gorbachev. He wants to start solving problems. If the Soviet side is equally committed to practical solutions, there will be progress.

President Reagan holds an informal meeting with (from left) national security adviser McFarlane, Secretary Shultz, Ambassador Hartman, and Chief of Staff Regan at Maison de Saussure on November 17.

(White House photo by Bill Fitz-Patrick)

President Reagan and General Secretary Gorbachev hold their second plenary session at the Soviet Mission on November 20.

The President approaches these meetings with a strong sense of realism. That means understanding a point that was easily forgotten in past post-summit headlines. Peace isn't based on meetings. It depends above all on policies that work and that make clear America's determination to defend its interests and those of its friends and allies.

We will seek sound agreements where we can, but we will fulfill our responsibilities where we must. In this way, the President believes that we can better avoid swings between complacency and confrontation. Neither of these extremes has served us very well in the past. In fact, as the historical record shows, the one can all too easily encourage the other.

In the late 1950s, the spirit of Geneva gave way to years of crisis over Berlin. In the late 1960s, the spirit of Glassboro was dispelled by the invasion of Czechoslovakia. And in the late 1970s, the confidence and hope that efforts at strategic arms control were supposed to bring to Soviet-American relations disappeared. They were undone by a relentless military buildup and by a half decade of Soviet activity in the Third World, culminating in the invasion of and continued occupation of Afghanistan.

President Reagan believes deeply that we have to do better. This has been the goal of all the policies that he has put in place since 1981. He feels that we can learn and profit from historical experience. He wants to chart a course—a consistent course—sustained by strong public support at home, and its aim is simple: to make restraint the most realistic Soviet option.

Perhaps the most frequently asked question of the week is, "Will the meeting be a success or a failure?" The President certainly hopes for progress and intends to make as much as is feasible. But a real answer to that question will not be immediately available. He has not come to Geneva to seek 2 days' of atmospheric improvements but to put down a strong foundation on which future results can be built. It is by such results that the value of this week's meetings, like those of the past, will be judged in the years ahead.

Joint Statement, Nov. 21, 1985[3]

By mutual agreement, President of the United States Ronald Reagan and General Secretary of the Central Committee of the Communist Party of the Soviet Union Mikhail Gorbachev met in Geneva November 19–21. Attending the meeting on the U.S. side were Secretary of State George Shultz; Chief of Staff Donald Regan; Assistant to the President Robert McFarlane; Ambassador to the U.S.S.R. Arthur Hartman; Special Adviser to the President and the Secretary of State for arms control Paul H. Nitze; Assistant Secretary of State for European Affairs Rozanne Ridgway; Special Assistant to the President for National Security Affairs Jack

Matlock. Attending on the Soviet side were Member of the Politburo of the Central Committee of the CPSU, Minister of Foreign Affairs E.A. Shevardnadze; First Deputy Foreign Minister G.M. Korniyenko; Ambassador to the United States A.F. Dobrynin; head of the Department of Propaganda of the Central Committee of the CPSU, A.N. Yakovlev; head of the Department of International Information of the Central Committee of the CPSU L.M. Zamyatin; Assistant to the General Secretary of the Central Committee of the CPSU A.M. Aleksandrov.

These comprehensive discussions covered the basic questions of U.S.-Soviet relations and the current international situation. The meetings were frank and useful. Serious differences remain on a number of critical issues.

While acknowledging the differences in their systems and approaches to international issues, some greater understanding of each side's view was achieved by the two leaders. They agreed about the need to improve U.S.-Soviet relations and the international situation as a whole.

In this connection, the two sides have confirmed the importance of an ongoing dialogue, reflecting their strong desire to seek common ground on existing problems.

They agreed to meet again in the nearest future. The General Secretary accepted an invitation by the President of the United States to visit the United States of America, and the President of the United States accepted an invitation by the General Secretary of the Central Committee of the CPSU to visit the Soviet Union. Arrangements for and timing of the visits will be agreed upon through diplomatic channels.

In their meetings, agreement was reached on a number of specific issues. Areas of agreement are registered in the following pages.

Security

The sides, having discussed key security issues, and conscious of the special responsibility of the U.S.S.R. and the U.S. for maintaining peace, have agreed that a nuclear war cannot be won and must never be fought. Recognizing that any conflict between the U.S.S.R. and the U.S. could have catastrophic consequences, they emphasized the importance of preventing any war between them, whether nuclear or conventional. They will not seek to achieve military superiority.

Nuclear and Space Talks

The President and the General Secretary discussed the negotiations on nuclear and space arms.

They agreed to accelerate the work at these negotiations, with a view to accomplishing the tasks set down in the joint U.S.-Soviet agreement of January 8, 1985, namely to prevent an arms race in space and to terminate it on Earth, to limit and reduce nuclear arms and enhance strategic stability.

Noting the proposals recently tabled by the U.S. and the Soviet Union, they called for early progress, in particular in areas where there is common ground, including the principle of 50 percent reductions in the nuclear arms of the U.S. and the U.S.S.R. appropriately applied, as well as the idea of an interim INF [intermediate-range nuclear forces] agreement.

During the negotiation of these agreements, effective measures for verification of compliance with obligations assumed will be agreed upon.

Risk Reduction Centers

The sides agreed to study the question at the expert level of centers of reduced nuclear risk, taking into account the issues and developments in the Geneva negotiations. They took satisfaction in such recent steps in this direction as the modernization of the Soviet-U.S. "Hot Line."

Nuclear Nonproliferation

General Secretary Gorbachev and President Reagan reaffirmed the commitment of the U.S.S.R. and the U.S. to the Treaty on the Non-Proliferation of Nuclear Weapons and their interest in strengthening, together with other countries, the nonproliferation regime and in further enhancing the effectiveness of the treaty, *inter alia*, by enlarging its membership.

They note with satisfaction the overall positive results of the recent review conference of the Treaty on the Non-Proliferation of Nuclear Weapons.

The U.S.S.R. and the U.S. reaffirm their commitment, assumed by them under the Treaty on the Non-Proliferation of Nuclear Weapons, to pursue negotiations in good faith on matters of nuclear arms limitation and disarmament in accordance with Article VI of the treaty.

The two sides plan to continue to promote the strengthening of the International Atomic Energy Agency and to support the activities of the agency in implementing safeguards as well as in promoting the peaceful uses of nuclear energy.

They view positively the practice of regular Soviet-U.S. consultations on nonproliferation of nuclear weapons which have been businesslike and constructive and express their intent to continue this practice in the future.

Chemical Weapons

In the context of discussing security problems, the two sides reaffirmed that they are in favor of a general and complete prohibition of chemical weapons and the destruction of existing stockpiles of such weapons. They agreed to accelerate efforts to conclude an effective and verifiable international convention on this matter.

The two sides agreed to intensify bilateral discussions on the level of experts on all aspects of such a chemical weapons ban, including the question of verification. They agreed to initiate a dialogue on preventing the proliferation of chemical weapons.

MBFR

The two sides emphasized the importance they attach to the Vienna (MBFR) [mutual and balanced force reductions] negotiations and expressed their willingness to work for positive results.

CDE

Attaching great importance to the Stockholm Conference on Confidence- and Security-Building Measures and Disarmament in Europe and noting the progress made there, the two sides stated their intention to facilitate, together with the other participating states, an early and successful completion of the work of the conference. To this end, they reaffirmed the need for a document which would include mutually acceptable confidence- and security-building measures and give concrete expression and effect to the principle of non-use of force.

Process of Dialogue

President Reagan and General Secretary Gorbachev agreed on the need to place on a regular basis and intensify dialogue at various levels. Along with meetings between the leaders of the two countries, this envisages regular meetings between the U.S.S.R. Minister of Foreign Affairs and the U.S. Secretary of State, as well as between the heads of other ministries and agencies. They agreed that the recent visits of the heads of ministries and departments in such fields as agriculture, housing, and protection of the environment have been useful.

Recognizing that exchanges of views on regional issues on the expert level have proven useful, they agreed to continue such exchanges on a regular basis.

The sides intend to expand the programs of bilateral cultural, educational, and scientific-technical exchanges and also to develop trade and economic ties. The President of the United States and the General Secretary of the Central Committee of the CPSU attended the signing of the Agreement on Contacts and Exchanges in Scientific, Educational and Cultural Fields.

They agreed on the importance of resolving humanitarian cases in the spirit of cooperation.

They believe that there should be greater understanding among our peoples and that to this end, they will encourage greater travel and people-to-people contact.

President Reagan takes an afternoon walk with General Secretary Gorbachev outside Fleur d'Eau.

(White House photo by Bill Fitz-Patrick)

General Agreement on Contacts, Exchanges and Cooperation in Scientific, Technological, Educational, Cultural and Other Fields, with Program of Cooperation and Exchanges for 1986–1988 was signed Nov. 21, 1985 in Geneva by Foreign Minister Shevardnadze and Secretary Shultz.

Northern Pacific Air Safety

The two leaders also noted with satisfaction that, in cooperation with the Government of Japan, the United States and the Soviet Union have agreed to a set of measures to promote safety on air routes in the North Pacific and have worked out steps to implement them.

Civil Aviation/Consulates

They acknowledged that delegations from the United States and the Soviet Union have begun negotiations aimed at resumption of air services. The two leaders expressed their desire to reach a mutually beneficial agreement at an early date. In this regard, an agreement was reached on the simultaneous opening of Consulates General in New York and Kiev.

Environmental Protection

Both sides agreed to contribute to the preservation of the environment—a global task—through joint research and practical measures. In accordance with the existing U.S.-Soviet agreement in this area, consultations will be held next year in Moscow and Washington on specific programs of cooperation.

Exchange Initiatives

The two leaders agreed on the utility of broadening exchanges and contacts including some of their new forms in a number of scientific, educational, medical, and sports fields (*inter alia*, cooperation in the development of educational exchanges and software for elementary and secondary school instruction; measures to promote Russian language studies in the United States and English language studies in the U.S.S.R.; the annual exchange of professors to conduct special courses in history, culture, and economics at the relevant departments of Soviet and American institutions of higher education; mutual allocation of scholarships for the best students in the natural sciences, technology, social sciences, and humanities for the period of an academic year; holding regular meets in various sports and increased television coverage of sports events). The two sides agreed to resume cooperation in combatting cancer diseases.

The relevant agencies in each of the countries are being instructed to develop specific programs for these exchanges. The resulting programs will be reviewed by the leaders at their next meeting.

Fusion Research

The two leaders emphasized the potential importance of the work aimed at utilizing controlled thermonuclear fusion for peaceful purposes and, in this connection, advocated the widest practicable development of international cooperation in obtaining this source of energy, which is essentially inexhaustible, for the benefit of all mankind.

Concluding Remarks, Nov. 21, 1985[3]

General Secretary Gorbachev[4]

You've already been handed the joint statement. The President and I have done a huge amount of work. We've gone into great detail; we've really done it in depth. And we've done it totally openly and frankly. We've discussed several most important issues.

The relations between our two countries and the situation in the world in general today—these are issues and problems the solving of which in the most concrete way is of concern both to our countries and the peoples of other countries in the world.

We've discussed these issues, basing our discussions on both sides' determination to improve relations between

the Soviet Union and the United States of America. We've decided that we must help to decrease the threat of nuclear war. We must not allow the arms race to move off into space, and we must cut it down on Earth.

It goes without saying that discussions of these sorts we consider to be very useful, and in its results, you find a clear reflection of what the two sides have agreed together. We have to be realistic and straightforward, and, therefore, the solving of the most important problems concerning the arms race and increasing hopes of peace, we didn't succeed in meeting at this meeting.

So, of course, there are important disagreements on matters of principle that remain between us. However, the President and I have agreed that this work of seeking mutually acceptable decisions for these questions will be continued here in Geneva by our representatives.

We're also going to seek new kinds of developing bilateral Soviet-American relations. And also we're going to have further consultations on several important questions where, for the most part, our positions again are completely different. All this, we consider these forthcoming talks to be very, very useful.

But the significance of everything which we have agreed with the President can only, of course, be reflected if we carry it on into concrete measures. If we really want to succeed in something, then both sides are going to have to do an awful lot of work in the spirit of the joint statement which we have put out. And in this connection, I would like to announce that the Soviet Union, for its part, will do all it can in this cooperation with the United States of America in order to achieve practical results to cut down the arms race, to cut down the arsenals which we've piled up, and produce the conditions which will be necessary for peace on Earth and in space.

We make this announcement perfectly aware of our responsibility both to our own people and to the other peoples of the Earth. And we would very much hope that we can have the same approach from the Administration of the United States of America. If that can be so, then the work that has been done in these days in Geneva will not have been done in vain.

I would like to finish by thanking most profoundly the Government of Switzerland for the conditions which they've created for us to be able to work.

President Reagan

May I express Nancy's and my deep personal appreciation and that of all Americans to the people of Switzerland for welcoming us so warmly and preparing the foundations for productive discussions. Yours is a long and honorable tradition of promoting international peace and understanding. You should take pride in being the capital for international discussions. So again to the Government of Switzerland and the citizens of Geneva, many, many thanks.

We've packed a lot into the last 2 days. I came to Geneva to seek a fresh start in relations between the United States and the Soviet Union, and we have done this. General Secretary Gorbachev and I have held comprehensive discussions covering all elements of our relationship. I'm convinced that we're heading in the right direction.

We've reached some useful interim results, which are described in the joint statement that is being issued this morning. In agreeing to accelerate the work of our nuclear arms negotiators, Mr. Gorbachev and I have addressed our common responsibility to strengthen peace. I believe that we have established a process for more intensive contacts between the United States and the Soviet Union. These 2 days of talks should inject a certain momentum into our work on the issues between us—a momentum we can continue at the meeting that we have agreed on for next year.

Before coming to Geneva, I spoke often of the need to build confidence in our dealing with each other. Frank and forthright conversations at the summit are part of this process. But I'm certain General Secretary Gorbachev would agree that real confidence in each other must be built on deeds, not simply words. This is the thought that ties together all the proposals that the United States has put on the table in the past, and this is the criteria by with our meetings will be judged in the future.

The real report card on Geneva will not come in for months or even years. But we know the questions that must be answered. Will we join together in sharply reducing offensive nuclear arms and moving to non-nuclear defensive strength for systems to make this a safer world? Will we join together to help bring about a peaceful resolution of conflicts in Asia, Africa, and Central America so that the peoples there can freely determine their own destiny without outside interference? Will the cause of liberty be advanced? And will the treaties and agreements signed—past and future—be fulfilled? The people of America, the Soviet Union, and throughout the world are ready to answer yes.

I leave Geneva today and our fireside summit determined to pursue every opportunity to build a safer world of peace and freedom. There's hard work ahead, but we're ready for it. General Secretary Gorbachev, we ask you to join us in getting the job done, as I'm sure you will.

Secretary's News Briefing, Nov. 21, 1985[5]

The President came to Geneva with a constructive approach and with an effort to make a fresh start in our relationship with the Soviet Union, and I think he achieved that fresh start.

All of us who have worked in support of the two leaders who met here this week, I think, share the view that perhaps we have a process underway that can lead to a more stable and constructive relationship. Of course, as both men basically emphasize, that remains to be seen. And we will be looking, over the coming months and years, to see what truly happens. But at any rate, we have made a fresh start.

Q. Is "Star Wars" more negotiable now as a result of the summit, or is it still where it stood before the President came, where he said it would not be any way a bargaining chip?

A. The subject of strategic defense was discussed in considerable detail and with great intensity on both sides. Insofar as the President is concerned, he feels as strongly as ever that the research program designed to find the answer, "Is it possible to defend against ballistic missiles?" is essential. And he insists upon that. There was no give on that at all.

Q. Did Gorbachev go along with the research idea at all?

A. The General Secretary and Soviets will speak for themselves, but I would say their position did not change.

Q. What has this 2 days of summitry done to curb the nuclear arms race?

A. It has not produced anything by way of a further agreement. It has produced, perhaps, some political impulse to the negotiators in Geneva, which will undoubtedly be reflected in our own discussions in Washington as we consider the next round.

Perhaps more important, it has contributed to a relationship between these two leaders based on a lot of substantive discussion between them. So it was just the kind of get-acquainted that we wanted and, I believe, General Secretary Gorbachev wanted; that is, they got acquainted on the basis of wrestling with difficult substance, and it worked well.

Q. Did the President give the Soviet leader any assurances that we would not go beyond research in SDI at this point?

A. The President's statements in our meetings were very parallel to statements you've heard him make many times—on the one hand, insisting that we must pursue the research and answer the question. And if the answer to the question is positive, then, as he has said many times, he believes that we should all sit down and share this technology so that we can move into a pattern of deterrence that has a greater defense component to it. If you had been sitting in the meeting, you would have recognized very clearly the things the President said.

Q. Do you think it was impulse which you referred to as the prospect of resulting in a new agreement, either in strategic arms or in INF in the coming year?

A. It remains to be seen. And I think it is at least notable that in the joint statement, the idea of a separate INF agreement is identified. Now, of course, that was emerging in the negotiations as they were taking place, but certainly, the subject came in for considerable discussion.

Q. After 2 days of such intense talks on all of these complicated questions, the two leaders couldn't agree to more than a restatement of what you had achieved last January here in Geneva and what had been emerging in Paris and at the negotiations on the interim INF group. Why shouldn't people think that those problems are intractable, that you've actually had a setback here because they couldn't get any further than where they'd already been on arms control?

A. People will believe whatever they want to believe. I don't know where your reference to Paris comes in. But, actually, I think what we have seen is a process, starting with the agreement last January, the beginning of the negotiations and the tabling of proposals by us. We've seen some counterproposals from the Soviet Union that constituted movement, some counter-counterproposals by us that constituted further movement, and you see that movement identified in this document. So I think there is a process here, and if you say, "What assurance do I have that it will go anywhere," I don't have any assurance.

Q. What you're saying, though, is that this is basically cataloging the progress that has been made over the past year on these issues, but not advancing them at all.

A. I would say you get a little advanced by this kind of discussion, but certainly there wasn't any definitive movement or decision. In fact, the meetings didn't set themselves up, really, as detailed bargaining sessions on the particulars of these things, but handled more on a general plane. But I think it was quite positive in general.

Q. Are there some guidelines given to the negotiators in the arms talks that do not appear in the joint statement? And second, on the statement of agreeing not to achieve military superiority, how does that differ from the agreement made in Moscow in 1972 or 1973—almost identical language—which the Soviets then almost immediately violated in Angola and other spots around the world?

A. I think the military superiority refers to the respective forces. We have felt that the regional issues which you referred to are a very important component of this total picture. As it has emerged in the course of this meeting, the notion that problems around the world and the distress that they produce is a major part of this problem, that emerged as something that is recognized on both sides. There is set out here indications of an effort to get at it. And I think the notion that people arm themselves because of distrust, not the other way around, is very prominent here. So we have to start with these areas that create the tensions and then, of course, working on arms control, but wanting to see an interplay there.

Q. What does the statement in the joint statement mean when they say they agree to accelerate the work at these negotiations? Does that mean they're going to meet more often, does that mean that both sides have pledged to put new things on the table faster? What are you talking about?

A. They're talking about a sense of importance and urgency and a kind of a mutual commitment to give a little heat to those who are going to be doing the negotiating.

You asked about guidelines, and we discussed various ways of putting what might be said to negotiators. And in the joint statement some things are identified—50% is in there, separate

INF is in there. But, in the process of discussing the ideas that they have and that we have, perhaps they should have a little clearer idea of the sort of guidelines that we're going to give our negotiators. And, of course, we're going to go back and, under the light of all that's been said, prepare ourselves and our negotiators for the next round.

Q. The President's UN speech puts so much emphasis on regional issues, and yet there's only one short sentence in here about it. Was there anything that you would determine was progress on Afghanistan, on Central America? Can you elaborate?

A. I thought that we had really a very good discussion on the regional issues in the plenary sessions. Afghanistan was treated at some length. Most of the areas you would think of were referred to. And the idea is in there that we need a process. And, of course, we've been having these regional meetings for the last year, and perhaps you noticed that Foreign Minister meetings will be regularized, so we'll definitely have them set out more often than just in connection with the UN General Assembly time and that the meetings of the Foreign Ministers will undoubtedly take as items for the agenda—and prepared agenda—certain regional issues. I think we expect Mr. Shevarnadze and me to get away from the pattern that has been typical where we sort of cover the waterfront every time and say, "All right, let's have a meeting, and this time let's focus on these two topics and not on everything," and go into them in more depth. There is emerging a sense of process, and the President's initiatives at the United Nations have been a definite contributor to that sense of progress.

Q. In Moscow, you said that you thought you knew 95% of what would come out of this summit meeting.

A. I did?

Q. Yes, you did. I wonder if you could say whether it turned out much the way expected or whether there was significant difference.

A. It's hard to know exactly what to expect in meetings of this kind. But what is set out in the joint statement, I think, represents a first step in the sense that some concrete things were put down and moved along as well as a process started, that interaction.

But I believe that the most important thing that happened here is that these two individuals took this over completely. It was very much their meeting, and they spent a lot of time together. It got to be a problem for the schedulers because every time they got together they went much longer than was thought. But that was really what we came here for and was very fruitful. And I think that length of time and the intensity and the frankness and the scope of what was talked about between the two by the fireside really went beyond anything I could have expected, although I felt myself that that kind of pattern was the desirable way to do it.

Q. May I ask you about human rights? Was the President specific? Did he name names, like Sakharov or Shcharanskiy? And did he raise Major Nicholson's name?

A. The President had an extensive discussion on the subject of human rights. And that is all I'm going to say about it.

President's Address Before a Joint Session of Congress, Nov. 21, 1985[3]

It's great to be home, and Nancy and I thank you for this wonderful homecoming. And before I go on, I want to say a personal thank you to Nancy. She was an outstanding ambassador of good will for all of us. She didn't know I was going to say that.

Mr. Speaker, Senator Dole, I want you to know that your statements of support here were greatly appreciated. You can't imagine how much it means in dealing with the Soviets to have the Congress, the allies, and the American people firmly behind you.

I guess you know that I have just come from Geneva and talks with General Secretary Gorbachev. In the past few days, we spent over 15 hours in various meetings with the General Secretary and the members of his official party. And approximately 5 of those hours were talks between Mr. Gorbachev and myself, just one on one. That was the best part—our fireside summit.

There will be, I know, a great deal of commentary and opinion as to what the meetings produced and what they were like. There were over 3,000 reporters in Geneva, so it's possible there will be 3,000 opinions on what happened; so maybe it's the old broadcaster in me, but I decided to file my own report directly to you.

History and Context of the Summit

We met, as we had to meet. I called for a fresh start—and we made that start. I can't claim we had a meeting of the minds on such fundamentals as ideology or national purpose—but we understand each other better, and that's a key to peace. I gained a better perspective; I feel he did, too.

It was a constructive meeting. So constructive, in fact, that I look forward to welcoming Mr. Gorbachev to the United States next year. And I have accepted his invitation to go to Moscow the following year. We arranged that out in the parking lot.

I found Mr. Gorbachev to be an energetic defender of Soviet policy. He was an eloquent speaker and a good listener. Our subject matter was shaped by the facts of this century.

These past 40 years have not been an easy time for the West or for the world. You know the facts; there is no need to recite the historical record. Suffice it to say that the United States cannot afford illusions about the nature of the U.S.S.R. We cannot assume that their ideology and purpose will change. This implies enduring competition. Our task is to assure that this competition remains peaceful. With all that divides us, we cannot afford to let confusion complicate things further. We must be clear with each other and direct. We

must pay each other the tribute of candor.

When I took the oath of office for the first time, we began dealing with the Soviet Union in a way that was more realistic than in, say, the recent past. And so, in a very real sense, preparations for the summit started not months ago but 5 years ago when, with the help of Congress, we began strengthening our economy, restoring our national will, and rebuilding our defenses and alliances. America is once again strong—and our strength has given us the ability to speak with confidence and see that no true opportunity to advance freedom and peace is lost. We must not now abandon policies that work. I need your continued support to keep America strong.

That is the history behind the Geneva summit, and that is the context in which it occurred. And may I add that we were especially eager that our meetings give a push to important talks already underway on reducing nuclear weapons. On this subject, it would be foolish not to go the extra mile—or, in this case, the extra 4,000 miles.

Confronting Major Issues

We discussed the great issues of our time. I made clear before the first meeting that no question would be swept aside, no issue buried, just because either side found it uncomfortable or inconvenient. I brought these questions to the summit and put them before Mr. Gorbachev.

We discussed nuclear arms and how to reduce them. I explained our proposals for equitable, verifiable, and deep reductions. I outlined my conviction that our proposals would make not just for a world that feels safer but one that is really safer.

And I am pleased to report tonight that General Secretary Gorbachev and I did make a measure of progress here. While we still have a long way to go, we're still heading in the right direction. We moved arms control forward from where we were last January, when the Soviets returned to the table. We are both instructing our negotiators to hasten their vital work and the world is waiting for results.

Specifically, we agreed in Geneva that each side should move to cut offensive nuclear arms by 50% in appropriate categories. In our joint statement, we called for early progress on this, turning the talks toward our chief goal—offensive reductions. We called for an interim accord on intermediate-range nuclear forces, leading, I hope, to the complete elimination of this class of missiles. And all of this with tough verification.

We also made progress in combating, together, the spread of nuclear weapons—an arms control area in which we've cooperated effectively over the years. We are also opening a dialogue on combating the spread and use of chemical weapons, while moving to ban them altogether. Other arms control dialogues—in Vienna on conventional forces and in Stockholm on lessening the chances for surprise attack in Europe—also received a boost. And finally, we agreed to begin work on risk reduction centers, a decision that should give special satisfaction to Senators Nunn and Warner, who so ably promoted this idea.

I described our Strategic Defense Initiative (SDI)—our research effort that envisions the possibility of defensive systems which could ultimately protect all nations against the danger of nuclear war. This discussion produced a very direct exchange of views.

Mr. Gorbachev insisted that we might use a strategic defense system to put offensive weapons into space and establish nuclear superiority.

President Meets With NATO Allies

NATO SECRETARY GENERAL CARRINGTON'S STATEMENT, NOV. 21, 1985[1]

In our original announcement of President Reagan's visit, we said that this special session of the North Atlantic Council would enable the participants both to hear at first hand of the results of the meeting between President Reagan and Mr. Gorbachev and to consult together on the wider and longer term process of strengthening security and improving East-West relations, of which that meeting was an important part.

That is very much how it turned out. The high-level of attendance confirms the importance allied governments attached to this occasion, and President Reagan was left no doubt of his colleagues' appreciation of his visit here in the middle of a quite exceptionally long and busy day.

The President, as you know, is flying straight from here to address a joint session of the U.S. Congress. It would be wrong for me to anticipate his report by commenting in any detail on what he was able to say in confidence to his colleagues. But you will have read the joint statement issued in Geneva, and I don't think that I would be revealing any secrets if I were to say that the President was able to report in positive terms on important aspects of what has transpired in Geneva and that allied reactions were strongly supportive.

Geneva is not the end of a process, but, we hope, the beginning of a new and more constructive stage. Alliance consultations, which have been very close and productive since the resumption of U.S.-Soviet arms control negotiations in Geneva at the beginning of this year, will be equally important in the future; and the next major occasion will be the ministerial meeting of the North Atlantic Council in December. President Reagan's visit, and this successful high-level meeting of the Council, underline the determination of allied governments to work together to keep the peace and to improve East-West relations.

[1]Made available to the press by the NATO Information Service in Brussels. ■

I made it clear that SDI has nothing to do with offensive weapons; that, instead, we are investigating non-nuclear defense systems that would only threaten offensive missiles, not people. If our research succeeds, it will bring much closer the safer, more stable world that we seek. Nations could defend themselves against missile attack and mankind, at long last, escape the prison of mutual terror. This is my dream.

So I welcomed the chance to tell Mr. Gorbachev that we are a nation that defends rather than attacks, that our alliances are defensive, not offensive. We don't seek nuclear superiority. We do not seek a first-strike advantage over the Soviet Union. Indeed, one of my fundamental arms control objectives is to get rid of first-strike weapons altogether. And this is why we've proposed a 50% reduction in the most threatening nuclear weapons, especially those that could carry out a first strike.

I went further in expressing our peaceful intentions. I described our proposal in the Geneva negotiations for a reciprocal program of open laboratories in strategic defense research. We're offering to permit Soviet experts to see firsthand that SDI does not involve offensive weapons. American scientists would be allowed to visit comparable facilities of the Soviet strategic defense program, which, in fact, has involved much more than research for many years.

Finally, I reassured Mr. Gorbachev on another point. I promised that if our research reveals that a defense against nuclear missiles is possible, we would sit down with our allies and the Soviet Union to see how, together, we could replace all strategic ballistic missiles with such a defense, which threatens no one.

We discussed threats to the peace in several regions of the world. I explained my proposals for a peace process to stop the wars in Afghanistan, Nicaragua, Ethiopia, Angola, and Cambodia—those places where insurgencies that speak for the people are pitted against regimes which obviously do not represent the will or the approval of the people. I tried to be very clear about where our sympathies lie; I believe I succeeded.

We discussed human rights. We Americans believe that history teaches no clearer lesson than this: those countries which respect the rights of their own people tend, inevitably, to respect the rights of their neighbors. Human rights, therefore, is not an abstract moral issue—it is a peace issue.

Finally, we discussed the barriers to communication between our societies, and I elaborated on my proposals for real people-to-people contacts on a wide scale.

Americans should know the people of the Soviet Union—their hopes and fears and the facts of their lives. And citizens of the Soviet Union need to know of America's deep desire for peace and our unwavering attachment to freedom.

Building a More Stable Relationship

As you can see, our talks were wide ranging. And let me, at this point, tell you what we agreed upon and what we didn't.

We remain far apart on a number of issues, as had to be expected. However, we reached agreement on a number of matters, and, as I mentioned, we agreed to continue meeting, and this is important and very good. There's always room for movement, action, and progress when people are talking to each other instead of about each other.

Well, we've concluded a new agreement designed to bring the best of America's artists and academics to the Soviet Union. The exhibits that will be included in this exchange are one of the most effective ways for the average Soviet citizen to learn about our way of life. This agreement will also expand the opportunities for Americans to experience the Soviet people's rich cultural heritage—because their artists and academics will be coming here.

We've also decided to go forward with a number of people-to-people initiatives that will go beyond greater contact, not only between the political leaders of our two countries but our respective students, teachers, and others, as well. We have emphasized youth exchanges. And this will help break down stereotypes, build friendships, and, frankly, provide an alternative to propaganda.

We've agreed to establish a new Soviet consulate in New York and a new American consulate in Kiev. And this will bring a permanent U.S. presence to the Ukraine for the first time in decades.

And we have also, together with the Government of Japan, concluded a Pacific air safety agreement with the Soviet Union. This is designed to set up cooperative measures to improve civil air safety in that region of the Pacific. What happened before must never be allowed to happen there again.

And as a potential way of dealing with the energy needs of the world of the future, we have also advocated international cooperation to explore the feasibility of developing fusion energy.

All of these steps are part of a long-term effort to build a more stable relationship with the Soviet Union. No one ever said it could be easy, but we've come a long way.

Limits and Possibilities

As for Soviet expansionism in a number of regions of the world—while there's little chance of immediate change, we will continue to support the heroic efforts of those who fight for freedom. But we have also agreed to continue—and to intensify—our meetings with the Soviets on this and other regional conflicts and to work toward political solutions.

We know the limits as well as the promise of summit meetings. This is, after all, the 11th summit of the postwar era—and still the differences endure. But we believe continued meetings between the leaders of the United States and the Soviet Union can help bridge those differences.

The fact is, every new day begins with possibilities; it's up to us to fill it with the things that move us toward progress and peace. Hope, therefore, is a realistic attitude—and despair an uninteresting little vice.

And so, was our journey worthwhile?

Well, 30 years ago, when Ike—President Eisenhower—had just returned from a summit in Geneva, he said, "... the wide gulf that separates so far East and West is wide and deep." Well, today, three decades later, that is still true.

But, yes, this meeting was worthwhile for both sides. A new realism spawned the summit; the summit itself was a good start; and now our byword must be: steady as we go.

I am, as you are, impatient for results. But good will and good hopes do not always yield lasting results. And quick fixes don't fix big problems.

Just as we must avoid illusions on our side, so we must dispel them on the Soviet side. I have made it clear to Mr. Gorbachev that we must reduce the mistrust and suspicions between us if we are to do such things as reduce arms, and this will take deeds, not words alone. And I believe he is in agreement.

Where do we go from here? Well, our desire for improved relations is strong. We're ready and eager for step-by-step progress. We know that peace is not just the absence of war. We don't want a phony peace or a frail peace; we didn't go in pursuit of some kind of illusory detente. We can't be satisfied with cosmetic improvements that won't stand the test of time. We want real peace.

As I flew back this evening, I had many thoughts. In just a few days, families across America will gather to celebrate Thanksgiving. And again, as our forefathers who voyaged to America, we traveled to Geneva with peace as our goal and freedom as our guide—for there can be no greater good than the quest for peace and no finer purpose than the preservation of freedom.

It is 350 years since the first Thanksgiving, when Pilgrims and Indians huddled together on the edge of an unknown continent. And now, here we are gathered together on the edge of an unknown future—but, like our forefathers, really not so much afraid, but full of hope and trusting in God, as ever.

Arms Control and Reduction Negotiations

President Reagan's radio address to the nation on November 2, 1985.[1]

Yesterday in Geneva, American negotiators presented to their Soviet counterparts new proposals designed to achieve real reductions in the nuclear arsenals of both the United States and the Soviet Union. My instructions to our negotiators also asked that this round of the negotiations be extended into this coming week so that our team can make a full presentation of our new proposals and so that the Soviets have the opportunity to ask questions about them.

I am very pleased that the Soviet Union has agreed to this extension of the talks. I know you join me in hoping that this will be a productive week in Geneva. Our new proposals address all three areas of these negotiations: strategic nuclear arms, intermediate-range nuclear forces, and defense and space systems. They build upon the concrete reduction proposals American negotiators have had on the table since early in the talks, and they take into account expressed Soviet concerns.

Our objective since the start of the Administration in 1981 has been to achieve real progress in reducing not only nuclear arms but conventional forces and chemical weapons as well. We've been firm and consistent in our arms control approach. Just as important, we have placed great value on maintaining the strength and unity of our alliances and ensuring that the security interests of our allies are enhanced in these negotiations. And we've demonstrated flexibility in taking legitimate Soviet interests into account.

I'm pleased to report to you that our strategy has been working. I believe we've laid the groundwork for productive negotiations in Geneva. The first sign of this was when Soviet Foreign Minister Shevardnadze presented to me at our White House meeting in September a Soviet counteroffer to our own earlier proposals. The Soviet negotiators then presented this in detail in Geneva, and our negotiators and our experts here at home have had a chance to analyze it carefully.

Based on this analysis, I decided upon the new U.S. proposals and instructed our negotiating team to present them in Geneva. Judged against our very careful criteria for reaching sound arms control agreements, we found that the Soviet counterproposal had some flaws and in some ways was one-sided. But as I made clear in my speech to the United Nations, the Soviet move also had certain positive seeds which we wish to nurture.

Our new proposals build upon these positive elements. One of them is the Soviet call for 50% reduction in certain types of nuclear arms. For more than 3 years, we've been proposing a reduction of about half in the strategic ballistic missiles of both sides. We, therefore, have accepted the 50% reduction by the Soviets.

At the same time, we're making it clear that we have a safer and more stable world. And if we're to have that, reductions must be applied to systems which are comparable, and especially to those which would give either side a destabilizing first-strike advantage.

We not only want to bring nuclear arms way down to equal levels in a stable way, we also want to decrease our mutual reliance for security on these extremely destructive offensive arsenals. Thus, we're seeking to discuss at the same time with the Soviets in Geneva how together we can try to help make the world a safer place by relying more on defenses which threaten no one, rather than on these offensive arsenals. Each of us is pursuing research on such defenses, and we need to be talking to each other about it.

I have written to both allied leaders and Soviet General Secretary Gorbachev about our new proposals. And I have informed Mr. Gorbachev how much I am looking forward to our meeting later this month in Geneva. He and I will have a broad agenda at our meeting, one that includes human rights, regional issues, and contacts between our peoples, as well as the Geneva and other arms control negotiations.

If we hope to succeed in our efforts to create a safer world and to bring about a fresh start in the U.S.-Soviet relationship, progress will be needed in all of these areas. And this can only be accomplished if the Soviet leaders share our determination. We're encouraged because after a long wait, legitimate negotiations are underway.

Now, we've had a proposal on the table in Geneva for quite a while. Now the Soviet Union has offered a counterproposal, and we, in turn, have a new proposal now reflecting some of the elements of both of the others. And this is what negotiation is all about.

I can't give you any more details about our new arms control proposals because we have to let the negotiators work this out behind closed doors in Geneva. But I want to leave you with the four key objectives our American negotiators are seeking: deep cuts, no first-strike advantages, defensive research—because defense is much safer than offense—and no cheating.

Secretary's Interview on "Meet the Press"

Secretary Shultz was interviewed on NBC-TV's "Meet the Press" on November 24, 1985, by Marvin Kalb, NBC News; John Wallach, Hearst Newspapers; and Robert Novak, syndicated columnist.[1]

Q. Let's start, if you can fill us in, with the latest information on this hijacking. Could you tell us, if you know, how many Americans are on board? Any Americans been killed as yet? What can the United States do about it?

A. The United States is working very closely with other governments—the Governments of Malta, of Egypt, of Greece, of Italy, other governments, to deal with this as expeditiously and firmly as possible.

Terrorists deserve no quarter. Terrorists should have no place to hide. We must stamp out this terrorist activity. These people are not worth the time of day. They're not even people doing what they're doing. So we have an unambiguous, unequivocal attitude toward what's going on.

Now, as far as precisely what the situation is, you've heard your report. The number of Americans on that plane is not exactly certain so I don't want to help the terrorists any by giving a number or giving our estimates, but they are very much in the minority as far as the total passenger list is concerned.

Q. Any Americans been killed so far?

A. It's possible that that is so, but I don't want to make a confirming statement.

Q. The capture of the Egypt airline plane by the United States in the *Achille Lauro* affair was not appreciated by President Mubarak. Does that make it more difficult for the United States now to act in this case?

A. We are working very closely and cooperatively with the Government of Egypt on this case.

Q. On the other hand, there was a lot of speculation by members of your Administration that the triumph in the *Achille Lauro* case would inhibit hijacking. That doesn't seem to be the case, does it?

A. We have another hijacking but that doesn't mean we shouldn't be putting them down firmly, and we'll continue to do it.

This notion that somehow or other if you are firm with hijackers and terrorists, you'll only invoke more terrorists, I reject that totally. And the way to get after these people is to get after them with both barrels.

Q. Do you think that this is any threat to the Mubarak government? Do you think this has any connections in Egyptian politics?

A. I don't have any idea of who these people are and what connections they may have. I do know this: President Mubarak is very—working on this very hard, and we're working cooperatively with him.

Q. You said "both barrels." Is there a possibility that the United States might be involved in the sense of using military action to try to end this hijacking episode?

A. I have no comment to make whatever on precisely what our strategy will be or the strategy of other people will be except to say that no one should give any quarter, no place to hide for these terrorists.

Q. You said "what our strategy will be." This hijacking is already 20 hours in the making. Is there a strategy?

A. Of course.

Q. Is it connected with the Egypt C-130 that's on the runway?

A. It's none of your business at this point.

Q. During your meetings last week, and the President's meetings with Soviet leader Gorbachev, Foreign Minister Shevardnadze, did the question come up of Soviet-American cooperation against international terrorism?

A. We've discussed that subject, but it was not—didn't play any particular part in the Geneva meetings.

Q. Because in Beirut the Russians were also affected by terrorism?

A. That's right, and we saw some impact of that on their attitudes. We are also working with them and others on a possible UN resolution on this subject.

Q. Because the Russians seemed, after the American action in the *Achille Lauro*, to be taking a public position quite different toward American action against terrorism than they had taken in the past.

A. That's correct, and we'd like to encourage that.

Q. After the summit, after all the plaudits for President Reagan, the critics of your foreign policy are saying that the next time, the next summit in Washington can't just be another get-acquainted session. The *New York Times* editorial page—

A. First of all, this was not what I would call, or the implication of a get-acquainted session. This was a session, of course, in which these two leaders got acquainted with each other. They got acquainted in the right way; not talking about the weather in Geneva, but by talking about the difficult, substantive differences there are between our countries, and showing that it is possible for them to disagree about things but also to agree about some things.

Q. Okay. But the *New York Times* editorial page, Senator [Albert] Gore of Tennessee—

A. Never mind about the *New York Times* editorial page.

Q. Let me just ask the question, sir, if I might. They are saying that next time the President must come up—in the next summit in Washington—must bargain, must deal, must come up with an arms control agreement. Don't you have terrific pressure for the next summit to come up with the bacon?

A. We will have the same approach—I'm sure the President will—at the next or any subsequent major meeting that he had in this one. Namely, that if there is an agreement to be found that is in the interests of the United States to make, we're quite ready and anxious to make it. And if there isn't, no amount of deadlining will cause the President to make one, and that's the approach we took this time; that's the approach we'll take the next time, and some agreements were made this time.

Q. If I may return to this hijacking just very briefly. The Libyan Ambassador at Malta has been in touch with the Egyptian revolutionaries who hijacked this airplane.

A. They asked him to come aboard, and he did.

Q. Is there evidence of a Libyan connection to this hijacking?

A. There is a fairly large number of passengers—I think on the order of about 26—who were transit passengers. That is, they came from Libya to Athens, were held in the transit lounge, and then boarded the Egyptian airliner to go to Cairo since there are no direct Libya-to-Cairo flights. Those are two pieces of information, but I don't have a basis of drawing any conclusion from that.

Q. Would it surprise you if there were Libyan involvement, Libyan Government involvement?

A. I don't want to make any statement of implications without knowing what I'm talking about, and what I know is only what I just told you.

Q. The State Department a couple of months ago gave a clean bill of health to the Athens Airport in terms of security. Now, this has originated at the Athens Airport. What does that say about the State Department's report? Has there been further laxness at the airport? What's going on there?

A. A total investigation was made, not by the State Department but by the agencies that work on airports—it falls under the Department of Transportation; we took part in it. And the officials, the Greek officials, really paid attention this time in a way that they hadn't before and brought the Athens Airport security arrangements up to what was seen as a good international standard.

Whether there's been any relaxation since that time, I can't tell you.

Q. But it does show that terrorists can get through these standards that are set up for international airport—

A. It shows that the system in Athens, or perhaps anywhere else, is not perfect.

Actually, just take U.S. airports. We have picked up in the last 10 years or so something like 35,000 pieces of armament through these devices at airports, but that doesn't say that these things are perfect. We know they're not perfect.

Q. I wonder if I could get back to the summit for a minute? I'm confused, and perhaps other people are, too, as to whether the Soviets were informed of the violations that they have made on the SALT (strategic arms limitation talks) II Treaty? It's never been ratified but signed between President Carter and Mr. Brezhnev in 1979?

Were there violations pointed out to them in Geneva?

A. The problem of violations and compliance with treaties was brought out by the President very strongly and firmly in his direct discussions with Mr. Gorbachev, including at the plenary session where I observed them myself.

Q. There was a report that we had agreed in advance and informed the Soviets in advance that we were going to continue observing the unratified treaty even though they violated it. Is that true or false?

A. The report is totally false. What has been said publicly and privately by the President, by me, and by others ever since last June, continues to be the President's policy. Namely, he has decided not to undercut the SALT II Treaty and [is] continuing to review that decision, watching the pattern of Soviet violations, the Geneva negotiations, and other aspects of our relationship with the Soviet Union. The President has it under review; and if he makes a change, that will be announced.

Q. You said a few days ago that the Soviets have done some things on compliance to stop their cheating, their violating. Did Mr. Gorbachev give you any indication in Geneva that they would step up that effort?

A. No. There wasn't that much detail on the discussion. There was a statement about the general problem, and what this does to confidence in arms control.

Q. Do they have to do that now, step up those efforts in order for the President in December to renew the policy of not undercutting the SALT II accord?

A. The President has the question under constant review. He's had a report just 1 week ago from the Defense Department, which will be commented on by everybody.

Q. Don't the Soviets have to do something next? That's what I'm—

A. —and he will be observing and deciding what he wants to do.

Q. I just have a followup on this SALT II. I understand that the nuclear—under the terms of the SALT II agreement, the nuclear submarine *Sam Rayburn* was supposed to be cut up on November 28. I've heard a report that before the summit the cutting-up began and the submarine is now inoperative. Is that true or false?

A. I don't know.

Q. You don't know whether the terms have been carried out?

A. I don't know what is happening to that submarine. I don't keep track of things like that.

Q. Wasn't that a very important decision, whether that was done?

A. It was an important decision to do it; and once the President decides that it will be done and gives that order to the military authorities—

Q. Did he make the decision?

A. —I assume it'll be done.

Q. Has he made that decision?

A. He made a decision last June, which was announced, about—I think it was in June—about that submarine. And once he announces it, as far as I'm concerned that's the end of it, and other people carry it out and I assume they will.

Q. You are always fond of quoting Albert Einstein who said that "With the dawn of the atomic age, everything has changed except the way man thinks."

Do you feel that President Reagan, now that he has met the personification of what he used to call "the evil empire," do you think that his own thinking has in any way been changed?

A. His thinking about the nature and the differences between the two societies—the Soviet society and ours—is as it was, as it must be. The President speaks about realism and about the necessity for realism as we approach our relations with the Soviet Union, and it has been unchanged.

At the same time, the President has had a chance to meet directly with the new Soviet leader, Mr. Gorbachev, and his associates, and have an intense discussion with them. And he's done that because he thinks that with all of our differences and all of our difficulties, nevertheless, here we are two countries that either one of which could blow up the world, and we just have to see if we can't put together a more stable and constructive relationship and that's what he's trying to do.

Q. Talk to us about Afghanistan for a moment. Did you find at the summit that there was any possible give on the Soviet position in the sense of them being willing to agree to some kind of timetable for their withdrawal of forces from Afghanistan in exchange for setting up a neutralist government, or the ending of American aid to the rebels?

A. The President put forward our concerns about Soviet behavior in various regions of the world and the instabilities caused by them, and Afghanistan is certainly a leading example.

The President, as he addressed the subject of arms control, I remember, said that "Nations arm because they distrust each other," not the other way around. Therefore, we need to be sure that we address the reasons why this distrust takes place, and aggressive behavior in various regions of the world is one of the leading causes. And Mr. Gorbachev responded, and I think, in fact, agrees that these kinds of conflicts lie underneath as an important problem.

And so in his responses he talked about Afghanistan, at least to my ear, and we'll have to study the transcripts carefully and see how we can follow up. I thought he had some interesting and a little bit different kinds of things to say.

Q. How interesting? What was interesting about it?

A. I don't want to go into it in detail. I'd like to study it carefully. But the principal thing, of course, is addressing directly the problem of Soviet troops in Afghanistan and their withdrawal. That's the key.

Q. So the idea that a timetable may be implicit in whatever shift there may be in the Soviet position—the acceptance of a timetable?

A. We'll have to see what will take place. There will be a continuation of the U.N.-sponsored Afghanistan negotiations in Geneva, I think in December, and we'll want to see what we can do to support success in those negotiations.

Q. Was there any indication that at those talks the Soviets might be willing to provide for the first time some kind of schedule for withdrawals?

A. I thought there was some indication of it, but we'll just have to see. The principal thing is that Mr. Gorbachev and President Reagan both talked about the importance of political solutions to these problems.

Q. Twice since the summit, President Reagan has talked about our commitment, the U.S. commitment to supporting freedom fighters around the world. Is it now the U.S. policy to give support to Jonas Savimbi in Angola?

A. This is a subject that's been discussed a great deal, and what I can say is this: First of all, we support the freedom fighting of Jonas Savimbi and UNITA.

Second, we want to support their efforts in a way that's effective.

Third, as in other areas, we believe that if there can be a political solution, a negotiated solution to the problems of Angola as well as the problem of Namibia, linked as it is to the difficulties in southern Africa generally and in South Africa, that's the way to go, and we're trying to do that.

Q. Would you still take the position that you made in your letter to Minority Leader [Robert] Michel in the House of Representatives that the Congress should not vote funds for Mr. Savimbi because it might undercut those negotiations?

A. That's not the basis for my position, that the Congress should not vote for open aid to Savimbi. And I can tell you that among those who have thought carefully about this problem and are very knowledgeable, I don't know of anybody who disagrees with that.

Q. What about—just to finish that up, will you then oppose the Claude Pepper—Congressman Claude Pepper, Florida, legislation to that end? Would the Administration ask Congress not to pass it?

A. Yes.

Q. What is Mr. Gorbachev supposed to think if within 2 or 3 days after the summit, the proclamation of new understandings of each other, the President of the United States says outright that he is prepared to give money for what amounts to the overthrow of an established government in Angola, and that government is supported by the Russians?

A. He is supposed to think that the United States will support people who fight for freedom, and we will try to figure out how to support them in a way that will be effective and I hope he has that message, and I'm sure he does.

Q. If the Soviets do something to move toward withdrawal in Afghanistan, would that help shape American attitudes toward Soviet participation in other parts of the world, particularly the Middle East?

A. I think a constructive pattern in these regional areas would be a great contribution to stability throughout the world. Everybody would welcome it.

Now, as far as the Middle East is concerned, to have a ticket of admission, at least a country ought to have diplomatic relationships with Israel; at least it ought to address the way it treats Jews within its own country; at least it ought to take a look at the problem of people who want to emigrate from the Soviet Union, so these are some of the things.

Q. On that subject, the President said a couple of days ago he did not raise individual cases with Secretary Gorbachev, just types of cases. What does that mean?

A. The President had a lengthy and intense discussion of what we think of as the human rights question with General Secretary Gorbachev, and he feels that—once again, the best way to be effective is to let people know that he is concerned and not to go further into it.

Q. Can we then expect a continuation of the mode of detente of several years ago where we do not—the United States Government does not publicly criticize the Soviet Union for human rights violations?

A. We have been very clear, and I have—if you read the speech I gave in Helsinki last July, you'll see it spelled out in great detail. Now, our concern about human rights is fundamental. The nature of our societies differ greatly and this is the essence of the difference.

[1]Press release 269 of Nov. 24, 1985. ■

Secretary's Interview on "This Week With David Brinkley"

Secretary Shultz was interviewed on ABC-TV's "This Week With David Brinkley" on November 17, 1985, by David Brinkley and Sam Donaldson, ABC News, and George F. Will, ABC News analyst.[1]

Q. Mr. Reagan will meet Mr. Gorbachev during the coming days. You have already met him. You've already spent some hours with him, talking and, I gather, doing a little arguing. Tell us about it, will you—about him and about your meeting, what you think of him?

A. Our meeting was a strong conversation, and I thought he was very direct

about what he wanted to say, and so was I. It went on a long time. There were—the kind of conversation where you interrupt back and forth, and I thought it was a worthwhile exchange. I was glad to have had it.

Q. Did anything he said surprise you?

A. Not really, although it's always surprising, I suppose, to hear your country described in a way that you don't think conforms to the reality.

Q. On the subject of SALT [strategic arms limitation talks] II, on June 10 the President said we would continue the no-undercut policy, but we're looking for improved compliance from the Soviet Union. That's 5 months ago now, plus some. Has there been any improved compliance?

A. There have been some things take place by way of Soviet activities. However, the President's position remains exactly as it was then. His policy is that he will maintain interim restraint under the SALT II agreement, observing Soviet behavior, including what progress there may or may not be in the negotiations on arms control.

Q. But since June 10, the Federal Government has made a pronounced statement about the deployment of mobile missiles. That would seem to imply that their compliance is worse now than it was in June.

A. The deployment of a second missile is a violation of SALT II, in our opinion, and I think it's a pretty open-and-shut case myself. It's not a modernization of an existing missile.

Q. But you'll have a—

A. There isn't a prohibition on mobile missiles, although we think that mobile missiles should be prohibited because they give you a very tough verification problem, particularly if they can roam around throughout the vast regions of the Soviet Union.

Q. Are you looking for some satisfaction here in Geneva on compliance, such as on the SS-25?

A. It's certainly going to come up. The subject of compliance and verification will be one of the things the President will want to talk about.

Q. And what if he says, "Nonsense, it's not a violation." You say it's clear-cut. Then what? Do you turn around to the President and say it's time to abandon the no-undercut policy?

A. The President will have an exchange here. He is observing. He got a report from the Secretary of Defense. It will be discussed. And after the President takes into consideration all of the things that come to him, he'll make up his mind.

Q. Secretary Weinberger's letter to the President, as we all know now—it was leaked to the press—urged the President to hang tough, not make a deal here in Geneva on extending the provisions of SALT II.

One, are you saying he won't make such a deal here? And, two, you've just heard a Soviet official say that he thought you were offended that that letter was leaked. It was not helpful. Is that correct?

A. I have no sense of offense. I think so much leaks in Washington these days that what does offend me is the lack of discipline in the government in that so much and many damaging things do leak, and this is just a relatively minor example.

Q. All right. Now, are you then ruling out the possibility that if Mr. Gorbachev says, "Let's make a deal and extend SALT II," Mr. Reagan won't say, "All right."

A. The President will decide what he's going to decide, and I'm not going to try to prejudge what he will do.

Q. If I may just be clear on this, then you are not foreclosing the possibility that we could come out of this Geneva summit with both sides having agreed to extend for another year, at the end of this year, the provisions of SALT II?

A. I'm not foreclosing it, but I think it is not very likely. At any rate, the President's position I described, and when he decides to change it, one way or another, you'll know about it.

Q. Let me ask another question about the possibility of guidelines to help the arms negotiators in the coming round.

A. Right.

Q. You said the other day it was possible, but not probable. Have you raised that estimate a little bit now?

A. Not particularly. I don't have any information I didn't have the other day, but there are some things that their proposals and our proposals have at least in a rough way in common. And it may be possible that something can be drawn up that's useful; but, as I said before, it's possible but not probable.

Q. One of the many leaks in Washington recently is that some people in the government want the United States to make a pledge that in the next 5 years it will not exercise its option to give a 1-year notice for withdrawal from the ABM [Antiballistic Missile] Treaty. Is that part of your agenda?

A. I haven't heard that particular—I haven't run across that particular leak, but then there are so many I can't keep up with them. [Laughter]

Q. Could we ask which Gorbachev is the one that you think is controlling on basic research on SDI [Strategic Defense Initiative]? We've just heard a top Soviet scientist say that the policy is as described in the *Time* magazine interview, and there Mr. Gorbachev seemed to say research is all right.

But it was my understanding that he told you directly in Moscow that research was not all right. How do you see it?

A. He basically expresses himself against strategic defense, and in our conversation in Moscow we didn't try to define in a very precise way what that might mean.

The fact of the matter is that the Soviet Union is doing a great deal of research on this subject, and it isn't all just what somebody might write down on a blackboard, because you can see large buildings and you can notice that lots of people are working there, and things like that. So it isn't just purely laboratory.

Q. Do you sense that perhaps at this summit, if Gorbachev gives a little and the President is able to accommodate a little bit, you might be able to remove this obstacle of SDI from an ability to go forward in arms reduction?

A. The President is determined to find the answer to the question, "Is it possible to construct a shield that will protect us in some measure against ballistic missiles?" And we have a program that's designed and in operation, and, so far as I can tell, we believe that program will give us an answer to that question. And there is no way the President can be persuaded not to continue seeking that answer.

And I might say further, there is no one in the group of people that are advising the President who believes that he should do anything except continue to find that answer.

Q. Let me fix upon three words: "In some measure." You said it's possible to have a successful SDI "in some measure." Most people, I think, would concede already that there's some form of strategic defense for knocking down some incoming missiles or warheads, so you have the answer already, don't you?

A. It depends. I think some judge it by whether or not an impenetrable shield can be constructed. That's a way-out test.

Q. But you were suggesting that in some measure—

A. I qualified that deliberately, because I think that if, with a layered defense, with each layer only very moderately successful—that is, say only 20% successful—by the time you go through four layers, you take out enough incoming missiles to make a large difference about cutting down your opponent's first-strike capability, and that is very worthwhile.

Q. Almost every point of discussion between us and the Soviet Union in our preliminary meetings, including yours in Moscow, has been resisted. So tell me what—

A. Has been what?

Q. Has been resisted. Everyone's position has been pretty much frozen.

A. That's not the case at all.

Q. That's what has seemed to us. Who has thawed?

A. There has been discussion of a lot of things that probably you would classify of a lesser nature, but which have had a lot of back and forth, give and take, and considerable progress made. And it may be that the discussions will be completed by the time our leaders meet.

Q. Those are discussions we haven't heard about yet, so we look forward to them. In the meantime, I wanted to ask you, what do you think might reasonably be expected to happen here that would justify calling it a successful summit?

A. These two men are going to meet, and I think to a certain extent it's going to be a very personal thing, although they're certainly going to be supported by plenty of advisers on both sides. And if out of this meeting can come a clearer understanding of what is troubling each side, with some way shown where we might make a little progress on some of the most difficult issues—personally I think those are, from our standpoint, the Soviet aggression in many parts of the world, and I think the problems that human beings in the Soviet Union have, the lack of ability to emigrate, and so on—those are the deepest and most difficult issues that show the differences between our societies, but we'll want to talk about them. Of course, the problems of growing armaments, huge nuclear arsenals that we both have, are big problems; and the President would like to see some way of getting them down and getting them under control, and I think we all would. And if progress can be made on that in any manner, I think it will be a success.

Q. On one point: You mentioned their aggression. This is a rumor, as far as I know. Have you heard that they are looking around for some convenient way to get out of Afghanistan?

A. I read that all the time—

Q. So do I.

A. —that the Soviets say that, and I try to probe into it whenever I have the opportunity, and I've had quite a few opportunities in the last 4 or 5 months, and I don't get any sense that it's there. But we're certainly prepared to try to be helpful on that, and there are negotiations going on, conducted by the United Nations, and we'd like nothing better than to see them succeed.

Q. What do you make of this news conference they held here in Geneva yesterday, in which Soviet officials said that their losses had been mounting and they really wanted to try to find some way to negotiate a settlement there? Was that just propaganda to try to make them look more peace-loving than they are?

A. I think that if they want some way, it's easy to find it. There has been negotiation in Geneva under the auspices of the United Nations, and some things have been worked out. The big thing that has not been worked out is really to come to grips with Soviet troop withdrawal.

Until you have a commitment for Soviet troop withdrawal over a relatively short span of time, none of the other things necessary for a settlement can come into effect.

Q. Maybe you don't put much stock in what they said yesterday?

A. I didn't say that. I think if they're looking for a means, the means is there. And insofar as the attitude of the United States is concerned, if there are some aspects of this that we can contribute to, we'll be glad to do it.

The President set out a kind of program or process in his speech to the United Nations that the Afghanistan situation could fit into as well as others.

Q. About 6 weeks ago on this show, Bud McFarlane said human rights would be the lead item on the agenda at the summit for the United States.

I'd like to ask you about the mechanics of how this gets raised. The United States' position is that the Soviet Union is comprehensibly violating its obligations under the Helsinki agreement. But it seems that to comply with those terms of the agreement, it would have to dismantle its entire domestic structure of repression.

You go into a meeting, and you say, "Why don't you cut this out?" And they say, "It's none of your business. It's an internal affair, and we're complying with the obligations." What's the next question? How do you continue a discussion?

A. Actually, there has been some shift—at least it seems to me, in responses on this question over the period of time that I've been discussing it with Soviet officials—from a posture of, "This is not anything we're willing to discuss," to a posture of saying, "There's certain categories of cases that are legitimate, and we're willing to discuss them, and we're willing to do something about them if our security problems are not violated."

There are others they're not willing to discuss, and now there is the added element of accusations about our human rights problems.

Now, if what comes out of it is sort of a joint investigation about human rights problems, we'll welcome that. But what the President, I'm sure, intends to do is to try to talk in a way to Mr. Gorbachev that will lead him to understand why it is that we're so concerned about this problem.

Q. One of the possible agreements that's talked about is one in which the two sides agree to work against the spread of chemical weapons. Since the Soviet Union is using chemical weapons, according to the U.S. position, wouldn't that be the thing to go after, not some rather innocuous measure on the spread?

A. I think there are many things that should be gone after. We have tabled a comprehensive chemical weapons ban on production and use, in Geneva, and we think that ought to be

pursued. Obviously, use of chemical weapons is deplorable. It's also true that chemical weapons are spreading, and I think the proliferation of them represents one of the biggest problems we face, and I think they see that, too.

Q. Will there be a joint communique at the end of the summit?

A. It remains to be seen what will be the way of reporting the meeting.

Q. How do you have a joint communique with both sides talking, for example, about terrorism, which we say they fund and finance and organize, and both sides talking about chemical warfare, which we say they're committing, how do you have a joint statement on these subjects without us sort of papering over differences and relinquishing principles?

A. You'll have to wait and see how the meeting is reported, and I don't think Ronald Reagan is likely to paper over principles.

Q. We understand that earlier today you met with the U.S. Ambassador to Lebanon, Reginald Bartholomew. Did he give you any progress report that was hopeful concerning Terry Waite's mission there or the possible release of our hostages there?

A. He told me that there seems to be more pressure on the situation right now, and we will, of course, work with it to the best of our ability because we want to get those people back, and it's long overdue. And I asked Reg to come up and talk a little bit, because we had a sense of some motion, and I just wanted to talk to him firsthand.

[1]Broadcast via satellite from Geneva, Switzerland. Press release 263 of Nov. 18, 1985. ■

News Conference of November 14

Secretary Shultz held a news conference at the Old Executive Office Building on November 14, 1985.[1]

Q. What do you think is going to come out of the summit? Will there be any kind of strong agreements, any agreements at all?

A. Pretty soon we won't have to speculate any more, so that will be a relief for everyone.

Q. Is that your answer?

A. But I think that—well, there will be some things of a significant but not major sort that will be agreed on. We know that. On the other hand, the main point of the meeting is to have a good, thorough exchange between the heads of these two great countries, and that will take place. And we can hope, perhaps even expect, that it will be a fruitful exchange and worthy of continuance.

Q. Can we hope, perhaps even expect, that there will be some guidance on arms control? That there will be a little more out of this than you've led us to believe so far?

A. Whether on arms control you're referring to the space defense talks—there are lots of other arms control areas where progress and movement toward agreement varies from one to the other—but on the nuclear and space talks, there now has been a U.S. proposal, a Soviet counterproposal, a U.S. counter-counterproposal, and some interesting numbers have emerged from that. And if there can be some impulse to the negotiators out of this meeting, that will be all to the good. But I think we have to wait and see, and there isn't any way of predicting that at this point. Or, in other words, there has been nothing negotiated out that would suggest that we're somewhere near that point.

Q. What does it depend on?

A. I suppose it depends on whether or not the Soviet Union will see the light and see the reasonableness of our positions.

Q. The Soviets have been in Geneva all week briefing foreign press. They have been holding news conferences, going on television, the Ambassador's speaking later today.

What effect do you think all of this Soviet publicity had on expectations of the summit and on the U.S. bargaining positions?

A. You're a better judge of the publicity side than I am. From our standpoint, we're very serious about this meeting and about the other things that we're talking about in various other fora with the Soviet Union. We're trying to approach them all in a constructive way. We try to make our proposals at the place which is designated for them, and, on the whole, I think that's generally appreciated.

Q. Do you think it puts us in any way on the defensive in the case of world opinion, or a little bit on the defensive?

A. I don't feel particularly defensive, no. We have stated our positions. We are available to the press. But we don't have to go running all over the place buttonholing the place. So there's nothing wrong with that, and if they want to make themselves available, I think that's fine.

Actually, I think that the notion that there is public opinion out there, including American public opinion, perhaps especially American opinion, is a good perception. It has always seemed to me that when you have to appeal to the common sense of the American people, it's a good thing for you. So if the Soviet Union starts to feel that way, that's good.

Q. In line with that answer, do you see any value, then, perhaps in a joint appearance or joint press conference of the kind that General Secretary Gorbachev had with the French President in Geneva?

A. There will need to be worked out—and we're in the process of doing it—a way of reporting the results of the meeting, and just exactly how that will emerge remains to be seen. Obviously, you report to people in each country, and you report to people all around the world who are interested, and you do it through the press to a very considerable extent, and so we're trying to figure out what the best way is. But I don't think it's necessarily the best way to have two heads of state standing in front of I don't know how many thousand reporters fielding whatever question comes along. But, at any rate, that subject is under review by the two sides.

Q. You wouldn't discount the possibility of some kind of limited or controlled joint appearance before some group of press? You wouldn't rule that out at this point?

A. I don't like words like "controlled," and that's your word, not my word.

Q. Whatever.

A. But, at any rate, there will be a way of reporting the results of the meeting. No doubt many ways. As you know, among other things, the President intends to go to Brussels and give a report to our allies. Our allies in Europe and in the Pacific region, Japan,

are very important to us. Their contribution to the strength of our ideals and posture is very great, so we'll be reporting to them. And then the President, of course, will report to the American people and the Congress.

Q. What are the prospects now for some kind of guidelines on arms control being reached at the summit? We've had some hopeful signs from Paul Nitze, some not so hopeful signs from others. I'm wondering what you can tell us at this point.

A. It's possible, but not probable. And if you were in a statistical frame of mind, or if Jimmy the Greek were here, and we were talking with Jimmy the Greek, I suppose maybe the probabilities would be somewhere between .2 and .4.

Q. Apart from your hopes or anybody else's hopes, what do you think in a hardheaded way Gorbachev really wants to get out of this meeting? Another official of this Administration suggested it was to get a unilateral advantage for Soviet interests abroad. What do you think?

A. You have to ask Mr. Gorbachev what he wants to get out of the meeting. I think you can absolutely assume that he will pursue Soviet interests, and you can also assume that Ronald Reagan will pursue U.S. and alliance interests. And our objective is to see if there are places where the intersection of that pursuit of these interests comes together enough so that either some things can be agreed on that seem to be in mutual interests, or an atmosphere or some sort of thrust toward doing that in some other fora can be created there. That's the name of the game.

Q. But you must have some assessment as to whether Gorbachev genuinely wants to see if there aren't these areas where the mutual interests can prevail, or whether in fact he simply wants to come to Geneva to push unilaterally the Soviet interests and go away with some sort of hardnosed propaganda stand.

A. The game seems to be played on a propaganda level and on a substantive level, and there's an interplay between these things. And to the extent you remove a word like "propaganda" from the lingo and just talk about it in terms of appealing to the common sense of people in respective countries, it's good.

Now, I can't—I'm no authority on the way in which Mr. Gorbachev is approaching the meeting. I talked with him at some length and found him a very vigorous interlocutor. We had what I considered to be a worthwhile exchange, and there was no holding back on either side.

And I think that kind of exchange is positive. That's the way you find out what's on somebody else's mind and what's important to him. That's the name of the game here.

Q. When you had that session with him, he was pretty tough from what we were told later, at one point accusing the United States of carrying the war to the heavens, speaking of Star Wars, or SDI [Strategic Defense Initiative].

What happens in Geneva if Mr. Gorbachev comes in and makes an American concession on SDI the absolute prerequisite for any kind of joint statement or any kind of progress coming out of the summit?

A. I'm not going to speculate on what he may or may not do there, but if it's a question of good, strong advocacy of positions, Ronald Reagan is no slouch at that, as everybody has learned. And he will put forward U.S. positions and allied positions very strongly. There is strength of conviction. There is strength of purpose. There is inherent capability of ourselves and our alliance, and there's also reasonableness. So that's what Ronald Reagan will project: strength and reasonableness, and we'll see where we go from there.

Q. If you have that kind of a clash, could the summit not fail?

A. We will undoubtedly have important differences of opinion. Going into this meeting, we know we do, and I don't have any doubt whatever that when the meeting ends, there will still be important differences of opinion.

The question is whether they will be narrowed at all, whether some things can emerge that will be on the positive side, and whether the differences are highlighted in a useful way, and whether there's any sense of an agenda for the future. Those are the kinds of questions, and a lot of it will depend on the meeting between these two individuals.

At least as I see it, those of us who are scurrying around in the woodwork like me and trying to get things prepared have worked at it. We've worked very hard at it, and the President's worked very hard at it. It's been a good preparatory effort. And my observation is that the same can be said on the Soviet side, and we've had a lot of discussions together. And now all of that has been laid in, and we're moving to a different stage of this in which the two leaders take over, and it's their meeting. And we can all—I'll be a spectator, and a little closer than you, and I hope it works out.

Q. As a prelude to the summit, there's a report that the Soviets offered a first slice cut of 200 land-based missiles on either side in your meeting in Moscow.

One, is it true; and, two, is this acceptable?

A. The Soviets in their counterproposal last October, whenever it was, put out a broad range of things, and one of them did have to do with a small reduction of the kind you described. It wasn't discussed at all in my meetings in Moscow.

And, of course, we consider all of the things that have been proposed. There are some obvious problems with small, absolute-number reductions. When you start from inequitable levels, if you go down absolutely, you don't get to an equitable end point. Furthermore, small reductions usually get made from systems that are not that meaningful anyway. But, at any rate, it was put on the table, and I don't think it's any big deal.

Q. When you went to Moscow, it seemed that the United States had greater expectations than you had when you left Moscow.

A. No. I don't know what it seemed, but if you say, did I have greater expectations before I went than after, the answer is no.

Q. But in your talk with Mr. Gorbachev, in the *Time* interview, for instance, I mean, he seemed to indicate that he would accept research. The Soviets seemed to go back on that during your meeting in Moscow and questioned it. Why—

A. There are—you can quote Soviet leaders in varying ways on the question of research. They have said right along that, however you want to define it, pure research, obviously, can't be dealt with in any kind of agreement. And then what exactly that means one can argue about.

But from our standpoint, we are pursuing a research program designed to answer the question, "Can you defend yourself at all adequately against ballistic missiles?" That program is going forward in a manner consistent with the ABM [Antiballistic Missile] Treaty, in fact, consistent with what is generally

regarded as a relatively narrow interpretation of that treaty, and we feel that it is possible to find the answer one way or another on the basis of that process.

So what we're doing is consistent with the obligations that have been undertaken, and the President will continue to pursue that program.

Q. It has been suggested that you and other Administration officials are playing an expectations game and purposely low-balling chances for success at the summit so that if it is a failure, it won't seem so, or if you get little successes, they will seem big successes. Are you playing that kind of game?

A. No. [Laughter] I tell you, I gave a press conference in Moscow after my meetings, and the writeups of the press conference were all that somehow it was a big downer. So I was surprised. So I went to my counselor on these matters, Bernie Kalb—where is Bernie? There he is. I said, "Bernie, what kind of a story would you have written?" He said, "Oh, I probably would have written it about the way the guys said." [Laughter] But that was not intentional. [Laughter]

Q. The guy's had a little help.

A. Sometime I'll speak prose and won't know it. [Laughter]

Q. Now that you've had a chance to see Mr. Gorbachev close up and since you've worked many times with the President, how do you think these two men will get on in their talks, and do you think that there is a reasonable chance that in their private discussions, they might be able to reach a new understanding or any breakthrough, where their diplomats so far have failed?

A. I'm going to be fascinated to watch and see what the answer to that question is, and we're not going to have to wait much longer. But they are both, I would say, strong, engaging personalities. So we'll just see what happens.

Q. In all of this pre-summit activity, people on the left seem to be concerned that the President is going to abandon arms control concerns, while people on the right seem to be concerned that he's going to sell out human rights concerns. Is the President going to be equally emphatic on all of those areas?

A. We have said consistently, going way back to the beginning of this Administration, and set it out painstakingly, that our agenda and our concerns are broad. We have great concerns about Soviet behavior in various regions of the world. I think it's worth noting that in the United Nations yesterday there was a vote about Afghanistan by the widest margin ever, so we think that world opinion shares the concerns we have about Afghanistan, and so on. Regional issues—that's a big problem. It must be talked about, and it will be, and the Soviets are prepared to talk about it.

The problem of human rights: We are deeply concerned about that. We must be. It's part of our way of life. It's part of our tradition. Emigration—we're a nation of immigrants. We've got to think that it should be okay for people if they want to leave and go some place else, to do so. That's what we all did, or our forefathers did. The Helsinki accords, we believe, give a proper basis for discussing these things.

So these matters will be talked about and always will be. Now, there's always a question of what's the best way to do it. Now, there are a number of bilateral questions, and to some extent these are a little more readily resolved.

Because they're more readily resolved, you shouldn't get the feeling, or we shouldn't get the feeling that they're not important, because they can over a period of time add up to something that can help a little bit in atmospherics and maybe help in settling things that are broader and deeper and more difficult. And then, of course, there are the subjects of arms control.

And while, obviously, the nuclear and space talks are at the center of attention and properly so, there are a number of other arms control issues that we are concerned about, and they are, and there are places where we are in an official way discussing various issues with them, and all of these things will come up.

So the agenda at this meeting will be a broad agenda. That doesn't mean that there are going to be so many tick points to get across on each subject. I don't think that's in the nature of a heads of state meeting. But, nevertheless, all of these things will be discussed, and none will be dropped off the table as far as we're concerned.

Q. Since you talked about regional issues, and since—

A. Since I talked about what?

Q. Regional issues.

A. Yes.

Q. And since Richard Murphy is accompanying you to Geneva, are we to expect a major breakthrough regarding the international conference on Middle East, especially while Mr. Peres is now talking about international context, and so on?

A. I would be very much surprised if there were any breakthrough on an international conference in the Middle East. However, we will talk about regional issues, and certainly the Middle East is one of them that both countries have a major interest in.

I would remind you that the Middle East is a place that contains many difficulties, and one of them involves Iran and Iraq. That is a war that deserves attention, and that's a war that's been very deadly, where chemical weapons have been used, where there doesn't seem to be any outcome in prospect, and which is not in any inherent way a product of conflict between the United States and the Soviet Union. And I would hope that we might be able to talk about it constructively, but that again remains to be seen. But the regional issues will get plenty of attention.

Q. Going back to your bookmaker, Jimmy the Greek, would you spell out for us, as you did on the arms control question, what the odds would be for agreement on specific issues such as cultural exchange, civil aviation agreement, Pacific air safety agreement, chemical weapons, and so on? [Laughter] Would you give the same odds?

Q. Give us the morning line. [Laughter]

A. No. I don't think I want to get into the morning line across the board. [Laughter]

Q. What does 3—2—what does .2 mean?

A. Didn't you ever study statistics?

Q. No, I didn't.

A. Gosh, you're uneducated. [Laughter]

Q. Give us a feeling, please, how close you are—

A. Two chances out of ten—point 2.

Q. Give us a feeling of how close you are on those kinds of bilateral issues as opposed to the arms control issues that you discussed earlier.

A. There are some things that I think have some real significance, where I think we're pretty well there. There

are other things which are being worked on very hard, and which may very well get agreed to, and so there's a variation. So I could give you .95 on some. How's that? You got that? [Laughter] And others may be—[Laughter] So there's a range of probabilities here, but there will definitely be some things that have been agreed to.

Q. On SALT [strategic arms limitation talks] II, the Soviets are reported to be rather interested in continuing the no-undercut policy after the end of the year when the treaty under its terms would have expired. President Reagan in June said that we would continue under certain conditions for a time which wasn't specified.

What is the U.S. position regarding the extension of SALT II, no-undercut policy after December 31st, and do you think that it is possible, even likely, that the two leaders will be able to reach some agreement on this subject in Geneva?

A. The President's position on that is exactly as he stated it last June. He said then that he was going the extra mile. We broke up the boat, and he said that he would continue, and what he would be watching was parallel Soviet behavior, on the one hand, and progress in negotiations on the other. That was his position then, and that's his position right now. There hasn't been any change in it.

Q. Does December 31st make any difference to the United States?

A. I just simply said that the President's position now is exactly what it was then. There hasn't been any change in it.

Q. How about the—

A. That's all I'm going to say on the subject.

Q. But to follow that, if the President's position was also to study behavior of Soviet responses, and—

A. Yes, I said that.

Q. —if there is no satisfaction of the U.S. complaint about verification at the summit, would that then be a logical time for the President to reconsider and analyze again the prospects and consider proportional responses?

A. The President's position today is the same as it was then, and he's watching all these things, and if it changes, you'll be the first to know.

Q. [Inaudible]

A. And I'm sure that's true. [Laughter] And I don't mean you, I mean *you*. [Laughter]

Q. What is the prospect of a joint reaffirmation toward the ABM Treaty, and what would make it easy or difficult?

A. As far as we are concerned, we are adhering to the ABM Treaty, so we don't need to reaffirm it; we are adhering to it.

Q. Either in statistical terms or otherwise, could you give us your estimate of where we are toward an agreement for a second summit?

A. We have agreed with the Soviets that one of the things that ought to get a little reflection is the agenda for the future: Where do we go from mid-November—there's life after mid-November, and how are we going to get there? So the question of both substance and the means of talking about substance, namely, meetings of one kind or another, including heads of state, will be, I'm sure, dealt with. And precisely what the outcome of the discussion will be, I can't tell you at this point.

Q. Would you assess what impact, if any, these recent events will have on the talks, the events including the sailor who jumped in the Mississippi River and Mr. Yurchenko's return to the Soviet Union?

A. As far as the sailor is concerned, and for that matter the soldier who came into our Embassy in Kabul, the Soviet Union in our presence made certain undertakings to those two individuals, and so I think we're entitled to ask, "How are they doing?"

As far as the defector/redefector is concerned, he seems to be singing in Moscow as he sang here, and I don't think anybody takes seriously these things that he's now saying. So I don't see that it has any particular effect as far as we're concerned.

Q. If there is less hope now that there will be an arms reduction agreement, does that give the United States a greater interest in reaching agreements on confidence-building measures such as perhaps joint crisis centers or joint military command centers?

A. I don't know where the notion comes from that there's less hope now. Less hope than when? Actually, I think what has happened is a quickening of the pace of negotiations insofar as the nuclear and space talks are concerned.

Early last January we agreed to hold the talks. They got under way in the spring. We put a comprehensive set of proposals on the table, that sat there and got discussed through basically two rounds of negotiations. Then the Soviet Union came in with a counterproposal, and we came very promptly back with a counter-counterproposal. And in our counter-counterproposal, we picked up some of the ideas that were in the Soviet counterproposal. So that's, I think, a quickening of the pace, so I don't see where you get the "less hope."

There is—I think there is more taking place, but insofar as, "Will there be an agreement, when will it be," and so on, I think at least my basic rule is you don't have an agreement until you've got an agreement, and we're nowhere near that point at this stage of the game.

Q. How would you assess the Pentagon report on SALT violations? Have you seen it? Do you find it disquieting, and will it be brought up at this summit?

A. I think the problem of violations of agreements is a matter of tremendous moment, and it highlights the importance of that subject, and it highlights the importance of adequate means for verification, and that subject, verification, is very much a part of any discussions we have on subjects in the field of arms control or otherwise. So I think the Pentagon report underlines that—the importance of that subject and puts an exclamation point behind it.

---

Secretary's Interview on "Face the Nation"

Secretary Shultz was interviewed on CBS-TV's "Face the Nation" on November 10, 1985, by Lesley Stahl and Terrence Smith, CBS News.[1]

Q. As we all know, that ship with the Soviet sailor Medvid has now sailed, or is sailing, out of U.S. waters. Why did the Administration not seek to question the sailor one more time, once we knew that he had tried to commit suicide and that there were questions about his sincerity in not wanting to defect?

A. We went aboard that ship, after he was mistakenly returned to it, and insisted that he be taken off the ship, that it wasn't sufficient to interview him aboard; brought him onto a Coast Guard cutter; when he appeared to be sick, brought him ashore into a naval facility, and after he had had a good long sleep, questioned him intensively in the presence of a doctor, with a medical examination, a psychiatric examination, and repeatedly talked to him about his wishes. Well, all the people who were there are satisfied that he was perfectly in control of himself and able to make a decision, which he repeatedly stated, that he wished to go back.

Q. But during this time—

A. Why did he jump ship? Well, it would look as though he decided somehow that he wanted to come to the United States, and after he was subjected to whatever he was subjected to aboard that ship, he changed his mind.

Q. Who made—

A. In the interview in the psychiatrist's report, which is quite interesting to read, he repeatedly referred to "Mama and Papa," and he talked about life. So I have no basis for being explicit about what threats may have been suggested to him, but it's clear that he had his mother and father on his mind and, all things considered, decided what he wanted to do. And that was done very carefully, very intensively and properly, and we insisted on doing it.

Q. You know there was a published report this week that the United States intercepted an instruction from the Soviet Embassy here in Washington to that ship to drug Medvid, which certainly would have affected and changed his view. Is that true? Can you confirm that story?

A. I can't confirm that story, but I can say that when we insisted that he come off the ship, he was ill; and that's why we didn't just do the interview on the Coast Guard cutter. He was brought ashore, allowed to sleep, examined by a doctor, examined by a psychiatrist, and carefully—this was all very carefully done.

Q. Did you explain all of this to Senator Jesse Helms and the other members of the Agriculture Committee? And if not, why do you think they kept pressing for a second interview?

A. All of this has been explained very carefully, and why other people do whatever they do, I don't know. But I think, from the standpoint of what we did in the Department of State, we did a very careful job of seeing to it that this young man had every opportunity, in an environment where it was clear to him that if he decided he wanted to stay in the United States, he could do so, to make that decision.

Q. Was it the President's decision not to intercept the ship and take him off for another interview?

A. It was the consensus of all the people working on this—and in the end, it's a Justice Department matter what to do—but all the people, Departments of Transportation, Justice, State, and so on, agreed that there was no legal basis to hold the ship.

Q. The President himself raised the possibility that there might be some link or connection between this case, the redefection of Mr. Yurchenko, the KGB agent, and even the Soviet soldier in Kabul, some sort of deliberate "ploy," in his words, as pre-summit theatrics. Is that the way it seems to you?

A. I suppose it's possible, but I don't think we can say that it is with any kind of assurance.

Q. Do you think he was a plant, or do you think that he had a midlife crisis, as some people are suggesting, and got depressed and—

A. You mean the spy, now you're talking about, not Medvid?

Q. We're talking about Mr. Yurchenko, who redefected—

A. Yes, right.

Q. —and whether he was mishandled by his debriefers. Which side do you come down on?

A. I think he was a—he is a high person in the Soviet KGB, and my opinion is that he defected and, for some reason or another, changed his mind.

Q. Was the information he gave the CIA [Central Intelligence Agency] golden, or was it, as some people suggest, "chicken feed?"

A. I'm not going to comment on what he provided for us.

Q. What about the other side of that? What did he learn while he was here? Did he learn important things about our debriefing techniques or any other aspect about the way the CIA works that he can now take back to Moscow?

A. Obviously, he knows how he was handled because he was there, but he was not given any U.S. secrets at all.

Q. Why do you think the Soviets paraded him out and made this such a public thing? They very easily could have sort of hustled him back to Moscow and not made it so public. Do you think that they were trying to chill the atmosphere before the summit, or what's your theory?

A. Again, it's hard for me to know why they do the things they do, but I suppose they wanted to dramatize his redefection, since it has been dramatized that he had defected. Of course, what he said was just a packet of lies. He was not kidnapped; he was not drugged or any of those things, and I know nobody takes it seriously at all.

Q. We had another rather poignant story in the news this week with the hostages, the American hostages being held in Lebanon—

A. Yes, that is a—

Q. —sending a letter to the President and others describing their situation. Let me ask you this very quickly: If quiet diplomacy, as they say, is not working, and if the Administration says it can't negotiate on a thing like this, what do we do now? Is there any middle ground here?

A. We keep talking to those—trying to talk directly or indirectly—to those who are holding these innocent Americans—

Q. Do you know who they are?

A. —and to try to have the Syrians—we try to work out through whatever indirect contacts we have with the Iranians; we get after the Lebanese. We do everything we can think of, if there are others who seem to have a possibility of intermediation, such as the Algerians. We talk to everybody to try to make it clear to those holding hostages that they are holding innocent people, that they are not going to gain their objectives that way; they only bring opprobrium on their heads, and get them to release these people.

Q. You came back from Moscow this week telling people that Mr. Gorbachev was combative, that he interrupted you, and now we learn from the national security adviser [Robert C. McFarlane] that there will not be a communique after the summit, between Mr. Reagan and Mr. Gorbachev. Was the meeting that unproductive that you've decided now that there will be no statement, no mutual communique at the end?

A. What the national security adviser said was that it was unlikely. We have to report whatever happens at the big Geneva meeting. What form that will take remains to be seen; it depends upon what amount of things are able to be put together at that time.

Q. It's possible that the U.S. delegation reports one thing, or one way, and the Soviet delegation reports another. Wouldn't you say—

A. It's possible to do it that way.

Q. You sat and talked to this man for some time, Gorbachev, and we're all curious about him. What's he like? What sort of a person is he?

A. He's bright. You used the word "combative"—that's true. He interrupted, and I interrupted, and we had a good, vigorous, strong conversation. Personally—

Q. Was he like Khrushchev?

A. I didn't know Khrushchev; I didn't ever deal with Khrushchev. I dealt with Brezhnev; I dealt with Kosygin; I've dealt with Gromyko, Patolichev. I've dealt with quite a few of the Russian leaders. He is very much "on the front burner," smart—actually a good, strong, combative conversation. I liked it.

I think you learn something that way. It's much better than him reading something to me and my reading something to him, so it was worthwhile.

Q. What did you learn?

A. I learned that his view of the United States is very different from how I believe the United States is. I learned something about his various positions on all the subjects. We touched upon, in one way or another, practically anything you could mention.

I transmitted to him—and Bud McFarlane also was there; did a very good job of trying to get him to understand not simply what our positions are, but why our positions are the way they are.

Q. The American public has been, in a sense, subjected to a game of kind of "great expectations" here in recent days with a roller coaster effect. One day, they're told to expect a framework for agreement, or a statement of agreed ideas; the next day they're told, "No, very little."

Now, we can understand prepositioning. But you tell us, what is the very minimum that we should expect out of this summit?

A. I think that there has been a very steady and consistent appraisal of this by the Administration. We have said from the beginning that we have to be realistic about it, that there are great differences between our two countries, and that it is important, almost therefore, to have a strong conversation between the President and the General Secretary and to have subsidiary conversations, such as the one that I had. And we hope that there will come out of this a more constructive and stable kind of relationship; but it remains to be seen.

Q. Do you have—

A. It's necessary to work at it. There isn't any up-and-down strategy; it's a consistent strategy.

Q. Do you have reason to believe, from what you heard this week, for example, that we might get an agreement to have at least annual summits, and perhaps even semi-annual meetings between you and Mr. Shevardnadze?

A. It's certainly possible.

Q. It's something you want?

A. Actually, with Shevardnadze, I've met with him in the last 4 or 5 months four times, and I think it's been a good thing.

Q. I'd like to ask you about something the President said in his interview with *Izvestia*, when apparently he was imprecise, as officials say, in saying that he would give the Soviets a veto over his Strategic Defense Initiative (SDI).

A. He didn't say that.

Q. It was sort of—[Laughter]

A. No—

Q. As I understand, it was corrected.

A. His Strategic Defense Initiative is a research program designed to find out whether or not it's possible to defend ourselves against ballistic missiles. The President will never give up on that.

Q. But what about the question of deployment? When White House officials sought to correct or clarify what the President had said, they repeated several times that the President reserves the right to deploy the Strategic Defense Initiative.

Is that a signal that he plans to abrogate the ABM [Antiballistic Missile] Treaty eventually, that that's really what this Administration is aiming toward?

A. He has not only said what I just said about his Strategic Defense Initiative; he has also said that we are and will conduct ourselves in complete accord with the ABM Treaty. And insofar as what would happen if we find that it is possible to defend yourself against ballistic missiles, the President has said repeatedly that at that time, he's prepared to discuss and negotiate about it, in accordance with the ABM Treaty, not only with the Soviet Union but with our friends and allies.

Q. But you don't rule out eventually deploying it, isn't that correct? That's not being ruled out in anything you said or anything the White House has said?

A. One of the important things about this possibility is that if it's possible to defend ourselves, and we're able to put up a shield against ballistic missiles, wouldn't you feel a little more comfortable than with a strategy that depends upon somebody's forbearance against wiping you out? So we're not going to preclude that possibility.

Q. Which would mean abrogating the ABM Treaty?

A. No. What it means is that we want to talk with the Soviet Union and others about why a proper defense would not only be in our interest, but in their interest, and I think it's true.

Q. And if they don't agree, you're sort of signaling that you would deploy it. I mean that is what I keep reading in all of this.

A. We re not going to give up on something that we think will improve the security and safety of the American people.

Q. Isn't there a logical compromise here that could be struck right at Geneva in which the United States agrees to proceed with research on this, but since there is nothing to test right now anyway—that's what the scientists say on SDI—that they will defer and negotiate later about testing and deployment. Isn't that the heart of a possible compromise?

A. The ABM Treaty has a lot of things in it about this subject, and we will adhere to that treaty. In fact, the President has decided that we can answer the question that he has raised, within what people are referring to as a relatively narrow interpretation of that treaty, and that's where he is.

Q. Very quickly, because we are running out of time, will the President recommit to the SALT II Treaty at the summit?

A. What he has said is that adherence to the SALT II Treaty depends upon Soviet behavior and the ability to have our negotiations go forward toward lowering offensive arms levels—and that's the test.

[1]Press release 261 of Nov. 12, 1985. ■

U.S. and Soviet Interests in the Horn of Africa

by Chester A. Crocker

Address before the World Affairs Council on November 13, 1985. Mr. Crocker is Assistant Secretary for African Affairs.

I want to speak to you this evening about the Horn of Africa because it demonstrates some of the basic principles of American diplomacy in the Third World and the sharp contrast of those principles with those of the Soviet Union. The Horn is especially relevant for such discussion. It is a region of great strategic importance and, therefore, inevitably an area of world power involvement. It is also a region with deep and longstanding internal conflicts and fundamental economic and humanitarian challenges.

Thus, it is a perfect example of the situation about which President Reagan spoke in his recent address before the United Nations. It is an area in which the Soviet Union could, but does not, play a role in helping solve regional conflicts or in promoting regional peace.

The Horn of Africa is the northeast corner of Africa, composed of the nations of Sudan, Djibouti, Ethiopia, Somalia, and parts of Kenya. It has considerable strategic importance for the United States as it is relevant to both the security of the Middle East and to Africa. Physically, it is a key crossroads of air and sea routes. The Horn guards access to the Red Sea. It protects the southwest approaches of Arabia and sits astride the waters of the Nile on the southern flank of Egypt.

American interests in this area include safeguarding shipping lanes, particularly for oil tankers which fuel the economy of Western Europe. We seek access to airfields and harbors for our military forces should they, in times of crisis, be required to defend against Soviet expansionism in the Persian Gulf or the Indian Ocean or which challenges our friends in the region. We strive to halt Libyan adventurism and terrrorism, which poses a threat to every peace-loving country in the region. We seek to avoid the isolation of Egypt. We work to prevent radical pressures on Saudi Arabia and efforts to destabilize Sudan and Somalia.

The United States, for many years, has followed a consistent policy of promoting regional security, economic growth, and internal stability. These objectives are fully compatible with those of the peoples of the region.

By contrast, I can say, without exaggeration, that the Soviets, their Cuban allies, and their Libyan associates have systematically exploited internal divisions, civil strife, and historical cleavages to promote discord and dissension. The Soviet Union has not used its good offices or influence to promote a peaceful resolution of either internal or cross-border violence. Its major source of extending its influence and promoting its own interests has been through the export of weapons. At the same time, the Soviets ignore the massive economic needs of the people. Indeed, the Soviets stood by almost mute as their own client state, Ethiopia, wrestled with one of the greatest human tragedies of our time—the devastating drought of this past year, which all of us in America witnessed on our television screens and to which we responded with our hearts and our pocketbooks.

Soviet Regional Objectives

The Soviets have important objectives in this region, and we must be clear about what they are. For them, the narrow Straits of Bab el Mandeb at the mouth of the Red Sea are a potential chokepoint against Western Europe. Via the Horn, the Soviet Union seeks a foothold in Africa whence it can destabilize governments across the continent. The Soviets know that true nonalignment and economic and political growth will foreclose Soviet opportunities to remake the world in a Stalinist image.

These are not loose charges. The record is very clear. In pursuit of these objectives, the Soviet Union has developed a militarized diplomacy of tactical alliances; it has supported terrorism and dissidence against established governments and encouraged ethnic violence.

An alliance formed with Sudan in 1969 had faded away by 1976 following several Soviet-inspired coup attempts against the very Sudanese Government the Soviets professed to support.

The Soviets also established a strong military relationship with Somalia in the early 1970s and sought to exploit the

deep-seated tensions between Somalia and Ethiopia. They provided Somalia $435 million of arms—enough to convert this desperately poor land into an offensive threat to its neighbors. However, when Somalia and Ethiopia became engaged in a major war in the Ogaden region in 1977, the Soviets switched sides to exploit the superior strategic position of Ethiopia and the needs and personal orientation of Ethiopia's dictator, Mengistu Haile Mariam. Quickly, the Soviet Union began massive shipments of arms to its new client—shipments whose value has now exceeded $3 billion. It is symbolic of Soviet goals and Soviet means in its African policy that this war between Somalia and Ethiopia, which served to deepen the antagonisms between these neighbors, was fought with Soviet weapons on both sides. Furthermore, 2,500 of the 25,000 Cuban troops which fought in that war remain posted in Ethiopia's Ogaden frontier areas as a continuing tangible reminder of Soviet-Cuban adventurism—seeking unilateral advantages in the Third World—and of Ethiopian Government dependence on communist forces.

The Soviet Union has also established military bases in the Horn and adjacent areas. They first established bases at Berbera in Somalia but, after switching sides to Ethiopia, built an extensive facility in the Dahlak Islands in the Red Sea. Additionally, the Soviets are well-ensconced on the southern tip of the Arabian Peninsula at Aden and on the Yemeni island of Socotra in the Gulf of Aden. There are no American counterparts in this area to these extensive and exclusive Soviet military bases. Furthermore, we seek none.

U.S. Commitment to Fundamental Principles

We are, thus, talking about a region of unquestioned strategic importance and one where both superpowers are engaged. How the superpowers pursue their interests spells the difference between war and peace, between development and decay, for the peoples of the area.

In the Horn, the United States has remained committed to fundamental values as we protect our interests. Those principles are:

- We have helped by means of humanitarian aid, support for development, and—where opportunity exists, as in Sudan today—encouragement of democracy.

- Our support has been balanced and principled. Thus, we have placed emphasis on economic assistance and development, for this is what the region needs most. To this end, in nonemergency assistance we provided $337 million last year and took strong stands on reform which would provide greater equity and return to the majority. For example, price reforms in Sudan have given farmers far greater income and opportunity than they have enjoyed for years.

- Our military response has been clearly and unabashedly aimed at deterring aggression. We deployed American radar planes to Sudan to counter the naked aggression of Libya in Chad and again in response to the bombing of the Sudanese town of Omdurman. Similarly, we sent emergency military supplies to Somalia in 1982 to counter Ethiopian incursions.

- Our military assistance has been carefully designed to improve our friends' abilities to protect themselves but not to give them the capacity to make war on their neighbors. There is no incidence in this region of American military assistance having fueled aggression.

- Unlike the Soviets and their allies, we have never sought to exploit tensions within the region. On the contrary, we have offered our help and have conditioned our assistance on the pursuit of peaceful settlements in the region.

We have consistently urged resolution of the insurgency in southern Sudan. We made clear to the regime of President Nimeiri that we saw no military solution to this problem and that we would have to reexamine our military assistance program if a purely military solution was pursued. We have offered full encouragement to efforts by the new government in Sudan to find a peaceful settlement. We have consistently made clear to the parties to the conflict that we offer our help in bringing about a negotiated settlement to legitimate grievances.

Similarly, we have urged peace along the Ogaden border between Ethiopia and Somalia. While we have responded positively to Somalia's defense needs, we have never wavered from our support for Ethiopia's territorial integrity. Our assistance to Somalia poses no offensive threat to Ethiopia, and Ethiopia knows it.

When political change came to Sudan earlier this year, American principles were again in evidence. With President Nimeiri, we shared a conviction about the dangers of Libyan subversion and Soviet ambitions. Since his departure, we have welcomed the opportunity that now exists for greater democracy and reconciliation in Sudan. Thus, we have continued every form of our assistance to Sudan since the change in government. We have received the new government's assurances that it will not disrupt traditional ties of friendship to the United States or Sudan's commitment to regional peace or continuation of Sudan's hospitality toward refugees.

At the same time, we look with concern at the efforts of Libya and Ethiopia to subvert and frustrate the process of reconciliation and democratization in Sudan. Initial Libyan promises of petroleum and military items cannot hide the fact that their terrorists walk the streets of Khartoum. Libyan political operatives organize revolutionary committees dedicated to Qadhafi-style dictatorship, orchestrate political demonstrations, and subvert the newly freed press. We fear that Sudan may be forced down a path of internal instability and divisive politics which will undermine democracy and will threaten peace in the region.

Finally, when nature's calamitous hand brought drought and famine to the Horn, America's response was immediate and effective. The toll of human suffering was immense, indiscriminately striking down innocent people irrespective of the political orientation of their government. Our response was as unrestricted by geography or politics as the drought. American humanitarian aid was given to all countries affected by the drought—Ethiopia, Somalia, Sudan, Djibouti, and Kenya alike. In fiscal year (FY) 1985 alone, the U.S. Government provided over $700 million of emergency aid to the nations of the Horn, and another $150 million was donated by private citizens and corporations. This outpouring of assistance, both private and public, was truly a demonstration of what America is all about—compassion and respect for individual rights and opportunities.

The drama of this effort is, perhaps, well known. But the political significance is worthy of attention. In western Sudan, where millions were threatened with starvation because drought was compounded by the failure of the railroads and impassable nature of the roads, America, along with our European allies, stepped in with an air bridge, including American helicopters operating in the far reaches of western Sudan. In Sudan, the grain delivered by this bridge came to be known as "Reagan" and "Bush." And a new crop

of sorghum, grown from seeds delivered in this effort, is similarly called the "Reagan harvest."

Elsewhere in Sudan, as well as in Somalia and Djibouti, 1.3 million Ethiopians fleeing war, internal oppression, drought, and famine have found refuge. Hospitality toward refugees is a long-standing African tradition, and they have been well received. But resources to support refugees must come from abroad. Again, Americans responded generously. U.S. Government refugee aid totaled almost $200 million in FY 1985. And, as I earlier recounted, the level of U.S. private donations was unprecedented.

This is America. These are American principles at work. In the midst of political change and uncertainty in Sudan, "Reagan"—lifegiving sorghum—is delivered. In Ethiopia, where a Marxist government pursues policies of internal repression with Soviet weaponry, America is represented by desperately needed food, by caring American relief agencies, by unbelievably dedicated efforts to supply each and every needy region of the country with food—not weapons, not political dissension, not war.

Soviet Involvement in Ethiopia

How, by contrast, do the Soviets and their allies operate in the Horn? I have spoken of Libyan activities in Sudan. But the answer is clearest in Ethiopia, for it is in Ethiopia that the Soviets have gained their greatest foothold in the Horn. It is there, because of the sellout by a small band of Ethiopian Marxist ideologues, that the blueprint of Soviet ends and means is most visible. As President Reagan detailed during his recent address at the United Nations, Ethiopia stands not only as a bastion of Soviet influence but also as a case study of Soviet policy in Africa. Soviet influence and near domination have reduced this once proud and traditionally fiercely independent nation, with a history dating back to biblical times, to near vassalage. And the toll on the Ethiopians, as well as on the region, has been enormous.

Look at Ethiopia's internal condition. Since the Soviets became the dominant influence, Ethiopia's economy has seriously deteriorated. Even the once promising gains of the revolution have been undercut. Land reform, which all welcomed, has now been overshadowed by an emphasis on collectivization. Today, Soviet-style collective farms drain away the national agricultural budget but produce little. The economic policies pursued by Mengistu's regime have made it virtually impossible for international or bilateral donors to help Ethiopian development. As a result, Ethiopia is among the lowest per capita recipient of economic assistance of any country in Africa.

When the drought hit, deaths were exacerbated by bad policies which diminished food production in areas less affected by drought. But even more disturbing was the lack of willingness by the government to face the crisis and the Soviet influence that has, to this day, thwarted the Addis Ababa regime from full and open cooperation with Western relief agencies. Yet the Soviets stood by and offered no logistical help or food until after the West had made an enormous and well-publicized response. Out of the 1½ million tons of emergency food sent to Ethiopia since 1984, only 10,000 tons—less than 1%—came from the Soviet Union.

And what of Ethiopia's internal stability? In the years of Soviet influence, Ethiopia has been more terribly wracked by civil war than any time in modern history. The Soviets supply the arms and advisers, pushing their Ethiopian clients toward a military solution. And in doing so, in complete cynicism toward principle and in a situation where they had the potential to work for peace, they instead turn on the Marxist-oriented guerrilla groups that they once helped. The success of Soviet policy in Ethiopia can be measured by the casualties in the north and by the crowded hospitals in the capital city. One can only wonder if the Soviets find this grim harvest of death a means to keep Ethiopia hopelessly and endlessly dependent upon them.

And what of regional peace? Not only has Mengistu been a willing ally of the Soviet Union, marching down a path of terrible internal devastation, he was completely duped by Qadhafi into arrangements that have had grave consequences for the region. In 1981, Ethiopia joined Libya and South Yemen in a tripartite pact. Ethiopia was supposed to get large amounts of Libyan economic aid—a form of aid the Soviets refuse to provide—and help against their traditional enemy, Somalia.

In exchange, Mengistu abandoned the policy of mutual accommodation between Sudan and Ethiopia that is essential to peace and balance in the region and became the principal supporter of the southern Sudanese insurgents, enmeshed in Sudan's internal struggles.

And what has Ethiopia gained? In 1985, in true Qadhafi fashion, Libya abandoned support for the southern Sudanese in order to try to woo the new Sudanese Government. Apparently Qadhafi also promised to end his support for Somali dissidents based in Ethiopia in order to open his way into Somalia. Meanwhile, the promised Libyan economic aid to Ethiopia never materialized. Ethiopia has been left in deeper dependence on the Soviets and without a single ally on the Continent of Africa. Mengistu and his ideological cohorts have been as great a failure in diplomacy as they have been in economics.

Efforts To Improve U.S.-Ethiopian Relations

What has been true for some years, however, does not have to remain that way. The United States has been ready to engage with Ethiopia to bring about an improvement in relations between us on a basis that would not only improve bilateral relations but allow Ethiopia to regain its once proud role in the region—one in favor of peace, regional security, a strong OAU [Organization of African Unity], and African solutions to African problems.

Our efforts go back several years. We have repeatedly taken steps to engage the Ethiopian leadership in the kind of ongoing discussion of our differences that is necessary to build a better relationship. We offered such a dialogue through the normal channels of the Foreign Ministry, and through high-placed personages who professed a desire to see better U.S.-Ethiopian relations. Several efforts of this kind, each originally promising, ended in failure.

A year ago, we embarked on another such effort at dialogue. We sought discreet, serious, and substantive talks on the issues which divided us, e.g., those which stood in the way of regular economic assistance to Ethiopia, issues of regional peace and security, issues affecting Ethiopia's security, and bilateral political problems between our two countries.

For many months, the Ethiopians put off responding. Then they said they preferred to establish an agenda first. We developed as complete an agenda as one could ask and offered it to the government. They did not respond; we received nothing but obfuscation.

Last summer, there seemed to be a breakthrough. Congress, angered by reports of Ethiopian Government brutality and intransigence in obstructing

relief efforts, passed legislation that called for a presidential determination on whether the Ethiopian Government was following a deliberate policy of starving its own population. Suddenly, the Ethiopian Government started sending positive signals, including dispatching a delegation which professed a general desire for improved relations. When we asked, in this context, about our proposal for an indepth exchange on serious issues, which had remained unanswered for a year, the delegation promised that the Foreign Minister would reply during his presence here for the 40th anniversary of the United Nations. It saddens me to say that when the Foreign Minister came, he had no mandate from his superiors to engage on any of these issues. Fearful of a trade embargo, the government mounted a public relations campaign about a desire for better relations. But the Ethiopian leadership, apparently fearful of its Soviet mentors, would not permit any real progress in this direction.

That is the sad lesson of Ethiopia. Under Soviet domination, Ethiopia has lost its reputation for peace, its chances for development, its internal stability. It has become the one country in the region that makes no efforts toward peaceful solution of the region's many conflicts. Ethiopia today occupies two salients of Somali territory. These points lack any strategic significance. The Ethiopians know that withdrawal from those salients could set in motion a process of talks about peace on the Ogaden border, yet the Ethiopians refuse.

Ethiopia, alone of the African countries of the region, puts its full support behind military actions in southern Sudan and blocks those who try even to see the SPLM [Sudanese People's Liberation Movement] leaders to talk peace. Thus, Ethiopia becomes part of the problem rather than the solution.

How sad a contrast to the Ethiopia that was a founding member of the OAU and whose capital, Addis Ababa, in recognition of Ethiopia's role in the process, names the accords which ended an earlier Sudanese civil war.

I am heartened to report that our friendship with the Ethiopian people stands strong. The people—the farmers plagued by drought, the old, the infirm, the weak, the diseased, the children, the students, the urban dwellers, the militia, the military, government civil servants, and, we know, many senior officials themselves—know who helped Ethiopia in time of greatest need—not the Soviet Union, but the United States of America.

I am proud to state, as well, that our massive humanitarian effort in Ethiopia—providing over 50% of the food delivered and helping save millions of Ethiopian lives—was unconditional. We did not link the relief of human suffering to bilateral politics. When our diplomatic efforts were spurned, we continued to send food. I believe we did the right thing—as a matter of morality and of good foreign policy.

Today, I renew our offer of dialogue with the Ethiopian Government. We have much to discuss. There are issues of regional peace and stability; human rights, particularly the resettlement program; bilateral problems; the drought; and recovery. All of these issues must be addressed candidly. But, above all, I call upon the Ethiopian leadership to reassess its adherence to a partnership which has so far brought nothing to that war- and drought-stricken land.

Exploring Alternatives

There are alternatives, and the evidence is right before us in the Horn. We talk of deep-seated enmities. But two countries of the Horn, Kenya and Somalia, have addressed those enmities with statesmanship and determination. Over the last 2 years, there has been significant movement to overcome the border problems that plagued these two countries. Dialogue goes on between them; cooperation at the border has been enhanced; solutions are being found to nettlesome problems that once produced violence. We have been happy to help encourage this process. When our friends in the region are at peace, our interests are also served.

And there is an alternative to the economic misery in Ethiopia. Kenya also faced a major drought in 1984. It did not make the nightly news; not because it was not serious. Over a million people were at risk. But the Kenyan Government acted swiftly. It brought in grain; it worked closely with the concerned international community. It gave top priority to the emergency effort in the country's logistical system. You didn't see Kenya on your TV screen because Kenya acted in a manner in which there was no need for camps and almost no loss of life. Today, because of ample prices paid to farmers, Kenya is enjoying a bumper crop as the drought recedes.

And there is an alternative for longer term recovery. Somalia once followed the Soviet lead. It placed its economy under the stranglehold of Soviet systems and controls. Commerce declined, and Somalia's prospects seemed bleak. But recently, Somalia has taken steps to rid itself of these controls. Last year, some price controls were lifted, and trade was liberalized so that commerce might flourish. Despite the loss, for other reasons, of one of its principal markets, Somali exports jumped by 60%. And last week, in support of Somalia's development, Western donors and international institutions met in Paris and pledged $313 million for Somalia's development program next year.

This is our vision of the Horn. It is shared by our allies in Europe and Asia and our friends in the Middle East and Africa. The President issued the Soviets a challenge. The Horn is one of the regions where they could, if they were so inclined, respond. We call on the Soviets to:

- Work for peace in Ethiopia on the basis of regional autonomy, reconciliation, and respect for human rights. In return, we urge the leaders of the Eritrean and Tigrean movements to reciprocate and pursue all openings for a peaceful Ethiopia. But the Ethiopian leadership must set a framework for peace.
- Work for peace in Sudan. Urge Ethiopia to stop its support for Sudanese civil war and put its weight behind the process of reconciliation instead of destabilization.
- Urge the Ethiopian leadership to take the first steps toward peace along the Somali border by withdrawing from the towns of Balenbale and Goldegob.

For our part, we must remain involved in the Horn of Africa, and we plan to do so. Our principles for involvement are clear. To all the countries of the region, we hold out our hopes and our active cooperation in the cause of peace, stability, respect for territorial integrity, and improvement in the lives of all the people in all the countries of this region. ■

The African Economic Crisis

by John C. Whitehead

Oral statement before the Subcommittee on African Affairs of the Senate Foreign Relations Committee on October 24, 1985. Mr. Whitehead is Deputy Secretary of State.[1]

I appreciate this opportunity to discuss the African economic crisis, its roots, and what we, together with many of the African governments, can do about it. This is a propitious time for this hearing. Much has been happening in Africa in recent years. The opportunities for us to join in a more effective effort there are greater than during any time in the recent past. At the same time, the needs are more urgent.

The State Department, AID [Agency for International Development], and Treasury have been working very closely over the past several months on these issues. We have developed a significant new proposal for Africa and other poor countries which Secretary [of the Treasury James] Baker presented at the annual IMF [International Monetary Fund]-World Bank meeting in Seoul just 2 weeks ago. This proposal offers a comprehensive approach to Africa's problems of growth and development. It calls for a much more coordinated international effort and, particularly, for a stronger relationship between the IMF and the World Bank. Part of this proposal was adopted at Seoul, and we have strong indications of interest from the African beneficiary countries and from other potential donor countries on the broader aspects of our proposal.

Causes of the Crisis

Sub-Saharan Africa is in the most profound economic crisis of its history—a crisis many years in the making. The causes of this crisis—aggravated by the severe drought of the past several years—are many and complex. African countries came to independence, by and large, less developed than those countries on other continents. They have suffered from deteriorating terms of trade during the last several years. Altogether, sub-Saharan Africa's terms of trade have declined by approximately 13% since 1977, with each 1% costing these countries about $200 million in lost net export earnings.

But Africa's development potential has been further undermined by a series of policy factors which, in our view, represent equally fundamental roots of the problem. These include:

- Inappropriate domestic economic policies based on an overreliance on the public sector and inadequate attention to private sector development and free market factors;
- Disastrous neglect of the all-important agricultural sector, in which over 75% of Africans are employed;
- A population explosion: Africa now has the highest population growth rate in the world—over 3% per annum; and
- The rapid buildup since the 1970s of African external debt, with the resulting heavy economic burden of debt servicing. From 1973, to 1983 Africa's medium- and long-term debt rose from $14 billion to $66 billion.

As a result, Africa faces a crisis of growth. The average African today is poorer than he was in 1970. According to World Bank data, average per capita GDP [gross domestic product] in Africa has declined by about 4.5% since 1970. Unless current trends are reversed, African standards of living will continue to deteriorate. Without renewed growth,

Deputy Secretary of State

John C. Whitehead was born in Evanston, Illinois, on April 2, 1922. He grew up in Montclair, New Jersey, attended public schools there, and graduated from Montclair High School in 1939.

He attended Haverford College, from which he graduated in 1943 with a B.A. degree in economics.

During World War II he served in the U.S. Navy aboard the *U.S.S. Thomas Jefferson* and participated in the invasions of Normandy, southern France, Iwo Jima, and Okinawa. While still in the Navy, he was later assigned as an instructor at the Harvard Business School.

After the war he attended the Harvard Business School and received his M.B.A. degree with distinction in 1947. He later received honorary LL.D. degrees from Haverford College and Pace University.

He joined Goldman, Sachs and Co. in 1947 as a junior statistician and has worked there ever since. He became a partner in 1956 and senior partner and cochairman in 1976. During that period, Goldman Sachs developed into one of the world's foremost investment banking and brokerage firms. Mr. Whitehead announced in August 1984 that he would step down as cochairman and as a general partner of Goldman Sachs on November 30 but continue as a limited partner and as chairman of the firm's International Advisory Board. Since that time he has devoted the majority of his time to activities in the nonprofit sector.

Mr. Whitehead has served on the boards of directors of numerous companies, including American District Telegraph Company, Crompton Company, Crompton and Knowles Corporation, Dillard Department Stores, Inc., Household International Inc., Loctite Corporation, and the Pillsbury Company. As a leader in his industry, he has served as a director and chairman of the Securities Industry Association and as a director of the New York Stock Exchange. From 1968 to 1970 he was chairman of the Advisory Committee to the Securities and Exchange Commission's Institutional Investor Study.

Long active in a variety of educational, civic, and charitable activities, he is a member of the Board of Managers of Haverford College and of the Board of Overseers of Harvard University. He was previously a trustee of the Carnegie Corporation and the Carnegie Foundation for the Advancement of Teaching.

He was formerly the president of the International Rescue Committee, in which capacity he traveled widely around the world in the cause of political refugees. He was also a director of the New York City Partnership, the New York Chamber of Commerce, the Economic Development Council of New York City, the American Productivity Center, Junior Achievement, and Outward Bound. He remains a member of the Conference Board and the Council on Foreign Relations.

For many years he has been active in Republican political affairs and was for 10 years a councilman in his hometown of Essex Fells, New Jersey. A former cochairman of the Republican National Finance Committee, he has been an active fundraiser for local, state, and national candidates. He is a former member of the President's Commission of Executive Exchange.

Mr. Whitehead was sworn in as Deputy Secretary of State on July 9, 1985. ■

the threat of famine and starvation will continue. Without renewed growth, African countries will increasingly be subject to political upheaval and instability.

The Need for Economic Policy Reform

Our policy toward the Continent of Africa is based on a search for peace, stability, economic growth, and development. Those objectives are intimately related, are widely shared by most African governments, and are mutually reinforcing. The challenge today is to create an environment in which Africa can get back on the path of growth and pursue those objectives.

To encourage growth, some major policy changes had first to take place in Africa, and the donor community has had to change the way assistance was provided.

This need for policy change has, thus, been the focus not only of recent U.S. economic policy in Africa but of the World Bank, the IMF, other donors, and the African governments themselves. We have made policy reform one of the pillars of our assistance program in Africa and a major part of our dialogue in international financial institutions.

African governments have made it a central concern as well. There is a definite trend now toward policy reform designed to encourage the private sector and to reduce the role and size of state involvement in the economy. Let me cite some examples:

- Twelve African countries have taken strong steps in a effort to stabilize their economies by reducing government deficits and limiting credit to the public sector. In Zaire, the central government has converted a deficit equivalent to 6% of GDP in 1982 to an anticipated surplus in 1985.
- Fourteen countries have allowed agricultural prices to rise substantially toward market levels and have liberalized the marketing of agricultural products. In Somalia, all price controls on produce and internal agricultural marketing restrictions have been eliminated.
- Eleven countries have begun to reform their public commercial enterprises. Guinea expects to reduce the number of such enterprises from 150 to 15.

The United States has played a positive and influential role in this process. Aid to Africa has increased steadily under this Administration. We now provide a total of more than $1 billion a year in regular assistance to the 46 countries of sub-Saharan Africa—a fivefold increase over a decade ago. In addition, the American people and the U.S. Government responded in extraordinary ways to the devastating drought and the terrible specter of famine. Our emergency aid in FY [fiscal year] 1984 and 1985 was itself more than $1 billion; private American donations have amounted to more than $200 million.

What I want to emphasize, however, is that our assistance policies now focus on the need for recipient government policy reform. Since FY 1982, we have increasingly used our balance-of-payments assistance to Africa to promote trade liberalization, agricultural price changes, reductions in the number and influence of public commercial enterprises, an improved climate for private investment, and other reforms. Evidence of this can be found in Senegal, Sudan, Somalia, and Kenya. Last year, we launched the Africa economic policy reform program, which provided additional and more flexible forms of support to those African countries that were not major recipients of U.S. balance-of-payments aid and that were prepared to undertake significant reforms.

Our policy reform program was a precursor and has given impetus to the creation of a similar program: the World Bank's special African facility—a facility which, together with bilateral funds available for cofinancing, will have about $1.2 billion over 3 years to finance policy reform programs in Africa. We have coordinated our policy reform efforts closely with the World Bank and, as the Bank's facility enters an operational phase, we will have greater opportunities for such cooperation.

Impediments to Growth

As important as this fundamental shift in thinking and policy is, Africa's return to growth will not be as rapid or dramatic as any of us would like. Africa still depends, in large part, on exports of raw material for which prices remain depressed. With proper incentives, new export sectors, especially in agriculture, will develop; but this will take time. Meanwhile, Africa suffers from a major debt problem, and servicing that debt directly affects Africa's ability to promote the growth it so desperately needs. Indeed, without more resources for growth-oriented investment, Africa's recent reform efforts will stumble because of continued stagnation and the political resistance and instability stagnation breeds.

We already see the manifestation of this problem in several cases where reform has been significant. For example, in Zaire, which has adhered closely to the reform recommendations of both the IMF and the World Bank since 1982, debt service takes almost 60% of the domestic budget, crowding out needed services and infrastructure maintenance. If nothing is done, it will grow to more than 90% by 1990—clearly an intolerable situation. In Zambia, the government's inability to repay mounting debt is holding Zambia back, even though it has just adopted a major reform of its trade and marketing structures. Somalia, Liberia, Gambia, and many, many other African countries face this same problem.

We are at a critical turning point. We must enable this process of reform and growth-oriented policies to go forward, or we will witness further stagnation, loss of will, backlash, and potential instability. Our friends in Africa—those on whom we count for many things and who have joined us in taking sound steps to restructure their economies on free market principles—will be the ones most threatened.

U.S. Proposal

It is for this reason that the Administration has put so much effort into the proposal which Secretary Baker made at Seoul and which my colleague, [Assistant Secretary of the Treasury for International Affairs] David C. Mulford, will describe to you today in greater detail. This proposal would, in the first instance, increase substantially the amount of concessional financing that African and other poor countries could receive from the IMF through the Trust Fund. Our broader proposal calls for a greater role for the World Bank through increased structural lending and by putting more World Bank resources into the poorer countries. The success of this broader approach depends on a stronger relationship between the World Bank and the IMF, working together with African countries to develop comprehensive growth-oriented economic programs that both World Bank and IMF Trust Fund financing would support.

The proposal for channeling Trust Fund repayments to the poorer countries was adopted by the interim committee at Seoul. We are now receiving indications of support and interest for the broader proposals from both Africans and other donors. Much remains to be done to develop this broader proposal and to give it specific form. We plan to work hard with our African and OECD [Organization for Economic Cooperation and Development] friends and with the international financial institutions to make it work.

In the context of this broader approach, we would be prepared to consider additional resources for this effort in coming years if other donors also make equitable additional contributions. We know the magnitude of the task is great. I am convinced, however, that while a sustained effort by the international community and the United States will be required, this joint effort can ultimately provide the very engine of growth needed to reduce Africa's unhealthy dependence on foreign donor assistance. However, we can only go forward with such an additional effort when the mechanisms of coordination are established and the pace of structural adjustment in Africa makes the use of such resources productive.

Conclusion

I am encouraged that we can find solutions to Africa's current problems. African countries have already embarked on an economic reform process in a wide range of areas. The international community, in turn, is responding with more flexible forms of assistance targeted to structural change in favor of market forces. We are addressing the special problem of debt. The United States has played a leading, catalytic role in all these efforts. But, clearly, the task ahead is beyond the capability of a single country. As the Bonn summit experts' report stated: "The magnitude of the challenge calls for a renewed and strengthened international partnership with Africa."

We wholeheartedly accept this call for action, and we have begun.

[1]The complete transcript of the hearings will be published by the committee and will be available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. ■

The Challenge of Negotiating by Democracies

by Kenneth L. Adelman

Address before the 16th Annual Leadership Conference Center for the Study of the Presidency in Grand Rapids, Michigan, on November 3, 1985. Mr. Adelman is Director of the Arms Control and Disarmament Agency.

This weekend is a good time to be discussing arms control and the media's participation in it. Just this past Friday our negotiators in Geneva began presenting President Reagan's new arms control proposal, which is both detailed and far-reaching. That presentation will continue over the next few days.

President Reagan's proposal seeks to nurture those positive "seeds" in the Soviet proposal a few weeks ago—particularly by using some of their concepts but applying them in a way that would be fair and equitable. Our new proposal attempts to reconcile and meet the major problems that have bedeviled this arms control endeavor for years. I want today to touch only briefly upon those major problems and then to focus on aspects that make arms control especially difficult for any President in our political system.

Looking at U.S.-Soviet arms control negotiations, what may first strike any objective observer is the extreme intellectual difficulty in fashioning proposals—as we have done over the past month—in a fair way to offset the two sides' force structures and approaches. The two sides could not be more different in these respects. The U.S. force structure stresses balance between the three legs of the triad—on land, sea, and air—and technological sophistication; U.S. doctrine emphasizes deterrence and a retaliatory strategy. The Soviet force structure places heavy emphasis on much larger land-based forces with more hard-target kill capability; Soviet doctrine emphasizes classical warfighting which includes preemption, or striking first if they believe war is imminent.

Also, the two sides could hardly be more different in terms of compliance, once an agreement is signed. As President Reagan has documented to the Congress over the past 2 years, the Soviets have clearly violated a number of arms control obligations they have undertaken, and probably violated many others. These include undertakings in nearly all the arms control treaties to date—including the ABM [Antiballistic Missile] Treaty, SALT [strategic arms limitation talks] II, the 1925 Geneva protocol, the 1972 Biological Weapons Convention, the Limited Test Ban Treaty, the Threshold Test Ban Treaty, and the Helsinki accords.

Soviet violations of arms control commitments they freely entered into cut to the quick of the arms control process itself. I am often asked, "why go for new agreements, when the Soviets are violating existing ones?" Good question. The answer is primarily because in the negotiations and in other channels, we should not give up seeking effectively verifiable limits that are in the interest of the United States and would reduce the risk of war—and because in these processes we can press the Soviets to comply fully with their existing obligations. However, their refusal to do so thus far casts a dark shadow over the future of arms control.

Another, and perhaps the greatest, obstacle to successful U.S.-Soviet arms control over these many years of effort stems from the character of the Soviet Union itself. It is clear to one and all that the Soviet Union poses the greatest threat to our values and to our security in the world today. The Soviet Union unmistakably has an expansionist international policy and a repressive domestic policy.

Arms control is designed, above all, to reduce the risks of war, especially nuclear war. This Soviet pattern of behavior only increases the risk of war. Soviet or Soviet-sponsored intervention and troublemaking in various regions—whether in Berlin in the late 1940s, Korea in the 1950s, Cuba in the 1960s, the Middle East and Africa in the 1970s, and Afghanistan in the 1980s—have raised the danger point of wider conflict in the world.

Moreover, aggressive Soviet behavior poisons the atmosphere for true arms control. The Soviet invasion of Afghanistan and intervention in the affairs of Angola and Ethiopia—along with its unrelenting buildup of military forces—effectively iced arms control in general and SALT II in particular in the late 1970s. Their expansionism and repression can only diminish the

American peoples' enthusiasm for striking deals with them.

Today I would like, as I said, to examine most closely the set of problems in arms control that confront our Presidents in managing arms control negotiations with the Soviet Union. President Ford faced these problems, as have other postwar Presidents. President Reagan faces these problems acutely today. Here, as in many other areas, the greatest strengths of our democratic institutions can also cause the most difficulties to those of us out there, on the front lines, trying to make progress in arms control.

The Public's Attitude Toward Arms Control

The American people, as in so many areas, typically vacillate in their attitudes toward arms control, surging from crashing disappointment to euphoric hope: disappointment at times when meaningful outcomes seem nigh unto impossible to achieve. Hope at times because democratic societies have a fantastic ability to overcome obstacles and achieve the unexpected.

Former Secretary of Defense Harold Brown understood the disappointment, which he shared after all his years dealing with arms control, when he wrote:

> Measured against these glittering possibilities, the achievements of arms negotiations to date have been modest indeed... In all, not much to show for 35 years of negotiations and 20 years of treaties.

On the other hand, Alexis de Tocqueville shared the hope, the great potential of democracies, when writing in *Democracy in America* 150 years ago. "Democracy," he observed:

> does not give the people the most skillful government, but it produces what ablest governments are frequently unable to create; namely, an all-pervading and restless activity, a superabundant force, and an energy which is inseparable from it, and which may, however unfavorable circumstances may be, produce wonders.

With all of this potential, why are we so discouraged, so frustrated? Disappointment stems naturally from unrealized and, in many cases, unrealizable expectations. Some Americans expect that arms control negotiations can produce a significant and lasting "peace accord" with the Soviet Union, one that can be settled fairly quickly and last forevermore. It is remarkable how often the media, even the best of the lot, interchanges "arms control agreement" with a "peace accord"—even though arms control is only one ingredient of peace, and not the most central one. For arms control cannot usher in a less totalitarian type of government and more open society in the Soviet Union. Arms control alone cannot temper its expansionist tendencies.

Arms control negotiations—like other international talks, but probably more so—require "political patience," and lots of it. That is a commodity rare indeed in our "go-go" society. For America's impatience is as old as it is endemic. Our national impatience runs strongly in our veins and is manifested in Congress. De Tocqueville saw this other side of the coin—noting that our system: "...can only with great difficulty regulate the details of an important undertaking, persevere in a fixed design, and work out its executions in spite of serious obstacles. It cannot combine its measures with secrecy or wait their consequences with patience."

Persevering "in a fixed design" is a major difference between our democratic, free-enterprise system—which rewards risktaking and thrives on innovation—and a totalitarian, centralized system—which rewards risk aversion and thrives on predictable control.

Surely, the Soviets have previously watched the pace of changes in U.S. arms control proposals over the years with a fair amount of pleasure, which frequently have not even prompted new approaches from the Soviet side. They typically wait for us to move closer to their positions, which we invariably do, while they basically stand pat. The Soviets happily watch our twists and turns in negotiations among ourselves, pocketing benefits to themselves while persevering in their own objectives.

To stay the course on our goals is to be serious about arms control. You no doubt appreciate how the recent Soviet counterproposal contains several unacceptable and extremely one-sided elements designed to increase, not strategic stability, but rather Soviet superiority in key elements.

In a nutshell, the Soviet counterproposal did nothing to narrow the gaps between their position and ours. Rather, their counterproposal would have us choose between clear U.S. strategic inferiority or clear U.S. withdrawal from the defense of our allies. That's no choice at all. No U.S. Administration would ever accept either alternative. It's a no-go from square one.

Still, for the first time, the Soviets have seemed willing to entertain at least the idea of deep reductions in nuclear arsenals. This is the key "seed" that, as the President has said, we are nurturing with our new ideas. Significantly reducing the nuclear arsenals that exist today has been one of President Reagan's prime arms control objectives since taking office. By sticking to this course, the Soviets may now be getting the President's message. We hope so, but we have yet to see.

To be successful over the long haul, we must curb some of our instinctive American impatience. No significant agreement lends itself to speedy results—even those without all the intricacies and complexities of nuclear accords, and without the natural caution that both sides have when negotiating over items at the core of their national security.

The Austrian State Agreement of 1955, for example, took more than 10 years of hard negotiations to conclude. Impatience there may have doomed Austria to less than the complete removal of Soviet occupation troops and less than the establishment of a fully democratic, neutral state in the heart of Europe. A free, neutral Austria was worth 10 years of often maddening negotiations with the Soviets. The Limited Test Ban Treaty negotiations spanned 5 years, the Nonproliferation Treaty took more than 3 years, SALT I took over 2 years, and SALT II over 7 years.

Information Leaks that Sabotage Negotiations

The inability of democracies to keep a secret, for long anyway—as also recognized by de Tocqueville—is as endemic as our impatience. Leaks in arms control sabotage success in negotiations. The likely prospect of leaks often spurs administrations to preemptively announce any new offerings to get it right on the record. The President has resisted temptation, particularly last week, as he wanted our negotiators in Geneva to be the focal point for the Soviets to learn of our proposal. Unfortunately, however, leaks still occurred.

Leaks of this kind have become standard fare, and not a very positive one, to those who desire extensive substantive progress in arms control talks. Sure, all the publicity adds a dramatic flare, but such is precisely what arms control does not need. Public fanfare invariably leads to dashed hopes

and deepening suspicions that the arms control endeavor is more one of public relations than of national security.

The problem here is a colossal one. A glaring deficiency in democratic systems is the unavoidable urge, if not necessity, to exaggerate in order to make an impact. Flamboyant rhetoric and startling conclusions come where subtlety and even ambiguity would be much more apt. Our flamboyance and openness contrast with Soviet stodginess and secrecy. Looking at us, the Soviets face a cacophony of voices, of facts and views, an information-overload. Looking at the Soviets, we face an unsettling scarcity of inside knowledge and hard data.

Due to such a contrast, verification is a problem almost exclusively for the United States. The Soviets should and, I believe do, know that we comply with agreements. They can learn easily about U.S. actions and programs through our press and Congress. It's all there for them to read, see, and hear.

These—or really any type of—freedoms are nonexistent in the Soviet Union. We cannot thus count on any congressional hearings there, on leaks there, on any *Aviation Week* there, on investigative reporters there, or on memoirs there. Rather, we must rely almost exclusively on our intelligence capabilities to verify their compliance. That is tough, and is simply not enough for many arms control measures.

Compliance and Verification Problems

Even more worrisome and nettlesome is verification's twin sister, compliance. The two are related, and each is critical. Arms control is empty without compliance. What to do about Soviet violations of arms control accords remains perhaps the most confounding of all arms control problems.

- The usual diplomatic deliberations of the Standing Consultative Committee and higher-level diplomatic protests are necessary but surely not sufficient. Too often, they become a dialogue of the deaf when the Soviets choose, as they frequently do, not to be responsive.
- Responding with military programs can be useful, and President Reagan has directed a review of defense measures that may be appropriate and necessary.
- Cancellation of our obligations in treaties that the Soviets violate is another possible recourse, but one politically painful in our country and at times, I believe, clearly unwise.

For years, it was surmised that strong domestic and international reactions would invariably follow a Soviet violation, which would prompt the Soviets to avoid or, at least, end any violations. People once believed in this "massive reaction" theory of treaty adherence. But the muffled voices coming after the President's report identifying clear Soviet violations sadly shows this theory to have been wrong.

But the bottom line remains unchanged: Effective responses must be found; Soviet cheating must stop. Otherwise, arms control simply is doomed. For a treaty limitation respected by open societies and violated by closed societies is no treaty limitation at all. It is not arms control at all. Instead, it is unilateral disarmament in the guise of bilateral arms control.

The Discontinuity of Changing Leadership

Another problem democracies face, in what de Tocqueville called "persevering in a fixed design," centers around our leadership changes. Presidential changes, which were frequent in the 1960s, and 1970s, break continuity and inhibit tough, consistent approaches to arms control which are so essential to achieving a sound agreement.

In the initial decade-and-a-half of strategic arms discussions, five different U.S. Presidents faced the same General Secretary of the Soviet Union. Arms control was characterized by a fair amount of discontinuity on our side, especially since three of the past four

Arms Control Negotiations

PRESIDENT'S STATEMENT, NOV. 14, 1985[1]

I met today with the senior American negotiators at the Geneva nuclear and space arms talks, Ambassadors Max Kampelman, John Tower, and Maynard Glitman. The meeting provided an opportunity for our chief negotiators to brief me on the just concluded round of negotiations in Geneva and on their perspectives for future developments in the talks.

This past round in Geneva, the third in the negotiations which began this past March, has been useful. It was marked by the Soviet presentation, in late September, of a counterproposal to the concrete reductions offers which the United States had put forward at the outset of the talks. Drawing on the counsel of our negotiating team and of our experts in Washington, we analyzed this Soviet counteroffer very carefully, making clear both its positive elements and the areas in which it fell seriously short of the criteria which we have established for an effective and equitable arms reduction agreement. As I have emphasized before, these necessary criteria are deep cuts; no first-strike advantages; research on defense, because defense is much safer than offense; and no cheating—that is to say, full compliance.

Building upon these criteria, as well as the positive seeds in the Soviet counterproposal, I instructed, on November 1, our negotiators to table a new set of proposals in Geneva. These new U.S. proposals cover all three areas of the negotiations: strategic nuclear arms, intermediate nuclear forces, and defense and space arms.

These new developments in the Geneva negotiations demonstrate that a serious give-and-take process can now take place. We welcome this, and we are determined to do our part to bring about the real nuclear reductions that the world desires and deserves. If there is equal determination and flexibility on the Soviet part, this can be done. I, therefore, hope that my coming meeting with General Secretary Gorbachev will give further momentum to this process.

Finally, I expressed the gratitude of all Americans to Ambassadors Kampelman, Tower, and Glitman for their highly professional and very patient negotiating efforts in Geneva, and my own appreciation for the wise counsel they have provided to me. Their continued efforts and advice will be vital in the days and months ahead, as we strive for radical, equitable, and verifiable cuts in nuclear arms.

[1]Text from Weekly Compilation of Presidential Documents of Nov. 18, 1985. ■

Presidential elections have been marked by challengers who had vigorously opposed the incumbents' arms control approach, and who won.

While such changes are the norm in democracies in the 1980s, a role reversal occurred. Instead of rotating American leaders there has been a pattern of fleeting Soviet leaders. President Reagan had to deal with three different Soviet leaders in his first 3 years in office. All those Soviet leaders were afflicted with serious ailments. The disruption here was not so much newcomers opposing their predecessors as it was stagnation in Soviet policy.

Today, however, the Soviet Union has a younger and much more dynamic leader. As witnessed by General Secretary Gorbachev's actions and public affairs efforts, the stagnation in Soviet policy has ended. A stronger regime in Moscow can preside over the tough arms control decisions necessary for a good agreement. But a stronger regime in Moscow can—if it so decides—constitute a greater rather than lesser threat to the interests of free societies. Beware of too much vigor by the Soviets.

Struggling Inside the U.S. Political Factor

Last—in any list of factors challenging our Presidents in managing arms control—surely is the bureaucratic and political factor. A Washington wag has it that negotiating with the Soviets is nowhere as maddening as the ordeal of negotiating within the U.S. Government. This is said only half in jest, the smaller half to be sure. The struggle occurs on many fields: within the Executive Branch itself, between the Executive Branch and the Congress, among various interest groups, and out in the general public.

Congress, of course, has a major role not just because of the requirement for Senate advice and consent for any treaty, but also because of its power over the purse and its formidable power to bring pressure to bear. Participating in the midst of the political interplay in Washington is like playing multidimensional chess.

Free and open exchanges are part of what makes us a healthy nation. Divergency of viewpoints on arms control should always persist, and no doubt will. President Reagan consistently welcomes a full range of views on arms control from his top advisors. He surely gets his wish fulfilled, and in spades.

But this is an area where a large degree of consensus on the big issues is needed if arms control is to serve our security interests. On the big issues, the differences among contending parties in Washington is miniscule—at any time—compared to the gap between U.S. and Soviet positions.

Much of the media play about arms control being in disarray simply misreads why more progress has not been made. It is part of the "blame America first" phenomenon described by my former boss, Jeane Kirkpatrick. The fault lies not in our governmental system, but rather in Soviet intransigence.

Another problem that can impede arms control progress is the growing tendency for Congress to link support for individual weapons systems with the vicissitudes of arms negotiations. This approach has grown remarkably popular in Congress, far more popular than it deserves to be.

An extreme example was embodied in the June 1984 Aspin amendment. This was at the time when the Soviets had walked out of the nuclear arms control talks. The amendment provided the Soviet Union an opportunity in effect to kill the MX missile—a strategic system supported by four U.S. Presidents and a distinguished bipartisan panel (the Scowcroft commission) as essential to our national defense. And, what did Moscow have to give up in return? All Moscow had to do under the amendment's term was to send a delegation to Geneva to resume a negotiation that it had no business of interrupting in the first place.

Defense programs—whether the MX, the Pershing II, or ASAT [antisatellite system]—should be designed and supported to meet U.S. security needs. They should be funded or discarded solely on that basis. If those security needs change because of sound arms control agreements made with and respected by the Soviet Union, so much the better. We can then change our defense programs—but not until then.

The President must work and negotiate with Congress. But there is a big price to be paid when these negotiations—not with the Soviets—but with the Congress go too far. Presidential control over both arms control and strategic planning thereby ebbs. Both are deprived of the coherence and continuity they desperately need.

No arms control negotiation can be successful without central management. Indeed, no negotiation of any kind can be. If the President fails to gain congressional approval of basic strategic programs, the Soviets are encouraged to be obstinate even longer. The Soviets are tough negotiators to begin with—taking what they can and giving as little as possible, or preferably nothing, in return. Actions which weaken our negotiating hand can, and usually do, strengthen theirs.

No amount of American imploring or unilateral concessions—such as killing the MX, or decreasing funding for strategic defense, or stopping ASAT tests—is likely to get the Soviets to negotiate more seriously. If we hand the Soviets strategic superiority by our own neglect in defense programs, we cannot retain strategic parity through diligence in arms negotiations. Unilateral concessions on our side result in unilateral advantages on their side. The Soviets take such concessions not as a sign of good will but as a sign of a lack of will.

While I have focused today on key problems democracies face in arms control and, to be sure, other negotiations, the freedom which democratic institutions protect is our most cherished asset, our greatest strength and our brightest light to oppressed people around the world.

Despite the problems found in the practice of freedom, none of us would trade the system for the world. Winston Churchill summed it up nicely in the House of Commons in 1947: "It has been said that democracy is the worst form of government except all those other forms that have been tried from time to time."■

Making Arms Control Work

by Kenneth L. Adelman

Address before the Associated Press Managing Editors Association in San Francisco on October 31, 1985. Mr. Adelman is Director of the Arms Control and Disarmament Agency.

I would like, today, for you to picture this: Russia proposes a freeze on weapons and weapons technology and an agreement renouncing first use. Germany debates the proposal. Many label it a trick to mislead Western opinion.

The year was not 1983 or 1985. It was 1898. The SDP [Socialist Democratic Party] Congress in Germany eventually welcomed Czar Nicholas' proposal to the extent that it recognized the need to stop accumulating weaponry. But the SDP also said that to take the proposal "seriously it is necessary for the Russian Government to set a good example . . . by ceasing to accumulate weapons, by ending the cruel persecution of those who do not share its political beliefs, and by granting the Russian people those rights and liberties" necessary for civilization.

Some things never change. But some things do. Nuclear weapons now present a new specter hanging over civilization.

Unfortunately, rational public discussion on arms control matters has been the victim of increasing emotion, rhetoric, and propaganda. This has been particularly true with respect to the U.S. Strategic Defense Initiative (SDI).

But other issues frequently fall victim as well. The Soviet Union has open access to the public debates in free societies. It marshalls its public diplomacy and propaganda tools to serve its own objectives, while allowing no such openness or give-and-take within its own society.

As the world focuses on the ongoing negotiations in Geneva, and on the upcoming meeting between President Reagan and Secretary General Gorbachev, reason should prevail over emotion. No easy solutions exist to the tough arms control problems we face and that so-called quick fixes are illusory at best, exceedingly dangerous at worst. The essayist, H. L. Mencken, once quipped: "There is always an easy solution for every human problem—neat, plausible and wrong."

The primary security objective of the United States and—I believe, of democracies everywhere—is to reduce the risk of war while preserving our most precious national hallmark: Americans—especially those who work in the press—have a vested interest in freedom. There can be no impartiality in the global battle between open and closed societies, between democracy and totalitarianism. There, free people around the globe stand together.

Keeping the Spotlight on Arms Control

Arms control is one important element of our security policy, but only one. It complements other necessary measures such as maintaining forces for an adequate deterrent.

Indeed, history shows that strength deters and weakness is provocative. Adequate defenses provide the foundation on which effective deterrence and arms control must rest. Inadequate defenses are conducive—not to arms control and mutual restraint—but to instability and aggression.

As was the situation in 1898, to which I referred earlier, so today arms control must be part of a broader policy and framework—the broader policy to stop aggression and spread human rights and freedom. The rivalry between East and West is not the result of personalities, of simple misunderstandings, of arms buildup, or of economic competition. That rivalry stems from fundamental moral and political differences that are reflected in differences over a wide range of international, regional, human rights, defense, and other problems. Weapons are the symptom of this struggle, not its cause. Weapons do not bring war. Aggressive policies do.

Thus, arms control cannot be the sole element in the East-West dialogue. The Soviets would like to make it so since highlighting arms control plays into their strong suit—military power—and allows them to put themselves, in this realm at least, on an equal plane with the United States. Putting the spotlight on arms control serves the Soviet interest in increasing pressure from the American public, Congress, and allies to make unilateral concessions, while the Soviets themselves face no such pressures since they have no such free publics, parliament, or allies.

Keeping the spotlight on arms control also serves the Soviet interest in keeping the light off human rights issues and regional issues—particularly, Soviet aggression in Afghanistan and their direct or indirect aggression in Africa, Central America, and South Asia. Arms control is the sole area where they can reasonably expect the United States to give up some gains, whereas in human rights and regional issues, the world reasonably expects the Soviets to give up their repression of their most creative citizens and their conquests of the 1970s—in Afghanistan, Nicaragua, Angola, Laos, Cambodia, et cetera.

The Soviet Union's expansionist behavior and disruptive policies fuel mistrust and undermine the arms control process. It is impossible to forget that the Soviet invasion of Afghanistan and intervention in the affairs of Angola and Ethiopia—combined with its unrelenting buildup of nuclear and conventional forces—derailed detente and effectively stalled arms control in the 1970s.

Soviet failure to comply with undertakings it has freely entered into also fuels mistrust and undermines arms control. The Soviets' questionable activities under a number of treaties and its clear violations of some are deeply troubling. The violations include:

- A new large radar being constructed at Krasnoyarsk in central Siberia that is contrary to a fundamental prohibition of the 1972 ABM [Antiballistic Missile] Treaty;
- Development of yet another new type of ICBM [intercontinental ballistic missile] and encryption of information on missile tests—both contrary to the obligation not to undercut the SALT [strategic arms limitation talks] II accord; and,
- Involvement in chemical weapons use in Afghanistan and Southeast Asia contrary to the longstanding international norms against such conduct as embodied in the 1925 Geneva protocol.

To be serious about arms control is to be serious about compliance. For one side to respect an obligation and for the other side to violate it—this is not arms control, but rather unilateral disarmament in disguise.

Will the Strategic Balance Remain Stable?

What do we believe can be reasonably accomplished through arms control? Reducing the risk of war requires addressing the areas of political conflict; but the military postures of the two sides are vitally important. In the nuclear age, even more than earlier, the structure of forces will not just shape

Presidential elections have been marked by challengers who had vigorously opposed the incumbents' arms control approach, and who won.

While such changes are the norm in democracies in the 1980s, a role reversal occurred. Instead of rotating American leaders there has been a pattern of fleeting Soviet leaders. To be serious about arms control is to be serious about compliance. For one side to respect an obligation and for the other side to violate it—this is not arms control, but rather unilateral disarmament in disguise.

Will the Strategic Balance Remain Stable?

What do we believe can be reasonably accomplished through arms control? Reducing the risk of war requires addressing the areas of political conflict; but the military postures of the two sides are vitally important. In the nuclear age, even more than earlier, the structure of forces will not just shape

the capability for conflict but will affect the likelihood of conflict as well.

Strategic stability is critical. And we must now ask, will the strategic balance remain stable in the face of the steady buildup of both Soviet offensive weapons—particularly those that threaten the retaliatory forces of the West—and the enormous Soviet investment in defensive programs?

This has been the central issue in strategic arms control negotiations since they began in 1969. We thought we basically remedied that matter favorably in 1972 with the ABM Treaty. It turned out not to be so.

When the United States and the Soviet Union concluded that treaty, with its stringent limits on defensive systems, we set down a marker for strategic arms reductions to follow. In fact, our chief negotiator and one of my predecessors, Gerard Smith, said at that time that the United States put "the U.S.S.R. on notice that if an agreement providing for more complete offensive arms limitations were not achieved [by 1977], U.S. supreme interests could be jeopardized and should that occur, would be the basis for withdrawal from the [ABM] Treaty."

But that assumption has not been fulfilled. The Soviet Union long resisted any agreement to reduce strategic offensive arms or even to effectively limit them. While the strategic arsenals on both sides have grown, that increase has been disproportionate on the Soviet side. They now have nearly four times the number of strategic ballistic missile warheads than in 1972. Their capability to quickly destroy hard targets in a disarming first strike has increased by a factor of ten or more.

This growth contrasts starkly to what we had hoped for when the ABM Treaty and SALT I were concluded. As former Defense Secretary [Harold] Brown once reflected: "We build, they build. We stop, they build."

Another assumption underlying the ABM Treaty was that both sides would adhere to it. Yet, as I noted, the Soviets have violated the limits on new large phased-array radars. They did this though they must have realized the United States would surely detect it—the Krasnoyarsk radar being several football fields large—and that it could not conceivably be reconciled with the terms of the treaty. This planning had to begin around the mid-1970s, not long after the conclusion of the ABM Treaty.

The nature and extent of Soviet defensive programs, even those that raise no compliance problems, raise other profound concerns about strategic stability. Over the past 20 years, the Soviets have spent roughly as much for strategic defense as for strategic offense. Besides passive defenses, they have deployed extensive air defenses; they have extensive civil defense; they have the world's only ABM system, which is deployed around Moscow, and

U.S.-U.S.S.R. Negotiations on Nuclear and Space Arms

PRESIDENT'S REMARKS, OCT. 31, 1985[1]

I have instructed our negotiators in Geneva at the nuclear and space talks to present a new U.S. proposal designed to advance the prospects for achieving real reductions in nuclear arms, enhancing stability, and addressing the legitimate concerns of the United States and our allies as well as of the Soviet Union.

I have also asked our negotiators to seek Soviet agreement to extend this round of the negotiations into next week so that our negotiating team can make a full presentation of our proposal and have a real give-and-take with the Soviets on its details.

Finally, I have written to the leaders of allied nations and have transmitted a personal letter to General Secretary [Mikhail] Gorbachev on this subject.

History has shown that progress is more surely made through confidential negotiations; therefore, I'm not going into any details about our proposal. Suffice to say that our proposal is serious, it is detailed, and it addresses all three areas of the negotiations. It builds upon the very concrete reductions proposals, which our negotiators had tabled earlier, as well as the Soviet counterproposal.

The Soviet counterproposal was first presented to me by Foreign Minister [Eduard] Shevardnadze at our White House meeting in September, following which it was tabled at Geneva by the Soviet negotiators. Since that time, our arms control experts have analyzed the Soviet counterproposal extremely carefully. This analysis now completed, I have met with my senior advisers, decided on our response, and have instructed our negotiators to make this move.

During our careful review, we measured the Soviet counterproposal against our concrete proposals for deep, equitable, and verifiable reductions which we already had on the table and against the criteria which we have long held for attaining effective arms control agreements. We have made clear that, measured against these criteria, the Soviet counterproposal, unfortunately, fell significantly short in several key areas.

At the same time, as I indicated in my address to the UN General Assembly last week, the counterproposal also had certain positive seeds which we wish to nurture.

Our new proposal builds upon these positive elements and calls for very significant balanced reductions of comparable nuclear systems, particularly those that are the most destabilizing. It's my hope that our new proposal will enable both of our nations to start moving away from ever-larger arsenals of offensive forces. At the same time, we seek in Geneva to undertake with the Soviets a serious examination of the important relationship between offensive and defensive forces and how people everywhere can benefit from exploring the potential of non-nuclear defenses which threaten no one.

I'm pleased that we seem to have made a successful start on this long process. The Soviet response to our earlier proposals and the new proposal which we're making are important milestones in moving these negotiations forward.

Additionally, I hope we can achieve progress in the other key areas of the broad agenda which Mr. Gorbachev and I will discuss in Geneva—human rights, regional issues, and bilateral matters.

Strengthening the peace and building a more constructive, long-term U.S.-Soviet relationship requires that we move ahead in all of these areas. I believe progress is, indeed, possible if the Soviet leadership is willing to match our own commitment to a better relationship.

[1]Text from Weekly Compilation of Presidential Documents of Nov. 4, 1985. ■

the world's only operational antisatellite system.

The Soviets have long been investigating some of the same advanced technologies for strategic defense that are now being examined in the U.S. research program. These include high-energy lasers, particle-beam weapons, radio frequency weapons, and kinetic energy weapons. The Soviet programs—as made clear in a recent U.S. publication "Soviet Strategic Defense Programs"—long antedate those of the United States.

Thus, it seems dubious that the Soviets ever really accepted the concept and assumptions underlying the ABM Treaty.

SDI: A Better Way of Deterrence

In this light and others, our research under the Strategic Defense Initiative looks toward a more promising basis for deterrence in the future, toward greater stability through radical reductions in nuclear offensive arms and through more and more reliance on defense and protection and less and less on offense and retaliation. If a better way of deterrence is possible, do we not have an obligation to search for it? I believe we do.

Yet within a few hours of the President's 1983 speech, the Soviet Government-controlled news agency, TASS, issued a statement which was the beginning of a propaganda campaign to stop the United States from pursuing the Strategic Defense Initiative.

The Soviet propaganda line against SDI is as predictable as it is hypocritical. The Soviets hope to foster a situation in which the United States is pressured unilaterally to restrain its research effort, even though such research is fully consistent with existing treaties. They wish to stop something which is fully consistent with the ABM Treaty—namely our SDI program—while they continue something which is clearly prohibited by the ABM Treaty—namely the Krasnoyarsk radar. This approach would leave the Soviets with a virtual monopoly in advanced strategic defense research; obviously they see this as the most desirable outcome.

Such a virtual monopoly would be most dangerous for the West. It has been recognized for many years that offense and defense are vitally related to each other, that it is essential to keeping the peace. Unilateral restraint by the United States in the defense area would jeopardize this balance and could, therefore, potentially undermine our deterrent ability.

The United States and its allies can expect the Soviets to continue to protest strongly and publicly about SDI and alleged U.S. designs to "militarize space," all the while denying that they are conducting similar programs and portraying themselves as a promoter rather than an obstacle to progress in arms control.

Perhaps the most poignant domestic criticism of SDI is the judgment of so-called experts that it simply won't work. Such "expert analysis" has been rendered before and found wanting before. For example:

- Thomas Edison forecast, "Fooling around with alternating currents is just a waste of time. Nobody will use it, ever. It's too dangerous. . . . Direct current is safe."
- Simon Newcomb noted in 1903, "Aerial flight is one of that class of problems with which man will never be able to cope."
- Lee Deforrest argued in 1926 that, "While theoretically and technically television may be feasible, commercially and financially I consider it an impossibility, a development of which we need waste little time dreaming."
- Admiral William Leahy, Chief of Staff to President Truman, warned in 1945 that, "The (Atomic) bomb will never go off, and I speak as an expert in explosives."
- One scientist argued in 1932 that, "There is not the slightest indication that [nuclear] energy will ever be obtainable. It would mean that the atom would have to be shattered at will."

If the point of the criticism is that SDI wouldn't work today, then I plead: "Guilty as charged." That's precisely why the President has ordered a research program—to see if it can work in the future. This approach is quintessentially American—holding out an objective which is right and beneficial and then working diligently to make it happen. SDI has become an American challenge.

U.S. Proposals in Geneva

In the talks on strategic arms, the United States has proposed reductions of nearly 50% in strategic ballistic missile warheads and in missiles on each side. We have proposed significant limits and tradeoffs between areas where the Soviets have an advantage (destructive power of ballistic missile forces) and where the United States has an advantage (heavy bomber forces with associated cruise missiles). We need to reduce weapons that exist today, particularly the most threatening and destabilizing systems.

The Soviet Union would have us believe that this central issue has all but disappeared—as if the threat from large existing MIRVed [multiple independently-targetable reentry vehicled] ICBMs, of which the Soviets have over 800, is somehow less important than a program of research into new defensive systems which do not even exist today, which will not exist for many years at best, and which will not come into being at all unless they can meet the stringent stability criteria we have set.

The United States is also trying in Geneva to eliminate the entire class of longer range INF [intermediate-range nuclear force] missiles, or to limit them to the lowest equal level possible. The threat of the Soviet's triple-headed INF missile, the SS-20, goes to the heart of our commitment to our allies.

In the defense and space negotiations we are seeking to explore with the Soviets how to effect a stable transition to a more defense-reliant deterrent posture—if the new technologies being investigated by both of us support such a change.

Our proposals in Geneva are paralleled by other U.S. and Western arms control initiatives in other fora. We have advanced ideas and programs to strengthen the bulwarks against the further spread of nuclear weapons—a critically important area where we, the Soviets, and many other countries cooperate well, as evidenced from the successful conclusion of the Non-proliferation Treaty Review Conference last month.

We have advanced proposals to stem the proliferation of chemical weapons and to effectively eliminate them everywhere, to reduce conventional forces in Europe, to construct confidence and security building measures to reduce the risk of war in Europe through accident or miscalculation, and to make progress on verifying nuclear test limits. We have, with our NATO [North Atlantic Treaty Organization] allies, agreed to significantly reduce the number of U.S. nuclear weapons in Europe. President Reagan's arms control agenda is—I believe—the most comprehensive one of any President in our history.

The Soviet Counterproposal

We now have, at long last, a Soviet counterproposal in Geneva. In the first two rounds, the Soviets by and large failed to engage in constructive negotiations at all. They tabled no new proposals; nor did they reaffirm their previous positions.

We welcome the Soviet decision to do something even if it does not really bridge the gaps between us, which their counteroffer clearly did not do.

The most striking thing about the Soviet counterproposal is the number of elements in it that have been rejected by the United States and by our allies time and time again throughout the 1970s and 1980s. Someone once said that Russian peasants sell the same cow twice, but Russian negotiators sell the same dead cow almost yearly. Many of these, like their inclusion of so-called U.S. forward-based systems, seem to periodically rise up again—like the Phoenix—and reappear in their same self-serving form. The Soviet package combines a blatantly one-sided mix of bans, freezes, and reductions that would prove positively dangerous to the security of the United States and our allies if ever accepted.

The major problems in the Soviet counterproposal can be summarized easily.

First, it is unequal and unfair. It sounds good by claiming to propose 50% reductions in each side's relevant delivery vehicles. But there is a catch. These are defined in such a way as to include all U.S. nuclear weapons as well as some dual-purpose systems meant to defend our allies in Europe and Asia, but none of the Soviet systems aimed at our allies. It would grant no significant reduction in the large SS-20 threat while erasing our limited counter to that threat.

Accepting such a definition would render us the stark choice of either having to accept strategic inferiority or to sacrifice our defensive commitments to our allies. We should do neither. We will do neither.

Secondly, the Soviet counterproposal would make the strategic balance less, rather than more, stable. They propose that no more than 60% of the 6,000 total permitted weapons be on any one leg of the triad, that is, on ICBMs, SLBMs [submarine-launched ballistic missiles] or aircraft. These numbers again sound good, but they are designed in a way that does not get at the central problem of large, land-based MIRVed ICBMs that threaten retaliatory forces. The Soviet Union's advantage in hard-target, killer ICBMs would actually be increased.

Finally, the Soviets make all offensive limitations contingent on banning our Strategic Defense Initiative including, as they say, "scientific research." This Soviet condition remains unchanged. But its repetition does not make it any more realistic or acceptable, especially in light of their own extensive programs on advanced defensive technologies. What they surely want is to continue their program while stopping ours. The Soviets know, of course, that their package cannot and will not be accepted by the West.

While there is some good news and a great deal of bad news in the Soviet counterproposal at Geneva, their beginning to move, in and of itself, is a positive sign. If they are serious, if they are willing to bargain realistically, then progress can be made. We are ready for give-and-take.

Conclusion

We should not look for "breakthroughs" by the time of the November meeting, but we do look for some progress. Before that time, we can expect even more Soviet propaganda—and possibly some new Soviet thrust on arms control. Their officials have been far more active in the media rooms than they have been in the negotiating rooms. They want to gain the propaganda momentum before the November meeting. We hope that the Soviets are prepared to get down to the tough business of arms control. The chief Soviet negotiator, Mr. Karpov, correctly noted that it takes "two for a tango," and we welcome the fact that the Soviets have finally ventured out on the floor.

Let us venture on the floor together so that we can find the necessary common ground to handle the nuclear dilemma that so bothers us all. Just as we are exceedingly proud of our predecessors, let us live and work so as to give plenty of cause for our successors to be even prouder of us. ■

Secretary Visits Canada

Secretary Shultz visits Canada on October 28 to meet with Secretary of State for External Affairs Joseph Clark. Following are his toast and a joint news conference by the two Secretaries.

TOAST,
CALGARY, ALBERTA,
OCT. 28, 1985[1]

We certainly appreciate—the President does, I do, all of us do—the wise counsel and advice that we are getting from you [Joseph Clark] and the Prime Minister [Brian Mulroney]. We sat together in New York last week during the UN meetings, talked about the upcoming Geneva meeting, the arms control, some of our bilateral problems, and I think it is very rewarding for us to have the advice and the counsel and the point of view that you bring. So, the President seeks that, not simply because you are a neighbor but because he finds it worthwhile and we truly do appreciate it.

Joe Clark and I have now met six times over the last year to discuss U.S.-Canada relations and to exchange views on current international developments. Our discussions have always been candid, detailed, and mutually informative, as befits close friends and good neighbors.

Meeting in Calgary is a special pleasure for me particularly on this anniversary as you described. We know Alberta as Canada's fastest-growing province, and one which has benefited from the robust leadership of Premier Peter Lougheed over the last 14 years. We salute him as a tireless advocate of Alberta's and Canada's economic interests, and we wish him well as he leaves office after such distinguished service.

When we Americans picture Alberta, we think of hard work, competition, and straight talk—the very qualities which turned these prairies into parts of the breadbasket of the world and the source of such a large share of North America's energy resources. When the International Olympic Committee chose Calgary as the home of the 1988 Olympics, it looked beyond your physical splendors and playing fields and saw the requisite civic pride and "can do" attitude so necessary for the success of the games. We look forward to friendly

and spirited competition in those games, just as we look forward to another chance at the Stanley Cup. It's a question whether we will win the Stanley Cup again before you win the World Series. Of course, Joe is a little worried about getting into the World Series and having it snowed out.

These themes—vigor, competition, and frankness—characterize the bilateral relationship which our two governments are continuing to build.

President Reagan and Prime Minister Mulroney last March called for a "new partnership" to help reinvigorate our economic relationship, to tackle common environmental problems, and to bolster our defense relationship.

We have made commendable progress in many of these areas and when the Prime Minister and President meet next March they can point with pride to a healthier and more productive relationship between our two countries. This is an effort which has enlisted the support of key top-level representatives of both governments—as shown by the five visits of U.S. Cabinet officers to Canada within the past 2 months and the four Canadian Ministers who have visited Washington over the last 6 months. This is not business as usual—it is an especially active effort to advance our common interests through a process of more intense dialogue and the forging of personal as well as professional ties between officials from both Ottawa and Washington. These links have been mirrored at the state and local levels on both sides of our common border.

Our success in achieving an enhanced market approach to energy trade is a clear example of how our bilateral relationship has improved over the last year. We note this accomplishment with satisfaction, while recognizing that further work needs to be done in the energy area, and maybe it will be done later this week.

We have now come to an historic juncture in the relations between our two countries. Prime Minister Mulroney has proposed that we explore the prospects for a broad-based, mutually beneficial bilateral trade agreement. President Reagan has warmly welcomed this initiative, and the Administration has begun consultations with the Congress. On the basis of these early talks and with our statutory requirements for consulting with Congress and the private sector in mind, we believe it will be possible to begin formal bilateral negotiations early in 1986.

The road to a bilateral trade agreement will be steep, but it is worth the climb. Hard work and good faith will be required to attain the goal of freer trade and strengthened economies.

We have laid out a challenge to each other, and the rest of the world will be watching our progress. We have said that it is not enough to have the largest two-way trade on the globe.

It is not enough that the greater part of our trade crosses borders duty free. Rather than congratulate each other on our accomplishments, we have chosen to recognize that dealing with tough issues—remaining tariffs, nontariff barriers, subsidies, and market access—will help us pave the way for greater economic efficiency and prosperity in both countries in the next century.

Now that we have accepted the challenge to work toward a bilateral trade agreement, we should be frank in discussing what is and is not intended in such an agreement.

First, as is inherent in any agreement between independent, sovereign countries the agreement must be mutually beneficial with no preponderance of advantage to either side.

Second, benefits from the agreement must be substantial. The gains from trade must outweigh the costs of inevitable economic dislocations. When we see academic studies estimating that a trade agreement could eventually boost Canadian per capita income by up to 10%, we see the prospect for substantial benefit to Canada. When we realize that Canada's remaining tariffs are among the highest in industrialized countries, we see prospects for substantially increased U.S. exports.

Lastly, the agreement will not remove all economic and trade disputes between our two countries. There will be ongoing problems. That is the very nature of our existence as two independent countries on the same continent.

In sum, we are talking about a new undertaking, truly a "new partnership," between old friends. We are talking about working through our differences, not whitewashing them. We will continue to disagree on many issues, knowing that we have a unique record for discussing problems before they fester, seeking compromise where possible, and respecting the values and intentions of the other party when differences remain.

And now, I express my appreciation to my colleague Joe Clark for the high quality of his public service and for his warm hospitality. And to Albertans and all Canadians I raise my glass in gratitude and friendship.

JOINT NEWS CONFERENCE, OCT. 28, 1985[2]

Q. Just 3 weeks ago, a man named Peter Widdrington, the Chief Executive Officer of John Labatt's Corporation—I quote him in saying that "Canada has not done its homework on free trade. That we are not ready to enter negotiations with the U.S." Can you make any comments?

Secretary Clark. I am inclined to speak about the marketing of beer, but I don't think I will reciprocate. No, we believe that we have made extensive preparations. I think the United States' side has made extensive preparations. We are naturally continuing consultations in this country. I think that you might find that Labatt's has an interest in the negotiations, and that may well explain the comment. But I am confident we are well prepared as we enter into whatever negotiations that might ensue.

Q. Mr. Clark, we heard the problems that the United States has with lumber, with steel, other problems with free trade. I want you to comment about doing anything further while these issues—where we are trading with them—are unresolved and we are running into increasing problems. I would like perhaps to hear from Secretary Shultz, too.

Secretary Clark. One reason we are interested from our side in looking at a larger trading arrangement is precisely because there has been a plethora of individual problems, some of which we think could be better handled by some new arrangements. But, I make the point, that we are dealing with those individual circumstances, whether they are lumber, steel, or strawberries, or whatever, one by one and in a way unlinked and separated from the question of negotiations that we might enter into. The facts are clear. There are some risks to Canada now from protectionist pressure in the United States. We have a duty to take account of those risks, to try to put a better system in place. There are some immense opportunities for Canada in the larger market for Canadian produce and Canadian productivity that would exist in the United States. We have an obligation to respond to the opportunity. That is what we are looking to.

Secretary Shultz. I subscribe to his answer.

Q. My question is for Secretary Shultz. Here in Alberta, our Premier

spoke repeatedly about "window of opportunity," that if we didn't make progress within a short time frame, that we might lose it. I am wondering if you could comment on whether that window is half open, or nearly shut, or what?

Secretary Shultz. I think the window is wide open. We believe in the United States—we, this Administration, the President in particular—that open trading is good for us, that we will benefit by opening still further the opportunities for trade with Canada, which historically have benefited us tremendously. We have a huge two-way flow now, and trade takes place when both parties to the trade want it to happen. It never takes place when it's only to one person's advantage. So, it is not a zero sum game. It is plus-plus, and we think we will benefit from it.

Q. Mr. Clark, does the fact that negotiations on lumber, and the other subjects [inaudible] are held hostage by negotiations on bilateral trade?

Secretary Clark. I think that the Canadian economy—Canadian employment in the forestry sector for example—is in a sense hostage now to the absence of a more efficient system than now exists. And as I said, we will have two goals: The first is to face up to the actual threat that now exists to Canadian employment. It's necessary to have a more effective response. Secondly, there are great opportunities, great possibilities for Canadians, across Canada, we think, and it is for that reason that we want to at least try to reach an approach with the United States.

Q. Mr. Clark, Mr. Shultz, how close are you to being able to name chief negotiators for the 1986 negotiations?

Secretary Shultz. From the standpoint of the United States, there is a statutory requirement before we officially enter the negotiations, that we have a thorough-going consultation with the Congress and with private interests. I believe this is a good thing, because it allows us to generate broad-based support for what is to be undertaken. And, I think, myself, that it is important to go through that process and have it behind us and then name a negotiator. But we will find a person of eminent qualifications, who will understand the political process that is involved and have the confidence of the many economic interests that are necessarily represented in a complicated trade negotiation.

Secretary Clark. As for Canada's part, we have set no deadline for the designation of a chief negotiator. We are involved, and have been for some time, in extensive consultations with other governments and industry sectors. Those are going to continue. The negotiating team that is put in place when that time arrives, will naturally fit into that system of negotiations. This is going to be, apart from being an historic process, quite an unusual one, in that it will require from our side a very extensive degree of consultation, perhaps greater than we have found before in a trade negotiation. And I frankly expect it will be one of the more public negotiations, because I expect that you fellows will be there with microphones, introducing whomever is our negotiator to the joys of the scrum.

Q. There is a lot of concern about cultural industries and cultural sovereignty, the *Time* purchase of Prentice Hall and so on. I would like each of you to comment on whether cultural issues are indeed on the table in these negotiations.

Secretary Clark. There are some Canadian culture industries which are very much anxious to find new markets for whatever cultural products they are involved with, and naturally, I wouldn't want to close the door on their opportunity to find markets in the United States for Canadian expression. As I have said again today at noon, the question of culture is obviously an important one, that we take seriously. I have indicated in the House of Commons that prior to becoming involved in any negotiations, I will be consulting personally with representatives of the cultural industries across the country, both so that I will understand their position and so that they will have a greater feeling of confidence about their own role in any negotiations, if those particular sectors are involved.

Secretary Shultz. I think the answer is yes. The industries, so to speak, if you want to call them that—you mentioned Prentice Hall, the publishing company—are things that need to be talked about. What the outcome of the discussion is, is another question. But I know the Prentice Hall issue is up front here in Canada right now. I gave Secretary Clark a list today of recent acquisitions by Canadians of U.S. publishing houses. It's a long list; it covers two pages, single spaced. So, as I said in my comments at lunch, opening up trade has got to be a two-way street.

Q. Given the strong protectionist pressure in the Congress, can you explain your optimism that this idea of a trade agreement, how will it go anywhere? I mean, you are asking the Members of Congress to move in the opposite direction from the one they are moving in now. Why are you optimistic that they will do that?

Secretary Shultz. When we all came back from a summer vacation this year, it was widely said everywhere, by all the people who know everything, that protectionist sentiment was sweeping the country, sweeping the Congress, and President Reagan, in his naive free trade attitudes, would be swept by it. As it turned out, those views are wrong. President Reagan has stood up to them. He denied shoe quotas. He has expressed his view very strongly. There was a vote recently in the House of Representatives, which is very heavily of the opposite party, and while a textile protectionist trade bill passed, it didn't pass by a two-thirds majority. In order to beat the President, you have got to generate over a third of the votes in both Houses. So, he is clear in his mind that protectionism is bad for America and he is preaching that gospel. And those who think he can't be effective should look at his track record. So, don't count us out. We are going to do the right thing for America.

Q. Mr. Shultz. Secretary Clark made reference at lunch to the possibility that certain industries that Canada views as cultural may not be seen that way in the United States. Are you concerned that Canada has tried to define its culture too broadly and put too many areas off the table before the talks begin?

Secretary Shultz. It's up to Canada to define things as it chooses. And, of course, it is up to us. We have to negotiate. As I pointed out with respect to publishing houses in the United States. So, it shouldn't come as a surprise that we would think it might be all right for a U.S. company to make an acquisition. But, at any rate, a negotiation is not settled when it starts. It's settled as a process unfolds and as people examine issues and learn. I might say, with respect to the question of preparation, you are never prepared at the beginning for absolutely everything that takes place. That's impossible. What you have to have is a sense of a process, capable people, and then, a way of being in communication with the affected industries so that they express themselves and you come to understand

it. And then gradually it works out. We've been through this in the successive rounds of trade negotiations that have opened up world markets, beginning with reciprocal trade efforts of Secretary of State Cordell Hull. It has been a long march back to open markets, and we don't have any intention of marching back in the other direction.

Q. Mr. Clark, the pilot of the aircraft that dropped those flags on the U.S. icebreaker, *Polar Sea*, a couple of months ago is apparently being charged by the Ministry of Transport for dropping hazardous objects—bunch of Canadian flags. You expressed shortly after that episode you didn't think charges would be laid. Could I ask you now how you feel about whether they should be laid, and if they will proceed?

Secretary Clark. Don, you say, "apparently." I will find out what the facts are that he is being charged. I will then defer to my colleague who is responsible for that part of the Government of Canada to comment, but I may well talk to him before he talks to you.

Q. You mean Mr. Mazankowski?

Secretary Clark. You know more about this story than I do, Don, and I can't—I learned some time ago, when I was reporter for the *Edmonton Journal*, that people who answered blind get in trouble, so I won't.

Q. I have a question for both Secretary Shultz and Mr. Clark. In 1986, the NORAD [North American Aerospace Defense Command] Agreement will be renewed. I was wondering if Canada anticipates any problems in negotiating that agreement, in light of the SDI [Strategic Defense Initiative] and what adjustments the Americans, the United States, would be interested in, in light of SDI and various other strategic concerns?

Secretary Shultz. They are separate issues, and we would hope the agreement would be renewed. As far as SDI is concerned, it is my understanding that the Canadian Government has taken the position that as a government, it doesn't participate, but it has no objection to private firms taking part in bidding on research contracts and so forth. And, of course, what we are talking about here is a research program designed to answer the question: Is it possible to find a shield that will protect you against incoming ballistic missiles? And we think in the United States, the President thinks, that it is tremendously important to find the answer to that question, because if it is possible to construct even a partially better defense, then it will be possible to reduce tremendously the possibilities or the threat of a first strike. And that is an extremely important thing for the safety of all of us. So, SDI is a completely different matter, and we think it is a matter of great importance to not just the United States but to the whole world.

Secretary Clark. Very briefly, they are separate questions. I anticipate no particular difficulty in the negotiations regarding a renewal. As you know, we referred the matter to the Standing Committee of the House of Commons. We have followed the practice consistently since the election of the Conservative Government of taking steps that involve Parliament and the people of Canada in the discussion of foreign policy. That hadn't happened before. We think it is a step forward. We think that among other things, it will result in a much broader understanding in the country of what is and what is not involved in the discussion of NORAD.

Q. Could I ask you a supplementary? Are you suggesting, then, sir, that we would not look at SDI until such time as NORAD—until such time as it is proven that such a shield could develop?

Secretary Clark. They are separate questions, as Secretary Shultz made clear, and I think it is broadly understood in the country. I have no doubt, Parliamentary committees being what they are, that questions relating to SDI will come up in discussions on the NORAD renewal. But they are separate questions.

Q. Mr. Clark, the most recent poll suggests the party is not as popular in the Province of Ontario as it used to be. Ontario was the one opponent to the idea of freer trade. Is that going to pose an obstacle in going ahead with negotiations with the United States?

Secretary Clark. I, in fact, have been impressed so far by the degree to which the discussions on freer trade have not become divisive on either partisan or regional lines in the country. I think that is very important that it continue to be the case. The Premier of Ontario has some views that do not precisely mirror my own. That is his right. He has some concerns about Ontario industry. We share those concerns. My understanding of his position is that he thinks it makes sense for us to enter into discussions and to try to see if we can achieve an arrangement that is better for Ontario, better for Alberta, better for Canada. We intend to involve him quite actively, and other Premiers, in the process of those discussions.

Q. Mr. Shultz, how important are the Canada-U.S. trade negotiations to both those the United States has with Japan and the European Economic Community?

Secretary Shultz. Canada is the most important trading partner of the United States by far, a much larger volume of trade than we have with Japan or with all of the European Community combined. So, from the standpoint of importance to the United States of trading arrangement, our trading arrangement with Canada and the relatively open trading arrangement we now have is of tremendous importance. We, I am sure, will want to respond positively to the invitation of Prime Minister Mulroney to negotiate further on this.

Q. I meant, actually, more in relationship to any further extension of free trade negotiations as you may have with those other countries, like, how important is this as a precedent to what the United States may do with other countries?

Secretary Shultz. I suppose, when people see something in place that works, they ask themselves, maybe it will work for us, too. But other than that, I don't see that it has any special implication.

Q. Mr. Shultz, your remarks at noon appear to suggest you have already taken a preliminary poll in Congress toward free trade. Are you satisfied that at this point you have the one-third endorsement that you need, and if not, what would the percentage of the fraction be at this point?

Secretary Shultz. When I spoke of the one-third, it had to do with votes on specific pieces of protectionist legislation. And the one I was referring to had to do with the textile industry, which is already protected. The question of entering negotiations with Canada is of a different nature. And we have a statute under which these negotiations are authorized, after careful consultation with the Congress and with private groups, and we will undertake that process. But there is in the United States a strong fund of recognition that our trading relationship with Canada is

basically good. And, so, we proceed with a lot going for us in that regard.

Q. If I could just clarify that for a moment, then, at this point how would you assess congressional support for this? Could you give me a percentage of how many members of Congress would vote for this right now?

Secretary Shultz. I can't tell you the answer to that question. We have been going around talking with Members of Congress and the general tone of discussion and responses is quite positive. But we are not going about taking a poll.

Q. Would each of you expect a free trading agreement to need a long period of transition and management of the consequences for the industries affected?

Secretary Clark. I think there is no doubt that any trading agreement that might be entered into would feature both of those elements.

Secretary Shultz. I think what would tend to happen is that you have different arrangements for different industries. So that it may be there—is an industry with particularly sensitive problems in Canada or in the United States, and, so, you would say, well, then the gradual movement toward the reduction of tariffs would take place over a period of time. So that those who would be affected can make an adjustment, whereas there might be other cases in other industries where there isn't really that much of a problem and you might as well just do it right away. So, it would be orchestrated. And that is exactly the sort of thing that negotiators would have to work at.

Q. Mr. Shultz, I would like to ask—you talked in your pre-lunch remarks about beginning negotiations in early 1986. Can we infer from this that you are going for a fast track approach with Congress, and can you tell us something about the mechanics that you foresee and whether you have any date on when these negotiations could realistically begin?

Secretary Shultz. We hope that we will be able to have done the consultations required by the statute during the month of—by the time the month of November and December, along in there—here worked themselves through. I can't say that is a definite thing, but that is our object, and we are working at it quite hard. Under those circumstances, I think what I said at the luncheon was sometime in early 1986 we would hope that we could get started. Now, those are guesses, estimates on my part, and I hope that they will turn out to be right. I wouldn't have said them if I didn't think there was a very good chance of it. But, obviously, it is not as though something is locked in concrete.

Q. I believe you spoke this morning in your private session about East-West issues. Can you tell us how you think the current incident going on down around New Orleans involving the Soviet freighter and the man who tried to defect might affect U.S. relations with the Soviet Union? And what is the United States prepared to do if the Soviets continue to refuse to let us interview this man in the kind of conditions that we are looking for?

Secretary Shultz. We have been working at this problem through diplomatic channels through the weekend, and my information is that right now there is an interview being conducted under circumstances that we insisted on. And I believe, at the same time, that it is essential, in looking at the coming meetings in Geneva, that we always make a point of doing what's right. So, in a case like this, what is right is that we see to it that the individual involved has a chance to express himself in an environment free of coercion. And, so we must do that without consideration of people saying, "Oh, my, if you do that, perhaps the Soviets will get mad and you won't have a meeting." Well, nonsense. The way to be sure that we have a good meeting, and I am sure the same applies on their side as well, is to be sure everybody knows we are going to do what is right. That is in the nature of conducting this thing properly. But I think—I hope—it is very much in the process or working itself out.

Q. [Inaudible.]

Secretary Clark. To take the first question I believe that it is very clear that President Reagan and the American Administration are looking for freer trade. This has been a longstanding undertaking for the President and the American Administration. There are pressures in Congress today which exist and which threaten Canada, but I am confident it will be possible for us to find the means to change our overall relations in a way to protect ourselves, generally, against this kind of activity. Insofar as cultural industries are concerned, there are several Canadian cultural industries that are looking at an American market larger than currently exists, and there are others which feel themselves threatened by the possibility of [trade] arrangements. It is for this reason that I am going to have direct conversations with cultural industry spokesmen to ensure that I know their situation, industry by industry, and that they are confident about the Canadian position.

Q. Mr. Shultz, I understand Arctic sovereignty was discussed this morning. I would be interested in hearing your thoughts on whether the United States, you think, should recognize Canadian sovereignty, or whether it might have to wind up in a venue like the World Court.

Secretary Shultz. I couldn't really hear all the words in your question, but I gather it had to do with the sovereignty issue in the Arctic.

Q. I am wondering about your thought on whether you think that the United States should recognize Canadian sovereignty?

Secretary Shultz. Of course, we recognize Canada's sovereignty. At the same time, there are problems about straits and passages that are important to us. And that we are engaged in a process of discussion, and we are gathering our thoughts together, and I think it's our nickel. We will make a response to some observations the Canadians have made to us. So, we hope that we will work this through properly.

Legislative Proposals Regarding Diplomatic Security

by Ronald I. Spiers

Testimony before the Subcommittee on International Operations of the House Foreign Affairs Committee on November 13, 1985. Ambassador Spiers is Under Secretary for Management.[1]

On Monday, November 4, the Bureau of Diplomatic Security and the Diplomatic Security Service were officially established, bringing to fruition the principal organizational recommendations of the Secretary's Advisory Panel on Overseas Security, chaired by Admiral B.R. Inman.

The Inman panel's report, which contained over 100 recommendations, was a comprehensive update on a security situation that has changed significantly over the past few years.

Nearly every day the media carries a virtual catalogue of the latest terrorist acts. Official Americans and American facilities overseas are frequently targets of mob violence, terrorism, criminal acts, and espionage.

The nature and intensity of the threat varies from region to region, from country to country. While in Lebanon we face nearly every imaginable threat—from car bombs to artillery, kidnapping, assassination, and random violence—in Jamaica our chief worry is crime. In Africa, political instability often produces security concerns for our personnel. In Europe radical leftists and several Middle Eastern terrorist groups carry out acts of violence against Americans and American facilities.

Our experience has shown that existing threats will not disappear. In fact, new threats will be layered on top of the existing threats. We have seen this clearly in Lebanon, for example. Our principal concern in Beirut used to be assassination and kidnapping of our personnel. We are still concerned about this, but now we also have to protect our personnel against car bombs and artillery fire. We need a dynamic program to protect our people and facilities against this expanding array of threats. We believe the Inman panel's recommendations form a solid foundation for such a program.

The Chain of Command

The central theme of the Inman panel's report was that in order to manage and direct security overseas and at home effectively, there must be clear cut chain of command for overall authority and responsibility of our security programs. The Inman panel clearly preferred that these programs rest with the Secretary of State. The report went further to say that the fundamental problem of the existing situation was the lack of centralized authority; that the program was, in fact, overly fragmented and without a clear chain of command. Secretary Shultz recently stated "neither the Congress, nor the American public understands or can be expected to condone confusion in security responsibility, authority or hierarchy."

The establishment of the new Bureau of Diplomatic Security and the Diplomatic Security Service exemplifies the Secretary's commitment to ending such confusion. Overseas, as the Secretary testified before the House Committee on Foreign Affairs last July, "the Ambassador ultimately has to be the responsible party." He went further to say, "We have tried to make it absolutely clear that the Ambassador is responsible for security, and we have got to take this seriously and that's where the responsibility lies." The establishment of the Bureau of Diplomatic Security is intended to attain that objective.

Improving the Professionalism of Security Personnel

One of the principal goals of the Bureau of Diplomatic Security is to raise the level of professionalism among the Department's security personnel. It should have a clearly defined mandate, outlined in legislation, and structured along the lines of other Federal law enforcement, security, and intelligence agencies, such as the U.S. Secret Service and the Office of Naval Intelligence. The director of the Diplomatic Security Service would be a professional security. law enforcement, or management official.

In order to ensure the professionalism and effectiveness of the Diplomatic Security Service, comprehensive training is essential. A great many of the panel's recommendations dealt directly and indirectly with improving the training of our personnel both here and abroad. This would include professional training for security personnel and intelligence analysis, and security awareness programs for the Foreign Service in general. This program would help foster a more realistic view of the threats overseas, and of our individual responsibilities.

We plan to revise our recruitment literature to reflect more accurately the threat of terrorism and crime while serving our country abroad. We are providing "hands on" training in evasive driving and firearms familiarization to employees stationed at high-threat posts; we have identified resources needed to implement this program. We are expanding and improving on the "Coping With Violence" course offered to all personnel assigned overseas from all agencies.

The Inman panel stressed the necessity of a standard of accountability for those responsible for the implementation and enforcement of the security program. We have already acted on this recommendation using the existing statutory authority held by the Inspector General of the Foreign Service and the Foreign Service Grievance Board. Further, an accountability review process is incorporated into the legislation currently being cleared within the executive branch.

Combatting Terrorism Through Diplomacy

Another very important aspect of the panel's report was the improvement of our efforts to combat terrorism through diplomacy. We have slightly modified the panel's specific recommendation that the diplomatic initiatives of the Office for Counter-Terrorism be transferred to the Office of the Under Secretary for Political Affairs. In order to give these diplomatic efforts the focus and priority they deserve, we have instead chosen to establish the Office of Ambassador-at-Large for Counter-Terrorism. We feel this is a clear indication to other nations, friendly and unfriendly, of the importance placed upon these efforts by the Administration.

The panel recommended that all operational and administrative responsibilities of the Office for Counter-Terrorism—emergency planning, crisis management exercises, and anti-terrorist

training assistance—be part and parcel of the new bureau. This has been done. The Office for Counter-Terrorism will focus on developing within the international community an offensive against terrorism.

The panel recommended that we ensure that each post is prepared to deal with emergencies, including terrorism. This would include review and regular testing of the emergency action plans and a significant expansion of the Washington office conducting crisis management simulations. This recommendation was accepted, and implementation has begun.

Protecting Foreign Officials

The protection of foreign officials in the United States was the subject of 17 of the panel's recommendations ranging from improving the competence, training, and professionalism of protective details to establishing an interagency working group to facilitate cooperation between the Department and the Secret Service.

The panel was originally inclined to recommend transferring the protective security functions *in toto* to the Secret Service. This was also the position of the Secretary. However, the Secret Service has made a strong case that any expansion of its authority in this area would undermine its primary responsibility of protecting the President. Nevertheless, our nation has an obligation to protect foreign diplomats and missions in the United States. We are therefore prepared to accept this responsibility.

The Department of State has a particular interest in ensuring that we fulfill our responsibility for protecting foreign diplomats. Many nations see a relationship between the level of protection they provide our officials overseas and the protection we accord their officials here. By providing better protection here, we can help to ensure that our officials are properly protected while they are serving overseas.

We routinely exchange information and ideas with the Secret Service. However, the existing division of responsibility between the State Department and the Secret Service will continue, certainly for the immediate future.

Physical Security Recommendations

The Inman panel made a variety of recommendations concerning the physical security of our overseas missions. The recommendations on physical security measures are now being addressed in the interagency Overseas Security Policy Group, chaired by the Department's Director of Security. A multiagency residential security plan has already been prepared and approved. approved.

The panel made 12 recommendations concerning the adequacy of both the local contract guard forces protecting the perimeter of our missions and residences, and the Marine Security Guard program which provides internal security for our posts. The panel concluded that we must improve the training and competence of our local guard forces. Funding for these guard forces is now being consolidated in the new Bureau of Diplomatic Security.

The Department has already sent training teams overseas to instruct local guard forces. We are preparing a manual for our guard forces worldwide. We are providing regional security officers (RSOs) additional training on the management of local guard forces.

The panel recommended the assignment of Marine Security Guards to all embassies and other posts with major classified holdings. The panel also recommended increased training for the Marines and for the post security officers. Marines are now being assigned to all sensitive posts. At those posts where, because of size or limited American presence, it is not feasible to post Marines, we are reducing the amount of classified and sensitive equipment. We support Marine Corps requests for additional resources needed to implement this recommendation.

Security Construction Program

Finally, I would like to address the proposed building program. The security construction program is the cornerstone of our security enhancement effort. It is designed to protect our facilities and personnel against both terrorists and espionage. Our present capital construction program is woefully inadequate. The serious security and safety concerns identified by the Inman panel at over half of our embassies and consulates overseas point out the urgency of this massive security construction program. We must renovate or replace those buildings which do not meet minimal security standards. Significant additional resources will be needed to carry out this program.

We are improving the physical security of our facilities abroad. The National Academy of Sciences is now developing design criteria for physical security for the "Embassy of the Future." Security specialists are designing new construction materials and techniques which will minimize the effects of a bomb blast. Perimeter security standards are being promulgated.

To implement the vital security recommendations outlined in the panel's report, we must undertake a massive security construction program. Our initial planning for this work centers on almost 200 individual facilities. We will have to construct many new chanceries, consulates, and offices and rehabilitate or relocate many others. Some may be closed. This will be a multibillion-dollar program.

To date, there have been some other significant accomplishments of which the bureau is proud. The "Coping With Violence" seminar will be expanded to a second day by January 1986. The training of the instructors has begun with the Marine Corps providing a training workshop for 12 participants, six of whom will be members of the Diplomatic Security Service. The target date for this workshop is early January 1986. A week long curriculum has been developed for post security officer training.

Threat alerting procedures are now more timely and effective. A uniform residential policy has been approved and disseminated. We have enhanced our technical security and countermeasures. Security engineering officers or security officers will be assigned to every Eastern European embassy and all consulates with significant classified holdings. The numbers of Marine Guard detachments and Seabees have been increased worldwide. The Department's counterintelligence staff has been doubled and the training of its personnel has been enhanced. Communications, automated systems, and information security programs have been upgraded; and we have plans to improve our protective services for foreign diplomats and visiting foreign officials.

We have accomplished a great deal, but there is still a great deal to be done. We hope we can count on your continued support.

---

Developments in the Philippines

by Paul D. Wolfowitz

Statement before the Senate Foreign Relations Committee on October 30, 1985. Mr. Wolfowitz is Assistant Secretary for East Asian and Pacific Affairs.

I am pleased to be able today to continue our close dialogue on developments in the Philippines and their impact on our longstanding and vital interests there. I believe that this dialogue is crucial to ensuring continued effective cooperation between the Administration and the Congress in addressing one of the most serious foreign policy challenges we face, not just in East Asia but worldwide.

The Philippines, one of our closest and most important allies, is in deep trouble. Serious, interlocking political, economic, and security problems directly threaten the long-term stability and well-being of that country. U.S. interests of immense importance are at risk, but it is not just our interests alone that are at stake. A communist takeover in the Philippines would threaten the stability of the East Asian region and the many countries in it who have so successfully focused their efforts in recent years on economic development. Most of all, it would threaten the Philippine people themselves, permanently destroying all hopes for democracy.

Thus, there are many others who have a stake in a successful outcome and a responsibility to help bring it about. Above all, no solution will be possible without great effort, responsibility, and even courage on the part of all Filipinos. But historical circumstances and our own strengths as a nation give the United States a large role to play, a role which we have not shirked.

Our policy toward the Philippines is an active and dynamic one designed to deal with an evolving situation. As befits a longstanding ally, we intend to continue working closely with the Philippine Government to find solutions to their problems. At the same time, we have made unmistakably clear to the Philippine leadership the need for early and dramatic progress toward fundamental reforms if we are to be of effective assistance.

Specifically, we support the revitalization of democratic institutions, restoration of a free market economy, and reinvigoration of military professionalism as the best approach to putting the Philippines back on the right track. In this regard, we have recently strengthened our approaches to the Philippine Government at the highest levels in support of an urgently needed program of reforms. In the coming months we will continue to look to this committee for your counsel and support in helping to fashion an effective strategy for dealing with the Philippines' crisis.

American Interests

Important American interests are in jeopardy in the Philippines today. These interests include:

- A stable, prosperous, and democratically oriented Philippines: our nations have deep ties, both historically and through the present flows of immigration, travel, trade, and culture. The democratic institutions in the Philippines were nurtured under American leadership, and this gives us an even larger stake in their success or failure.
- Prevention of a communist takeover: in addition to shattering all hopes for democratic solutions to the nation's problems and inflicting suffering on the Filipino people that would probably make the present situation with all its flaws, look good by comparison, a communist takeover would be a significant blow to stability in the entire East Asian region.
- Strategic access to the naval and air force facilities at Subic and Clark: these facilities are of crucial importance in maintaining our forward deployment posture in the Pacific and Indian Oceans and offsetting the expanded Soviet military presence in Asia. These facilities have also helped to preserve a degree of stability which has permitted states in the region to avoid diverting excessive amounts of scarce resources to military efforts and to concentrate instead on economic development which is crucial to long-term stability. Alternatives to our present facilities exist but would be much more expensive and considerably less desirable and effective.

As important as these facilities are, however, let us be clear that our policy toward the Philippines cannot be, and is not, made hostage to our interest in the bases. There is no conflict between our interest in the bases and our interest in democratic reform. We are not afraid of democratic change. To the contrary, we believe that reform is essential to prevent a communist victory that would end, at one and the same time, both our hopes for democracy and our access to these important military facilities.

- Successful regional cooperation in Southeast Asia: regionally, a strong ASEAN [Association of South East Asian Nations] that includes a healthy Philippines allied to the United States is a key barrier to communist pressure in Southeast Asia and a model of what economic freedom and democratic progress can accomplish.

U.S. Policy

In seeking to protect these fundamental interests in this troubled period in the Philippines, we have sought to promote peaceful change through the revitalization of institutions which will enable the country more effectively to cope with its current interlocking crises. Our objective is a strong, stable, dynamically growing Philippines which is democratically oriented. We are confident that the deep mutual interests of our two nations and peoples will permit us to work with such a government constructively to enhance mutual security and economic development in the region.

We have concentrated our efforts for reform in three areas—political, economic, and military—each of which can contribute significantly to the rebuilding of institutions, stopping the growth of the insurgency, and creating a positive climate for the protection of our interests. We have not tried to impose our own agenda but, instead, we have supported a constructive Philippine agenda, one that is being pursued energetically by responsible, politically active elements of Philippine society. The solutions must be Philippine solutions, as the problems are Philippine problems.

Nevertheless, our deep ties, our important mutual interests, and the expectations of the Philippine people themselves all require that we help in every way consistent with our role as friend and ally.

You have asked me to concentrate on developments this year, and, thus, I propose to review each of these areas—political, economic, and military—and describe what I consider to be some salient developments as well as our own efforts.

Political Reforms

The requirement that the agenda of reform is and should be a Philippine agenda applies with particular force in the area of political reform. It is appropriate, however, for us to make clear our deep conviction that the invigoration of democratic institutions offers the best means of restoring public confidence in government and provides the best alternative to the unacceptable recourse to armed insurgency.

We have discussed in earlier sessions some of the significant steps taken in 1983 and 1984, including:

- Changes in the presidential succession machinery;
- Increased freedom of the press;
- Rise of a citizens' movement for free elections;
- The much fairer and more open parliamentary elections of the spring of 1984; and
- The Agrava Board's impartial investigation of the Aquino assassination.

At present, local elections for governors and mayors are scheduled for the spring of 1986, and an election for president and vice president is scheduled for the spring of 1987. Fair elections are essential components for restoring stability and growth.

The court, which throughout the year has been trying those accused in connection with the Aquino assassination, has completed presentation of evidence and arguments. We anticipate that a verdict will be rendered in the near future. The perception of the Philippine public as to whether justice has been done will have an important bearing on whether stability and public confidence can be restored.

As you know, we believe that full prosecution and punishment of those responsible is very important. Where feasible, the United States has cooperated both in the very successful fact-finding effort of the Agrava Board, whose work contributed significantly to revived faith by Filipinos in their own institutions, and, this year, in provision to prosecutors of any relevant evidence in the possession of U.S. Government employees.

The Economy and Economic Reform

In 1984 the Philippine GNP [gross national product] declined by 5.5%. Although final figures for 1985 are not yet available (the decline is about 4.5% for the first half of 1985), we estimate that this year will end with a decrease of between 3% and 5%. However, inflation, which reached an annual rate of over 60% in November 1984, is now down to an annual rate of about 8% during the first 9 months of 1985 and has been only about 6% in recent months. Both current account and balance of payments have shown marked improvement.

This year we have also witnessed the collapse of the sugar economy in the west-central Philippines, with consequent major social disruption and poverty in the plantation areas.

It is our judgment that intrusive and erratic government interference in the economy, together with control of important segments of the economy by personal monopolies and monopsonies, have contributed significantly to the overwhelming economic problems now faced by the Philippines. These problems, aggravated by declining world prices for Philippine export commodities, came to a head with the significant loss in political confidence precipitated by the Aquino assassination in mid-1983.

Over the past year we have been engaged in a full and frank dialogue with the Philippine Government concerning fundamental reforms which can contribute significantly to reviving the economic energies and potential of the country. The Philippines is blessed with considerable natural resources, a hard-working people, high literacy, and an able entrepreneurial class. We strongly believe that a reorientation toward a free market system and a restoration of confidence can, in combination, unleash considerable productive economic energy and investment. Some recent developments should be noted:

- The Philippine Government entered into a standby agreement with the IMF [International Monetary Fund] in December 1984 which set financial criteria; decontrolled the exchange rate; and undertook measures to reform the tax system, the coconut and sugar sectors, and financial institutions and public corporations.
- By mid-1985, the Philippines had come into full compliance with the financial criteria of the IMF program.

More recently, disbursement of the third tranche of the IMF standby has been delayed while the IMF, the IBRD [International Bank for Reconstruction and Development], and the Philippine Government try to come to grips with the difficult policy issues involved in reform of the coconut and sugar monopolies. It is too early to make a judgment on the likely effectiveness of proposed reforms still under discussion. If the spirit and letter of the proposals are fully implemented, we believe benefits would flow to producers at all levels of these industries. However, we have not yet seen any substantial reform implementation.

We have lent our strong support to these efforts, believing that both the short-term financial stabilization program under the IMF agreement and longer term structural reform of government economic policies are necessary if a renewal of sustained economic growth is to be achieved.

Responding to Philippine efforts to reintroduce market forces and fair competition in key agricultural commodities—rice, wheat, flour, and fertilizer—we provided effective readjustment incentive through the signature last summer of a PL 480 title I agreement for $40 million in U.S. agricultural commodities. The self-help provisions of that agreement provide for reintroduction of market forces in these areas, previously subject to administrative controls and government monopolies.

Although some initial steps have been taken to implement these reforms, serious questions remain about the government's intent to establish competitive market conditions for these commodities. The level of our economic assistance will be influenced strongly by the implementation record for these as well as other basic reform measures.

The attitude of the private sector is also a critical factor for economic recovery. Continued bank lending and trade financing are both dependent upon the Philippines remaining in satisfactory compliance with IMF guidelines. Much-needed investment, both domestic and foreign, is inhibited by an investment climate which investors perceive to be unstable. American investors observe that Filipino entrepreneurs are not themselves investing at this time as they await a return of political confidence and improved government economic policies. These factors are known to the political and economic leadership of the Philippines and provide a powerful incentive for attention to an agenda of reform which we can support.

The Military Situation and Military Reforms

While my colleague from the Defense Department, Assistant Secretary [for International Security Affairs Richard L.] Armitage will comment in greater detail on recent military developments, no report on the Philippines would be complete without some assessment of the security situation.

I would note first that all the available indicators point to continued growth this year of the CPP/NPA [Communist Party of the Philippines/New People's Army] insurgency in overall strategic terms. Increasing NPA presence and influence have become particularly apparent this year in the central Philippines (the Visayas) and in provinces near the capital of Manila. Communist "taxation" is on the increase. The AFP [Armed Forces of the Philippines] has scored a number of tactical victories in local encounters, but these limited successes have had not a significant impact in slowing the momentum of the insurgency as a whole.

Nevertheless, in 1985 the government leadership and the military establishment have demonstrated an increased awareness of the seriousness of the insurgency and have taken steps to deal with it more directly.

Important elements of the AFP leadership have sought to restore the confidence of the Philippine people in their armed forces by returning to the basic military values of discipline and service. They have publicly acknowledged that the armed forces had become afflicted with "arrogance, abuse of authority, laziness, and corruption." The United States welcomes this increased Philippine Government attention to combating the insurgency and the recognition that rebuilding the professionalism of the armed forces will be essential to that effort. However, we believe much more progress is needed if the military is to develop the capability to counter the communist insurgency and begin the difficult process of regaining the confidence and support of the Philippine people.

As concerned civilian and military figures in the Philippines have noted in public and private, there are continuing problems in the areas of armed forces leadership, opportunities for upward mobility, and accountability for incompetence, corruption, or abuse of authority which have not yet been fully addressed. Until the resolution of the current trial of military officers and men who have been implicated in connection with the Aquino assassination, it appears unlikely that any significant restructuring of armed forces leadership or authority will take place.

This remains a significant impediment to full realization of the reforms which have been initiated. In our continuing dialogue with the Philippine Government, we have strongly conveyed our concern for rapid progress on elimination of military abuses and enhanced professionalism.

An effective effort against the insurgency requires far more than just military means. The Philippine Armed Forces do not need any lectures from us on that score. In fact, one could say that they wrote the book on how to fight an insurgency successfully in their struggle against the Huk rebellion in the 1950s. And they followed the same prescriptions in largely putting down the Moro insurgency in the 1970s through a campaign that was as much political and economic as it was military. What they need to do now is to take that book off the shelf and apply its lessons, no matter how demanding they may be in terms of professionalism, discipline, and courage.

We Americans must recognize, however, that such a campaign cannot succeed with only political and economic measures and that an effective military requires more than just professionalism—it needs equipment as well. That may seem elementary. But for the Philippine military—which has had its budget cut heavily in the last few years and which gets a smaller share of GNP (roughly 1%) than any other country in Southeast Asia—it is not something that can be taken for granted.

Those who propose to cut our relatively modest military assistance to the Philippines for the sake of reducing the incidence of military abuse or promoting political reform do a disservice to both goals. The reform that has begun within the Philippine military deserves to be encouraged. Starving the military, to the contrary, will, at best, divert their attention from essential tasks and, at worst, force them to commandeer resources from an unwilling population.

The process of rebuilding the Philippine Armed Forces is long overdue and will take a long time to complete. Those who will gain from delay are not Marcos' democratic opposition but only the NPA. Indeed, if the democratic opposition does gain power some day, they, too, will need effective protection against the communists and will wish that the process of rebuilding the Philippine military had been started earlier.

The Continuing Dialogue

It is not our intent to produce a deepened crisis in the Philippines but to assist in those measures which will revitalize essential institutions which either the present government or its successor will need to defeat the insurgency, restore economic growth, promote respect for human rights, and give the public confidence and hope in the future.

In this connection, we have maintained and expanded frank and open relations with all responsible elements of the Philippine body politic and have engaged in a continuing dialogue with the Philippine Government regarding our mutual concerns.

Senator Laxalt's recent visit at the personal behest of the President was a part of this continuing dialogue. The trip signified no fundamental change in our appraisal of the situation. It was, however, an important part of the ongoing process of contact and consultation between the leaders of our two countries. As a senior member of the Senate and a close personal confidant of President Reagan, Senator Laxalt was able, we believe, to convey U.S. concerns and present U.S. policy in the most authoritative way possible.

The Senator discussed our concerns fully. However, he delivered no hostile messages, and there was no rejection of our views on President Marcos' part. President Marcos indicated that some positive steps would be taken in the areas of elections and improved military performance. We are studying carefully the comments of President Marcos to Senator Laxalt. Obviously, the key to success will depend not on words but on the actions which the Philippine Government takes to correct the economic, political, and military problems that now exist in that country.

In sum, our Philippine policy has multiple dimensions, all designed to rebuild and reenergize institutions which will be required to restore stability and growth. One indispensable element of this policy is assistance resources, provided by the Congress, some of which fulfill honorable commitments in connection with our important military facilities and all of which enable us to work more effectively for constructive change.

We believe that our policy is a sound one. We do not underestimate the problems or the vital interests involved. Nevertheless, we are determined to stay the course and not be deterred by easy cynicism. No "quick fixes" or cheap solutions are available.

Nevertheless, I am confident that the Filipino people, with such assistance from us as they feel appropriate and we can appropriately provide, will successfully overcome current problems and launch the new generation on a renewed era of growth and democratic progress in productive association with neighbors and allies. We will mutually gain from such an outcome, and the entire region will be more secure and stable.

U.S.-Pakistan Relations: The Economic Dimension

by W. Allen Wallis

Address before the Federation of Pakistan Chamber of Commerce and Industry in Karachi on November 19, 1985. Mr. Wallis is Under Secretary for Economic Affairs.

After 2 days of government talks on economic and commercial issues in Islamabad, I welcome this opportunity to meet with leaders of Pakistan's business community to share ideas and enjoy good fellowship. I had a similar opportunity in Lahore on Sunday and found it informative, constructive, and interesting, as I am sure this occasion will be also.

Shared Objectives and Interdependence

The renewal of the security assistance relationship between the United States and Pakistan in 1981 began a train of events that has resulted in broadened and strengthened relations between our two nations. Those relations are based on mutual respect, shared political and economic objectives, and a recognition of each other's interests. It is a relationship of growing interdependence, as decisions taken in Washington and Islamabad have important implications for the interests of both our governments and peoples.

Our shared objectives include the following:

- Opposition to Soviet aggression and repression in Afghanistan;
- Reduction of tensions in the region; and
- A desire for peace, stability, and prosperity for all nations in the region.

Pakistani Economic Growth: A Key to Stability

The stability of Pakistan, a nation living under the constant threat of Soviet aggression and expansionism, is critical to the fulfillment of these objectives. Our security assistance provides Pakistan with equipment necessary to meet this threat, and it also demonstrates our confidence in Pakistan and our commitment to Pakistan's security and territorial integrity. This is a vital component of Pakistan's stability.

Another vital component to Pakistan's stability is a healthy economy. The people of Pakistan aspire to economic progress and its benefits. But Pakistan has a special burden: it must achieve economic growth at the same time that it is striving to enhance its defenses in the face of the constant Soviet threat and at the same time that it has the world's largest refugee population—nearly 3 million.

Pakistan is meeting this challenge, and the American people have deep admiration for what Pakistan is accomplishing. Since the Soviet invasion of Afghanistan, despite the heavy costs associated with responding to that threat, Pakistan has recorded real economic growth of about 6% per year—a creditable performance by any standard. Pakistan's agricultural base has strengthened, and new industries have increased Pakistan's manufacturing capabilities.

Pakistan's Challenge: Domestic Resource Mobilization

Much of this growth has depended on capital from outside, on funds remitted by the millions of Pakistanis working abroad, and on official transfers from international sources.

There is a new challenge facing Pakistan today, as overseas remittances are declining and international financing is becoming tighter. The challenge immediately ahead is to mobilize domestic resources to provide the investment needed for the economy to continue to grow vigorously. The challenge is to adjust to declining capital inflow from abroad. How Pakistan responds to this challenge will determine what the longer term prospects are for Pakistan's economic welfare and will have an important impact on political stability.

The United States has a large stake in the resolution of this issue, and we stand prepared to support your efforts. Our private sector will respond if Pakistan improves its industrial base and mobilizes resources through greater reliance on market forces. The strength of our government's commitment is illustrated by President Reagan's pledge to seek a new multiyear program of security and economic assistance for Pakistan when our current $3.2 billion program concludes in September 1987. But the challenge is, first and foremost, yours. It is a challenge to do at least five things:

First, overhaul the mechanisms of domestic resource mobilization;

Second, unleash the resources and initiative of the private sector;

Third, increase the self-financing of those public corporations which cannot be readily divested;

Fourth, rely to a greater extent on user charges for public services; and

Fifth, eliminate wasteful subsidies which only lead to inefficiency.

I am confident that Pakistan's greatest asset, its talented people, will accept this challenge with the same vigor that has resulted in Pakistan's impressive economic performance in the first half of this decade.

America's Challenge: International Trade Policy

Just as the United States has a large stake in the outcome of Pakistan's efforts at domestic resource mobilization, so also does Pakistan have a large stake in the results of the Reagan Administration's efforts to preserve and strengthen the international open trading system and to avoid a worldwide slide into protectionism.

During the past 4 years, President Reagan has charted a course for the U.S. economy that has fostered new

competition in our economy through deregulation, tax incentives, and reduced inflation. The results are impressive. I will mention three.

First, new products and services have been spawned by established firms and by hundreds of thousands of new firms.

Second, our gross national product has increased by nearly 13% after allowing for inflation.

Third, our unemployment rate has fallen from 10% in 1982 to 7% today, and 7 million new jobs have been created.

At the same time, however, our trade deficit has risen to more than $100 billion annually. Despite this huge deficit and the increasing calls for protectionist legislation, President Reagan has stood firmly in support of free international trade. The basis of his commitment is that historical experience has shown that the dislocations and costs resulting from protectionism are disastrous. The President witnessed the effects of protectionist trade policies in the 1930s—the Great Depression—and none of us want to see this happen again.

President Reagan recognizes also that he has a responsibility and a duty to ensure that American companies and workers are not subject to unfair competition. He is aware that our adjustment to changes in our comparative advantages can be disruptive, with domestic political consequences.

The President's program for addressing these concerns is contained in the trade policy we are now vigorously pursuing. It has three main components:

First, a new round of international trade negotiations designed to reduce trade barriers and to strengthen the rules under which international trade in goods and services is conducted;

Second, elimination of unfair trading practices by foreign countries that injure American exporters; and

Third, negotiations with our trading partners (especially Japan) to open their markets.

A New GATT Trade Round

It is the outcome of the first item, a new international trade round, that is of most importance to Pakistan, because if this effort is successful, it will expand trade opportunities for all nations.

The United States has three key objectives for this new round:

First, to strengthen and improve the trading rules to create a more open trading environment;

Second, to expand the exchange of goods through the reduction of trade barriers, thus raising standards of living; and

Third, to establish rules for free and fair trade in services, investment, and intellectual property.

These are our goals, but in addition we are prepared to negotiate all of the concerns of all our trading partners. But they must participate to have their concerns addressed.

The support of developing countries such as Pakistan for a new round is essential if we are to strengthen the world trading regime and thereby strengthen Pakistan's trading prospects. Your concerns with the trade policies of the United States and other developed countries cannot be adequately handled in isolation; a successful new trade round will create the environment under which all our concerns can be dealt with.

U.S. Textile Import Policy

You are especially interested, I know, in U.S. policy on textile imports. You must realize that our trade policies are determined by the interplay of economic interests among domestic political groups. That is true of trade policies in all countries.

The American Government must ensure that the structural adjustment we are now undergoing is not unduly disruptive. The U.S. textile industry in 1980 employed 848,000 workers. Today, it employs 746,000—a loss of over 100,000 jobs in 5 years. Our textile industry supplied 89% of the U.S. market in 1980 but only about 77% today. Pakistani textile imports to the United States last year increased from $119 million to $176 million—just short of 50%. The total U.S. market has been growing only about 1% per year.

The U.S. textile industry—manufacturers and workers—can be found in almost every state in the United States. They have sought U.S. Government help in easing the adjustment as their market share has fallen substantially, with severe economic disruption in many parts of our country. The decision to provide them some relief is a political decision I believe most governments would consider it their responsibility to take.

For 23 years nations have dealt with textile trade in a unique and special manner. Despite the enormous adjustment problem the United States has had to face in response to textile imports, and despite the long history of international regulation of textile trade, the United States has been the market most open to textile exports from developing countries such as Pakistan.

Between 1982 and 1984, textile imports into the United States increased 64%, into Japan only 14%, and into the European Community less than 1%. Lack of access to other markets has caused textiles from all over the world to surge toward the United States, thus aggravating the problem for the United States and creating pressures for protection.

For Pakistan, U.S. textile import quotas have provided guaranteed access to the U.S. market during a period of intense competition from other countries. If such access had not been guaranteed to Pakistan through our quota system, I can only speculate about what would have happened to Pakistan's share of our market. The quota system has protected you from some tough competitors, principally in East Asia.

Despite intense pressures on the Reagan Administration to restrict textile imports further, I want to make clear to you President Reagan's firm opposition to the protectionist legislation now pending in our Congress, including the Jenkins bill to which your president referred when he introduced me.

But we need your help, and the help of other textile suppliers, to convince those who call for protectionist legislation that the world marketplace is, indeed, moving toward freer and fairer trade. We can make that move through multilateral trade talks. It shocked us greatly last week in Geneva that Pakistan joined India, Brazil, and a few other countries in obstructing preparations for a new round, even though countries which carry on 95% of the world's trade want to proceed.

Conclusion

As we look to new negotiations of the Multi-Fiber Arrangement and a new GATT [General Agreement on Tariffs and Trade] round of international trade talks, we need to keep open minds and to recognize that our specific concerns must fit into a larger framework.

Freer and fairer trade—whether in services, high-technology products, or

textiles—is in both our interests, and it is in the international multilateral context that we can find the solution that unlocks new markets for efficient industries.

The stakes for both of us in these talks are high, just as they are in other aspects of our relationship. We are linked by a long-term commitment and shared objectives, and we must recommit ourselves to working together to strengthen this relationship. This requires understanding each other's concerns and basic honesty in confiding what can and cannot be done to resolve our problems. It is in this spirit that I have talked with you today, and I can assure you that it is in this spirit that I have listened to your government in Islamabad and will listen to you this evening. ■

The United Nations at Forty: Economic Successes and Failures

by W. Allen Wallis

Address before the Business Council for the United Nations on November 6, 1985. Mr. Wallis is Under Secretary for Economic Affairs.

Just over 2 weeks ago, President Reagan spoke before the General Assembly of the United Nations. At the beginning of his address, he compared the UN's laudable ideal of sparing succeeding generations from the "scourge of war" with the painful reality in which "too many dreams have been shattered, too many promises have been broken, too many lives have been lost."

Today, I wish to discuss with you another of the noble objectives embodied in the UN Charter—"to promote social progress and better standards of life in larger freedom."

Notice that the drafters of the Charter linked freedom to social and economic progress. President Reagan, in an eloquent statement on this theme at the General Assembly, said:

> Only when the human spirit can worship, create, and build, only when people are given a personal stake in determining their own destiny and benefiting from their own risks do societies become prosperous, progressive, dynamic, and free.
>
> We need only open our eyes to the economic evidence all around us. Nations that deny their people opportunity—in Eastern Europe, Indochina, southern Africa, and Latin America—without exception are dropping further behind in the race for the future. But where we see enlightened leaders who understand that economic freedom and personal incentive are key to development, we see economies striding forward—Singapore, Taiwan, and South Korea; India, Botswana, and China. These are among the current and emerging success stories because they have the courage to give economic incentives a chance.

Too often during the last 40 years the United Nations and its member nations have forgotten these basic truths. Many nations embraced theories of development based on central planning and government coercion. When unsound domestic policies of this type have led to economic stagnation, as inevitably they must, many of these same developing countries have turned to the international arena and sought to establish a new international economic order. In its extreme form, the new international economic order would establish an international welfare state in which economic power would be shifted from individuals to governments and intergovernmental bureaucracies and in which wealth would be redistributed internationally rather than be created through economic growth.

The Success of the Market System

Actually, the new international economic order would not be new at all. For as far into the past as historical records extend, there have been rulers and bureaucracies that have sought to control commerce and increase their own wealth and power at the expense of their citizens.

The really new ideas in economics and politics are little more than 200 years old. Adam Smith, in *The Wealth of Nations*, was the first writer to explain how a competitive, free market will lead individuals, while freely pursuing their own self-interest, to order their activities in ways that lead to a pattern of production, consumption, and distribution that cannot be equaled by even the most omniscient and omnipotent economic planner. Economists ever since Smith have been impressed with the capacity of the market system to promote economic growth and spread its benefits broadly without coercion. As the President noted, experience has shown that those nations that have trusted the market most have prospered most.

The market, so successful within nations that have relied on it, is equally effective in organizing economic relations among the peoples of different nations. Greater reliance on market principles not only would promote social progress and economic development but also would increase prospects for achieving other goals of the United Nations—for example, preventing war, protecting human rights, and strengthening the rule of law.

This point was elucidated eloquently by [Singapore's] Prime Minister Lee Kuan Yew in a brilliant address to a joint session of Congress recently. Prime Minister Lee noted that, before the Second World War, the "desire for a better life had caused squabbles over markets and the expansion of empires in order to build larger markets and acquire resources." But, he noted, while these efforts to expand territory or gain assured markets did not bring prosperity, prosperity did come later in a very different way. As Lee put it:

> . . . political leaders in former colonial territories watched in wonderment as the British, French, Belgian and Dutch Governments dismantled their empires . . . and grew more prosperous. Their former subject peoples had expected them to decline into relative poverty after they lost their empires, like Spain and Portugal. The secret lay in GATT [General Agreement on Tariffs and Trade] and the IMF [International Monetary Fund], which ensured that trade and investments continued and expanded after decolonization.

Put more bluntly, the nations of the world have seen that to secure the prosperity that comes from access to markets and raw materials, free trade is far more effective than armies.

Coordination of economic activity through markets involves voluntary exchange, not coercion or central management. There are many countries in the world whose values and social systems diverge sharply from our own. The market system will not dissolve these differences, and free trade will not create universal harmony. Rather, trade permits economic cooperation to take place in spite of differences, even among

people who hate each other. In that way, the market system makes a contribution toward the goal of eliminating the scourge of war.

The market system also is supportive of another basic ideal expressed in the UN Charter, that of "faith in fundamental rights, in the dignity and worth of the human person, in equal rights of men and women and of nations large and small." By allowing men and women to pursue their own economic self-interest, the market system maximizes individual freedom. In a market system the individual—not government—is paramount.

In command-and-control economies, by contrast, the energy and productivity of the individual are appropriated by the state. Economic coordination is secured by government coercion that intrudes into individuals' decisions on where to work, what to buy, and even how many children to have. Government coercion is the antithesis of individual freedom and human rights.

The market system is not synonymous with anarchy. A market system needs a rule of law that protects private property and enforces contracts. The development of international markets advances a third objective of the UN Charter, the establishment of "conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained."

There are encouraging signs that, after being overlooked too long, these principles now are being quietly acknowledged and cautiously put into practice. In their national policies and bilateral relations with the United States, many developing countries have turned toward market mechanisms. The two most populous countries in the world—China and India—have begun slowly to deregulate, decentralize, and liberalize their economies. The more dynamic economies of Asia have already shown that full participation in the open trading system is the key to economic advancement.

It is not only in Asia that success stories are found. In Africa, nations like Botswana, Malawi, Mali, Senegal, and Zaire have increased the scope given to market forces. The Nigerian Government recently opened a public debate on economic policy, and it is emphasizing the important role the market should play.

The UN Debate on International Economic Issues

Unfortunately, these positive developments have hardly penetrated the sterile debate on international economic issues at the UN General Assembly and the UN Conference on Trade and Development (UNCTAD). For instance, despite progress on debt that is quietly supported by debtor nations, their UN delegations continue to parrot timeworn calls for global economic conferences and negotiations. The call is continued without regard for whether such conferences would have practical benefits for developing countries.

Since the need for debt relief varies widely from country to country, conferences are not likely to address the individual needs of debtors but are likely to be harmful. By treating alike countries with solvable, short-term problems and countries that have more fundamentally mismanaged their economies, conferences convey the impression that all the participating debtors are poor credit risks.

Although there is growing recognition that sound domestic policies are critical to economic development, reports of the UN Second Committee and UNCTAD continue to imply that development can occur only if developed countries donate unrestricted and ever-increasing amounts of charity. These major UN bodies seem unable to come to grips with the central role of domestic economic policies in economic development. Fortunately, their performance is in sharp contrast to the excellent advice and technical support for developing countries provided by such specialized UN agencies as the World Bank and the International Monetary Fund.

Although developing countries clearly gain from the open trading system—and could gain even more from further trade liberalization under a new trade round—UN debate in New York focuses on demands for unilateral trade concessions from developed countries to developing countries. Free trade is not a one-way street, and political realities will not allow markets to remain open forever to exports of newly industrializing countries without at least the prospect of reciprocal rights and benefits among trading partners. Nor are high trade barriers in the interest of the developing countries themselves. Again the world is fortunate that there is a specialized UN agency—the GATT—where it is still possible to address many trade issues in a realistic fashion, soon in the context of a new round of multilateral trade negotiations. But even in the GATT, too many developing countries resist progress on a new trade round and cling to ancient dogmas.

Despite growing acknowledgment that private direct foreign investment is an attractive alternative to debt financing, some representatives of developing countries in the United Nations continue to seek rigorous codes to restrict transnational companies. The UN rhetoric reinforces the notion that most developing countries are hostile to foreign investors, thus discouraging investment and, along with it, the associated transfer of technology and know-how.

Resources in the United Nations continue to be devoted to the many activities of the UN Centre on Transnational Corporations. Unfortunately, the center accomplishes nothing because it insists on playing politics. It refuses to apply a uniform set of criteria that would encompass both public and private enterprises, regardless of whether they are from the West or the East. If the center contends that transnational corporations are evil, then Soviet transnational corporations must be just as evil as those of the United States. But, of course, there is a more fundamental problem with the center's activity—namely, that it has sought only to condemn and restrict transnational corporations instead of fostering the benefits they can bring to the development process. If we are to restore confidence to international investors, it will be necessary to bring balance to UN activities in this field.

Toward a More Realistic and Effective UN Role

Now and then we see glimmers of light. Individual delegates from developing countries are beginning to recognize that the confrontational tactics and ideological extremes of the past have done nothing to bring their nations the economic development they seek. At a recent UNCTAD meeting, an African delegate sat through hours of discussion analyzing a report written by a Soviet national employed by the United Nations. The report disingenuously argued that the trade surplus the East bloc was running with LDC [less developed countries] countries contributed greatly to LDC development. Finally, the African delegate threw up his hands in disgust and said, "We have had enough analysis

on the Soviet-LDC trade. What we want to know is how we can market our commodities in your country." He got no satisfactory answer, of course, because the Soviet Union and its economic partners have neither the desire nor the ability to serve as important markets for developing countries.

Members of the large group of developing countries which gathers unders the G-77 banner are coming to realize that their economic needs and problems are not uniform. They see that they must seek solutions tailored realistically to their individual problems. There also are modest signs of resistance among developing countries to continuing to march in lockstep support of unrealistic, ideological positions that in UNCTAD, ECOSOC [Economic and Social Council], and UNIDO [UN Industrial Development Organization] have prevented pragmatic problem solving.

We see the brightest spots in the work of some of the UN technical organizations. For example, the Food and Agriculture Organization (FAO) and the World Food Program have provided focal points for international efforts to deal with the African hunger crisis. They have distributed record amounts of emergency food aid and played an important role in coordinating the efforts of donors, in addition to their regular food aid in support of economic development. The World Health Organization (WHO), the International Atomic Energy Agency (IAEA), the International Civil Aviation Organization (ICAO), and the International Maritime Organization (IMO) have sought practical solutions to real problems. WHO works to limit the spread of global health problems; it eliminated smallpox from the face of the earth, a monumental accomplishment. IAEA supports our commitment to nuclear nonproliferation. ICAO has been the central point for reducing the threat of terrorism to civil aviation. In the aftermath of the *Achille Lauro* piracy, we will look to the IMO to help halt terrorism at sea.

The effectiveness of the various UN organizations and agencies in the future will depend on the success of U.S. and Western efforts to undertake reform throughout the UN system. The United States for one, pursues this objective vigorously. We have had some minor success. In UNCTAD, for example, we now see some progress being made under improved leadership, although, admittedly, against a backdrop of the usual unfocused and duplicative work programs which have been the hallmark of UNCTAD. The Secretariat has been forced to recognize that it does not exist solely to advocate G-77 political causes, no matter how impractical they may be. It is learning that an ideologically neutral Secretariat can be an effective prodevelopment Secretariat. We have seen, for example, major improvements in the latest UNCTAD Trade and Development Report, an analysis of world economic conditions; for the first time in many years, the report was written objectively enough to be taken seriously.

Unfortunately, it sometimes seems that we take two steps backward for every three forward. We spend inordinate amounts of time in childish bickering over fatuous resolutions that are irrelevant to development problems.

Conclusion

To sum up, the United States has a straightforward goal in its work in the United Nations on economic and social issues. We want the United Nations to come to understand that development is possible only if it is grounded in individual initiative, private property, a rule of law, and freedom. We want to ensure that the activities of the United Nations return to the fundamental principles set out in the UN Charter. We want to channel the economic and social programs of the United Nations into activities that really do promote "social progress and better standards of life in larger freedom," that support the rule of law, and that strengthen human rights.

We recognize that, as the President pointed out, there are deep and abiding differences among the nations of the world. Market-oriented approaches to international economic and social relations will not dissolve these differences, but they can reduce the chances that economic and social tensions become politicized and lead to conflict. By promoting greater reliance on the market, the United Nations would reinforce its other efforts "to save succeeding generations from the scourge of war."■

U.K.-Ireland Agreement Concerning Northern Ireland

PRESIDENT'S STATEMENT, NOV. 15, 1985[1]

I am delighted to join with Speaker [of the House of Representatives Thomas P.] O'Neill in welcoming the important Anglo-Irish accord announced today by Mrs. Thatcher and Dr. FitzGerald. We applaud its promise of peace and a new dawn for the troubled communities of Northern Ireland. I wish to congratulate my two good friends—and outstanding Prime Ministers—who have demonstrated such statesmanship, vision, and courage.

The peoples of the United Kingdom and of Ireland have made a great contribution to the political and intellectual heritage of the United States and to our economic and social development. We are particularly pleased that these two neighbors—faithful friends of America, so close to the United States in their ties of history, kinship, and commitment to democratic values—have joined on a common causeway toward hope and harmony in Northern Ireland. All Americans—and above all, those of Irish descent who have prayed for an end to violence in the land of their ancestry can take pride in this important step forward.

We view this agreement as a clear demonstration of British and Irish determination to make progress concerning Northern Ireland and in their bilateral relations. Given the complex situation in Northern Ireland, all may not applaud this agreement. But let me state that the United States strongly supports this initiative, which pledges to both communities in Northern Ireland respect for their rights and traditions within a society free from violence and intimidation.

On a number of occasions, we have joined the Irish and British Governments in condemning violence and discord in Northern Ireland and calling on all Americans not to assist, either with money or moral support, those misguided efforts that prolong the nightmare for terrorism and hatred. Our call is even more compelling now that a framework for peace has been agreed upon. I wish to reconfirm and reinforce

our condemnation of terrorism wherever it may take place.

Now that a framework has been established, the work of constructing a durable peace must proceed. This will involve rebuilding what has been destroyed by hatred and violence and giving hope to those who have been tempted by despair. We have often encouraged Americans to let their foreign investments and vacation dollars, and the employment opportunities that accompany such spending, find their way to the Emerald Isle. I am proud that Northern Ireland enterprises in which American money is involved are among the most progressive in promoting equal opportunity for all.

The British and Irish Governments have pledged their cooperation in promoting the economic and social development of those areas, in both parts of Ireland, which have suffered from the instability of recent years.

It is entirely fitting that the United States and other governments join this important endeavor. As President Carter said on August 30, 1977: "In the event of a settlement, the U.S. Government would be prepared to join with others to see how additional job-creating investment could be encouraged to the benefit of all the people of Northern Ireland."

There are many in Congress who have shown their concern and sympathy for the people of Northern Ireland. And I will be working closely with the Congress, in a bipartisan effort, to find tangible ways for the United States to lend practical support to this important agreement. The Speaker, who has kindly joined me at the White House today, and I have already discussed how the United States could assist in promoting peace, friendship, and harmony between the two great Irish traditions.

In closing, permit me to underscore our heartfelt support for this courageous and determined effort to promote peace and reconciliation in Northern Ireland.

[1]Text from Weekly Compilation of Presidential Documents of Nov. 18, 1985.■

Secretary's Visit to Northern Europe

Secretary Shultz departed Washington, D. C., on November 2, 1985, to visit Finland (Nov. 3–4), the Soviet Union (Nov. 4–5), and Iceland (Nov. 5–6). He returned to Washington on November 6.

Following are news conferences held by the Secretary in Moscow and Reykjavik.

NEWS CONFERENCE, MOSCOW, NOV. 5, 1985

We all have just concluded around 14 hours of intensive discussion, with General Secretary Gorbachev this morning, with Foreign Minister Shevardnadze yesterday and this afternoon. In addition, a small group from our delegation met with a small group of theirs and tried to define further some of the issues that we have been talking about. We came here to exchange views, and we did so in a systematic manner: in painstaking detail with the Foreign Minister, and on a more general basis, or discursive basis, with the General Secretary. This has allowed each of us to explore all the possibilities and to explore the nature of problems and opportunities that involve our two countries, I might say not only in the sense of preparing for the meeting in Geneva between President Reagan and General Secretary Gorbachev, but more generally to examine our relationship, thinking of this meeting, and even such a major event as the one taking place in Geneva, as part of a process that we would like to see continued. In evaluating our discussions, I would say that there was nothing surprising in them. We anticipated a frank and thorough review of the issues; that's what we had. And I think this kind of across the board survey is important in its own right, and a useful part of the process of assembling of more constructive relations between our two countries.

As we broke up late this afternoon, as we had had a custom of doing, we now always pick out a few words to use to characterize these discussions, and I think we would agree that this meeting, set of meetings, have been an important part of the preparations for the Geneva meeting. They've been frank; we have identified respective positions; we've seen some positive developments; we also see that there are many serious differences between us, which, I suppose, only suggest the need for the meeting that we anticipate. And so as we broke up we wished for success in the upcoming Geneva meeting and beyond, and pledged to each other that we would work hard for continuing preparations, inspired, so to speak, by the importance of this endeavor. If you have any questions, I'd be glad to try them; if they're too difficult, I'll ask Ambassador [Paul] Nitze or Mr. [Robert] McFarlane or Ambassador [Arthur] Hartman to [inaudible].

Q. You spoke of some positive developments. Could you possibly identify them for us?

A. I think first of all, a deep exchange of views in itself is a positive development. We have tried to work at all the issues, and there are quite a range of them. I can't say that anything definitive was settled as such, although we did, I think, narrow our differences in some, but as I said there are deep differences remaining.

Q. Would you say now there is an understanding—not in writing, but a general understanding—that to pursue the dialogue you spoke of, there ought to be more than one summit meeting, that perhaps, a year or so after this meeting, it would be a good thing for them to meet again?

A. There has been no real exploration of that although obviously the question of where do we go from here—and undoubtedly a part of where we go from here involves subsequent meetings, not only of the heads but of others. So that question is before us, but nothing has been settled about it.

Q. Could you tell us a little bit about your meeting with Mr. Gorbachev, and what the two of you discussed, with as much specificity as possible?

A. I can easily do it with as much specificity as possible, but I think on the whole I'd prefer not to go into the detailed substance of these exchanges, as they're part of a process that we're working on. But it went on for quite a long while—the General Secretary had to break off a little before 2:00, as he was dedicating a Lenin statue here—but so we had close to 4 hours of—I think the only way to describe it is vigorous discussion. And he's accustomed to interrupting and expressing a view, and

so when in Moscow, do as those in Moscow do: we interrupted too. And so we had a very vigorous exchange, and I think it's helpful to both sides to get a sense of the way each thinks about these issues, the vigor of the view, and so on. So in that sense it was very good, and I would say it covered everything. There was hardly a subject you can think of that wasn't in some manner referred to or touched on.

Q. Just to follow that up, how do you think he and Mr. Reagan might interrelate on this question of interrupting and having vigorous discussion?

A. That remains to be seen. But the President is an old hand at this, and obviously the General Secretary is. So I—from my standpoint that will be something of a spectator sport—I'm looking forward to it.

Q. Did the subject of Vitaly Yurchenko come up, and the charges that he has made about the United States?

A. The charges that he has made are totally false. Insofar as what happens to him is concerned, we follow a practice in the case of a person who has given strong indication of a desire to stay in the United States, and that practice will be followed faithfully in this case.

U.S.-U.S.S.R. Air Service

DEPARTMENT ANNOUNCEMENT, NOV. 22, 1985[1]

American and Soviet civil aviation delegations met November 18–22 in Moscow to discuss the resumption of direct air service between the United States and the U.S.S.R. The two sides have reached tentative agreement to resume regularly scheduled service between the United States and the Soviet Union. Regularly scheduled flights would serve Moscow, Leningrad, New York, and Washington. It is anticipated that service will begin in 1986. Designated carriers for this service will be Pan American for the United States and Aeroflot for the U.S.S.R.

[1]Read to news correspondents by Charles Redman, State Department deputy spokesman. ■

Q. Did it come up?

A. We had a very brief discussion of it at the end.

Q. Can you tell me if the Soviets expressed any interest in Mr. Reagan's remarks about SDI [Strategic Defense Initiative] in the interview with Soviet journalists, to wit, that the United States would only deploy this after offensive missiles had been removed?

A. He had a general—we had a discussion, as I say, about everything, including SDI, but I don't think any particular statement was picked out in that discussion. But we certainly discussed the issue, and I think they are well aware of the importance the President attaches to this issue

Q. Did the Soviets here in Moscow give a response to the counteroffer, or counter-counteroffer, whatever one wishes to term it, that was put down by the United States in Geneva just a few days ago, and either in that connection or some other connection, was there here some narrowing of the positions between the two countries on the subject of the arms negotiations which are going on?

A. There was a narrowing with respect to those nuclear and space talks. We presented the U.S. position as it has been presented in Geneva, although in a much briefer style, and they made some observations which they labelled as preliminary, but neither side regarded this as the appropriate place to negotiate on that subject. We have the negotiations in Geneva, and that's where we believe the negotiations should take place. So there wasn't any real effort to try to turn this into a negotiating forum as such.

Q. Can you say whether proportionally more time was spent on arms control than on other subjects? Can you just give us some idea of how the time was split up?

A. First, in responding to your question, let me note, as you know, that there's a lot of arms control other than what's being discussed in the nuclear and space arms talks. We presented our views about that subject, and all of the other arms control settings, the positions of the United States, and suggestions of the United States. And I don't have in my head how long that took, and they had some responses, and then scattered through our conversations there were references to arms control. I don't know, I haven't toted it up that way, but certainly both sides agree that this is a subject of central importance. It's not the only subject: regional issues are of great importance, bilateral issues are of importance, human rights issues are of importance. The—perhaps underneath it all there is more to be said than perhaps we all realize—I feel this after these exchanges—to having frank arguments that kind of bring out to us the fact that the view here of the United States is very different from what we think the reality is. From some of their reactions, maybe they think we don't understand their reality. But at any rate, it's worthwhile to dig in on that basis, and we certainly did that in a major way, and I'm sure that that kind of thing will continue, and there should be that kind of exchange as well in Geneva.

Q. If there was some narrowing of issues and it wasn't in the main arms control areas, was it in regional, was it in bilateral, was it in human rights, could you give us some flavor?

A. I don't want to overdo the narrowing of issues. It's—I was going to say that would be gilding the lily, but I don't know whether the lily is the right image to cast up here. I think that the thorough explanation of what we think on all these various subjects and why, and what we propose, and listening to their responses, hearing their views, we did a great deal of that, very painstaking and systematic, with—going down a list so to speak. So in that sense, I think, perhaps there was some narrowing. But as I said, I can't—maybe there are one or two things that we can say, "Yeah, we agreed on that, we agreed on that," but basically we have a lot of work to do.

Q. With 2 weeks left before the summit, does it look at all realistic for us to expect anything like an agreement in principle on arms negotiations or a final communique that has any substantive agreements in it, or is it more likely now that it would be, as you've sketched out, more or less a laundry list of where the two sides differ?

A. As far as what likelihoods are for the former part of the question, I wouldn't bet the *New York Times* on it.

Q. You wouldn't bet that there'd be anything [inaudible]?

A. No, I wouldn't, but I don't—I think these things are open, but there is nothing from our discussions today from which to draw that conclusion. But they have made, after quite a distance of

time, a counterproposal to what we put on the table in Geneva, and we have, rather quickly, given a counter-counterproposal. The Geneva negotiations have been extended a little bit, so people are talking, that's—and that's about all you can say on it.

Q. You say the Yurchenko matter did come up. Did this, and the Embassy episode in Kabul and the Soviet seaman—do these events at all impinge on the atmosphere, or were you totally insulated from these events?

A. I don't think they particularly impinged on our talks. We were very intensive and hardworking on this. Of course, we have been working on the Kabul part before we came here, and as it turned out, it got resolved, I think, during the first day of our meetings, in accordance with the proper application of our principles. It obviously is the sort of thing that takes up time, but we didn't talk about it. We might have if it had dragged on, but it didn't.

Q. What you're describing sounds like a shouting match between you and—

A. No, it was—there was none. That's—I think one of the points that needs to be made here is that the atmosphere was far from a shouting match, quite the reverse. The discussions were straightforward, frank, as I said, the atmosphere was quite cordial and I think reflected a desire to use the time as effectively as could be. So it wasn't—there was no sense of a shouting match at all.

Q. May I ask a followup, a related question? The groups that were appointed to define further the issues—could they be called drafting groups?

A. They were not particularly a drafting group. You see, by this time we have a fairly well known to each other set of things that we're struggling with, and we talked about them for more or less 8 hours, and then we thought it might be worthwhile to have a smaller group—I think we had three on each side—discuss a few of these issues, and see if they could make a little more headway. Now, obviously when you take up a subject, and you want to see whether you agree on it or not, and if you think in a general way you do, it pays to write something down and see if everybody will sign on to that. So in that sense, there's a little drafting involved, but that's not really—it's not about drafting, it's about trying to see if we really can come to an agreement on some matter.

Q. Do you have an agenda now? Is the American side ready for the summit, or is there some major issue that still needs to be resolved?

A. There's a lot of work to do, in my opinion. We intend to do it. Whether or not there'll be more set in by the time the middle of November emerges, arrives, or not, remains to be seen. But there are quite a few things that I think may very well yield to further work, and we have agreed. Through our respective embassies, and through the negotiating groups that are at work now on various issues—for instance, there's a trilateral group meeting in Washington starting yesterday on the Northern Pacific air problem, and so on, and there are a lot of these going on—to keep pushing. So there's lots of work to do. And I would say that while, of course, the fact that there is going to be a big meeting in Geneva coming up tends to be useful as a kind of bureaucratic device to get people to decide things, at the same time life doesn't end in the middle of November. And in fact the whole purpose is not just to see if we can have a meeting where people come and talk, but whether or not through all the things that are going on it is possible to develop a more constructive relationship between these two countries. And we know it's hard, because the differences are wide.

Q. There have been a number of suggestions in the last few weeks that there might be some changes in Soviet human rights policy. Did you pursue those in your meetings, and at the end of the meetings, do you think there is a chance that there would be some changes in Soviet human rights policy?

A. The subject was certainly discussed, as a matter of fact rather fully. But I don't have anything that I can tell you. I don't mean that I have some things, but I can't tell you, but I have nothing to report as to what possible outcome there may be.

Q. Will any of the working groups that were established here at this meeting remain in operation? Will anyone remain here or return here between now and the middle of November, or vice-versa, will the members of the Soviet working groups come to Washington to continue that process?

A. The real working groups, of course, are the people who are negotiating different things, like the exchanges agreement, on the consulates, and so on. Those are the designated working groups. As far as the three people who met last night are concerned, that was just kind of a rump session that we put together, and it isn't necessarily to continue. We don't plan to leave anybody behind; the Embassy here is very well staffed, and Ambassador Hartman knows more about these issues than anybody, so we're well prepared here to follow through. But if it turns out that we think it's useful to have a little more exchange, we're quite prepared to move people back and forth, and I assume they are too.

Q. Were you disappointed by the lack of progress in narrowing issues?

A. I said in my opening statement that the views expressed were not surprising, and I think that we're still very much in that process of pushing along, and a word like disappointment or elation or whatever is—it's a function of what your expectations were, as much as anything else, so I guess I'd have to say no, I wasn't turned on or off one way or another. It reminds me a little bit about the other day, I was playing golf, and I had a putt to make, and there was quite a little curve on the green. I asked the caddy how much he thought the putt would break; he said "more than you think." And I stopped and I thought about that a little bit. Same kind of question.

Q. At this point, do you see the possibility of agreement on any of the substantive issues outstanding between these two countries at the summit?

A. You give me pretty wide range—"any." And so I confidently answer that question "yes" [inaudible], but that isn't necessarily saying a lot.

Q. Which ones?

A. I'm not going to go into that.

Q. Did you get some new information about Andrei Sakharov and Elena Bonner?

A. The information that we had about Mrs. Bonner we had before I left Washington, and nothing that I've heard here has changed that; in fact, it's only been confirmed further by the various things that are public knowledge.

Q. Did you discuss the possibility of Mr. Gorbachev appearing [inaudible] on American television before the summit?

A. The subject of television appearances is one of the items in the—we discuss in the exchanges agreement. But I would point out to you that Mr. Gorbachev appears on American television all the time, because—when he was in

France, he was being interviewed, it was all shown—that's in the nature of our system. Whomever the news people think the American people want to see, they'll show, and we'd like to see it the other way around as well, but unfortunately it isn't that way. I might say we were disappointed that the interview given by President Reagan was not reproduced in full, and that didn't seem to us quite a fair way to proceed.

Q. After your meetings, do you still believe that the Soviet proposals on disarmament in Euromissiles is aimed at driving a wedge between North America and its Western European Allies?

A. I've never said that, so I don't want you to put words in my mouth. On the other hand, I think it is a quite readily observable fact that the Soviet Union for a long time has tried to divide the United States from our allies, and it is quite obviously a tactic that hasn't succeeded, and the alliance is very strong—not only the North Atlantic Alliance, but our relationships with others around the world. As you know, the President met with five others, European and Japan, in New York, last week, I guess it was, and it was a very successful and warm and supportive meeting.

Q. You said that in the course of your discussions you've gathered that the view here of the United States is very different from what reality is. What misconceptions does Mr. Gorbachev have about the United States?

A. I'm not going to try to go into all of those ins and outs, but I suppose it isn't really even surprising that somebody who has never been in the United States and not been subjected to a wide array of competing flows of information and news and analysis that we tend to see all the time would have misinformation. So we hope that through the process of discussion and visits here of people and so on that a better picture will emerge.

Q. Could you tell us what proportion of the preparation you feel are completed, and, at this point, what your assessment is of the prospects for a successful summit?

A. The meeting will take place. And we have been preparing. What will be accomplished between now and then that will help the meeting to be productive, of course, I don't know; we'll work on it. But it's kind of impossible for me to envisage some sort of amount of preparations and then carve a percentage into it. But I do believe that, in the end, both leaders are likely to be very well prepared for this meeting; that we have done a reasonable job of creating a mutual understanding of how the meeting will be set up and how it will flow and what topics there will be and things of that kind, and of exploring each other's views enough so that I can give a pretty good rundown to President Reagan of just where the Soviets stand on various things, and no doubt the same can be said on the other side. So I don't know quite how to put a proportion down, but I think that the preparations for the meeting will be pretty good in the end.

Q. And the assessment for success—do you think, at the end of it, both leaders will be happy with what resulted?

A. I don't have any way of knowing, and success of course is a question of expectations again. I think that, at least in my own judgment, the measure of whether the meeting was worthwhile is most likely, and most importantly for that matter, to be taken by both men themselves, what do they think. And if it was worth the really very large expenditure of time and effort to them, in their view, as they see things unfolding, then I'd say it's a success. If they don't think so, but yet various things happen that lead other people to think it's a success, I wouldn't feel that good about it. So I think it's, at this stage of the game, quite a personal thing, and I know from the side of President Reagan, he is working very hard at it, and is genuinely desirous of seeing not simply a good meeting in Geneva—that's really not so important in the scheme of things—in the scheme of things what's important is that the relationship between these two very important countries have a turn for the better. That's the name of the game.

NEWS CONFERENCE, REYKJAVIK, NOV. 6, 1985[2]

We have been very pleased to have had a chance for an hour or so visit here with the Prime Minister and the Foreign Minister. This is part of our process of maintaining close consultation with our friends in Iceland and hearing their views and letting them hear ours about outstanding developments.

Of course, the primary focus in the relations between two friendly countries as we are has to be on the direct relations between us. So we spent a fair fraction of our time this morning, half or so, discussing the shipping issue, and I was pleased to be able to report that our Department of Justice has decided to appeal the decision made on the actions of the U.S. Government. So that appeal will be going forward, and in the meantime our government seeks a stay on the decision made, which we think is an incorrect decision, and we hope for, although we can't know of course what a court will rule, but we hope for a stay to be issued certainly before the end of this month. So we are working very hard on the shipping issue and we do believe that shipping determined on the basis of competitive bids is the right way to do it. It makes sense in terms of our system of thought about competition, and so we favor that.

We also had some discussion about whaling problems, and I have a memorandum from the Prime Minister on that. We'll look into that and see that that subject doesn't become a problem.

We also had an opportunity to give a description of what happened during our most recent trip, Mr. McFarlane's and mine, to Moscow and to discuss basically our alliance relationships and the alliance approach to East-West relations generally. I was interested to hear from my friends here about the recent visit of Mr. Shevardnadze to Iceland. So we managed to keep ourselves closely in consultation. And I think that's the way in which you maintain the strength of the alliance that's been such an outstanding fact of life here in recent times.

If you have any questions I'll be glad to try them. If you have tough questions, Mr. McFarlane will handle them.

Q. Do you think the Rainbow navigation case has harmed the relationship between your countries?

A. Not at all. Actually I think the questions raised by the Government of Iceland have been quite legitimate questions. And the Reagan Administration has been supporting a line of effort that I think is very much the same as your government wishes to pursue.

Q. It seems that an agreement made this summer with the Icelandic Government didn't have much [inaudible]. The case was just delayed. [Inaudible] and is this the case?

A. What happened was our Administration, the Department of the Navy, which is the branch of our government that is administering this particular case, made a decision involving an interpretation of our law. The decision that we feel is right and I think your government feels is right. And that decision was challenged in our courts.

We live under the rule of law, as you do, and an aggrieved party can challenge a decision of the government, and they did, and the judge in that case, a Judge Green, ruled in favor of the challenger. And what I have told you today is that our Justice Department has decided to appeal that decision. In other words, we don't agree with it. We'll take it to a higher court. In the meantime, we also seek a stay. So we are working within our judicial process to try to get this turned around. So I wouldn't say that's meaningless. I would say that's a lot of effort going on to try to get a good result and do it in the proper way. As we all know, in a free country operating under the rule of law, you have a lot of pulling and hauling and that's the way we work. It's a terrible form of government. It's just better than any other alternative, that's all.

Q. Are you optimistic after your meeting in Moscow?

A. I don't like words like "optimistic" and "pessimistic." I'd rather just describe the reality, which is that we have lots of issues, some of them quite deep, between ourselves and the Soviet Union, as you well know. And a very extensive effort, a systematic effort, is being made to deal with those issues, both in a broad general way and in terms of going through systematically and carefully a whole list of particular things that we are negotiating about. So the fact of the matter is that each side is working at it hard and will continue to do so. President Reagan and General Secretary Gorbachev will have their chance to work at it too in the middle of November.

Q. You met with Mr. Gorbachev yesterday and you work with President Reagan all the time. Given the mood and the climate of everything that is going on right now and knowing the personalities of the two men, what do you feel is perhaps the most positive thing, one very positive thing, that would come out of this summit meeting?

A. I think the fact that we are talking to each other instead of about each other—it's one of President Reagan's favorite phrases—is a good thing. On the other hand, it isn't simply a question of getting acquainted. Or, I'll put it another way, the best way to get acquainted is to struggle together at substantive and important issues and see if something can be done with them. So there is a process that is underway. The setting of a meeting tends to invigorate that process. And no doubt the outcome of the meeting will be in part a continuing process, and you need to look at it that way. In terms of what substantive may be possible to bring about or announce at such a meeting, that very much remains to be seen, but there are a number of issues that are under review.

Q. Is it true that in Moscow Mr. Gorbachev didn't seem to be properly informed of many of the issues that were discussed?

A. He probably feels he is properly informed, but it seemed to us that many statements made by various people on the Soviet side showed, in our view, a lack of understanding about how the United States works and what patterns of thinking are in the United States. They may feel we have the same picture of their own country. But in any case I think when you see what seemed to each side to be misunderstanding, perhaps that shows the importance of having more interaction and ability to talk, explain, and let people see for themselves, and so that's what we're doing.

[2]Press release 260 of Nov. 7. ■

NATO Nuclear Planning Group Meets

The Nuclear Planning Group of the North Atlantic Treaty Organization (NATO) met in Brussels October 29–30, 1985. The United States was represented by Secretary of Defense Caspar W. Weinberger. Following is the final communique issued on October 30.

The NATO Nuclear Planning Group (NPG) met in ministerial session at NATO Headquarters on 29th and 30th October, 1985. Spain attended as an observer.

On the eve of the meeting between President Reagan and General Secretary Gorbachev, we declare that the President goes to Geneva with the full support and solidarity of the Alliance.

We reviewed the status of Alliance nuclear forces including the ongoing arms control negotiations in Geneva. In this context, we received comprehensive briefings by the United States secretary of defense on developments in the balance of nuclear forces, the arms control negotiations, the continuing Soviet deployment, improvement and research programmes in the field of ballistic missile defense, and the United States Strategic Defense Initiative (SDI) research programme. We continue to support the United States and the United Kingdom efforts to maintain the credibility of their strategic nuclear deterrent in preserving security, peace and freedom.

We welcome the opportunity for effective arms control offered by the Geneva negotiations now underway. We reviewed the status of the Geneva negotiations and expressed strong support for United States positions concerning intermediate, strategic, and defense and space systems. We discussed the prospects for progress in each of these areas stressing that close consultation among the Alliance partners remains essential. We hope that the recent Soviet counterproposals, despite their one-sided and self-serving nature, indicate a Soviet willingness to accept verifiable and equitable arms control agreements involving deep reductions in numbers of nuclear weapons. We stressed the flexibility contained in the United States proposals for significant reductions, which have been on the table since the opening of the negotiations.

We received a detailed briefing from the United States secretary of defense on the evidence of Soviet treaty violations. We take the most serious view of this and call on the new Soviet leadership to take the steps necessary to assure full compliance with its commitments. We noted in this connection that a double standard of compliance with arms control agreements would be unacceptable and would undermine the security of the Alliance. In this context, we reaffirmed the requirement for effective verification of, and full compliance with, all arms control agreements.

We continue to be concerned by the steady buildup of Soviet nuclear forces, in particular the testing and deployment of new strategic systems, including the SS-X-24 and the recently deployed SS-25, the deployment of a new generation of air-launched cruise missiles and the preparation for deployment of ground- and sea-based versions. We also note that the total SS-20 force has further increased to 441 launchers with 1,323 warheads. Alliance policy in comparison is to maintain only the minimum number of nuclear weapons necessary for credible deterrence.

In accordance with the Montebello decision, SACEUR [Supreme Allied Commander Europe] presented at our meeting in Luxembourg a programme to reduce NATO's nuclear stockpile in Europe by a further 1,400 warheads by the end of 1988. These reductions are underway; they include the withdrawal of Atomic Demolition Munitions (ADMs), from the Alliance's nuclear stockpile. Taken together with the 1,000 warheads already withdrawn, this would reduce the number of nuclear warheads in the Alliance's stockpile to the lowest point in 20 years. At the Luxembourg meeting, SACEUR also presented his proposals to improve the responsiveness, effectiveness, and survivability of the remaining forces. At this meeting we received a progress report reflecting the status of SACEUR's proposals. We continued to review those reduction and improvement measures, recommended by SACEUR, which are currently being undertaken through the appropriate channels by the nations concerned. We agreed to consider periodically the progress of further implementation which depends on decisions by the nations concerned.

We noted the progress made on longer range INF (LRINF) deployments by NATO nations and the fact that negotiations on INF systems are currently underway. We reviewed, in particular, the status and the prospects for these negotiations and expressed support for the United States negotiating position developed in close consultation with its Allies. We emphasized NATO's determination to continue the deployment of LRINF missiles as scheduled in the absence of a concrete negotiated result with the Soviet Union obviating the need for such deployment. At the same time, we reiterated our willingness to reverse, halt or modify the LRINF deployment—including the removal and dismantling of missiles already deployed—upon achievement of a balanced, equitable and verifiable agreement calling for such action.

We accepted with pleasure an invitation from Dr. M. Worner, the German Minister of Defense, to hold our next meeting in the Federal Republic of Germany in spring 1986.

Greece expressed its views in a statement included in the minutes. Denmark reserved its position on the INF part.■

U.S. Role in the Case of Soviet Seaman Medvid

by Rozanne L. Ridgway

Statement before the Subcommittee on Europe and the Middle East of the House Foreign Affairs Committee on November 7, 1985. Ambassador Ridgway is Assistant Secretary for European and Canadian Affairs.[1]

I welcome the opportunity to testify today about the role of the Department of State in the case of Soviet Seaman Miroslav Medvid. This case, which focuses attention on the fundamental issue of political freedom, has drawn the attention of many concerned Americans and Members of Congress.

Before I describe in detail the role we played in this case, I would like to underscore three important points.

• First, that from the moment we were informed of this case, our objective was clear and straightforward: to remove Seaman Medvid from the Soviet ship in order to interview him in a neutral, nonthreatening environment under our control to determine whether or not he wished to remain here or return to the U.S.S.R. The operating assumption of the Department of State, the Department of Justice and the White House was that Seaman Medvid's behavior in jumping from his ship and his resistance to being returned to it constituted presumptive evidence of his desire to remain in the United States.

• Second, that decisions taken in this case, including the final decision to permit Seaman Medvid to sign a statement and return to his ship, were made at the highest levels of the White House, the Department of State, and the Department of Justice.

• Third, that it is and will continue to be the general policy of the U.S. Government not to force individuals to return to a country where they would be persecuted on account of race, religion, ethnic origin, membership in a particular social group, or political opinion. This principle remained fully operative throughout our involvement in the case of Seaman Medvid.

At 3:40 p.m. Friday, October 25, when it was first informed of this case by the Border Patrol Section of the Immigration and Naturalization Service (INS), the Department of State immediately requested the U.S. Coast Guard and Treasury Department to take steps to prevent the departure of the *M.V. Konev* from the Belle Chasse area of the port of New Orleans. We also immediately dispatched a Russian-speaking Foreign Service officer and an assistant legal adviser to the scene.

The Department of State representative arrived in New Orleans and boarded the *M.V. Konev* at approximately 10:30 p.m. CST [Central Standard Time] that night; from then on, the United States had a team of at least six officials aboard the Soviet vessel at all times until Seaman Medvid was transferred to the U.S. Coast Guard cutter *Salvia* on October 28. This team included representatives of the Department of State, the INS, the Treasury Department (Customs Service), and a U.S. Navy doctor. From the evening of October 26 an expert interpreter retained by the Department of State was also on the scene to ensure there would be no difficulty in communicating with Seaman Medvid. Of Ukrainian heritage himself, this interpreter was fluent in both Russian and Ukrainian and was able to communicate with Seaman Medvid in both languages.

Prior to our arrival on the scene, INS officials had observed Seaman Medvid on the *M.V. Konev* during the afternoon of Friday, October 25, and they reported that he was in bed and appeared to be sedated; there was a bandage on his left wrist and it was reported that Seaman Medvid had inflicted a laceration on his forearm. The Department of State representative first saw Seaman Medvid on Saturday, October 26, at approximately 3:00 p.m. CST. A U.S. doctor conducted a preliminary physical examination and reported that Seaman Medvid was alert and that he appeared to be in generally good condition; he did not appear to be sedated or under the influence of drugs. During that examination Seaman Medvid told the Department of State representative that he wished to return to the U.S.S.R. and asked whether we had any questions for him. Our representative replied that we would reserve our questions until we could arrange a formal interview off the Soviet vessel.

From the start we made clear to the Soviets that Seaman Medvid had to be removed from the Soviet ship to be interviewed in a nonthreatening environment under our control. In diplomatic discussions with the Soviet Embassy, we made clear that if Soviet officials did not agree to this demand, we were prepared to remove Seaman Medvid from the *M.V. Konev* by force if necessary. As a result of these diplomatic discussions it was agreed that Seaman Medvid would be transferred from the *M.V. Konev* to the U.S.

Coast Guard cutter *Salvia* for an interview in an environment where he would be free from coercion. The transfer occurred without incident at approximately 4:30 p.m. CST on Monday, October 28, after Hurricane Juan, which was passing over the New Orleans area, abated. Upon arrival on the *Salvia*, Seaman Medvid was offered some refreshment and an opportunity to rest or relax, which he declined.

The interview was conducted by a State Department representative in the ward room of the *Salvia*. Also present were a U.S. Navy doctor, an INS official, our interpreter, and four Soviets: two officials from the Soviet Embassy, a Soviet doctor and the master of the *M.V. Konev*. We allow the Soviet presence during such interviews in order to ensure our very important rights to similar access to Americans in the Soviet Union. However, the meeting was structured so that at no time were the Soviets present allowed to intimidate Seaman Medvid. At the meeting only one Soviet representative was allowed to speak, and then only at the start and end of the interview; he was not allowed to interrupt while the Department of State interviewer questioned Seaman Medvid or while Seaman Medvid responded. Not present during the interview, but aboard the Coast Guard cutter to assist if required, were two additional Department of State representatives including an assistant legal adviser, and also a U.S. Air Force psychiatrist, and representatives from INS, the Border Patrol, and the U.S. Customs Service. The interview was conducted through the U.S. interpreter in both Russian and English.

Shortly after the interview began, however, Seaman Medvid said he felt nauseous, and he asked to go outside for some fresh air. At that time, the sea was still rough as a result of Hurricane Juan and the Coast Guard vessel was rolling as a result of the turbulent water. Seaman Medvid was escorted to the deck and attended to by the U.S. Navy medical doctor who recommended that he lie down in the ship's sickbay. The Soviet medical doctor was present as an observer but did not participate in his treatment. After approximately a half hour, Seaman Medvid indicated that he was prepared to resume the interview and the U.S. doctor concurred that there was no medical impediment to continuing the interview.

When the interview resumed, Seaman Medvid was repeatedly assured by the Department of State interviewer that he was not under arrest, that he was free to remain in the United States, that he was free to depart immediately with the U.S. representatives, and that he would not have to return to his ship or to the U.S.S.R. against his will. He was also questioned extensively about the events of the preceding days, particularly why he first jumped from the *M.V. Konev* and what had happened when he was returned to the ship. Seaman Medvid replied that he had fallen overboard while making some electrical repairs on the ship and that he could recall almost nothing from that time until he woke up in the sickbay of the Soviet ship. He repeatedly stated that he wanted to return to the Soviet Union. Nevertheless, because we wanted to be absolutely certain that Seaman Medvid understood that he had a clear choice, and considering his nausea earlier that evening, the Department of State in Washington decided that Seaman Medvid should be given an opportunity to get a good night's sleep on shore. A nearby U.S. Government military facility was selected for this purpose.

Seaman Medvid was given supper on the Coast Guard cutter and at approximately 11:15 p.m. EST [Eastern Standard Time] on October 28, he and the accompanying U.S. and Soviet representatives were transferred to a nearby naval support facility, traveling first by launch and then by motor vehicle. At the naval facility, Seaman Medvid was given a thorough physical examination by the U.S. Navy medical doctor, which lasted approximately 45 minutes, and a psychological evaluation by a U.S. Air Force psychiatrist which lasted approximately 1 hour. The medical doctor determined at that time that Seaman Medvid did not appear to be under the influence of drugs. The Soviet doctor was allowed to observe but not participate in these examinations. We will be providing to the committee, as privileged information and not for public release, copies of these medical reports.

Seaman Medvid was housed overnight in a comfortable suite in the bachelor officers quarters (BOQ). No more than one Soviet representative was allowed in the living room area outside his bedroom and then only when an

Assistant Secretary for European and Canadian Affairs

Rozanne L. Ridgway was born August 22, 1935, in St. Paul, Minnesota. She received a Bachelor of Arts degree from Hamline University in 1957 where she subsequently received an honorary LL.D. in 1978.

Ambassador Ridgway joined the Department of State in 1957 as a Foreign Service information specialist. She served as personnel officer in Manila in 1959–62 and as visa officer in Palermo in 1962–64. In 1964 she was assigned to the Department as an international relations officer until her posting in Oslo (1967) as political officer. She returned to the Department in 1970 as Ecuador desk officer and as deputy director for policy planning and coordination in the Bureau of Inter-American Affairs in 1972–73. She served as Deputy Chief of Mission in Nassau from 1973 until her appointment in 1975 as Deputy Assistant Secretary for Oceans and Fisheries Affairs. In February 1976, she was confirmed as Ambassador for Oceans and Fisheries Affairs.

She served as Ambassador to Finland from 1977 to 1980, when she became Counselor for the Department. After a period of service as a special negotiator assigned to the Secretary's staff, she served as Ambassador to the German Democratic Republic (1982–85).

Ambassador Ridgway received the Department's Superior Honor Award in 1966, 1975, and 1981, the Meritorious Honor Award in 1970, and the William Jump Meritorious Award for Exemplary Achievement in Public Administration in 1972. In April 1977, she received the annual national award of the National Fisheries Institute and in October 1982 the Joseph C. Wilson Award for Achievement in International Affairs.

Ambassador Ridgway was sworn in as Assistant Secretary for European and Canadian Affairs on July 19, 1985, and holds the rank of Career Minister. ■

American was present. The other Soviet representatives were quartered in a separate room at the BOQ. Before going to sleep and again in the morning, Seaman Medvid relaxed by watching TV; he was especially interested in viewing TV coverage about himself. In conversations with the State Department representative that evening and again the next morning, Seaman Medvin kept up a steady stream of informal conversation, and he frequently opined that things in the U.S.S.R. were better than in the United States. He also repeatedly expressed his desire to return to the U.S.S.R.

At approximately 1:00 a.m. CST on October 29, he went to his room where he slept until around 8:00 a.m. CST. After breakfast Seaman Medvid participated in an extended interview with a U.S. Air Force psychiatrist; the Soviet doctor was present only as an observer. Through extensive questioning, the psychiatrist determined that Seaman Medvid was alert, capable of doing calculations, and in touch with reality. He did not appear to be sedated or under the influence of drugs. At one point Seaman Medvid strongly objected to questions by the U.S. psychiatrist which he interpreted as implying that he might not be in control of his faculties. The U.S. psychiatrist determined that Seaman Medvid was capable of making important decisions about his future. Following this examination, Seaman Medvid continued to watch TV and converse informally with the American and Soviet representatives present.

At approximately 12:00 a.m. CST on October 29, the U.S. representatives reconvened the interview with Seaman Medvid. The U.S. interviewer questioned him extensively concerning his wishes and assured him he could not be subject to prosecution or forced to return to the custody of Soviet authorities against his will. If he chose, he could leave immediately with U.S. authorities. He was alert and was determined by U.S. medical, legal, and other representatives to be competent to make a decision concerning whether he wanted to remain in the United States. During the final interview, Seaman Medvid reaffirmed his repeated statements that he wished to return to the U.S.S.R.; he specifically expressed his desire to return home to see his mother and father. On instruction, the U.S. representatives then adjourned the interview to seek advice from Washington.

At 3:45 p.m. EST on October 29, the White House, the Department of State, the Department of Justice, and INS instructed the U.S. representatives to reconvene the interview and to tell Seaman Medvid that he would be allowed to return to the Soviet ship as he had repeatedly requested. Seaman Medvid was asked to sign a statement in Russian and English confirming his wishes and his understanding that he would be free to leave with U.S. representatives immediately if he chose to do so. After insisting on a few changes in Russian to the text of the statement, Seaman Medvid signed it. These were changes in the verb tenses and an additional sentence which repeated that he had decided to return to the U.S.S.R. Medvid said he wanted these changes to make it clear that he had never waivered in his determination to return to his country. The Department of State representative then accompanied Seaman Medvid and the Soviet representatives to the *M.V. Konev* in accordance with Seaman Medvid's wishes, where he was greeted with cheers by the Soviet crew.

In conclusion, I would like to underscore the fact that at every point in the Department of State's involvement in this case, our paramount concern was the welfare of Seaman Medvid. We were determined to ensure that he had an opportunity freely to express his preferences. Over a period of days, extraordinary measures were taken to ensure that he was given that opportunity, first aboard the U.S. Coast Guard cutter and then again at the U.S. naval facility after he had had a good night's rest. We were obviously not able to recreate Seaman Medvid's original frame of mind of October 24, nor will any of us ever know what pressures may have been exerted on Seaman Medvid while he was on the Soviet ship prior to his transfer to our custody on October 28. Nor did we ever discount the fact that such pressures may have influenced Seaman Medvid's final decision. None of us is under illusions about the repressive nature of the Soviet Government and its willingness to use coercion and threats to control its people. From the outset there was always the possibility that Seaman Medvid might indicate that he wished to return to his ship and to the U.S.S.R. and that if he did so, we would have to respect that choice and whatever considerations led to that decision.

In our questioning of Seaman Medvid he repeatedly expressed his desire to return to the U.S.S.R. and there was no doubt on the part of U.S. medical doctors who examined him about his ability to make such a decision. All officials involved in the case, both in Washington and New Orleans, concurred that the U.S. should allow Seaman Medvid to return to the Soviet ship. It is of course possible for anyone to second guess whether we should have attempted to keep Seaman Medvid longer in circumstances calculated to try to overcome presumed Soviet pressures. That is a judgment call. I would only ask that consideration also be given to whether the United States wishes to detain a foreign citizen against his repeatedly expressed wishes, recognizing that only that citizen, in cases such as this, can truly weigh the risks taken for himself or for others.

Religion in Eastern Europe

by Richard D. Schifter

Statement before the Subcommittee on European Affairs of the Senate Foreign Relations Committee on November 14, 1985. Ambassador Schifter is Assistant Secretary for Human Rights and Humanitarian Affairs.[1]

In recent years, particularly in light of Jeane Kirkpatrick's well-known article in *Commentary*, there has been a good deal of discussion of the dichotomy between totalitarianism and authoritarianism. The question has been posed whether the differences between those two forms of dictatorial rule are real or merely imagined. What I want to suggest to you in this statement is that there are clear differences and that the way in which a government deals with religion is as good a litmus test as any in telling the difference between an authoritarian and a totalitarian government.

An authoritarian government will, generally speaking, permit a purely religious organization to function

without interference or might occasionally spar with it, particularly if the governmental authorities believe that the religious organization is seeking to encroach on what the ruling group considers to be the domain of the government. A totalitarian government, by contrast, cannot tolerate a situation in which it lives side by side with any kind of independent association of its citizens, be it religious or secular. It will try to destroy them or take them over, or if it can do neither, it will try to control their every activity. What a totalitarian system simply cannot accept are private organizations of citizens which are beyond its ability to manipulate.

When we examine the situation of religion in Eastern Europe today, that is, in countries which profess to be adherents of the Marxist-Leninist approach to government, we need to keep in mind that they started out with a firm ideological commitment to atheism and, therefore, with a policy to root out religious belief. Today, in Eastern Europe, there is one country which is so totally committed to Leninist ideology that it has, in fact, outlawed religion. It is Albania, the country in which the practice of religion, in any form, constitutes a crime.

The commitment to atheism on which Albania has followed through with the utmost consistency was a commitment to which the founders of the Soviet state adhered as well. The advocacy of atheism has been established Soviet policy since the days of Lenin.

Soviet Bureaucratic Control of Religion

What the leaders of the Soviet state discovered in due course was that religion could not be stamped out as easily as they might have thought at the outset. So, in the spirit of the principle that "if you cannot beat them, join them," the Soviet Union created as long ago as 1929 a massive system for the bureaucratic control of religion.

The statutory scheme created in the Soviet Union permits the conducting of religious activities by groups only if they are registered as "religious associations." Religious associations, in turn, are rigidly controlled through a body of rules enforced by a state bureaucracy which is headed by the so-called Council of Religious Affairs. Working under the Council of Religious Affairs are regional commissioners, with whom religious associations must register. A commissioner can refuse to register an association or can cancel a registration without citing any reason. Through this process, the commissioner can also regulate the selection of clergymen to any church position.

Furthermore, as all real property, including ancient church buildings, is owned by the local units of government, the religious association must sign an agreement with these local units of government before it can obtain use of a building. That agreement will often add to the limitations placed upon the association by the national religious-control bureaucracy.

Generally speaking, the regulators will authorize liturgical services at designated hours in designated places, namely the officially authorized places of worship. All other religious activities are forbidden. Thus, all persons whose personal commitments or the rules of whose religion call for religious activity and experience beyond those sanctioned by the bureaucracy must forego the demands of their conscience or risk punishment at the hands of the state. Moreover, in a special effort to prevent parents from passing on their religious beliefs to their children, membership in religious associations is denied to persons under the age of 18. Every effort is made to discourage all forms of religious instruction.

Religious associations are thus left between a rock and a hard place. If they do not register, yet still engage in religious practices, they find themselves in violation of the law. If they register, they subject themselves to government control, particularly as to the selection of their clergy, and submit to a large body of rules imposed upon them from the outside. Violation of the rules can lead to loss of registered status, and thus, once again to violation of the law. It is clearly a "Catch-22" situation.

Enforcing the Laws on Religious Activities

It is worthy of note that as the police are evidently kept busy performing functions other than the enforcement of the laws of the subject of religion, a special volunteer spy system has been created for that purpose. Neighborhood committees which are called "public commissions for control over observance on the laws about religious cults" watch their neighbors and report their violations of the laws on religion to the appropriate authorities.

This, then, is the system which serves to deprive those persons of religious freedom who look to their religious associations to provide them with more than a government-approved ritual ceremony in a government-approved location during a government-approved time period. Evangelical Christians, Seventh-day Adventists, Mennonites, Baptists, and Pentecostals—many of whom have refused to register—are most often the victims of government persecution of religious activists. Roman Catholic priests in Lithuania have in recent years also more and more frequently been severely punished for engaging in religious activities and for the violations of government edicts. So have Jews, whose legally authorized synagogues have been reduced to 50 throughout the Soviet Union, and whose training institutions for rabbinical students have long been closed.

The objective of present Soviet policy toward religion is reasonably clear. To the extent to which religious observance constitutes an individual act, even if carried out in the presence of others, it is permitted. To the extent to which it involves interaction among fellow-believers and unity of purpose of a group, the state seeks to prevent it. Yet, to the chagrin of the authorities, interest in religion on the part of the Soviet people has been on the increase rather than on the decline. Violations of the law are thus too numerous for these laws to be enforced rigidly. Instead, as students of the subject have noted, a good many minor violations will simply be ignored. But when the KGB's patience runs out, its agents clamp down hard and the person guilty of the illegal practice of religion is sent off for years in a prison, a forced-labor colony or into exile, most often on a trumped-up charge. And in those cases in which it appears inconvenient to invoke "socialist legality" through a criminal proceeding, the luckless religious practitioner is sent off to an institution for the mentally ill.

Thus, in today's Soviet Union, religious associations run afoul of the government whenever they try to assert any independence or when believers want to engage in religious activities beyond those authorized by the Soviet Union's religious-control bureaucracy.

Some church organizations have accepted the government's decision, as it were, to "join" them. They limit their activities to those that the government permits and, in return for being granted permission to function and to perform authorized religious rituals, dutifully express the government line on issues of foreign policy when called upon to do so

at international gatherings. It is said that KGB agents may even have infiltrated the clergy and hear confessions.

Aside from repressive measures against religious groups which seek to exercise religious independence, the Soviet Union has also adopted repressive measures against churches associated with particular brands of disapproved nationalism. In its efforts to suppress Ukrainian nationalist tendencies, the Soviet Union close to 40 years ago outlawed the Uniate Church of the Ukraine, an Eastern Rite Catholic Church. For similar reasons, the Soviet Government has also acted harshly against the Roman Catholic churches of Lithuania and Latvia.

Eradicating Islam in Bulgaria

The Soviet approach to religion is not copied by all the countries which are members of the Warsaw Pact. Among these European states, we see policies ranging from the efforts of the Bulgarian Government to destroy entirely the identity of its Islamic population of Turkish ethnic descent to the approach followed by Poland, which has decided to live with the fact that it cannot destroy the independence of the Polish Roman Catholic church.

The most recent large-scale, violent attack on religion in Eastern Europe began last fall with Bulgaria's campaign to eradicate the identity of the country's ethnic Turkish population. About 1 million people, approximately 10% of the entire population, were suddenly told that they were not in fact Turks, that they had to change their names to Slavic names, stop speaking Turkish, stop wearing Turkish clothing, and stop performing most Islamic religious customs. Many who resisted were killed, and many more imprisoned. Most mosques in the country have been closed, converted to museums, or turned into various types of secular structures. Few Moslem religious leaders remain, and the training of new ones has effectively been halted. Religious rites essential to the conduct of Islam have been banned, including circumcision, marriage, and funeral rites. The pilgrimage to Mecca has in practice ceased to occur.

Islam is not alone among religions in Bulgaria facing repression. The Orthodox Church, the church of the majority of the population, receives some favored treatment from the state due to its historic role in helping preserve Bulgarian nationalism and culture. At the same time, though, it is allowed only a very narrow range of activities, and must subordinate itself completely to the state. The Roman Catholic and several small Protestant churches lead tenuous existences, suffering constant harassment and enjoying few legal rights.

Religious Revival and Repression in Romania

Romania presents perhaps the most mixed and complex religious situation in Eastern Europe. While encountering persistent, often ruthless persecution by the state, various religious groups in Romania have in recent years undergone tremendous growth. Many observers have pointed to the fact that Romania seems to be experiencing a religious revival which is making the open, fervent practice of religion in that country second only to that of Poland in Eastern Europe. Because of the scale of this revival, and, perhaps, due to the need for a safety valve in a society suffering from serious economic difficulties, the authorities have in practice allowed a degree of open religious activity far beyond that of some of their neighbors.

Unfortunately, this acquiescence in considerable religious activity has gone hand in hand with spasmodic measures of ruthless repression. Charismatic religious leaders have been harassed, imprisoned, or forced to emigrate. There are reports that some have been killed. Churches with rapidly growing congregations have had great difficulty in gaining permission to enlarge their facilities, and a number of churches which have attempted to proceed with enlargements on their own have had their buildings torn down by the authorities. The various churches face severe restrictions on the printing or import of religious materials, including Bibles, and there is strong evidence that some Bibles have actually been pulped for the manufacture of toilet paper.

Just as in Bulgaria, due in part to the Orthodox Church's historic role in preserving Romanian identity, and to the fact that the overwhelming majority of believers in Romania are Orthodox, the Romanian Government does accord that church a somewhat favored position among religious groups. The government has, at times, argued the need to protect the status of the Orthodox Church as grounds for restricting the proliferation of other Christian groups. When criticized for not allowing churches such as the Jehovah's Witnesses to function legally, Romanian authorities sometimes comment that "14 sects are enough. We don't need any more."

Religious Activities in Czechoslovakia and East Germany

Legally, the situation in Czechoslovakia very much resembles conditions in the Soviet Union. In Czechoslovakia, as in the Soviet Union, a religious-control bureaucracy tries to monitor and regulate the activities of the churches. Priests who sponsor religious activities outside the legally-authorized framework are punished in Czechoslovakia as they are punished in the Soviet Union, in both situations for violating the laws and regulations governing the exercise of religion. What can be said for Czechoslovakia on this point is that the sentences meted out to violators of these laws and regulations are significantly shorter than those meted out in the Soviet Union.

The G.D.R., East Germany, has moved significantly toward coexistence with independent churches. The same has, for some time, been true of Hungary and, as I have already said, Poland acquiesces in the existence of a totally independent church.

Conclusion

There remains the question of what we can do about all that I have described. The answer in this situation, as in the case of other human rights problems is to shine a spotlight on the violators. As long as these repressive governments can continue their practices without the world at large paying attention, they will do so. Only if a great deal of public attention is focused on these activities is there a chance that they might modify them. Hearings such as this one serve that purpose. So do the speeches that we deliver on the subject of religious intolerance at international gatherings, such as meetings of the UN Human Rights Commission, the Third Committee of the UN General Assembly, and at meetings held under the provisions of the Helsinki accords. In each case it is, of course, also important that the information contained in testimony or in speeches be picked up by the media.

I, for one, sincerely hope that attention will be paid to what it is that is being said at this hearing. The issues deserve such attention.

U.S. Terminates Acceptance of ICJ Compulsory Jurisdiction

SECRETARY'S LETTER TO UN SECRETARY GENERAL, OCT. 7, 1985

Dear Mr. Secretary-General:

I have the honor on behalf of the Government of the United States of America to refer to the declaration of my Government of 26 August 1946, as modified by my note of 6 April 1984, concerning the acceptance by the United States of America of the compulsory jurisdiction of the International Court of Justice, and to state that the aforesaid declaration is hereby terminated, with effect six months from the date hereof.

Sincerely yours,

GEORGE P. SHULTZ

DEPARTMENT STATEMENT, OCT. 7, 1985[1]

In accordance with the instructions of the President, on October 7, 1985, the Secretary of State deposited with the Secretary General of the United Nations formal notice of termination of the U.S. declaration, deposited on August 26, 1946, accepting the optional compulsory jurisdiction of the International Court of Justice (ICJ). This action will become effective 6 months after the deposit of that notice.

This decision is fully compatible with the Statute of the ICJ, which leaves it to the discretion of each state to determine its relationship with the World Court. That Statute also explicitly refers to the right to condition acceptance of the Court's compulsory jurisdiction on the principle of reciprocity.

When President Truman signed the U.S. declaration accepting the World Court's optional compulsory jurisdiction on August 1, 1946, this country expected that other states would soon act similarly. The essential underpinning of the UN system, of which the World Court is a part, is the principle of universality. Unfortunately, few other states have followed our example. Fewer than one-third of the world's states have accepted the Court's compulsory jurisdiction, and the Soviet Union and its allies have never been among them. Nor, in our judgment, has Nicaragua. Of the five permanent members of the UN Security Council, only the United States and the United Kingdom have submitted to the Court's compulsory jurisdiction.

Our experience with compulsory jurisdiction has been deeply disappointing. We have never been able to use our acceptance of compulsory jurisdiction to bring other states before the Court but have ourselves been sued three times. In 1946 we accepted the risks of our submitting to the Court's compulsory jurisdiction because we believed that the respect owed to the Court by other states and the Court's own appreciation of the need to adhere scrupulously to its proper judicial role would prevent the Court's process from being abused for political ends. Those assumptions have now been proved wrong. As a result, the President has concluded that continuation of our acceptance of the Court's compulsory jurisdiction would be contrary to our commitment to the principle of the equal application of the law and would endanger our vital national interests.

On January 18, 1985, we announced that the United States would no longer participate in the proceedings instituted against it by Nicaragua in the International Court of Justice. Neither the rule of law nor the search for peace in Central America would have been served by further U.S. participation. The objectives of the ICJ to which we subscribe—the peaceful adjudication of international disputes—were being subverted by the effort of Nicaragua and its Cuban and Soviet sponsors to use the Court as a political weapon. Indeed, the Court itself has never seen fit to accept jurisdiction over any other political conflict involving ongoing hostilities.

This action does not signify any diminution of our traditional commitment to international law and to the International Court of Justice in performing its proper functions. U.S. acceptance of the World Court's jurisdiction under Article 36(1) of its Statute remains strong. We are committed to the proposition that the jurisdiction of the Court comprises all cases which the parties refer to it and all matters that are appropriate for the Court to handle pursuant to the UN Charter or treaties and conventions in force. We will continue to make use of the Court to resolve disputes whenever appropriate and will encourage others to do likewise. Indeed, as we have announced today, we have reached agreement in principle with Italy to take a longstanding dispute to the Court.

LEGAL ADVISER SOFAER STATEMENT, DEC. 4, 1985[2]

I welcome this opportunity to discuss the background to the President's decision of October 7 terminating our acceptance of the compulsory jurisdiction of the International Court of Justice (ICJ). This decision will take effect 6 months from that date. I will discuss what the President's decision means in practical terms before turning to some of the reasons for it.

Jurisdiction of the Court

The ICJ has limited jurisdiction, based on its Statute and on the consent of states. Under Article 36(1) of the Court's Statute, the ICJ has jurisdiction when states sign a special agreement referring a dispute to it or are parties to a treaty providing for ICJ dispute resolution. The President's action does not affect this basis for jurisdiction. Indeed, we have just agreed with Italy to submit an important dispute, involving millions of dollars, to the Court for adjudication. We also are party to some 60 treaties providing for adjudication of disputes by the ICJ.

The second basis for ICJ jurisdiction exists when a state accepts the Court's compulsory jurisdiction under Article 36(2) of the Statute—the so-called optional clause. Historically, acceptance of compulsory jurisdiction has been less important as a basis for the Court's work than specific agreement between the parties to a dispute.

A state accepts compulsory jurisdiction by depositing with the Secretary General of the United Nations a declaration to the effect that it agrees to be sued by any state depositing a similar declaration. In return, the filing state may bring suit under compulsory jurisdiction against any other state filing such a declaration. Generally, a state has no way of knowing in advance by whom or on what issue a suit may be filed. A declaration covers any issue of international law, except to the extent that the state excludes specific disputes or categories of disputes. A state faced with a suit under compulsory jurisdiction may invoke any exclusion in its declaration and, on the basis of reciprocity, any exclusion in its opponent's declaration to seek to defeat jurisdiction. It also may raise nonjurisdictional objections to the Court's taking the case. If the parties disagree over the scope of a declaration or its exclusions, the Court itself decides the issue.

Under the Court's Statute, a state is free to accept or to decline the Court's compulsory jurisdiction. A state accepting the Court's compulsory jurisdiction likewise is free to terminate or modify its acceptance whenever the state concerned believes that doing so would serve its interests. The President's action terminating our 1946 declaration, thus, is entirely consistent with our international legal obligations.

The President's action also is consistent with his domestic legal authority. Declarations under Article 36(2) of the Statute are not treaties under either international law or the Constitution. Nevertheless, in 1946 the executive branch considered that congressional approval of the declaration was necessary for several reasons. Any such a declaration necessarily entails an open-ended exposure to suit, including potential financial liability. In addition, Congress traditionally had been reluctant to allow the President to enter into compulsory third-party dispute settlement arrangements, as the fate of repeated executive efforts to have the United States accept the jurisdiction of the predecessor Court, the Permanent Court of International Justice, showed.

The termination of the 1946 declaration, on the other hand, does not expose the United States to new commitments or obligations. On the contrary, it reduces or eliminates that exposure. Furthermore, by its terms, the declaration authorizes termination on 6 months' notice, and our October 7 note is consistent with that condition. Finally, the Constitution allows the President unilaterally to terminate treaties consistent with their terms; and his authority is even clearer with respect to lesser instruments such as the 1946 declaration.

Reasons for U.S. Review

Our experience in the case instituted against the United States by Nicaragua in April 1984 provided the chief motivation for the Administration's review of our acceptance of the Court's compulsory jurisdiction. The principal basis of jurisdiction cited by Nicaragua in bringing that case was the 1946 U.S. declaration accepting compulsory jurisdiction. We believed at the time, and still believe, that Nicaragua itself never had validly accepted the Court's compulsory jurisdiction. More important, Nicaragua sought to bring before the Court political and security disputes that were never previously considered part of the Court's mandate to resolve. In our view, the Court's decision last November that Nicaragua had, indeed, accepted compulsory jurisdiction and that Nicaragua's claims were justiciable could not be supported as a matter of law. These considerations led the President to decide last January that we would no longer participate in the case.

The Court's decision also caused us to undertake a thorough evaluation of our 1946 declaration and its place in the system of compulsory jurisdiction established by Article 36(2) of the Court's Statute. That we were evaluating these questions was well known. The issues at stake were considered and debated in government and private groups interested in this question. All the relevant points were carefully considered.

We recognized, first of all, that the hopes originally placed in compulsory jurisdiction by the architects of the Court's Statute have never been realized and will not be realized in the foreseeable future. We had hoped that widespread acceptance of compulsory jurisdiction and its successful employment in actual cases would increase confidence in judicial settlement of international disputes and, thus, eventually lead to its universal acceptance.

Experience has dashed these hopes. Only 47 of the 162 states entitled to accept the Court's compulsory jurisdiction now do so. This number represents a proportion of states that is substantially lower than in the late 1940s. The United Kingdom is the only other permanent member of the UN Security Council that accepts compulsory jurisdiction in any form. Neither the Soviet Union nor any other Soviet-bloc state has ever accepted compulsory jurisdiction. Many of our closet friends and allies—such as France, Italy, and the Federal Republic of Germany—do not accept compulsory jurisdiction. Moreover, a substantial number of the states accepting compulsory jurisdiction have attached reservations to their acceptances that deprive them of much of their meaning. The United Kingdom, for example, retains the power to decline to accept the Court's jurisdiction in any dispute at any time before a case is actually filed.

Compulsory jurisdiction cases have not been the principal part of the Court's overall jurisprudence. Of some 50 contentious cases between 1946 and the end of 1983, 22 were based on the Court's compulsory jurisdiction, of which only five resulted in final judgment on the merits. The last case decided under the Court's compulsory jurisdiction, the *Temple of Preah Vihear*, was completed in 1962. In the remaining 17 cases, objections to the Court's jurisdiction were sustained in 13; four were dismissed on other grounds.

Another consideration we weighed is the fact that, although we have tried seven times, we have never been able successfully to bring a state before the Court. We have been barred from achieving this result not only by the fact that few other states accept compulsory jurisdiction but also by the principle of reciprocity as applied to our 1946 declaration. That principle allows a respondent state to invoke any reservation in the applicant state's declaration to seek to defeat the Court's jurisdiction. Thus, respondent states may invoke reservations in our 1946 declaration against us. The so-called Connally reservation in our 1946 declaration provides that the United States does not accept compulsory jurisdiction over any dispute involving matters essentially within the domestic jurisdiction of the United States, as determined by the

United States. In other words, we reserve to ourselves the power to determine whether the Court has jurisdiction over us in a particular case. Any state we sue may avail itself of that power on a reciprocal basis to defeat jurisdiction.

This is, in fact, precisely what happened when we tried to sue Bulgaria in 1957 on claims arising out of the loss of American lives and property when Bulgaria shot down an unarmed civilian airliner that had strayed into its airspace. Bulgaria claimed that the Court had no jurisdiction because the matter in dispute was within Bulgarian domestic jurisdiction as determined by Bulgaria. Even though we had pledged never to invoke our Connally reservation in bad faith to cover a manifestly international dispute, we were compelled to acknowledge that its invocation in any case would be binding as a matter of law. Hence, Bulgaria's reciprocal invocation of the Connally reservation forced us to discontinue the case.

On a more general level, other countries, the international legal community, and, indeed, the executive branch have severely criticized the "self-judging" nature of the Connally reservation. Some commentators even argue that the Connally reservation made the 1946 declaration a legal nullity because of its wholly unilateral and potentially limitless character. Certainly, that reservation has undercut the example the United States tried to set for other countries by its acceptance of compulsory jurisdiction.

For these reasons we have never been able successfully to bring another state before the Court on the basis of our acceptance of compulsory jurisdiction. On the other hand, we have been sued under it three times: by France in the *Rights of Nationals of the United States in Morocco* case in 1950–1952; by Switzerland in the *Interhandel* case in 1957–1959; and, finally, by Nicaragua last year.

The terms of our acceptance of compulsory jurisdiction contain an additional weakness. Nothing in it prevents another state from depositing an acceptance of compulsory jurisdiction solely for the purpose of bringing suit against the United States and, thereafter, withdrawing its acceptance to avoid being sued by anyone in any other matter. Students of the Court long have recognized that this "sitting duck" or "hit-and-run" problem is one of the principal disadvantages to the system of compulsory jurisdiction under Article 36(2). It places the minority of states that have accepted compulsory jurisdiction at the mercy of the majority that have not.

The Court's composition also is a source of institutional weakness. At present, 9 of 15 judges come from states that do not accept compulsory jurisdiction; most of these states have never used the Court at all. Judges are elected by the General Assembly and Security Council, frequently after intense electioneering. One reasonably may expect at least some judges to be sensitive to the impact of their decisions on their standing with the UN majority. Whereas in 1945 the United Nations had some 50 members, most which were aligned with the United States and shared its views regarding world order, there are now 160 members. A great many of these cannot be counted on to share our view of the original constitutional conception of the UN Charter, particularly with regard to the special position of the permanent members of the Security Council in the maintenance of international peace and security. This same majority often opposes the United States on important international questions.

The Nicaragua Case

None of the weaknesses deriving from the Court's composition and our 1946 declaration is new. We have hitherto endured them on the assumption that the respect states owed to the Court and the Court's own scrupulous adherence to its judicial role would insulate us from abuses of the Court's process for political or propaganda ends. The Nicaragua case showed that it would be unrealistic to continue to rely on that assumption.

Several aspects of the Court's decisions in the Nicaragua case were disturbing. First, the Court departed from its traditionally cautious approach to finding jurisdiction. It disregarded fundamental defects in Nicaragua's claim to have accepted compulsory jurisdiction. This question involves more than a legal technicality. It goes to the heart of the Court's jurisdiction, which is the consent of states. International law—in particular, the Court's own Statute—establishes precise rules that states must follow in order to manifest that consent. The purpose of such technical rules is to ensure that a state's consent is genuine and that all other states are given objective notice of it. Nicaragua never complied with those rules, and the historical evidence makes clear that its failure to do so was deliberate and designed to ensure that Nicaragua could never be sued successfully under Article 36(2). A majority of the Court, on the other hand, was prepared to discover an exception to those rules that allowed Nicaragua to bring suit, an exception that is inconsistent with the Court's prior jurisprudence on the subject. The result-oriented illogic of the majority's position was

U.S.-Italy Agree to Submit Dispute to ICJ

DEPARTMENT STATEMENT, OCT. 7, 1985[1]

The United States and Italy have been engaged in a longstanding dispute arising from certain actions by Italian Government officials against a wholly owned subsidiary of Raytheon Company and Machlett Laboratories, Inc., both U.S. corporations.

The two governments have come to the conclusion that they are unable to resolve the diplomatic claim of the United States on behalf of Raytheon Company and Machlett Laboratories, Inc., through diplomatic negotiation or binding arbitration. Therefore, the United States, in conformity with the U.S.-Italian Treaty of Friendship, Commerce, and Navigation of 1948, has determined to approach the International Court of Justice (ICJ) with a view to submitting that dispute to a special chamber as provided by the Court's Statute and rules of procedure, subject to mutually satisfactory resolution of implementing arrangements. Italy concurs in the opinion that this is an appropriate course of action.

[1]Made available to news correspondents by State Department deputy spokesman Charles Redman. ■

vigorously exposed in the opinions of the dissenting judges.

Furthermore, the Court engaged in unprecedented procedural actions—such as rejecting without even a hearing El Salvador's application to intervene as of right—that betrayed a predisposition to find that it had jurisdiction and that Nicaragua's claims were justiciable, regardless of the overwhelming legal case to the contrary. In the particular case of the Salvadoran intervention, the Court ignored Article 63 of the Statute, which deprives the Court of discretion to reject such interventions. The Court sought to cover itself by holding out the possibility of accepting the Salvadoran intervention at the merits stage—at which point Salvadoran objections to the Court's jurisdiction and the justiciability of Nicaragua's claims would have been too late.

Even more disturbing, for the first time in its history, the Court has sought to assert jurisdiction over a controversy concerning claims related to an ongoing use of armed force. This action concerns every state. It is inconsistent with the structure of the UN system. The only prior case involving use-of-force issues—the *Corfu Channel* case—went to the Court after the disputed actions had ceased and the Security Council had determined that the matter was suitable for judicial consideration. In the Nicaragua case, the Court rejected without a soundly reasoned explanation our arguments that claims of the sort made by Nicaragua were intended by the UN Charter exclusively for resolution by political mechanisms—in particular, the Security Council and the Contadora process—and that claims to the exercise of the inherent right of individual and collective self-defense were excluded by Article 51 of the Charter from review by the Court.

I cannot predict whether the Court's approach to these fundamental Charter issues in the jurisdictional phase of the Nicaragua case will be followed in the Court's judgment on the merits. Nevertheless, the record gives us little reason for confidence. It shows a Court majority apparently prepared to act in ways profoundly inconsistent with the structure of the Charter and the Court's place in that structure. The Charter gives to the Security Council—not the Court—the responsibility for evaluating and resolving claims concerning the use of armed force and claims of self-defense under Article 51. With regard to the situation in Central America, the Security Council exercised its responsibility by endorsing the Contadora process as the appropriate mechanism for resolving the interlocking political, security, economic, and other concerns of the region.

Implications for U.S. National Security

The fact that the ICJ indicated it would hear and decide claims about the ongoing use of force made acceptance of the Court's compulsory jurisdiction an issue of strategic significance. Despite our deep reluctance to do so and the many domestic constraints that apply, we must be able to use force in our self-defense and in the defense of our friends and allies. We are a law-abiding nation, and when we submit ourselves to adjudication of a subject, we regard ourselves as obliged to abide by the result. For the United States to recognize that the ICJ has authority to define and adjudicate with respect to our right of self-defense, therefore, is effectively to surrender to that body the power to pass on our efforts to guarantee the safety and security of this nation and of its allies.

This development particularly concerned us as a matter of principle and for reasons bearing directly on the capacity of the ICJ to reach sound, correct decisions on use-of-force issues and to enforce principles it eventually may articulate on our communist adversaries. The Court has no expertise in finding facts about ongoing hostilities or any other activities occurring in areas such as Central America. Based on my years as a trial judge and considerable experience with complicated cases, I doubt that the 16 judges sitting on the Nicaragua case may reliably resolve the evidentiary problems presented. The ICJ is similar to an appellate court, more at home with abstract legal questions than with competing factual claims. Moreover, the Court's rejection of El Salvador's application to intervene deprived it of that nation's indispensable contribution to a true picture of the situation in Central America, a contribution that goes to the heart of our legal position.

Even if the Court were inclined to allow participation by all necessary parties, it has no power to compel that participation. We have, for example, no doubt that Cuba, and quite probably the Soviet Union, help Nicaragua's efforts to subvert the democratic regime in El Salvador as well as to undertake unlawful acts against Costa Rica and Honduras. But, in view of their consistent refusal to submit to the Court's jurisdiction in any other matter, neither Cuba nor the Soviet Union can be expected to join in the proceedings, and the Court cannot force them to do so. These facts render even more questionable the capacity of the Court to determine the facts concerning Nicaragua's aggressive acts.

The Court's lack of jurisdiction over Soviet-bloc nations, especially the Soviet Union, also has long-term significance for the strategic acceptability of ICJ review of self-defense issues. The Soviets have long advanced the view—by the Brezhnev doctrine and otherwise, and by their actions in places like Czechoslovakia and Afghanistan—that force is acceptable in order to keep a nation in the socialist orbit or to promote a socialist revolution but have not hesitated to condemn responsive uses of force as violating the UN Charter.

We reject this view. We believe that, when a nation asserts a right to use force illegally and acts on that assertion, other affected nations have the right to counter such illegal activities. The United States cannot rely on the ICJ properly and fairly to decide such questions. Indeed, no state can do

so. If we acquiesce in this claimed authority, we would be bound by the Court's decisions that limited our ability to confront Soviet expansionism, even though the Soviets could and would do as they pleased. That most of the Court's judges come from nations that do not submit to its jurisdiction, including Soviet-bloc nations and other states that routinely support that bloc, is of special concern on these fundamental issues.

Mr. Chairman [Sen. Richard Lugar], in considering this complex and important subject, I hope that you and the other members of this distinguished committee weigh carefully the national security implications of accepting the Court as a forum for resolving use-of-force questions. For example, would the Court be the proper forum for resolving the disputes that gave rise to such actions as the Berlin airlift, the Cuban missile crisis, and, most recently, our diversion of the *Achille Lauro* terrorists? Each event involved questions of international law.

At the same time, however, at stake on each occasion were interests of a fundamentally political nature, going to our nation's security. Such matters cannot be left for resolution by judicial means, let alone by a court such as the ICJ; rather, they are the ultimate responsibilities assigned by our Constitution to the President and Congress. We did not consider such issues to be subject to review by the ICJ at the time we accepted the Court's compulsory jurisdiction, and we do not consider them to be encompassed by that acceptance now. The Court's apparent willingness to construe our declaration otherwise left us with no prudent alternative but to terminate that aspect of our use of its facilities.

We carefully considered modifying our 1946 declaration as an alternative to its termination, but we concluded that modification would not meet our concerns. No limiting language that we could draft would prevent the Court from asserting jurisdiction if it wanted to take a particular case, as the Court's treatment of our multilateral treaty reservation in the Nicaragua case demonstrates. That reservation excludes disputes arising under a multilateral treaty unless all treaty partners affected by the Court's decision are before the Court. Despite Nicaragua's own written and oral pleadings before the Court—which expressly implicated El Salvador, Honduras, and Costa Rica in the alleged violations of the UN and OAS [Organization of American States] Charters and prayed for a termination of U.S. assistance to them—and statements received directly from those countries, a majority of the Court refused to recognize that those countries would be affected by its decision and refused to give effect to the reservation. Furthermore, merely having filed a declaration is enough for the Court to indicate provisional measures against the filing party, whether or not the Court later found it had jurisdiction under the declaration. Finally, the 1946 declaration expressly provides only for its termination, and we would not wish to have the legality or effectiveness of any lesser step open to question.

Conclusion

Looked at from the standpoint of the reality of compulsory jurisdiction today, the decision to terminate our 1946 acceptance was a regrettable but necessary measure taken in order to safeguard U.S. interests. It does not signify a lessening of our traditionally strong support for the Court in the exercise of its proper functions, much less a diminution of our commitment to international law. We remain prepared to use the Court for the resolution of international disputes whenever possible and appropriate.

We recognize that this nation has a special obligation to support the ICJ and all other institutions that advance the rule of law in a world full of terror and disorder. Our belief in this obligation is what led us to set an example by accepting the Court's compulsory jurisdiction in 1946 and by continuing that acceptance long after it became clear that the world would not follow suit and that our acceptance failed to advance our interests in any tangible manner.

Yet, the President also is responsible to the American people and to Congress to avoid potential threats to our national security. The ICJ's decisions in the Nicaragua case created real and important additional considerations that made the continued acceptance of compulsory jurisdiction unacceptable, despite its symbolic significance. We hope that, in the long run, this action, coupled with our submission of disputes under Article 36(1), will stregthen the Court in the performance of its proper role in the international system established by the UN Charter and the Court's own Statute.

IMO Endorses U.S. Initiative on Ship and Passenger Security

DEPARTMENT ANNOUNCEMENT, Nov. 22, 1985[1]

The assembly of the International Maritime Organization (IMO), meeting in London yesterday, November 21, gave unanimous endorsement to a U.S.-sponsored initiative designed to improve security practices on ships and thus to guard against further terrorist incidents such as the one occurring recently on the *Achille Lauro* in the Mediterranean.

The U.S.-drafted resolution calls upon the IMO Maritime Safety Committee to draft detailed and practical technical measures which may be employed by governments, port administrations, shipowners, shipmasters, and crews to ensure the security of passengers and crews on board ships. The committee will meet in London at the end of January to consider proposals that may be considered and adopted by governments and interested parties.

The Governments of Egypt and Italy were among the nine which joined in cosponsoring the U.S. resolution. We are encouraged by the unanimity of the international community on the need to take immediate and concerted action to deal with unlawful acts against shipping and passengers and take satisfaction in the adoption of this resolution by the IMO.

U.S. Offers Reward for *Achille Lauro* Terrorists

DEPARTMENT ANNOUNCEMENT, NOV. 25, 1985[1]

Today the U.S. Government announces a reward of up to $250,000 for information leading to the apprehension and effective prosecution and punishment of Abu el Abbas, as well as any others not yet in custody responsible for the terrorist action which resulted in the seizure of the *Achille Lauro* on October 7, 1985, the taking of hostages, including 14 Americans, and the killing of one American, Leon Klinghoffer.

Those with information in the United States should notify the Federal Bureau of Investigation (FBI) or the Diplomatic Security Service, Department of State. Those with information in any other country should notify the nearest U.S. Embassy. The information received will be handled confidentially and the identities of informants will be protected.

Officers or employees of any governmental organization who furnish information while in performance of official duties are not eligible for a reward.

Promoting Peaceful Change in South Africa

by Vernon A. Walters

Statement made in plenary session at the UN General Assembly on October 30, 1985. Ambassador Walters is U.S. Permanent Representative to the United Nations.[1]

We all know the meaning of apartheid: deliberate, systematic, institutionalized racial discrimination denying South Africa's black people their God-given rights. America's view of apartheid is simple and straightforward: We believe it is wrong. We condemn it. And because we live by Lincoln's words—"No person is good enough to govern another without the other's consent"—all Americans are united in hoping for the day when apartheid will exist no more.

The history of the United States is one of struggle against all forms of racial, cultural, and political intolerance. Our constitution resolutely forbids intolerance. And our commitment to equality and freedom does not end at our borders. We oppose political and economic systems based upon the self-proclaimed right of any race, religion, tribe, clan, or economic or political elite to rule over and oppress other people. Such elitist orders produce misery and refugees, many of whom bring their talent and energy to open societies, including my own.

My country can thus only reject apartheid. And we are working toward the elimination of this unjust and unjustifiable system. The question has never been whether apartheid should end—all of us recognize that it is doomed. The question is how to end it while realizing the democratic aspirations of South Africa's people. The policy of the United States, outlined in dozens of addresses before this and other bodies and most recently by President Reagan on September 9, is to promote positive, peaceful change that will lead to a system in South Africa based on the consent of all those governed by it. We want to encourage change that assures rather than destroys South Africa's future.

I should also point out that the United States believes that apartheid will not be undone by demagogic posturing and sloganeering. Exhortations to bloody revolution, calls for mandatory sanctions and hypocritical talk about liberation from the leaders and representatives of nations that deny liberty to their own people will not bring peace and justice to millions of South Africans.

Ending apartheid is a task that demands more than hot rhetoric, no matter how emotionally satisfying it may be. That is the spirit of President Reagan's Executive Order of September 9. The measures he announced then, which will go into force by the end of this year, are aimed at specific areas: the apparatus and symbols of apartheid. They are designed to deprive the Government of South Africa of any direct or indirect U.S. support in maintaining its police, military, and apartheid-enforcing structure. And, equally important, they commit the United States to sustaining a strong presence in South Africa as a basis from which to exert influence for change. The U.S. Government is taking concrete steps to encourage U.S. businesses and entrepreneurs to seek an end to the discriminatory labor and employment practices of apartheid. And we shall greatly increase our economic assistance for the education and training of disadvantaged South Africans and our support to peaceful opponents of apartheid through our human rights program.

Some might argue that this is not enough—that these improvements are only economic and do not represent political gains. This reminds me of the axiom that one of the lessons of history is that we do not remember the lessons of history. One of these lessons is surely that economic and political freedoms are inextricably linked. It is exactly this hope for real improvement in their lives that has brought so many people to South Africa—black and white—and that now impels an unstoppable push for political change in that country.

Others call for destructive, punitive sanctions, arms, and more violence. We want jobs, better housing, and health programs. We want freedom of association, of movement, and all the other political rights and economic freedoms that allow the individual, rather than the government, to choose his way of life. We take this approach because we Americans are builders, not destroyers. Our government is actively pressing for democratic, peaceful change in South Africa. So too are our foundations, our labor unions, our universities, our corporations—we want our every link with South Africa to be dedicated to the purpose of bringing constructive influence to bear on that country. In other words, we are striving to utilize every instrument of peaceful change in South Africa to the benefit of our common cause: the end of apartheid and the creation of a political process in which all South Africans can participate freely.

This we do because another lesson of history is that we cannot retreat from all the difficult and complex moral choices in the world. We Americans have accepted the hard reality that our passionate commitment to moral principles can be no substitute for a sound foreign policy. The choice for us, however, is not between moral principles and the national interest, but between moral principles divorced from political reality and moral principles anchored in political reality. Part of that reality is progress towards democracy and greater freedom around the world may be slower than we would like. If we use our power to push nondemocratic states too far and too fast, we may destroy the hope for greater freedom.

What we see in South Africa is a beginning of a process of change. The changes in official policy so far are plainly inadequate—but ironically they have been enough to raise the expectations and impel demands for fundamental reforms such as we all desire. This fundamental change will occur—there can be no doubt about it. All Americans are disturbed by the trend of events in South Africa—the violence and official repression will not lead to serious negotiations over a new political future for the country.

A cause of hope is that South Africa is not a totalitarian society. Every day we see examples of outspoken protest and access to the international media that would not be possible in some countries represented in this chamber today. This degree of openness in South African society and our willingness to engage with that society for constructive purposes are the sources of our influence. The United States will continue to take advantage of this opportunity to do what we can as a responsible nation to end apartheid. Our policy is aimed at seeking engagement with all sides in South Africa for the purpose of encouraging negotiations that will produce fundamental reforms, and we regard such a course as in the best traditions of the United Nations.

I urge that the United Nations use its prestige to work constructively to help the South African people achieve a democratic state under which they would enjoy all the rights enumerated in the Universal Declaration of Human Rights. I also urge that the United Nations increase its efforts to work effectively for the elimination of all forms of racism and racial discrimination.

Situation in Angola

by Vernon A. Walters

Statement before the UN Security Council on October 7, 1985.[1] Also included is the text of the Security Council resolution adopted on October 7. Ambassador Walters is U.S. Permanent Representative to the United Nations.

Once again, we find ourselves gathered around this table to consider a violation of the territorial integrity of Angola's borders. And once again I shall set forth U.S. policy toward South African operations of this sort. We condemn them. They serve to exacerbate an already volatile situation. Besides their negative consequences on chances for a negotiated solution to the problems besetting the region, they cause misery and death. So long as they continue, they will frustrate the aspirations of all those in southern Africa longing to fulfill their simple, inalienable right to a life without war and bloodshed.

The diplomacy of the United States in the region is geared to peaceful, negotiated solutions; it is the road to a deeper, more lasting settlement than gunpowder can ever offer. My government asks all parties to recognize the folly of this strife. They should realize the necessity of turning back forthwith, in their own interests, to the negotiating track.

There is a clear and unmistakable contrast between this policy of negotiation—supported without reservations by my government—and the policy of certain forces outside the region who fuel the conflict in the benighted belief

that their own interests are served. Why do these distant forces fear peaceful negotiations among the involved parties unless for self-serving reasons. Theirs is a selfish and a myopic policy: it leads ineluctably to more bloodletting for the Angolans; more hardship for civilians who have been so long under the yoke of Mars. And it is a devious policy that feigns concern for the interests of the Angolans; that distorts realities to serve its own expansionist goals; that under the guise of disinterest has a clear mission for the region which does not incorporate the hopes of all for peace, freedom, and security.

My delegation welcomes this resolution as an occasion to reiterate our call for an immediate withdrawal of South African troops from Angola. We join once again all members of the Security Council in deploring this lataest incursion.

But as I stated a little over 2 weeks ago, my government believes that the introduction of more weapons of war into the area will result in an escalation of violence, more death, more misery. Angola needs peace, not more foreign troops, foreign intervention, and imported arms.

The United States supports the territorial integrity of Angola. We call on South Africa, yet again, to halt further acts of aggression. We could not, however, vote in favor of operative paragraph six, for the same reasons that we could not vote in favor of a similar call to arms in Security Council Resolution 571. For that reason, my delegation abstained on paragraph six of the resolution. Since the rest of the resolution was acceptable to us, I had no hestitation in voting for it.

[1]USUN press release 107 of Oct. 7, 1985. ■

SECURITY COUNCIL RESOLUTION 574, OCTOBER 7, 1985[2]

The Security Council,

Having considered the request of the Permanent Representative of Angola to the United Nations contained in document S/17510,

Having heard the statement of the Permanent Representative of Angola to the United Nations,

Bearing in mind that all Member States are obliged to refrain in their international relations from the threat or use of force against the sovereignty, territorial integrity or political independence of any State and from acting in any other manner inconsistent with the principles and purposes of the United Nations,

Recalling its resolutions 387 (1976), 428 (1978), 447 (1979), 454 (1979), 475 (1980), 545 (1983), 546 (1984), 567 (1985) and 571 (1985), which, *inter alia*, condemned South Africa's aggression against the People's Republic of Angola and demanded that South Africa scrupulously respect the independence, sovereignty and territorial integrity of the People's Republic of Angola,

Gravely concerned at the persistent, hostile and unprovoked acts of aggression and sustained armed invasions committed by the racist regime of South Africa in violation of the sovereignty, airspace and territorial integrity of the People's Republic of Angola and, in particular, the armed invasion of Angola carried out on 28 September 1985,

Conscious of the need to take effective steps for the prevention and removal of all threats to international peace and security posed by South Africa's acts of aggression,

1. *Strongly condemns* the racist regime of South Africa for its latest, premeditated and unprovoked aggression against the People's Republic of Angola, as well as its continuing occupation of parts of the territory of that State, which constitute a flagrant violation of the sovereignty and territorial integrity of Angola and seriously endanger international peace and security;

2. *Strongly condemns also* South Africa for its utilization of the illegally occupied territory of Namibia as a springboard for perpetrating acts of aggression against the People's Republic of Angola, as well as sustaining its occupation of part of the territory of that country;

3. *Demands* once again that South Africa cease immediately all acts of aggression and unconditionally withdraw forthwith all military forces occupying Angolan territory, as well as scrupulously respect the sovereignty, airspace, territorial integrity and independence of the People's Republic of Angola;

4. *Reaffirms* the right of the People's Republic of Angola, in accordance with the relevant provisions of the United Nations Charter, in particular Article 51, to take all the measures necessary to defend and safeguard its sovereignty, territorial integrity and independence;

5. *Calls upon* all States to implement fully the arms embargo imposed against South Africa in Security Council resolution 418 (1977);

6. *Renews* its request to Member States to extend all necessary assistance to the People's Republic of Angola in order to strengthen its defence capability in the face of South Africa's escalating acts of aggression and the occupation of parts of its territory by the South African military forces;

7. *Requests* the Commission of Investigation established in pursuance of resolution 571 (1985), consisting of Australia, Egypt and Peru, to report urgently on its evaluation of the damage resulting from South African aggression, including the latest bombings;

8. *Decides* to meet again in the event of non-compliance by South Africa with the present resolution in order to consider the adoption of more effective measures in accordance with appropriate provisions of the Charter;

9. *Decides* to remain seized of the matter.

[2]Unanimously adopted. ■

Human Rights Situation in Peru

by Elliott Abrams

Prepared statement before the Subcommittees on Human Rights and International Organizations and on Western Hemisphere Affairs of the House Foreign Affairs Committee on November 13, 1985. Mr. Abrams is Assistant Secretary for Inter-American Affairs.[1]

I appreciate your invitation to review with you the human rights situation in Peru. Both the country and the topic are important. And there are many developments to discuss. In our bilateral relations there are many unresolved issues relating, for instance, to the new government's confrontation policy on debt. The rhetoric coming from Peru has been excessive. This prepared statement, however, deals just with the human rights question and its general setting: It does not attempt to cover all the many topics in U.S.-Peruvian relations.

Electoral Support for Democracy

In office only 3½ months, Peruvian President Alan Garcia has taken swift action to stop and prevent human rights abuses. This is not surprising: issues related to human rights have concerned Peruvians across a broad political spectrum for some time. Progress has been uneven and at times difficult to analyze because of terrorism. But I can report that Peru today is a nation striving to protect and promote human rights.

Alan Garcia's inauguration on July 28 as President of Peru marked both a personal triumph for him and a victory for the American Popular Revolutionary Alliance (APRA), which despite considerable influence during its 61 years of existence, had never occupied the country's highest elective office. Peru's democractic development was solidified that day in another sense as well: For the first time in 40 years, a democratically elected president, Fernando Balaunde, transferred power to a democratically elected successor. We applaud that achievement, and congratulate the Peruvian people for their success in building democratic institutions.

The military regime which ruled Peru from 1968 to 1980 came to power claiming it sought to modify social structures to include greater opportunities for social, economic, and educational advancement for the masses. President Juan Velasco increased the role of the state but failed to develop effective popular participation. This contributed to many of the difficulties Peru faces today. The statism of the Velasco period has proved particularly damaging. Centralization hastened migration from rural to urban areas, greatly increasing unemployment in the cities. Meanwhile, neglect of the countryside provided fertile grounds for communism and terrorism. The failure to generate new economic growth contributed directly to Peru's current serious debt situation. The now entrenched Soviet presence in Peru also dates back to the early 1970s when the military turned to the Soviet Union for equipment and the technicians to service it. The Velasco regime, moreover, was unstable because it lacked electoral legitimacy. Realizing this, acknowledging the failures of the military government, and acceding to the democratic yearnings of the Peruvian people, General Morales Bermudez organized fair and competitive elections for a constitutional assembly, then relinquished power when in accordance with the constitution the people chose a new president.

Fernando Belaunde Terry, who won those elections in 1980, identified closely with the ideals of democracy. He was responsible for the restoration of the many civil liberties enjoyed in Peru today, including a free uncensored press. Having turned over power, Peru's military leaders showed restraint and maturity and continued to support the fledgling democratic government as it faced its daunting challenges. In this respect the military of Peru must be praised.

Belaunde's 5 years in office were not easy. His administration saw an intensification of the economic crisis, brought on by falling export commodity prices combined with devastating natural disasters, and by the terrorism of the brutal *Sendero Luminoso*, or Shining Path, guerrilla movement. Diverting resources and entangling the government authorities in an elusive guerrilla war, the struggle with the *Sendero Luminoso* became a thorn to the Belaunde administration and to Peruvian society. As terrorist and counterterrorist activities spread, so too did the concern for human rights in Peru. Allegations of human rights abuses multiplied. The number of alleged disappearances mounted. International organizations monitored the situation, so too did the Peruvian people. It is apparent that ending the violence is a general concern throughout the country.

Alan Garcia took office with more electoral support than any president of Peru in decades, and his first steps in office have earned him unprecedented popularity—85% in some recent polls. Moreover, APRA has a majority in the Peruvian legislature, so that President Garcia has a good chance to obtain legislative backing for his program. Every bit of this broad support will be needed as Garcia faces the daunting agenda he inherited.

Immediately seizing the moral high ground, Garcia began a forceful campaign against corruption and moved quickly to implement his oft-repeated pledge to eliminate human rights abuses. He has acted to improve an overloaded judicial system and overcrowded penal institutions, and to grapple with continuing acts of violence from communist terrorists and narcotics traffickers. Pledged to wage war against narcotics trafficking, President Garcia scored immediate notable successes by participating in Operation Condor, a highly successful joint drug interdiction program with Colombia and the United States.

Confrontational Policy on Debt

President Garcia has also begun an economic program which, although still incomplete, begins to confront a dismal economic situation. GDP [gross domestic product] per capita today expressed in constant dollars is no better than 1965 levels. Inflation, unemployment, poor health, and education standards, and the forgotten rural poor are but some of the issues Alan Garcia addressed at his inauguration, which I attended. If not dealt with firmly, this situation augurs further decline in a country already in the grips of poverty. Since Peru began to implement a nationally defined austerity program inflation has slowed perceptibly, but it is too early to assess future results.

Part of Peru's economic difficulty is its heavy debt burden, a problem Peru shares with other countries of the hemisphere. How to deal with debt is a vexing problem without ready or quick solutions, but with much room for arguments and misunderstanding. An overly rhetorical approach could hinder practical cooperation; the new govern-

ment rhetoric has given us cause for concern in this regard.

In the early months of his administration, President Garcia and some members of his government have been quick to publicly blame the United States for Peru's problems. These unpleasant words have been puzzling to us and in some instances made cooperation more difficult. Nevertheless, we will continue to seek ways to advance our common concerns, including, and here I want to emphasize, the desire to see the country return to healthy economic growth.

We believe the U.S. proposal for a "Program for Sustained Growth," presented by Treasury Secretary [James] Baker at the Seoul IMF [International Monetary Fund] World Bank meeting, involving increased commercial bank lending, enhanced international financial institution effectiveness, and structural change in the economies of the principal debtors, offers a concrete manner to cope with the debt problem. In our view, this program has elements which can appeal to Peru. It is clearly in our national interest to pursue with the Government of Peru a serious and quiet dialogue on how we can cooperate to help restore economic growth.

As we evaluate the first steps of the Garcia administration we must keep in mind that none of Peru's long festering problems has disappeared. Finding the solutions to Peru's dramatic plight will not be easy for Peru or its new president. Perhaps the most positive change brought about so far by President Garcia is psychological. Peru, once the seat of the Inca Empire, is a country with a history; what Alan Garcia said to his people is that Peru is also a country with a future. He has helped Peruvians to believe their situation is not hopeless, that they can improve their and their children's lot. We applaud his efforts to reenergize the country and restore its will. We are prepared to assist Peru where we can be helpful.

Terrorism, Narcotics, and Political Violence

Turning now specifically to civil and human rights issues, allow me to review for you some key areas of concern and actions taken thus far by the Garcia administration.

With regard to civil rights, the overall situation is excellent. Notwithstanding terrorist violence against the elections, including the attempted assassination of the president of the National Electoral Board, the campaign and the April 14 elections proceeded without significant irregularities. Over 90% of eligible Peruvians went to the polls, electing as their president the candidate of the center-left Aprista Party, as well as a congress whose membership ranges from conservative to communist. The elections and peaceful transfer of power represent a triumph for democracy as well as for the departing Belaunde administration, which had made this a key goal.

The media take a lively role in political debates. The press is particularly sensitive to reports of human rights abuses, calling for investigations of allegations and punishment of responsible individuals. Freedom of the press was further strengthened by the administration's recent repeal of the law of contempt under which some journalists had been charged in previous years.

The Peruvian Government has maintained a "state of emergency" in 24 provinces where terrorists and narcotics traffickers are especially active. The state of emergency gives total authority to the military in those areas and suspends the constitutional requirement for a search warrant to enter private homes, restricts freedom of movement and freedom of assembly, and effectively suspends habeas corpus. President Garcia has stated that, for the time being, conditions are not right for lifting the state of emergency. Despite concerns about the limitations on normal protection of rights, he renewed the state of emergency for 60 days. These are severe measures, but the terrorism and narcotics problems are so serious they could destroy the entire fabric of Peruvian society.

Violence and killings, many with apparent political motivation, remain serious problems in the Ayacucho and Upper Huallaga emergency zones. The *Sendero Luminoso* has continued its program of vicious killings in both emergency zones, targeting recalcitrant campesinos, civilian officials, and members of the police and security forces. The situation in Tingo Maria in Upper Huallaga is further complicated by the presence of unscrupulous narcotics traffickers, who periodically settle accounts by force with each other as well as with law enforcement officials. Attributing responsibility for acts of violence in these areas is difficult since traffickers attempt to pin the blame for murders on the terrorists and vice versa. But whatever their motivation and whoever perpetrates them, the U.S. Government condemns this violence. Shining Path terrorists have also carried out numerous assassinations and a policy of indiscriminate car bombings in urban areas, especially in the Lima area, which is home to nearly one out of every three Peruvians.

Another terrorist group, the urban-based *Movimiento Revolucionario Tupac Amaru* (MRTA), announced a temporary truce with the Garcia administration, saying that it would wait to judge the actions of the new government, but vowed to continue its struggle against "imperialist enterprises." Last week the MRTA reportedly claimed responsibility for a bomb hurled in front of our Embassy and for a car bomb set off in front of Citibank in Lima. A communique threatening "the beginning of a countdown" unless the government carries out change suggests that, despite the vigorous actions of the APRA government, the MRTA may be close to reinitiating armed activities against the government.

Extrajudicial Killings

Political killing is a policy of neither the current Peruvian Government nor its predecessor. Nevertheless there is abundant evidence that in the face of brutal terrorism some in the security forces have responded with excessive violence of their own. Peruvian Government investigations revealed the extrajudicial killings in August of seven persons in Pucayacu and at least 40 more in Accomarca. In addition, there are allegations that local self-defense groups, sometimes created by the security forces, sometimes not, have killed or tortured alleged terrorists they have captured. One news magazine reported the lynching deaths of two alleged *Sendero* members in Marcas, Huancavelica on August 29, following a *Sendero* raid that killed six villagers.

The new government moved swiftly to halt these extrajudicial killings. Following the allegations of violations in Pucayacu and Accomarca, the Garcia government ordered expedited military investigations. When the investigation revealed the involvement of three military members in the Pucayacu slayings, President Garcia removed the Armed Forces Joint Command Chief, General Cesar Enrico. After subsequent revelation that military members were also responsible for the Accomarca massacre, Garcia ordered two high-ranking army generals responsible for the Ayacucho emergency zone, Generals Jarama and Mori, relieved of their commands. The Peruvian military has identified eight persons directly responsible

for the Pucayacu and Accomarca deaths. They have been charged in both military and civilian court systems. The supreme court is to decide final jurisdiction. The public has applauded Garcia's response as courageous and correct. While holding senior officers responsible for errors within their commands, the civilian government has also sought to distinguish the military as an institution from possible crimes committed by individual members.

Alleged disappearances decreased markedly between January and July 1985 according to preliminary data assembled by the independent human rights commission (CONADEH), and confirmed by the Catholic Bishops' Social Action Commission (CEAS) and the Association for Human Rights (APRODEH). Reported disappearances totaled 40 in January, 62 in February, 30 in March, 25 in April, 18 in May, 4 in June, and 2 in July (total of 181). The Peruvian Attorney General recently visited Ayacucho and returned with 1,300 files on cases of individuals reported missing in the past 4 years. He has publicly committed himself to study each case carefully. Again, the new Government of Peru has made clear its view that the counterterrorist fight must be waged with respect for law and human rights. We applaud that commitment and will continue to monitor the situation carefully.

Both the Belaunde and Garcia administrations have rejected the use of torture. However, security forces reportedly tortured Pucayacu victims as well as those in Accomarca, where witnesses allege that soldiers raped several women before shooting and burning some 40 victims.

Treatment of Prisoners

Independent human rights groups remain concerned about mistreatment of prisoners. The rapid increase in the number of detainees has led to severe overcrowding in prisons and has exacerbated sanitary and nutrition problems in these institutions. Recent rioting at the Lurigancho Penitentiary caused 30 deaths and several injuries to inmates and the police. The government stated that the riots started while it was seeking to establish control over the cellblocks where the terrorists were held and were believed to be arming themselves for an escape. It offered persuasive evidence that, of the 30 killed, 26 burned to death in a fire set by other inmates and that the police had not abused their authority.

The Garcia administration has already signalled its indignation with regard to prison conditions, although lack of resources continues to be an impediment. The Government of Peru hopes to ameliorate this problem by speeding up the trial process for prisoners, but this, too, is hampered by the lack of resources in the court system. The reform of Peruvian police services, which President Garcia has ordered in an effort to correct police corruption and abuses, also should have a positive effect on treatment of detainees; 56 police generals and over 170 other officers have been dismissed.

In his inaugural address, the President indicated that persons erroneously sentenced or accused of terrorist activities should be freed. President Garcia has steadfastly denied that there are "political" prisoners in Peru. The new government has indicated that it is appalled by the large number of persons in jail awaiting trial or final sentencing (approximately 15,000 of the 22,000 prisoners). Accused criminals frequently are detained for 2 or 3 years pending trial. In September, the Government of Peru ordered 50 prosecutors to report for extra duty at one prison in order to speed up the trial process. One of the duties of the recently announced Peace Commission will be to study possible pardons for individuals improperly imprisoned in the past.

The Government of Peru has also acknowledged the need for judicial reform to speed up the trial process, and is working on legislative proposals in this area. Our Embassy officials have met with the Ministry of Justice representatives to discuss possible U.S. Government support for an Administration of Justice Project, under the authority provided in the 1985 amendments to the Foreign Assistance Act. Our AID [Agency for International Development] Mission in Lima has been authorized to finance an assessment by a local institution of the Peruvian justice system as the first step toward developing a project that can support this important initiative by the Government of Peru. Also, in an interesting pilot program, the Government of Peru has opened free legal clinics in poorer neighborhoods of Lima.

Strategy for Human Rights Improvements

The human rights situation in Peru is closely tied to terrorism and the Government of Peru's response. To the extent the Government of Peru can carry out an effective counterterrorist policy, this will also contribute to improving the human rights situation. The new Government of Peru's new strategy contains several elements.

- Continued military efforts against terrorists' rural bases in the emergency zones, but with increased emphasis in the wake of the Pucayacu and Accomarca incidents on preventing abuses by security forces;
- Increased economic assistance to the emergency zone areas. In addition, the Ayacucho region should benefit from the Government of Peru's general policies that aim to benefit the poor and the rural areas, particularly in the highlands; and
- While refusing negotiation with terrorists, the Government of Peru in September established a Peace Commission composed of six nongovernment individuals, including a member from the Catholic Church hierarchy. The commission will seek to establish a dialogue with terrorists with a view to reincorporating them into a democratic society, and will study questions of pardons and amnesty.

To conclude, we believe that events in recent months indicate improvements in human rights in Peru. Although significant problems remain, we are encouraged by the firm resolve of the Garcia administration to identify and confront them. Nevertheless, the major source of abuses, terrorist violence, continues and probably cannot be controlled in the short term. We believe the Garcia administration's initial efforts to address these issues are praiseworthy and deserve the support of the U.S. Government and the international community.

Promoting Economic Development in Central America

by Richard T. McCormack

Address before the Central American Forum sponsored by the Pan American Development Foundation in San Pedro Sula, Honduras, on October 23, 1985. Ambassador McCormack is U.S. Permanent Representative to the Organization of American States.

We are meeting here at a critical time in the development of Central America—both politically and economically. Latin America in general is facing major challenges, and how they are dealt with in the next few months and years will decide the course of developments in this hemisphere into the 21st century. I understand that this is the first time this group has met, and the Pan American Development Foundation is to be congratulated for helping to organize this meeting, and you are to be congratulated for engaging in this forum at this time.

This group has the opportunity to influence positively what happens in this area of the world. In democratic governments it is the private sector—the private individual—that has a crucial voice and who, together with his fellow citizens, decides what happens or does not happen. You in this meeting have command over substantial resources that will determine whether there is growth and prosperity in this region of the world. You will help decide whether democracy succeeds or fails. That is a heavy responsibility, and I know that you do not take it lightly.

Objectives of U.S. Assistance

The U.S. Government and its people are watching events in Central America. It is no exaggeration to say that this area is one of the highest priorities of President Reagan. Our policies on economic growth and development and the security of this hemisphere are being tested in this area of the world. If all of us working together succeed here, we will demonstrate that we are on the right track and can succeed elsewhere. But if we stumble here, we will set back our united efforts throughout this hemisphere.

At the strong urgings of your governments, and the wise suggestions of the late Senator Jackson of Washington, we embarked several years ago on a program to help bring stronger economic and social growth and stability in this part of the world. President Reagan appointed a national commission which rendered its report in January 1984. We are now implementing what is called, for this region, the Central American initiative [Central America Democracy, Peace, and Development Initiative or Jackson plan].

Our participation in economic programs in Central America was $625 million in 1983. The program increased by almost 50% to $892 million in 1985, and almost $1 billion is requested for 1986. In current dollars, then, we are planning to assist in Central America with the same amount we provided for the Alliance for Progress in the 1960s. That is a major undertaking for the United States. The broad strategy is:

First, to arrest the declines in incomes, employment, and economic activity by means of major balance-of-payments assistance;

Second, to lay the foundation for long-term economic growth via improvements in economic policy and the infrastructure necessary for an export orientation;

Third, to assure the widest possible distribution of the benefits of growth through assistance for improving health, education, and housing for the poorest groups; and

Fourth, to support democratic processes and institutions through assistance for the administration of justice, technical training, and the development of leadership skills.

Progress in Implementing U.S. Initiatives

The efforts to assist the region are changing the economic climate and achieving results. The decline in gross national product has ceased. The region's gross national product (excluding Nicaragua) grew by 1.2% in 1984 and is expected to grow by 1.7% in 1985. It is clear that the strategy is working. The private sector has been strengthened; the region's international competitiveness has improved; economies are returning to equilibrium; and trade and exports have increased by 12% in the past year. Such changes are, of course, the responsibility of the countries concerned, but I believe our assistance has made a significant difference, and we want to continue to help. None of us here should underestimate the difficulty of such an adjustment, but a substantial start has been made. We are also hoping that the Inter-American Development Bank will also increase its efforts to promote the recovery and development of the region.

A critical objective is economic stabilization. In the absence of economic stabilization, it is doubtful that the rest of the Central American initiative can be achieved.

Economic adjustment is the second major objective and is at the core of the Central American initiative. Bluntly stated, all of the region's economies need to be restructured to some degree if they are ever to achieve levels of economic growth necessary to generate the needed employment levels and increase the dissemination of the benefits of growth to larger segments of the region's population. Generally, this will involve changing the productive base, i.e., diversifying the region's production and, in particular, its export sector. This, in turn, will require creation of a policy framework that encourages more investment into nontraditional exports, development of a strong private sector, adequate infrastructure, and an increased flow of technology.

The process is long term, which is why the broader program for Central America and the Caribbean, called the Caribbean Basin Initiative, was authorized for 12 years. Significant progress is already being made on restructuring economies. For example, both Costa Rica and Honduras are planning to sell or close down enterprises operated by the government. In El Salvador, the government is considering a divestiture program of activities better handled by the private sector. New investments, joint ventures, contracts, and other business activities totaling $45 million have been made in Central America up to June of this year. This has created nearly 13,000 new jobs.

An agribusiness development project, working from a $12 million loan base and private capital, has promoted 210 agribusiness projects under the Caribbean Basin Initiative. The National Investment Council of Panama, which was created in 1983 with a $3.7 million loan and $200,000 grant, has attracted 28 firms to Panama with $32 million in investment and over 4,000 new jobs.

The Need To Pursue Political and Economic Democracy

I have outlined in some detail the vigorous effort that the United States is making, and plans to continue making, to encourage economic and social growth in Central America and the Caribbean. We are persuaded, because of our own national experience, that a strong, healthy economy and social justice are essential foundation stones for effective democracy.

But I would be less than candid if I did not discuss with you what your countries are doing to assure your own economic prosperity and social equity. Latin America in general has accumulated substantial debt. Some of the countries in the area have acquired so much that they consider it unbearable and talk of default.

The unfortunate fact is that too many countries have professed to favor open and democratic countries with free economies but have followed policies wholly inconsistent with those objectives.

- It is a common affliction in Latin America to run uneconomical state enterprises, subsidize them with tax money, and then wonder why the budget is so unbalanced, there are few reserves, and the country is accumulating huge debts.
- It is a common practice to maintain unrealistic exchange rates for political reasons and then wonder what happened when the foreign exchange is gone and the debt cannot be paid.
- It is a common practice to protect uneconomic enterprises—some call them "tin can" industries—with high tariffs and other restrictions and then wonder why prices are high, domestic enterprise is noncompetitive, and products cannot be exported.
- And it is still a common practice to keep out foreign capital that will bring technology, employment, and economic growth because of events in the last century that led to the theology that debt is better than equity.

I would hope that countries now struggling under the burden of the debt that this theology continually helps to make larger will begin to reassess this development strategy. I know that remittances have to be paid, and they can be a burden. But the bankers want their money in good times and bad. The businessman has to suffer with the economy, and when it is down, profits are down and also remittances.

If we believe in democracy, then we must believe in both political and economic democracy because they are inseparable. One cannot survive without the other.

My country has thrived on the creativity of the individual and private investment. It would be no mistake to say that European capital financed the American industrial revolution in the past century. So we believe that there is nothing to match the initiative, creativity, and productiveness of the individual in a free society. That is the great strength of democratic countries. That is how we grew and developed.

The threat to Latin American countries is not foreign intervention, as extreme nationalists would suggest. The threat is foreign indifference—when your friends and allies become absorbed in their own national problems and weary of their efforts to provide access to their markets and the world economy because your domestic policies do not permit you to take advantage of what is offered.

The world is moving forward, and it is developing at a rapid rate. Technology that we thought to be the latest thing in the 1970s is obsolete in the 1980s. And because of restrictions that your countries have imposed, the technology of the 1970s has yet to arrive in your countries. Europe is concerned that it will fall behind in the fast technology race that the United States is leading. I think that those concerns may be somewhat exaggerated. But the Soviet Union already sees that its economic system has left it hopelessly behind, with no chance that the bold statement of Krushchev that "we will bury you" will ever be realized.

The world is becoming integrated. No country can any longer be truly independent and also participate in the world economy. Decisions made in the markets of London, Frankfurt, and Tokyo profoundly affect the United States. We are learning to live in this interdependent world and to grow and prosper. The countries represented in this room must do the same. Other countries in Latin America must also do so. It is a national decision for each of you whether you will join the world and prosper with it or be left behind. We cannot make that decision for you. We can try to be helpful, help provide resources, and encourage our citizens to do the same if their contribution is welcome and treated with dignity. But the competition for resources in the United States and elsewhere is severe.

In brief, it is the policy of my government to do everything it reasonably can to promote democracy and economic growth in this region of the world, and we are doing that, but in the final analysis, the decision is yours.

It has been an inspiration to be here with you and in Central America and to sense and feel the thirst for democracy and the opportunities that it will provide. I know, perhaps not as well as you, how difficult your task is to satisfy the just aspirations of your people. El Salvador has made unbelievable progress, held open and free elections in the face of the greatest adversity, and now democracy is rooted more firmly than ever before. Three of your countries will have elections in the coming year. Unfortunately, the Sandinistas in Nicaragua in recent days have more clearly repudiated their promises to the Nicaraguan people and moved to impose a cruel police state. So you are confronted with a predatory dictatorship in your midst.

You have a great obligation—in truth to pledge your lives, your fortunes, and your sacred honor to the future welfare and freedom of your countries. I know that you have the will and courage to do just that. You can be certain that you will have the strong continuing support of the United States. ■

November 1985

The following are some of the significant official U.S. foreign policy actions and statements during the month that are not reported elsewhere in this periodical.

November 1

U.S. and EC negotiators completed an agreement to curtail the export of EC steel into the U.S., bringing the total number of agreements under the President's Steel Program to 16.

The U.S. increases duties on EC pasta imports in retaliation for the EC's failure to settle a longstanding citrus trade dispute begun in 1976. The EC responds by increasing tariffs on imports of U.S. lemons and walnuts.

U.S. welcomes the decision by the Netherlands Parliament to deploy NATO intermediate-range nuclear weapons on its soil.

November 5

UN General Assembly calls on Vietnam to withdraw its troops from Cambodia and let the Khmer people determine their own destiny. The vote is 114 (U.S.) to 21 with 16 abstentions.

The following newly appointed ambassadors present their credentials to President Reagan: Stanislas Butchi (Congo), Leshele Abel Thoahlane (Lesotho), Timon Sam Mangwazu (Malawi), Salah Ahmed (Sudan), Nalumino Mundia (Zambia), J.H.A. Buekes (South Africa), Albert Oswyn Xavier (Grenada), and Edouard Kadigiri (Burundi).

November 6–9
Deputy Secretary Whitehead visits Honduras, El Salvador, Costa Rica, and Guatemala to meet with senior host-government officials and to become familiar with the region.

November 13
UN General Assembly approves a resolution calling for the immediate withdrawal of foreign troops from Afghanistan. The vote is 122 (U.S.) to 19 with 12 abstentions.

November 20
The Department of State issues a travel advisory for the city of Khartoum. It advises that "due to the presence in Khartoum of known terrorists, and possible threats to U.S. interests, American citizens are advised to avoid the Sudanese capital of Khartoum." This advisory is in addition to a more general travel advisory for the Sudan issued January 12, 1985.

AID Administrator McPherson visits the site of the Nevado de Ruiz volcano, 100 miles west of Bogota, and reviews the efforts made to rescue and aid thousands of Colombians affected by the disaster. The volcano erupted Nov. 13 killing an estimated 23,000 people. The U.S. responded quickly to the call for assistance with U.S. personnel, helicopters, tents, blankets, and a team of seismologists and volcanologists. As of the end of November, the cost of the initial U.S. response is $2.5 million.

November 27–28
U.S.-Angolan delegations meet in Lusaka, Zambia, to continue efforts in achieving a peaceful resolution of important southern Africa issues. Assistant Secretary Crocker heads the U.S. delegation. ■

Current Actions

MULTILATERAL

Arbitration
Convention on the recognition and enforcement of foreign arbitral awards. Done at New York June 10, 1958. Entered into force June 7, 1959; for the U.S. Dec. 29, 1970. TIAS 6997.
Accession deposited: Malaysia, Nov. 5, 1985.

Coffee
International coffee agreement, 1983, with annexes. Done at London Sept. 16, 1983. Entered into force provisionally Oct. 1, 1983; definitively Sept. 11, 1985.
Ratification deposited: Zaire, Oct. 25, 1985.

Human Rights
International covenant on civil and political rights. Adopted at New York Dec. 16, 1966. Entered into force Mar. 23, 1976. 999 UNTS 171.[1]

International covenant on economic, social and cultural rights. Adopted at New York Dec. 16, 1966. Entered into force Jan. 3, 1976. 999 UNTS 3.[1]
Accessions deposited: San Marino, Oct. 18, 1985

Jute
International agreement on jute and jute products, 1982, with annexes. Done at Geneva Oct. 1, 1982. Entered into force provisionally Jan 9, 1984.
Acceptance deposited: Netherlands, Nov. 8, 1985.
Ratification deposited: Germany, Fed. Rep. of, Nov. 13, 1985.

Marine Pollution
Convention on the prevention of marine pollution by dumping of wastes and other matter, with annexes. Done at London, Mexico City, Moscow, and Washington Dec. 29, 1972. Entered into force Aug. 30, 1975. TIAS 8165.
Accession deposited: China, Nov. 5, 1985.

Pollution
Protocol to the convention on long-range transboundary air pollution of Nov. 13, 1979 (TIAS 10541), concerning monitoring and evaluation of the long-range transmission of air pollutants in Europe (EMEP), with annex. Done at Geneva Sept. 23, 1984.[2]
Acceptance deposited: Netherlands, Oct. 22, 1985.

Sugar
International sugar agreement, 1984, with annexes. Done at Geneva July 5, 1984. Entered into force provisionally Jan. 1, 1985; definitively Apr. 4, 1985.[3]
Accession deposited: Haiti, Oct. 30, 1985.
Ratifications deposited: Austria, Nov. 13, 1985; Belize Nov. 13, 1985.

Terrorism
International convention against the taking of hostages. Done at New York Dec. 17, 1979. Entered into force June 3, 1983; for the U.S. Jan. 6, 1985.
Ratification deposited: New Zealand, Nov. 12, 1985.[4]

Convention on the prevention and punishment of crimes against internationally protected persons, including diplomatic agents. Done at New York Dec. 14, 1973. Entered into force Feb. 20, 1977. TIAS 8532
Accession deposited: New Zealand, Nov. 12, 1985.[4]

Trade
Agreement on technical barriers to trade (standards code). Done at Geneva Apr. 12, 1979. Entered into force Jan. 1, 1980. TIAS 9616.

Agreement on implementation of Art. VII of the general agreement on tariffs and trade (customs valuation code). Done at Geneva Apr. 12, 1979. Entered into force Jan. 1, 1981. TIAS 10402.
Acceptances deposited: Portugal, Oct. 14, 1985.

Wheat
1983 Protocol for the further extension of the wheat trade convention, 1971 (TIAS 7144). Done at Washington Apr. 4, 1983. Entered into force July 1, 1983.[3]

1983 Protocol for the further extension of the food aid convention, 1980 (TIAS 10015). Done at Washington Apr. 4, 1983. Entered into force July 1, 1983.[3]
Ratifications: Argentina, Nov. 15, 1985.

BILATERAL

Argentina
Air transport services agreement, with annexes. Signed at Buenos Aires Oct. 22, 1985. Entered into force provisionally Oct. 22, 1985; definitively upon exchange of diplomatic notes confirming that each party has concluded its internal procedures.

Canada
Agreement between the United States and Great Britain (for Canada and Newfoundland) for the prevention of interference by ships off the coasts of these countries with radio broadcasting. Effected by exchange of notes at Manchester, Mass., and Washington Sept. 18 and 23 and Oct. 1, 1925. Entered into force Oct. 1, 1925. TS 724-A.
Notification of termination by Canada: Aug. 7, 1985; effective Aug. 7, 1986.

Arrangement relative to the assignment of frequencies on the North American continent. Effected by exchange of notes at Ottawa Feb. 26 and 28, 1929. Entered into force Mar. 1, 1929. TS 777-A.
Notification of termination by Canada: Aug. 7, 1985; effective Aug. 7, 1986.

Regional arrangement governing the use of radio for civil aeronautical services. Effected by exchange of notes at Washington Feb. 20, 1939. 53 Stat. 2157; EAS 143.
Notification of termination by Canada: Aug. 7, 1985; effective Oct. 6, 1985.

Agreement relating to land line communication facilities between Edmonton, Alberta, and Fairbanks, Alaska. Effected by exchange of notes at Washington Mar. 1 and 31, 1948. Entered into force Mar. 31, 1948. TIAS 1906.
Notification of termination by Canada: Aug. 7, 1985; effective Aug. 7, 1986.

Agreement relating to the sealing of mobile radio transmitting equipment. Effected by exchange of notes at Washington Mar. 9, and 17, 1953. Entered into force Mar. 17, 1953. TIAS 3138.
Notification of termination by Canada: Aug. 7, 1985; effective Sept. 26, 1985.

Egypt
Agreement relating to the agreement for the sale of agricultural commodities of June 7, 1974 (TIAS 7855). Signed at Cairo Nov. 12, 1985. Entered into force Nov. 12, 1985.

France
Protocol to the convention with respect to taxes on income and property of July 28, 1967 (TIAS 6518), as amended by the Protocols of Oct. 12, 1970 (TIAS 7270), and Nov. 24, 1978 (TIAS 9500). Signed at Paris Jan. 17, 1984. Entered into force Oct. 1, 1985.
Proclaimed by the President: Nov. 1, 1985.

Convention on the transfer of sentenced persons. Signed at Washington Jan. 25, 1983. Entered into force Feb. 1, 1985.
Proclaimed by the President: Nov. 4, 1985.

Agreement extending the memorandum of understanding of July 8 and 23, 1982 (TIAS 10422), covering cooperation in the field of geological sciences. Signed at Reston and Orleans Sept. 27 and Oct. 23, 1985. Entered into force Oct. 23, 1985; effective July 23, 1985.

India
Agreement amending agreement of Dec. 21, 1982 relating to trade in cotton, wool, and manmade fiber textiles and textile products (TIAS 10624). Effected by exchange of letters at New Delhi Sept. 25 and Oct. 28, 1985. Entered into force Oct. 28, 1985.

Israel
Agreement relating to the employment of dependents of official government employees. Effected by exchange of notes at Tel Aviv and Jerusalem Sept. 23 and Oct. 3, 1985. Entered into force Oct. 3, 1985.

Italy
Memorandum of understanding for a cooperative program concerning earthquake data and evaluation of seismic hazard. Signed at Rome and Reston Sept. 30 and Nov. 6, 1985. Entered into force Nov. 6, 1985.

Memorandum of understanding concerning installation and management of U.S. navigational aids. Signed at Rome and Ramstein Air Base Oct. 8 and 11, 1985. Entered into force Oct. 11, 1985.

Jamaica
Agreement regarding the consolidation and rescheduling of certain debts owed to, guaranteed by, or insured by the U.S. Government and its agencies, with annexes. Signed at Washington Sept. 26, 1985. Entered into force Nov. 18, 1985.

Japan
Agreement relating to the acquisition and production in Japan of the patriot weapon system. Effected by exchange of notes at Tokyo Oct. 4, 1985. Entered into force Oct. 4, 1985.

Agreement extending the technical exchange arrangement of Sept. 12 and 29, 1980 (TIAS 10537), in the field of [nuclear] regulatory matters. Effected by exchange of notes at Washington and Tokyo Sept. 25 and 26, 1985. Entered into force Sept. 26, 1985.

Madagascar
Agreement regarding the consolidation and rescheduling of certain debts owed to, guaranteed by, or insured by the U.S. Government and its agencies, with annex. Signed at Antananarivo Oct. 8, 1985. Entered into force Nov. 12, 1985.

Agreement amending the agreement for sales of agricultural commodities of Sept. 27, 1985. Effected by exchange of letters at Antananarivo Oct. 28 and Nov. 7, 1985. Entered into force Nov. 7, 1985.

Saudi Arabia
Memorandum of arrangement relating to technical assistance in developing and modernizing Saudi Arabia's civil aviation system, with annex. Signed at Washington and Riyadh May 16 and Aug. 3, 1985. Entered into force Aug. 3, 1985.

Sri Lanka
Agreement for sales of agricultural commodities. Signed at Colombo Oct. 23, 1985. Entered into force Oct. 23, 1985.

Sweden
Agreement extending the agreement of Sept. 9, 1980, concerning a cooperative program in the field of management of radioactive wastes. Signed at Stockholm Oct. 8, 1985. Entered into force Oct. 8, 1985; effective Sept. 9, 1985.

United Kingdom
Agreement relating to sharing facility construction costs on Ascension Island, with memorandum of agreement. Effected by exchange of notes at London Mar. 25, 1985. Entered into force Mar. 25, 1985.

Agreement amending annex 2 of the air services agreement of July 23, 1977, as amended (TIAS 8641, 8965, 9722, 10059). Effected by exchange of notes at Washington May 28, 1985. Entered into force May 28, 1985.

Venezuela
Agreement extending the implementing agreement of Oct. 29 and Nov. 9, 1982 regarding air transport services. Effected by exchange of notes at Caracas Feb. 1 and Mar. 18, 1985. Entered into force Mar. 18, 1985; effective May 1, 1985.

Yugoslavia
Agreement amending and extending agreement of Oct. 26 and 27, 1978 (TIAS 9447), as amended, concerning trade in men's and boys' wool and manmade fiber suits. Effected by exchange of notes at Belgrade Oct. 9 and Nov. 12, 1985. Entered into force Nov. 12, 1985.

[1]Not in force for the U.S.
[2]Not in force.
[3]In force provisionally for the U.S.
[4]Applicable to Cook Islands and Niue. ■

Foreign Relations Volume Released

The Department of State on October 7, 1985, released *Foreign Relations of the United States*, 1951, Volume IV, Europe. The volume presents over 1,800 pages of previously classified documents on U.S. policy with regard to Western Europe (Part 1) and Central and Eastern Europe (Part 2).

Part 1 contains over 1,000 pages of documents, covering both multilateral topics and bilateral relations with the nations of Western Europe and Scandinavia. Regionally, U.S. policy focused on support for the political and economic integration of Western Europe, providing encouragement for ratification of the Schuman Plan for a European Coal and Steel Community, as well as for the Organization for European Economic Cooperation (OEEC), the Council of Europe, and the European Payments Union. Bilateral materials are arranged alphabetically from Belgium through the Vatican. The largest compilations, which deal with France and Italy, cover efforts to ensure political stability in both countries and highlight visits to the United States by French Prime Minister Pleven and President Auriol and Italian Prime Minister De Gasperi. Documents on the United Kingdom explain U.S. views concerning Britain's defense policy, particularly in light of its economic situation.

Part 2 consists of some 800 pages introduced by the section on Austria, which centers on problems of the occupation as well as U.S. participation in negotiations for an Austrian State Treaty. Additional material on Central Europe, relating to Germany and the problems of Western European security, was published in *Foreign Relations*, 1951, Volume III, released in 1981. Most of Part 2 deals with Eastern Europe, including a multilateral section and bilateral portions on the countries. The largest components are those on the Soviet Union and Yugoslavia. The former sets forth principal issues in bilateral relations with the U.S.S.R., presents major appraisals and estimates of Soviet intentions, and offers reports on internal developments of significance to the formulation of U.S. policy. The final section on Yugoslavia relates to U.S. interest in supporting Yugoslav independence through military and economic assistance programs and the encouragement of expanded political relations with the West.

Foreign Relations, 1951, Volume IV, was prepared in the Office of the Historian, Bureau of Public Affairs, Department of State. Copies of Volume IV, (Department of State Publication No. 9424 (Part I) and 9425 (Part 2); GPO Stock No. 044-000-02053-0) may be purchased for $41.00 (domestic postpaid) from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Checks or money orders should be made payable to the Superintendent of Documents.

The *Foreign Relations* series has been published continuously since 1861 as the official record of U.S. foreign policy. The volume released October 7 is the last of seven to be published covering the year 1951.

Department of State
bulletin

Volume 86 / Number 2107 / February 1986

The DEPARTMENT OF STATE BULLETIN, published by the Office of Public Communication in the Bureau of Public Affairs, is the official record of U.S. foreign policy. Its purpose is to provide the public, the Congress, and government agencies with information on developments in U.S. foreign relations and the work of the Department of State and the Foreign Service.

The BULLETIN's contents include major addresses and news conferences of the President and the Secretary of State; statements made before congressional committees by the Secretary and other senior State Department officials; selected press releases issued by the White House, the Department, and the U.S. Mission to the United Nations; and treaties and other agreements to which the United States is or may become a party. Special features, articles, and other supportive material (such as maps, charts, photographs, and graphs) are published frequently to provide additional information on current issues but should not necessarily be interpreted as official U.S. policy statements.

Afghanistan's Struggle for Freedom

by John C. Whitehead

Address before the World Affairs Council in Washington, D.C., on December 13, 1985. Mr. Whitehead is Deputy Secretary of State.[1]

Thank you for the opportunity to discuss Afghanistan with you today. As many of you know, 6 years ago, on Christmas eve, Soviet airborne troops began landing in Kabul. By December 27, Soviet forces had risen to 5,000; within 6 months they numbered 85,000. Today, there are about 120,000 Soviet troops in Afghanistan, with an additional 30,000 poised across the border in the Soviet Union.

The Soviet invasion and continued occupation of Afghanistan is a blatant example of communist colonialism at its worst. Without provocation, certainly without invitation, the Soviet Union simply invaded a nonaligned, nonmenacing, and independent country. Soviet troops stormed the presidential palace, murdered the insufficiently docile Marxist President Amin, and installed Babrak Karmal as his compliant replacement. For 6 years, using almost every conceivable means available in their vast military arsenal, the Soviets have tried to pacify, conquer, and Sovietize Afghanistan. In this, they have failed and failed miserably.

The Soviet invasion sounded the death knell for detente. It revealed, for the first time since World War II, the Soviet Union's willingness to use its own military force outside Eastern Europe. Coming in the wake of Soviet adventurism through proxies in Angola, Ethiopia, and South Yemen, the naked invasion of Afghanistan by Soviet troops exposed Soviet expansionism to the world.

The Soviet Union has always proclaimed its support for people fighting for their national independence. Afghanistan turns those hollow words into a bad joke. Nowhere is the will for freedom stronger than in Afghanistan, yet nowhere in the world has the carnage wrought by Soviet imperialism been greater.

Soviet Tactics

Using indoctrination, subversion, and stark military terror, the Soviets have tried for 6 years to crush the Afghan will to resist. They have literally tried to destroy everything Afghan—history, culture, tradition, religion, family.

Unable to pacify or control the countryside, for example, the Soviet Union in 1984 resorted to tactics aimed specifically at depopulating areas of strategic importance. High-altitude saturation bombings, the willful destruction of crops and livestock, reprisals against civilians, and the widespread use of antipersonnel mines are just some of the tactics the Soviets are using in their war on the Afghan people.

Bombs disguised as toys or pens—designed to maim, not kill—continue to be used. It is difficult to conceive what military objective might be served by such devices. One French doctor explained it this way:

The Russians know quite well that in this type of war, an injured person is much more trouble than a dead person. In many cases, he will die several days or weeks later . . . with atrocious suffering, which further depresses those who must watch him die.

Other more subtle, but equally dangerous, forms of warfare are being waged. To create a loyal cadre of pro-Soviet Afghans to take eventual control of the government, Moscow has invaded the family to initiate reeducation and indoctrination programs. Children as young as 5 and 6 years old are being separated from their families and sent to the Soviet Union for as long as 10 years of indoctrination. Since 1979, an estimated 40,000 Afghan students have been sent to the Soviet Union; 10,000 are there at any given time. Afghan school curricula have been revised to include Marxist-Leninist ideology; revised history books written by Soviet scholars have been introduced; Afghan professors have been replaced with those from communist countries. The intent is clear: Moscow seeks to obliterate Afghan cultural values from the minds of the country's youth and to substitute a made-in-Moscow view of the world.

The Soviet invasion and continued occupation of Afghanistan is a blatant example of communist colonialism at its worst.

Refugees

Not surprisingly, Soviet tactics in Afghanistan have resulted in one of the greatest mass migrations in history. Nearly 3.5 million refugees—more than the population of the entire Washington, D.C., metropolitan area and about 20%–25% of Afghanistan's prewar population—have fled the country. At least a million more have been driven from the countryside into internal exile in cities and towns where a Red Army-style peace has been imposed.

Before coming to Washington, I had the privilege of visiting on several occasions as president of the International Rescue Committee many of the refugee camps in the North West Frontier border area of Pakistan. I have spoken with hundreds of refugees and have been received in their simple tents and mud huts. I have seen at firsthand their fierce determination. I have felt their hatred of the Soviet invaders, their love of freedom, and their longing to return once again to their land and to their homes.

Afghan refugees rely primarily on the Government of Pakistan, the UN High Commissioner for Refugees (UNHCR), and private voluntary agencies for their basic needs. The United States has contributed generously to the Afghan relief effort. Since 1980, we have provided over $430 million, primarily through the UNHCR and the World Food Program. The Afghan relief effort is one of the most effective refugee programs in the world; it is certainly the largest. But dependence on others' hospitality and charity is alien to a people renowned for their industriousness, their creativity, and their proud independence. Their only request to their visitors is like Winston Churchill's in World War II: "Give us the tools and we will finish the job."

I, too, am convinced that, one day, they will return to a free Afghanistan. Throughout Afghanistan's long, tumultuous history of resisting marauding armies and ruthless invaders, no one—not Alexander or Genghis Khan, not Tamerlane or Nadir Shah—has been able to conquer and rule the Afghans. The Afghan *mujahidin* say they will fight to the last man, and I believe them. The Soviets must acknowledge and accept that the will of a people united in a national liberation struggle cannot be broken by force of arms, short of genocide.

The Military Situation

What the Soviet Union faces in Afghanistan is not the opposition they surmounted in Central Asia in the 1920s; nor is it a band of rag-tag rebels fighting without a clear purpose or cause. They face freedom fighters trained to fight with modern weapons and backed by a people united in their will to expel yet another invader.

Hostility and active opposition to the Karmal regime are not confined to one area; it encompasses the entire country. The Soviets have been unable to find qualified, loyal Afghan technocrats willing to participate in Karmal's puppet government. They have been forced to abandon the pretense that they are merely advising the Karmal regime and now either directly make or are deeply involved in every major political, military, or social decision. There can be no doubt that it is a Soviet-run government.

On the military front, Soviet efforts to build up the Kabul army have been thwarted by disloyalty, desertions, defections, and disillusionment. The puppet Afghan army has shrunk to less than half of its preinvasion strength of 90,000.

The Soviet army itself has been plagued by alcohol and drug abuse; lack of discipline is a major problem. From Soviet defectors, themselves tangible proof of the unpopularity of the war, we have learned that Soviet soldiers sent to Afghanistan are told that they will be fighting alongside Afghans to defeat U.S., Chinese, and Pakistani imperialists. Instead, they discover with dismay that they are expected to kill Afghans fighting to defend their families, homes, and land.

In contrast to Soviet morale, *mujahidin* morale remains high. On the battlefield, the Afghan resistance is better organized, better trained, and more effective than ever before. Despite stepped-up fighting and more aggressive Soviet tactics, the invaders have been unable to consolidate their conquest. The resistance continues to control over 75% of the countryside. Mounting Soviet losses of supply convoys, helicopters, and fixed-wing aircraft testify to the improved ability of resistance fighters to use the modern weaponry at their disposal. They have become more adept at carrying guerrilla warfare to major cities. Even in Kabul, the most heavily guarded garrisons and airbases, as well as the Soviet Embassy, have been rocketed.

Six years ago, few of us could have imagined that today we would be talking about an Afghan resistance that has kept one of the most powerful armies in the world at bay. The Afghan people's courage, resilience, and iron will to survive have kept open the only path to a lasting solution—a negotiated political settlement. The *mujahidin* cannot hope to expel the Soviet invader by force.

Sheer numbers are on the Soviet side. The military option entails only further death and destruction. It will neither achieve a Soviet victory nor crush the will of the Afghan people to be free.

The only lasting solution to the war is a negotiated political settlement that gets Soviet troops out of Afghanistan and permits the Afghan people to determine their own destiny. Only then will the *mujahidin* put down their arms; only then will the refugees voluntarily return to their country and global as well as local tensions decrease.

The Roles of Pakistan and the United Nations

We admire and support Pakistan's courageous and unwavering stand on the Afghanistan issue, particularly its efforts in the United Nations and elsewhere to achieve a negotiated settlement. We believe, as do the Pakistanis, that every avenue must be explored to find a peaceful solution. We encourage other countries in the region—particularly India—to contribute toward achieving a comprehensive and viable settlement.

As you know, there is a vehicle in place to achieve a negotiated settlement. Under the auspices of the United Nations, the UN Secretary General's personal representative, Diego Cordovez, has been conducting a series of negotiations between the Government of Pakistan and the Kabul regime. The talks, conducted indirectly through the UN negotiator rather than face to face, are referred to as proximity talks. Pakistan does not recognize the puppet regime of Babrak Karmal, which was installed and is maintained solely through Soviet military force and clearly does not represent the will of the Afghans. Currently housing 2-3 million Afghan refugees who have specifically fled the excesses of the Karmal regime, Pakistan's unwillingness and inability to recognize the puppet government is not only understandable but morally justified. We support this view.

These proximity talks envisage four basic documents or instruments which would comprise a comprehensive settlement. They include agreements on mutual noninterference and nonintervention, voluntary return of the refugees, international guarantees, and the interrelationship of these instruments to the key question of Soviet withdrawal. To date, three of the four instruments have been largely completed. The interrelationships document, in which the withdrawal of Soviet forces from Afghanistan would be addressed, remains to be negotiated. This is the critical document. The issue of withdrawal lies at the heart of the Afghan problem; it is the reason the proximity talks were convened. The questions addressed in the other instruments, though important, are ancillary.

The United States has firmly supported and continues to support a negotiated withdrawal of Soviet troops. In this connection, we informed the Secretary General in writing this week of our willingness to play an appropriate guarantor's role in the context of a comprehensive and balanced settlement. We have also conveyed our readiness to accept the draft guarantees instrument that Mr. Cordovez has presented to the parties and to us, provided that the central issue of Soviet troop withdrawal and its interrelationship to the other instruments were resolved.

On December 16, a new round of UN-sponsored negotiations will begin in Geneva. Both parties apparently have agreed to maintain the proximity format. The way is thus open to tackle, once and for all, the prompt and final withdrawal of the Soviet army from Afghanistan. If, as General Secretary Gorbachev indicated in Geneva, the Soviet Union supports the UN process, and if, as the Soviet Union continues to claim, it is sincerely interested in achieving a political settlement, then this next round of talks will provide them a forum to demonstrate their sincerity. Let us hope that the Soviets have finally made the political decision to seriously negotiate a withdrawal of their troops.

But let there be no mistake. If the Soviets digress and make excuses or unreasonable demands, the blame for lack of progress will be theirs alone.

The Afghan* mujahidin *say they will fight to the last man, and I believe them.

Afghanistan is and will remain a thorn in the Soviets' side. Time will not heal this wound. It will grow and fester and spread. Afghanistan is an international embarrassment to them that has increased rather than faded away. It serves as a painful and bloody example of Soviet insincerity and untrustworthiness—an example that nations around the world, large and small, have taken to heart.

The courage, steadfastness, and faith of the Afghan people stand in stark contrast to the cowardice reflected in Soviet atrocities against innocent civilians. Last Friday, the United Nations endorsed a report prepared by Special Rapporteur Felix Ermacora. It concluded that the war in Afghanistan "is exacting an increasing toll in human lives and continues to engender human rights violations on a large scale."

We must speak out about these atrocities. The world must know what is happening in Afghanistan. The *mujahidin* are doing a magnificent job of resisting the Soviets. For our part, the rest of the world must exact from the Soviets a political price. They must pay for the death and destruction they are wreaking daily in Afghanistan.

President Reagan, in his meeting with Mr. Gorbachev, made it clear that, while we seek a wider dialogue on issues of global concern, we will not remain silent on Afghanistan. Afghanistan will remain an obstacle to an overall improvement in our relationship. As long as the Soviets pursue a military solution, we will continue to support the Afghan cause.

My message to you tonight is clear. Collectively, we can and must help restore Afghanistan's independence. If we speak with one voice against this brazen use of Soviet force and continue to pressure the Soviets from all sides, we can create a situation in which it will be in their best interests to withdraw. In conclusion, allow me to quote Edmund Burke's warning which, although 200 years old, sadly applies to the world today.

> When bad men combine, the good must associate; else they will fall, one by one, an unpitied sacrifice in a contemptible struggle.

[1]Press release 279 of Dec. 16, 1985. ■

Afghanistan: Six Years of Soviet Occupation

The following report was prepared in December 1985 by Craig Karp, Afghanistan analyst, with the assistance of other analysts in the Bureau of Intelligence and Research and Department officials. It is a sequel to Mr. Karp's 1984 report published in the January 1985 Bulletin.

SUMMARY

At the end of the sixth year of the Soviet occupation of Afghanistan, the Soviet Union is no nearer to subjugating the country than before. The current military situation can best be described as a continuing stalemate, with a higher level of fighting by both the Soviets and the *mujahidin*. Both sides have adopted long-term strategies and neither has been able to defeat its adversary. Casualties were up for combatants on both sides, and possibly among civilians as well.

Afghan opposition to the Soviet occupation remains implacable. The resistance fighters, the *mujahidin*, were better armed and trained, and more effective militarily than ever before. The Soviets were unable to shut off resistance supply lines, despite a greater involvement in combat. In 1985 the resistance initiated its largest offensive operations of the war and for the first time overran an important regime military installation. Resistance groups displayed increased cooperation, and intergroup combat was probably reduced. The increase in offensive activity was the most important military development of 1985.

On the political front, the resistance made a potentially significant move toward unity with the merger of the seven principal political parties into an alliance. The alliance sent a delegation to New York for the 40th anniversary celebration of the United Nations, as part of its program to present Afghanistan's case to the world.

The Soviets adjusted their numbers, weapons, and tactics to meet the improved capabilities of the *mujahidin*. Soviet troop strength in Afghanistan increased by a few thousand to about 118,000, and they were more aggressive in the field. In 1985, Soviet losses of both men and materiel increased significantly. The war received increasing publicity inside the Soviet Union as signs of growing internal dissatisfaction with the Afghan conflict mounted.

The continued unreliability of Afghan military forces compelled the Soviets to assume a greater war burden. Opposition within the regime's own ranks was highlighted when Air Force personnel destroyed some 20 aircraft at the largest base in western Afghanistan.

The Democratic Republic of Afghanistan (DRA) staged an unconvincing version of the traditional grand national assembly, a series of tribal councils, and even a set of sham elections. These initiatives were aimed as much at an international audience as at the disbelieving Afghan people.

Unable to mobilize support, the regime remained dependent for its survival on the presence of Soviet troops. The Marxist ruling party remains split between its *Khalq* and *Parcham* factions. Despite persistent rumors of a change at the top and some high-level reshuffling, Babrak Karmal, installed by the Soviets in 1979, remains head of state.

The U.S.S.R. continues to pursue both long- and short-term strategies aimed at consolidating control over Afghanistan. An essentially defensive short-term military strategy aimed at containing the resistance allows the pursuit of longer term political goals. Thousands of Afghans, including children, have been sent to the Soviet Union to prepare them to run a future Sovietized Afghanistan.

International opposition to the Soviet occupation intensified during the year. On the fifth anniversary of the Soviet invasion, countries around the world condemned the war on the Afghan people and expressed their support for the heroic Afghan resistance. Pakistan continued its firm support for the Afghan people, despite concerted Soviet pressure that included numerous violations by Soviet/DRA aircraft and shellings of Pakistani territory. Progress toward a negotiated settlement in the UN-sponsored proximity talks foundered on the refusal of the Kabul regime to discuss the key issue—the withdrawal of Soviet forces.

The UN General Assembly rebuffed the Soviet/DRA public relations campaign by passing for the seventh time by overwhelming majority a resolution calling for the withdrawal of foreign forces from Afghanistan and demanding self-determination for the Afghan people. A month later the Assembly for the first time adopted a resolution passed by the UN Human Rights Committee condemning the violation of human rights in Afghanistan.

Outlook. Without a major addition of Soviet forces, the stalemate is likely to continue. The U.S.S.R. still appears to be committed to a military solution. Soviet hints of a willingness to be flexible may mask a basic condition: the maintenance of a Soviet-dominated government that the Afghan people—and and the world—reject. At the same time the will of the Afghan people to resist shows no sign of faltering.

MILITARY SITUATION

Throughout 1985, combat was at a higher level compared to previous seasonal norms. Even during the customary winter lull, it was not uncommon for fighting to occur in most of Afghanistan's 29 provinces during any given week.

Soviet forces were more aggressive and launched operations in every part of the country, focusing on efforts to disrupt resistance lines of communication. Campaigns throughout the year in the eastern provinces, and particularly the massive May-June drive into the Konar Valley, were directed to this end.

Resistance activity also was widespread; many Soviet/regime garrisons came under attack during the year. The pace of fighting escalated in the summer as the resistance took the offensive in the Panjsher Valley and in Paktia Province. In the west, the *mujahidin* were nearly able to eliminate all regime presence from Herat. Forced to respond in order to prevent major losses, the Soviets launched large-scale counterattacks. Intense combat continued into the fall.

Better armed and trained than in the past, the *mujahidin* were able to take the initiative in the fighting. Improved resistance air defense—still comprised primarily of heavy machineguns but increasingly supplemented by surface-to-air missiles—has forced the Soviets to be more cautious and to adopt countermeasures. As a result, the impact of Soviet air power has been reduced. Convoy ambushes were increasingly effective, as a combination of

improved weapons, more ammunition, and better tactics led on several occasions to the destruction of dozens of Soviet or DRA vehicles. Casualties were up on both sides, and among civilians.

One example of the war's greater intensity is the increased use of mines by both sides. As part of their efforts to impede resistance movement, the Soviets resorted to heavier use of several types of mines, particularly airdropped. The Soviets have dropped or planted an estimated 2 million mines since the invasion; these mines have probably caused more casualties to civilians than to resistance fighters. The resistance employs mines mostly to attack road convoys. On each of several occasions in 1985, the *mujahidin* knocked out dozens of Soviet/DRA vehicles. These ambushes have become more costly to the Soviets and hamper their freedom of movement.

Eastern Afghanistan

A detailed description of the year's combat follows, starting with the three major battles in eastern Afghanistan during the summer.

Konar. Barikot, an Afghan regime garrison located where the Konar River skirts the Pakistan border, has been under siege since the early days of the communist takeover in Kabul. Over the past year, even helicopter resupply became difficult because of fire from surrounding *mujahidin*. Soviet/Afghan aircraft often violated the Pakistan border to strike targets in Chitral, Pakistan, across from Barikot.

Early in the year, a combined Soviet/Afghan column attempting to relieve Barikot was forced to retreat. A rare case of frustrated Soviet movement, it was certain the Soviet 40th Army would try to overcome it with massive force. But resistance operations increased and threatened to overwhelm Barikot. By April all Afghan regime garrisons in the valley were under attack.

In May, exploiting a lull in *mujahidin* activity during the Muslim fasting month of Ramadan, the Soviets moved more than 10,000 troops with armor support up the Konar and its side valleys. The largest action since the spring 1984 offensive in the Panjsher, it was accompanied by the massive use of air power. Airborne assaults on the valley heights, although successful, sometimes encountered heavy opposition, including hand-to-hand combat. Losses on both sides were high.

The Soviets reached Barikot in about 2 weeks, relieving the besieged garrison. Almost immediately, however, they began to withdraw from the Konar Valley, turning Barikot back to the DRA. The 40th Army demonstrated that it can put large concentrations of troops almost anywhere in Afghanistan (and right up to the Pakistani border just before the June round of indirect talks in Geneva and U.S.-Soviet bilateral discussions on Afghanistan). But they could not sustain such a large presence. In the wake of the Soviet withdrawal, the *mujahidin* returned to the Konar and once again surrounded Barikot. Despite its size, the Soviet operation yielded only short-term tactical gains.

The valley was devastated by this intense use of Soviet firepower, but civilian casualties were light. Most villagers long ago had left this war zone for nearby Pakistan. The Soviets used napalm to strip parts of the valley—one of the few heavily forested areas in Afghanistan—of natural cover. They left a virtual wall of mines in an effort to discourage resistance movement.

Panjsher. The heaviest fighting in the Panjsher Valley in 1985 did not occur until summer. Commander Ahmed Shah Mahsud was preoccupied with nearby refugees and food shortages in the wake of last year's Soviet seizure of most of the lower valley. Yet Panjsher *mujahidin* harassed Afghan and Soviet garrisons throughout the winter. In January, a Soviet/DRA column was turned back after vainly trying to relieve a besieged garrison.

In early March, the Panjsheris assaulted a garrison and caused more than 100 Soviet/DRA casualties. At the end of March, Panjsher fighters hit a Soviet munitions convoy near the Salang Pass, destroying more than 60 vehicles and tying up the vital highway for days. Surprisingly, the annual Soviet spring push into the Panjsher failed to materialize.

When the Soviets moved in late spring to cut his supply lines in the Konar, Mahsud sent his fighters down from the Panjsher hills. The *mujahidin* quickly overcame a number of regime outposts in the valley, then advanced on Peshghor, the most exposed garrison in the valley.

The Soviets responded hastily, in contrast to their more customary well-planned operational style. Soviet forces were thrown almost piecemeal into the valley, possibly to prevent the fall of garrisons further down the valley. Afghan soldiers in Kabul were drafted into duty in the Panjsher, where they faced heavy opposition and ambushes in areas presumably under regime control.

By the end of July the Soviets went on the offensive, having placed over 10,000 troops in the Panjsher. Soviet troops retook Peshghor and moved into the side valleys, taking heavy casualties. Soviet and regime wounded filled Kabul's hospitals. Air power played less of a role than in the 1984 Soviet offensive, perhaps because of the closeness of the fighting or improved insurgent anti-aircraft capabilities.

The *mujahidin* captured nearly 600 prisoners at Peshghor. Conscripts who were not considered enemies of the resistance were paroled back to their homes. The remainder, mostly officers and perhaps a few Soviets, were held in a side valley. Hopes for a prisoner exchange were dashed when Soviet troops attacked the encampment; about 130 prisoners died.

Peshghor was an important victory, the first time the *mujahidin* have overrun a major regime garrison. The resistance had taken the initiative, forcing the Soviets to respond. When Soviet troops did reach the Panjsher Valley, the *mujahidin* stayed to fight, then retreated slowly rather than melting away when faced with superior force. Fighting in

the Panjsher continued into the fall, although at a lower level. In late November, Panjsher *mujahidin* reportedly again attacked Peshghor and overwhelmed several outposts.

Paktia. In late summer, the heavy fighting shifted south to Paktia Province, scene of intense combat in 1984. Paktia Province borders the Parachinar salient of Pakistan extending deep into Afghanistan, its tip only about 50 miles from Kabul. All year there has been heavy fighting as the Soviets attempted to interrupt resistance supply lines. Most bases in the eastern part of the province are manned by DRA forces and have been under continuous insurgent pressure.

In the early part of the year, fighting was concentrated in the northern part of Paktia, near Parachinar. The garrisons at Jaji/Ali Khel and Chamkani were under constant pressure. Some relief efforts arrived; others did not. In April, a large Soviet/DRA convoy traveling between the Paktia capital of Gardez and Chamkani suffered extremely severe troop and vehicle losses.

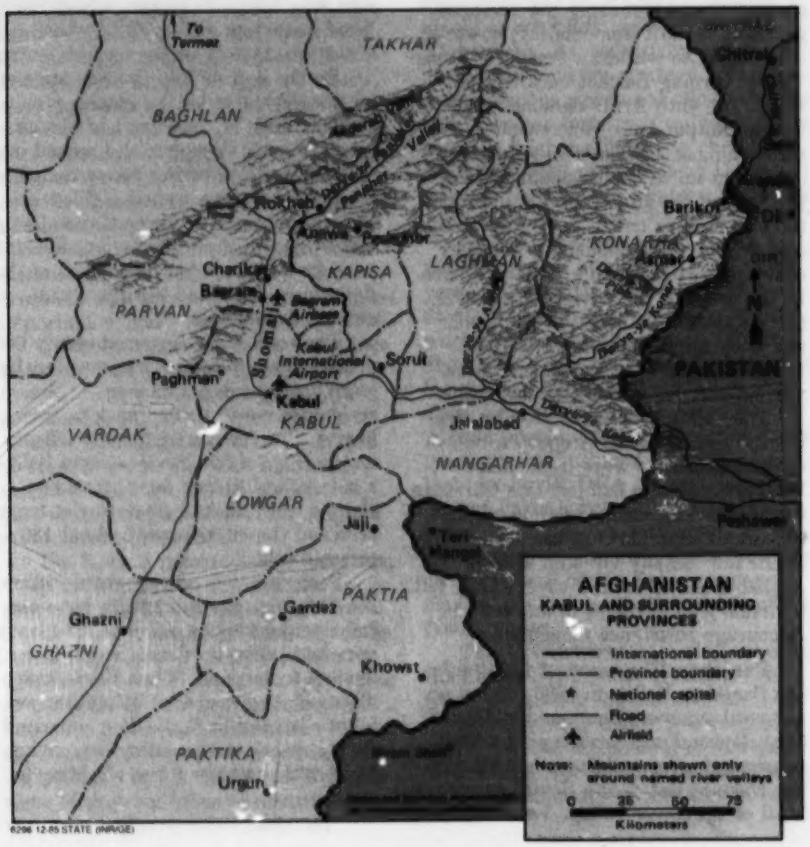
During the summer, the *mujahidin* launched a series of attacks on the garrison at Khowst, in the southern part of the province. Khowst, under siege since before the Soviet invasion, was the scene of a major battle in 1984. The Soviets, unable to get a convoy through the mountains to Khowst, must supply the town by air. Nearly all civilians left long ago.

The *mujahidin* around Khowst belong to several parties. Led by Jalaluddin Haqqani, from the *Hezb-e-Islami* (Yunis Khalis faction), they joined forces to attack the garrison. It was the largest offensive operation ever mounted by the resistance, involving perhaps 5,000 *mujahidin* in coordinated assaults. As many as half of the regime outposts around Khowst fell to the *mujahidin*. The Soviets were forced to act to prevent the fall of this isolated but strategic garrison.

Soviet/regime forces fought fiercely and overran several *mujahidin* camps in Paktia. Intense combat was accompanied by artillery and air attacks by Soviet/DRA units across the border into Pakistan. By late August, Soviet/DRA forces appeared to have ended a sweep operation south of Khowst. After a short lull, however, Soviet and regime troops staged a surprise sortie from Khowst to press the insurgents along the border. *Mujahidin* fighters, many of whom had gone to rest and recuperate in Pakistan, were recalled to the fighting.

Casualties were high on each side, in some of the bloodiest fighting of the war. Afghan and Pakistani hospitals were jammed with wounded. Several of the cooperating resistance force commanders reportedly were killed, including one of Haqqani's sons.

The Soviets and DRA were able to prevent the loss of Khowst. However, at year's end, the garrison remains surrounded by the resistance. Although unable to seize Khowst at this time, the Paktia *mujahidin* demonstrated impressive offensive capabilities, and morale remains high.

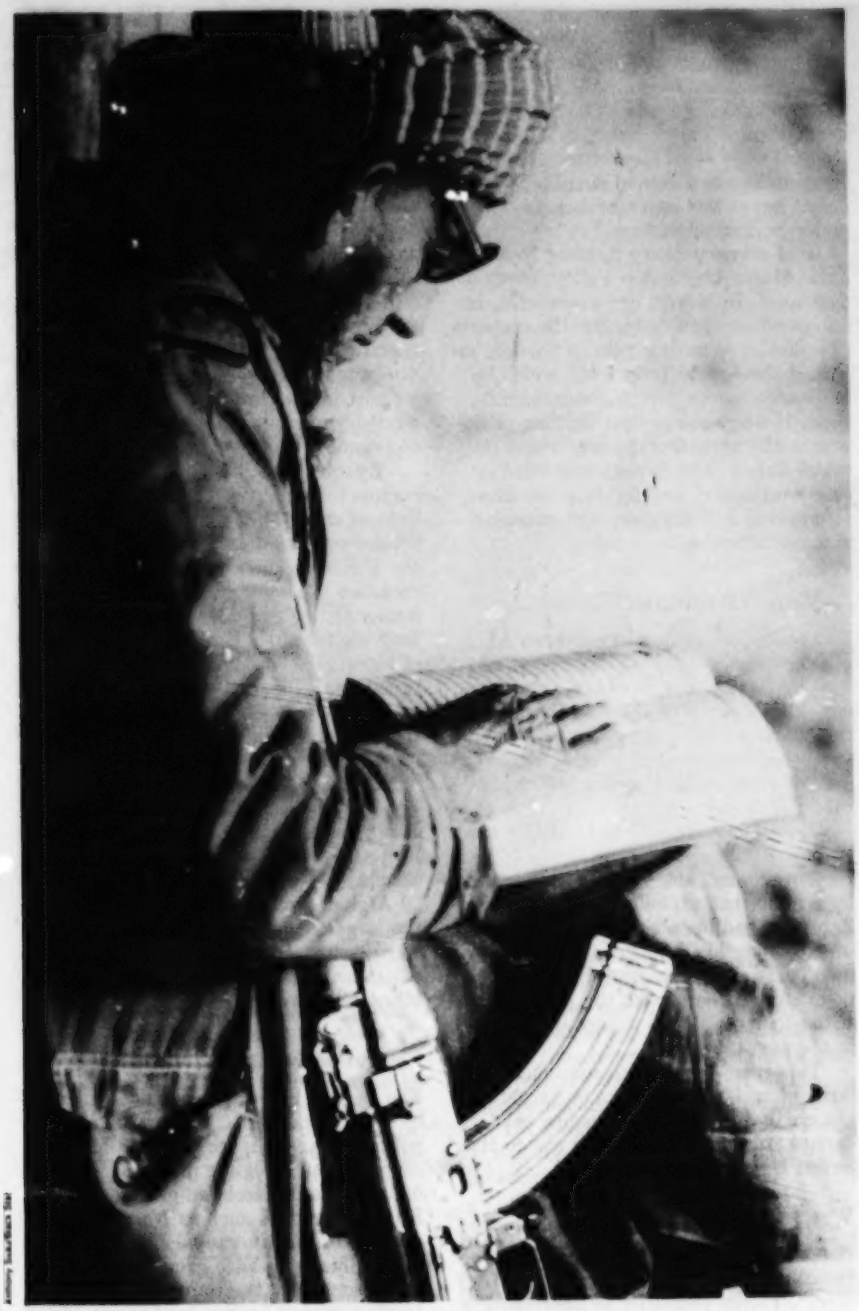


Kabul. The security situation in the capital, relatively quiet in the early part of the year, deteriorated over the summer. The Soviets devoted extensive resources to protecting themselves and the regime in Kabul—their minimum tactical goal—particularly on symbolic occasions or during important regime meetings.

The U.S.S.R. continued to develop its military infrastructure in the capital. Kabul now has checkpoints and gun and tank emplacements at all access routes. The Soviets established a second security ring of bunkers, supplemented by antipersonnel mines, to impede *mujahidin* infiltration.

A nightly curfew continues, punctuated by the sweep of searchlights from atop the city's peaks and the sounds of helicopter gunships. Kabul's sky often was lit by flares—ejected from aircraft when landing or taking off—which are designed to confuse the *mujahidin's* heat-seeking missiles. Bombing and rocketing of areas suspected of harboring *mujahidin* caused many civilian casualties, particularly among the internal refugees who have flocked to Kabul to escape the fighting. Since the Soviet invasion the capital's population has more than doubled to about 2 million.

The *mujahidin* launched rocket attacks around December 27, the fifth anniversary of the Soviet invasion, and there were some bomb attacks during the PDPA's 20th anniversary in early January, but the city was relatively secure. To maintain security during these internationally visible events, the



Resistance fighter reading the Koran.

regime deployed as many as 60,000 Soviet or Afghan military and police personnel in the capital.

Life became more dangerous in 1985 for the Soviets in Kabul. In late January a massive explosion at a military hospital in Kabul left a number of Soviet and regime personnel killed and wounded. Soviet personnel and their dependents were shaken by a series of resistance bombs in their customary shopping and residential areas; Soviet women were among the killed and wounded. On several occasions during the spring, Soviets were stabbed on the streets of the capital, at least one fatally.

In late April, with security precautions high before the *Loyah Jirga*, a Soviet/DRA task force surprised a *mujahidin* unit on the outskirts of Kabul, inflicting numerous casualties. That same week a Soviet/regime force captured a multiple-rocket launcher from a *mujahidin* group. Such weapons previously had not been observed in the hands of the resistance. Nevertheless, the *mujahidin* launched a spate of rocket attacks that month, including some harassing fire at the site of the *Loyah Jirga*.

On July 1, the resistance made a series of fierce and apparently coordinated attacks on the airport and Kabul's eastern suburbs. Later that week, the Soviet Embassy compound in the western suburbs was hit, reportedly killing several Soviet guards. Attacks on the embassy became so frequent that the Soviets installed a rocket launcher battery in the embassy compound, in order to return the fire. The embassy remained a target through the fall.

On July 22 the *mujahidin* launched their heaviest assault of the year, striking Kabul airbase. The sounds of combat could be heard in the city all week. In mid-September, a series of explosions, possibly caused by a rocket attack, did major damage to the Soviet ammunition dump at Khair Khana.

The bolder, more offensive-minded tactics employed by the resistance also were seen in the capital. In early November, the *mujahidin* overran a DRA post at Abshar on Kabul's west side. After seizing the garrison's weapons, the *mujahidin* withdrew.

Paghman, west of Kabul, was the scene of several Soviet and regime operations during the year. The regime has claimed successful pacification of this area nearly a dozen times over the

past 2 years. The civilian population again bore the brunt of Soviet and regime frustration. In September, residents reportedly were warned that if they did not stop supporting the resistance, their villages would be destroyed.

Shomali, north of Kabul, was the scene of almost constant Soviet and regime operations around the Kabul-Termez road. The Soviets have made the security of the capital's lifeline to the north a top priority. These efforts, however, were not enough to prevent numerous *mujahidin* ambushes, often closing the road for days. In October, a Soviet/DRA force used bulldozers to destroy all trees, crops, and houses for 125 feet on each side south of the Salang Pass, to Bagram.

Bagram Airbase, a major Soviet installation, was attacked several times by the resistance. Early in the year, the resistance claimed the downing of a Soviet/Afghan aircraft near Bagram by a surface-to-air missile.

In **Vardak Province**, in April, a large convoy, heavily armed with self-propelled artillery and FROG-7 long-range surface-to-surface rockets, was ambushed and forced to turn back to Kabul.

The **Nangarhar** provincial capital, Jalalabad, is reportedly one of the most secure cities in Afghanistan. Yet even Jalalabad Airbase was subject to rocket attacks. In March, the *mujahidin* took several Afghan border posts near the Khyber Pass. A few days later they withdrew, in the face of a large Soviet/DRA operation, which may have involved more than 300 armored vehicles.

Southern Afghanistan

In Qandahar, resistance activity all year long was higher than last year. The regime has virtually abandoned even the few posts it maintained in the bazaar. In October, a large DRA unit mutinied, killed their officers, and defected to the resistance. The government and the Soviets remain at the airport, which was periodically under attack.

The regime gained by defection, before the *Loyah Jirga*, Asmatullah Muslim Achakzai, who had commanded a *mujahidin* band called the *Fedayeen-i-Islami*. He took more than 100 men with him. In addition to cash and a bodyguard of 50 Afghan Army soldiers and several armored cars, the regime gave Asmatullah command of a tribal militia unit at Spin Baldak, on the Pakistan border near Quetta. During the summer, armor and artillery under his command fired into Pakistan, but the incident cooled after Pakistan deployed troops to the area. Qandahar resistance commanders condemned Asmatullah for defecting; at last report, he is staying under regime protection.

In February heavy fighting took place in the Arghandab Valley, north of Qandahar. In March, the *mujahidin*, in an operation remarkable for the cooperation displayed among various parties, attacked the Kajaki Dam, built with U.S. assistance before the 1978 communist coup. It was the heaviest fighting of the war in the agriculturally important Helmand Valley. The Soviets and DRA counterattacked, and fighting continued into spring and summer, with considerable casualties on both sides.

Northern Afghanistan

The tempo of fighting in northern Afghanistan was relatively lower in 1985. Several Soviet offensives took place, but none on the scale of those in the rest of the country. Soviet operations in the northeast Provinces of Konduz and Takhar resulted in a number of civilian casualties.

The resistance suffered a major setback in February, when *Jamiat-i-Islami* regional commander Zabiullah was killed by a mine that exploded under his jeep. Zabiullah had been singularly successful in extending his influence outside his own party. His successors have not yet been able to reestablish the coordination with other resistance groups operating in the north.

However, there were continued reports of resistance attacks on targets in the north, including the pipeline that carries Afghanistan's natural gas to the Soviet Union.

Western Afghanistan

Some of the largest Soviet operations took place in western Afghanistan. They were directed primarily at preventing a resistance takeover of Herat. With a fraction of its prewar population (many have fled to nearby Iran), Herat today is a battlefield and virtual ghost town.

The resistance in Herat operates as a coalition of several parties, led by Ismail Khan, a *Jamiat-i-Islami* commander who had served as a captain in the Afghan Army. At the end of 1984, Khan addressed a rally in the town of more than 1,000 people, without fear of interruption by the regime.

Although the regime is still present in Herat, it does not exercise control. A local resistance commander, dissatisfied with his role in the emerging local coalition, defected and was appointed an officer in the government militia. He was shot shortly afterward on the steps of a government building.

Beginning in June the *mujahidin* moved to assume full control of the city. Officials from Kabul appeared reluctant to go to Herat, and street fighting raged day and night. In June, the *mujahidin* tunneled under a major DRA outpost in the center of the city and exploded a massive charge, killing dozens of regime troops.

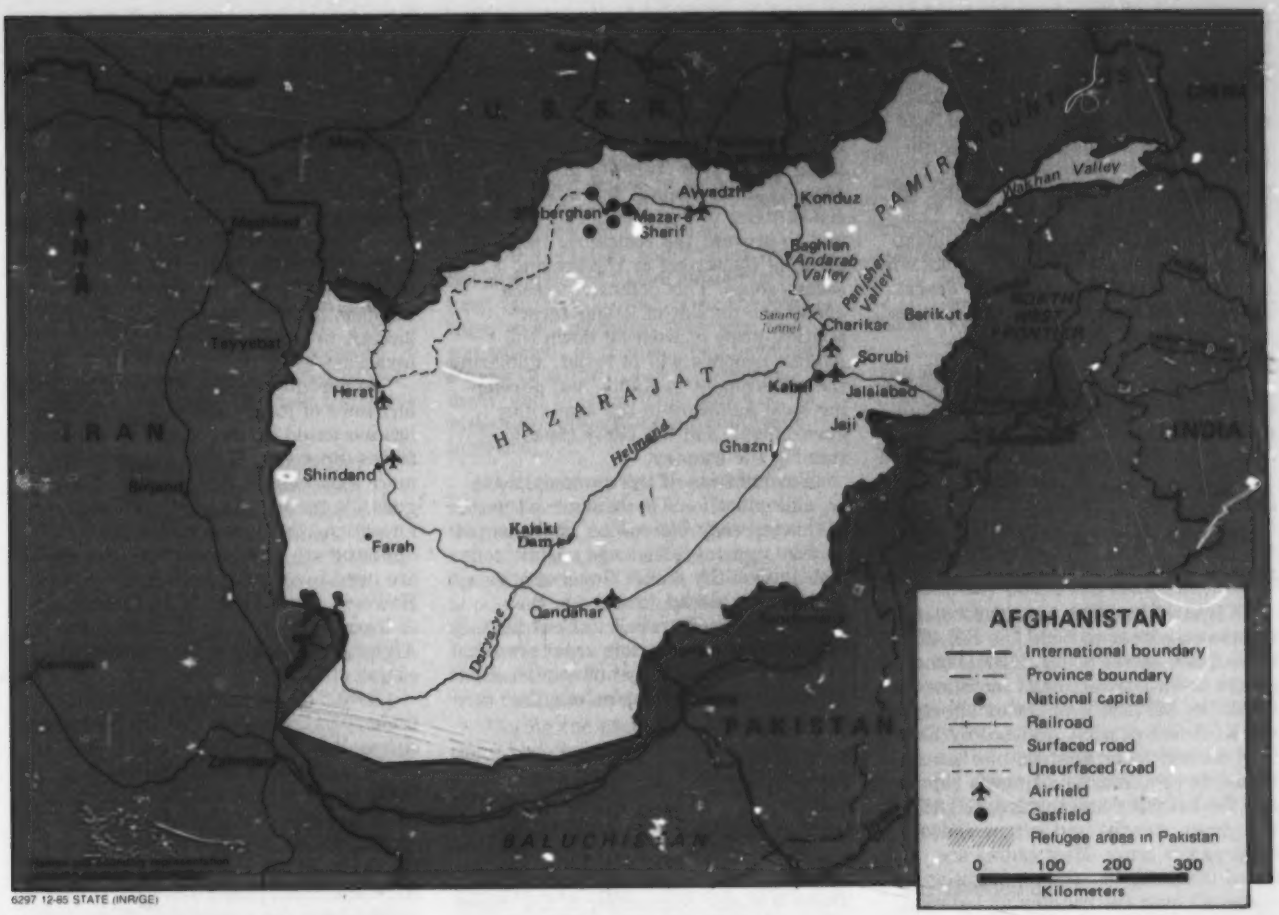
By July, the resistance was pushing regime forces out of the city. The Soviets reportedly were forced to call in reinforcements directly from bases in the U.S.S.R. The Soviets bombed and rocketed the center of town, causing numerous civilian casualties. Although they reasserted nominal daytime control of Herat, the *mujahidin* retain a strong presence in the city.

The Soviets continued to build up their capabilities in the west. There were a number of incidents on the border with Iran in the early part of the year. In March, a Soviet convoy near Toraghundi, a major facility on the Soviet/Afghan border, suffered heavy casualties. Further south, in June, about 20 Afghan aircraft at Shindand Airbase, the largest Soviet facility in the area, were destroyed by sabotage. The resistance attacked Shindand on several other occasions in 1985.

Central Afghanistan

The remote Hazarajat, populated mainly by Shia Hazaras, has undergone major political changes since the 1978 Marxist coup, although regime presence is limited to a few isolated garrisons. Pro-Khomeini groups such as *Nasr* and *Sepah-e-Pasdaran* vanquished the traditional Shia resistance groups that had held sway since the coup. These pro-Iranian groups have moved to establish an Islamic republic in the Hazarajat. The previously dominant *Shura* party reportedly is no longer active in the region.

In a meeting in Tehran in mid-June, several pro-Iranian groups, including the independent *Harakat-Islami* of Ayatollah Mohseni, pledged to stop fighting other Afghans and direct their arms against the Soviets. Focused on in-



6297 12-85 STATE (INR/GE)

ternal conflict, the Hazarajat has been only marginally involved in the resistance. However, because it is free from Soviet/regime control, the town has served as an important transit route for resistance supplies. There is some indication that, having confirmed their control over the Hazarajat, the pro-Khomeini Shia may have begun to strike at the Soviets.

THE AFGHAN MILITARY

Afghan military effectiveness continued to deteriorate over the past year, despite Soviet efforts to reverse the trend. The December 1984 appointment of a Khalqi, Nazar Mohammed, to run the Ministry of Defense, has not improved the situation. Nor has a large pay increase announced in the spring. The largely Khalq officer corps remains under suspicion by the ruling Parcham faction.

Enlisted men, mostly press-ganged conscripts, may fire when fired upon but mostly prefer not to fight the *mujahidin*. Given the opportunity, especially in combat, they desert. The resistance generally paroles them and sends them home or absorbs them into its ranks. The DRA military continues to be a major source of arms and ammunition for the resistance.

Lack of enthusiasm, combined with poor performance in combat, has made the DRA forces unreliable and forced the Soviets to take a more direct role in the fighting. In the past year Soviet forces increasingly have gone into combat without an Afghan Army "shield," or accompanied by only a small number of Afghan troops.

Even the best DRA units have had problems. The elite 444th commando brigade, thought by many to be the Afghan Army's most effective unit, was cut to pieces when it parachuted into the Panjsher in the summer. Many of the survivors deserted. Some Afghan units, such as the garrison at Khowst, performed well; despite heavy losses, it conducted an independent offensive after Soviet forces withdrew from the area in August.

Two regime directives illustrate the difficulty Kabul has in getting Afghans to fight for the regime. In January, the politburo announced that those who "volunteer" for the army would have to serve only 2 rather than the normal 3 years required of conscripts. There is no evidence that this gesture succeeded in attracting many volunteers. Moreover, many reports describe conscripts being forced to serve beyond their required term—a major source of disaffection within the army. Four years of duty is required from those stationed in Kabul, where life is easier and relatively safe.

In the second directive, issued in the spring, the regime decreed that anyone between the ages of 18 and 38 who had not yet served would be liable for im-

mediate callup. In the absence of effective draft registration, the law merely legitimizes conscription by press gang.

The Afghan Air Force, previously considered the most loyal service, was wracked by defection and sabotage in 1985. The June sabotage attack at Shindand caused the largest loss of aircraft in any single incident of the war. The episode evidently stemmed from unhappiness over the disciplining of pilots who had dropped their bombs in the desert instead of on the target village. The accused saboteurs were reportedly executed.

Air Force woes did not end with the June incident; other officers planned or executed additional acts of sabotage. In July, DRA Air Force personnel defected to Pakistan with two Afghan Mi-25 (Mi-24D) export version HIND helicopter gunships, the first HINDs to slip out of control of Soviet forces or their clients.

KHAD. The DRA has devoted extensive resources to build the KHAD, the Afghan secret police. KHAD (the letters are a Dari acronym for State Information Service) is overseen closely by the KGB and possibly assisted by East German and other Eastern bloc security forces. It continues to acquire a reputation for brutality and torture. KHAD has grown steadily and is now almost as large as the army. Most cadres are based in Kabul, but the organization operates all over the country and abroad. By offering good salaries to those with few alternative prospects, KHAD has had some success in recruiting and retaining young urban males. Recruits appear to have little or no ideological commitment, but do become committed and loyal to the organization.

Militia. The regime also has tried to develop the militia, in areas both within and outside regime control. This approach, used by Kabul rulers for centuries, has succeeded in obtaining some nominal adherents, although there are few instances of militia actually fighting the *mujahidin*. Moreover, it is a risky tactic. Some local groups have taken the government's money and arms, then defected to the resistance.

THE SOVIETS IN AFGHANISTAN

The U.S.S.R continues to pursue both long- and short-term strategies aimed at consolidating their position in Afghanistan. The Soviet Union has acted in the short term to preserve security in the capital and a few provincial centers, to protect its supply lines, and to prevent the resistance from growing too strong or threatening secure zones. This defensive stance allows the pursuit of longer term political goals of wearing down the Afghan people's will to resist, stabilizing the government in Kabul, and developing loyal followers in the army, the government, and the party capable of running the country.

Sovietization of the economy, society, and educational system are all part of this strategy but can be implemented only in areas of Soviet and regime control. It took the Soviet Government more than a decade to subdue the *basmachi* (bandit) revolt in Central Asia in the 1920s. The Soviets seem prepared to face the current level of conflict in Afghanistan for as long as may be necessary.

Military Developments. In 1985, the Soviets adjusted their numbers, weapons, and tactics to meet the greater capabilities of the *mujahidin* and make up for the decreasing effectiveness of the Afghan Armed Forces. There is a new commander of the Soviet effort in Afghanistan, General Zaitsev. Soviet troop strength in Afghanistan increased by a few thousand in 1985 to about 118,000, supported by an estimated 30,000 additional troops in the Soviet Central Asian republics north of Afghanistan.

In 1985, Soviet forces displayed an ability to conduct more than one multibattalion assault at a time, although no single operation was as large as the 1984 attack on the Panjsher Valley. The Soviets have demonstrated that they can concentrate troops in strength almost anywhere in the country. However, once these troops have been redeployed elsewhere, the *mujahidin* generally have been able to regain control of the area.

In assuming a greater burden of the war from the ineffective Kabul regime forces, the Soviets were more aggressive this year, concentrating their attacks on resistance supply lines. This more offensive posture, plus the need to react to resistance offensives, produced a higher rate of Soviet casualties and increasing aircraft losses. Soviet casualties in Afghanistan since 1979 total more than 30,000, including more than 10,000 killed. In addition, the Soviets and Afghans together have lost nearly 800 aircraft to the *mujahidin* since the invasion.

Apparently dissatisfied with the performance of its regular troops, Moscow has increased its use of special purpose forces (Spetsnaz). These better trained, more experienced troops use counterguerrilla tactics and deploy in smaller formations than other units. The Spetsnaz are often active at night and are used to ambush resistance convoys. However, the Soviet Union is unlikely to insert enough of these troops into Afghanistan to affect substantially the course of the war.

Soviet forces in Afghanistan continue to suffer serious morale problems, although low morale is probably not a major factor in combat. Disease, particularly dysentery and hepatitis, is rampant. Reports of theft and sale of military items, which often end up in the hands of the resistance, are common. Soviet soldiers often use the proceeds to pay for alcohol and drugs, including heroin. Drunkenness is apparently worse than the already high incidence in the U.S.S.R.

Soviet Defectors and Prisoners. In the early years of the conflict, few prisoners were taken by either side. There is no evidence of major detention centers for resistance fighters. Continued press reports of limited actual or planned prisoner exchanges suggest that Kabul and the Soviets do hold some *mujahidin*.

A few Soviets have defected to the resistance; some even fight alongside the *mujahidin*. According to press interviews, Soviet defectors often convert to Islam and go by Muslim names. Some defectors, in trouble before they left Soviet lines, remain with the *mujahidin*

rather than face severe punishment, perhaps death, should they return. In addition, various resistance groups hold Soviet prisoners, generally in secure base areas inside Afghanistan.

The International Committee of the Red Cross (ICRC) has a program to intern Soviet prisoners in Switzerland and eventually voluntarily repatriate them. Several voluntarily returned to the Soviet Union after completing the waiting period mandated by the Geneva Convention. In 1985, no Soviet soldiers were released through the ICRC. Six Soviet soldiers asked for and received parole admission into the United States in 1983 and 1984; one returned to the U.S.S.R. in 1985.

Soviet Soldier Enters U.S. Embassy. A 19-year old Soviet soldier entered the U.S. Embassy in Kabul on October 31, telling U.S. diplomats that he was fed up "with the soldier's life in Afghanistan" and that he wanted to return to the Soviet Union. Shortly afterward, Afghan and Soviet troops surrounded the embassy, access to it was impeded, and the electricity was cut off. Four days later the soldier agreed to leave with the Soviet Ambassador under the condition that he could return to the Soviet Union and would not be punished beyond a party reprimand. The Soviet Ambassador gave assurances on these points to the U.S. charge in Kabul. Almost immediately after the soldier's departure the cordon was lifted and power restored. A similar incident occurred in 1980.

SOVIET POLICY AND THE AFGHAN WAR

Moscow continues to pursue a military solution to the Afghanistan problem and uses diplomacy as a means of supporting its efforts to consolidate control in the country. Moscow's diplomatic efforts and those of its Afghan proxies aim at eroding international support for the *mujahidin*, intimidating Afghanistan's neighbors, Iran and Pakistan, and gaining international acceptance for the Kabul regime.

Moscow supports the concept of a political settlement "around Afghanistan" that will maintain and legitimize the client regime in Kabul. The Soviets endorse the continuation of UN-sponsored indirect negotiations in Geneva. Moscow has declined, however, to put forth a withdrawal schedule for the "limited contingent" of Soviet forces in Afghanistan, contending that the timing and other details of such a withdrawal can be negotiated only bilaterally between Moscow and Kabul.

Both politically and militarily, the Soviets appear to have settled in for a long, but limited, war. Over the years they have moderately increased their commitment of troops. They have made extensive adjustments in tactics, equipment, and types of units deployed, as *mujahidin* effectiveness has steadily increased.

Criticism on the Home Front. The scope and duration of the Soviet military effort in Afghanistan has been reflected to a certain extent by developments in the U.S.S.R. Although there is no evidence of widespread opposition, support for the venture in Afghanistan is for the most part passive and unenthusiastic—particularly among those with family members in Afghanistan.

During the past year, however, there have been increasing signs of unhappiness inside the Soviet Union about the Afghan conflict. This dissent has taken several forms. Public demonstrations against service in Afghanistan have taken place in Armenia, Georgia, Ukraine, and other republics. Draft evasion appears to have increased, prompting the Soviet authorities to issue new laws punishing those failing to register. *Samizdat* criticism (privately circulated dissident manuscripts) has expanded, including both negative reports from Afghanistan veterans and open expressions of sympathy for the *mujahidin* by Crimean Tartar leaders. Complaints about the war have become more frequent and open and are implicitly acknowledged by coverage in the Soviet press. Unofficial polls conducted by human rights activists show a decline in support for the war.

To generate more support, the Soviet media have expanded their coverage of the fighting. Combat fatalities are now reported more frequently; decorations for heroism played up; and special features on men fighting in Afghanistan are carried in their home town newspapers. Not all coverage is upbeat—Soviet spokesmen have said that the fighting is "intensifying," a clear indication that Moscow is preparing its own people for a long struggle. At Geneva, a Soviet spokesman publicly admitted to a sharp increase in casualties in Afghanistan in 1985.

THE AFGHAN REGIME

The Afghan regime remains ineffective, with little future prospect of becoming a viable surrogate capable of standing on its own.

The Kabul regime remains essentially a city state—with military outposts in the hinterland and a secure civilian presence only in Kabul and a few other towns. Both Herat and Qandahar are substantially out of regime control. DRA performance, and particularly its efforts to build legitimacy or a political base, are limited by its reach. Najibullah, ex-director of KHAD, admitted to an Indian journalist that only 35% of the country was under control of the regime. The true figure is uncertain but probably closer to the 10% often cited by the resistance than to the KHAD estimate.

Party Developments

The DRA is nominally ruled through the People's Democratic Party of Afghanistan (PDPA). The party is riven by deep-seated divisions, which frequently, although perhaps not as much as in previous years, erupts into violence. The most serious incident reported in 1985 was a September gunbattle between army adherents of the rival Khalq and Parcham factions at the Arg Palace in Kabul. The Soviets have spared no effort to integrate the party factions, going back to the early 1970s, but regime and party changes in 1985 appear to have shifted the balance of power still further away from the Khalq.

Babrak's Parcham faction holds most state power, although its Dari-speaking, multiethnic, urbanized adherents still comprise only 40% of the party. It controls KHAD, an important source of leverage.

The Khalq faction was headed by Presidents Taraki and Amin, both killed in 1979. The Khalq is currently led by Interior Minister Gulabzoi, who controls the regular police and was promoted this year to Lieutenant General. Khalqis are mostly Pashtu speakers (Pathans) from eastern areas, often from a lower class or rural background. Still a majority of party members, Khalqis predominate in the armed forces, which makes them resistant to being purged. In the past, the Khalqis had a reputation for being more radical and nationalist than the Soviet-sponsored Parchamis.

Factional differences probably contributed to a major regime personnel change, announced on June 3, when Najibullah Masir replaced Mohammed Ismail Danesh as Minister of Mines and Industries. Danesh, a Khalqi, has taken up respectable political exile as Afghanistan's Ambassador to Libya. Three new appointments were announced the same day, all with the rank of minister. Abdulbasir Ranjbir was named head of the Central Bank, Mohammed Daoud Kauian was named Director General of the official Bakhtar News Agency, and Abdul Qadr Ashna, Director of the State Committee for Culture, was elevated to Cabinet status. Ashna is a reputed Parchami; the other new ministers probably had similar affiliations.

At the opening session of the 16th plenum of the PDPA Central Committee on November 21, a party reshuffle was announced, the first in 3 years. Ghulam Dastigir Panjsheri was dropped from the politburo and Danesh and former Defense Minister Abdul Qadir—a key figure in the 1978 coup—were replaced as alternate or candidate members. *Radio Kabul* said that Qadir and Panjsheri asked to be removed because of illness, but there is no evidence that they suffer from any physical infirmity; for Qadir it is the end of a long slide downward. Defense Minister Nazar Mohammed and Tribal Affairs Minister Suleiman Laeeq were named as candidate members of the politburo.

Najibullah was named secretary of the PDPA Central Committee, a sign of the increasing power of the secret police. KHAD's position was further improved by the promotion of Najibullah's deputy, Ghulam Faruq Yacubi, from candidate member of the Central Committee to full member. Saifullah, Kabul City *sarandoy* (militia) commander, and a possible Gulabzoi protege, also was appointed candidate member of the Central Committee. On December 5, *Radio Kabul* announced that Yacubi had been named as KHAD's new director.

The PDPA marked its 20th anniversary in January with major celebrations in Kabul. The Soviets supplied as guest of honor the first secretary of the Communist Party of Uzbekistan. The only member of a ruling party politburo present was from Poland.

After the celebrations, party affairs appeared to become secondary to the questions of regime performance. Continuing Soviet dissatisfaction with Karmal was apparent when he was accorded low-level treatment on a May visit to Moscow, his first state visit since a trip to Mongolia in July 1983. Karmal went from the U.S.S.R. to Poland, where his reception was subdued. A week before Karmal's arrival in Moscow, on the occasion of the *Saur* (April) Afghan revolution's seventh anniversary, Soviet commentary was lukewarm and appeared to downgrade the status of the PDPA. A second Karmal trip to Moscow, ostensibly for medical treatment, was equally downplayed.

Rumors of Karmal's impending replacement surfaced several times during the year, especially in connection with his shabby treatment abroad. Potential successors mentioned include Prime Minister Sultan Ali Keshtmand, an able administrator and party loyalist who is hampered by being a Hazara, Afghanistan's lowest status ethnic group. Another party leader, Nur Ahmed Nur, spent 2 years in Moscow for a training course and returned to Kabul, apparently for good, in September.

Another organization that has not succeeded in mobilizing support for the regime is the National Fatherland Front (NFF). The NFF is charged with bringing together various regime front organizations, such as the Democratic Youth of Afghanistan, in a patriotic, nonparty context. In March, high-level party figure Saleh Mohammed Ziray was replaced as NFF chairman by Abdul Rahim Hatef, a Pathan tribal elder who served in Afghanistan's parliament during the monarchy. Although named to head *Loyah Jirga*, Hatef has added little to the regime's appeal.

The Regime Strives for Legitimacy

With little prospect of improved party performance or appeal, Kabul has tried to build a facade of legitimacy for the regime through a series of public initiatives. The regime was stung by criticism in the Ermacora report (see human rights section below), specifically its reference to Afghanistan's lack of even the formality of representative institutions. Kabul's political initiative may, therefore, have been packaged more for international than domestic consumption.

Loyah Jirga. On April 12, Kabul announced it would call a *Loyah Jirga*, the traditional grand assembly of Afghan tribal leaders. Such assemblages historically were used by the Afghan kings and by the prerevolution republican government to gain acquiescence in a transfer of power or approval of a major new policy.

In the 1980 *Fundamental Principles of the Democratic Republic of Afghanistan*, which serves as an interim constitution, the *Loyah Jirga* is defined as the "highest organ of state power." Neither the Karmal regime, nor the preinvasion Khalq government had previously convoked a *Loyah Jirga*, although regional *jirgas* have been held. Reports of the event suggest that the *Loyah Jirga* was a sham and that it was recognized as such by the Afghan people.

A high percentage of the 2,000 participants were regime functionaries, from the military or KHAD, or members of the PDPA or its various front organizations. The hurried scheduling of the sessions belies the assertation of active participation. The regime announced it was calling the *Loyah Jirga* on April 12. On the 13th, Kabul announced that "elections for *Jirga* representatives had already been held in 13 of the 29 provinces." By April 20th the elections were pronounced complete—only then was the April 23 meeting date announced.

The "independent" delegates were paid well for attending—reportedly 20,000 Afghanis per delegate and up to 50,000 for those who agreed to speak during the televised sessions. Many were coerced into appearing. The regime took a hard line at the sessions, denouncing the resistance as "antirevolutionaries." The role of Pathan and Baluch border tribes (delegates were in attendance from both Pakistan and Iran) in staving off "outside interference" was stressed.

The resistence responded quickly. At a press conference in Peshawar, a group of party leaders from both then-existing coalitions strongly condemned the meeting, threatening vengeance on the participants. Resistance threats were not idle. A Bakhtar flight carrying delegates from Badakhshan was reportedly shot down April 15. A number of delegates apparently were killed in the aftermath of the *Loyah Jirga*. At least two may have had their hands cut off, the Islamic punishment for thieves.

In August, the initiative was renewed in the same unconvincing manner when local council elections were announced—the day before they were to begin. In Kabul, the "election" process was simple: a smattering of district residents were assembled at a meeting hall—some unwillingly. Candidates, usually one per seat, were introduced only moments before the vote. Rather than by secret ballot, voting meant raising hands under the watchful eyes of KHAD agents. The regime announced that 450,000 Kabul residents participated, about 90% of eligible voters.

Within a week there were reports of council members killed by the *mujahidin*. Nevertheless, council meetings were reported being held by the end of August. The regime announced plans to hold similar elections around the country.

The regime once again focused on the frontier in a September 17 High Tribal *Jirga* for the Pathan and Baluch tribes whose territories span the borders with Pakistan and, in the case of the Baluch, also with Iran. This time a somewhat higher proportion of the roughly 3,700 delegates were actually from the tribes. The regime's "prize" defector, Asmatullah Achakzai, was elected to the presidium of the *Jirga*, and again, delegates were reportedly paid well to attend. Cash payments probably were supplemented by arms, in the traditional manner of government-tribal relations. The weapons were reportedly for use in defending the frontiers and presumably also for use in tribal lands across the border. There is no evidence that the regime has gained any adherents as a result of these subventions.

On November 7, on the eve of the UN General Assembly vote on Afghanistan and the U.S.-U.S.S.R. summit, the DRA announced a new initiative designed to "broaden the social pillars" of the revolution. Karmal indicated a readiness for dialogue with the opposition and even the possibility of bringing into the government opposition figures who accept the April revolution. Thus far there have been no takers.

Mujahidin with RPG-7, the basic antitank weapon of the resistance.

On November 11 Babrak Karmal paid a 1-day visit to Konduz City, in northern Afghanistan. Accompanied by the heads of KHAD and the Ministries of Interior and Defense, it was his first trip to the provinces in more than 2 years. Later that week, Prime Minister Keshtmand reportedly made an equally rare 1-day trip to Herat.

Economy

The war has caused significant damage to the Afghan economy, already one of the world's poorest. The resistance has focused on disrupting Afghanistan's small industrial sector, which even before the 1978 coup was mostly state owned. The Soviets and the regime, largely in the course of fighting, also have disrupted agricultural production and food distribution.

In a January 1985 speech, President Karmal charged that the resistance has caused more than $350 million in damage. He claimed that the *mujahidin* have destroyed 1,800 school buildings, 31 hospitals, hundreds of trucks, 14,000 kilometers of telephone lines, and hundreds of electricity pylons.

Nevertheless, there is considerable evidence that the economy continues to function in much of the country. Disruption of agriculture has been confined mostly to areas of heavy fighting and population movement, i.e., the eastern provinces bordering Pakistan. In much of the rest of the country, as noted below, farming and herding continue to provide at least subsistence to the rural population.

Trade continues with Pakistan, India, and elsewhere, much of it outside government hands. Neither the government nor the resistance has tried significantly to disrupt nonwar-related commerce out of concern that the population might turn against the side that reduces the standard of living.

Neither black market differential nor inflation is high enough to suggest severe economic disruption. The unofficial rate for the Afghani has risen slightly to about 130 to the dollar, above the official rate of 50.6. Inflation in the cities has continued to run at about 25% annually, fed by occasional shortages that bid prices upward. A major factor limiting the rate of inflation is that the Soviets bring in a wide variety of goods, including wheat and other foodstuffs, for distribution in areas under their control.

Continuing Sovietization of the Economy. In 1984 Soviet-Afghan trade was up slightly, totaling about $1.1 billion, about 70%–80% of total Afghan trade. Trade is in approximate balance as Afghan natural gas continues to be pumped to the Soviet Union, despite occasional resistance disruptions.

The merger of Ariana Afghan Airlines into the domestic Bakhtar Airlines provides an example of Soviet efforts to displace Western economic influence. As part of the transition, Ariana sold its single DC-10 jetliner; other Western-manufactured aircraft

also may be replaced by aircraft from the Soviet bloc; at the end of 1985, Bakhtar's Boeing 727s were still flying.

Soviet Aid. In 1984, the Soviets pledged more than $300 million in new aid and disbursed more than $400 million in commodities and new project aid. In February 1985 an agreement was signed granting additional project credits. The U.S.S.R. has provided Afghanistan with assistance unprecedented in Soviet relations with Third-World countries, including about two-thirds of its total program of grants, long payment terms for credits, and commodity support—even wheat, which the Soviet Union itself must import.

Much of this Soviet largesse is actually designed to support the military effort, particularly aid-financed expenditures for transportation infrastructure. In addition, a substantial portion of the commodity credits appears to be for war-related material (such as trucks or petroleum) for the Afghan Armed Forces. East European aid is much lower; only $12 million in new aid was extended in 1984.

Agriculture in 1985

Afghanistan is a country of dry, mountainous terrain, mostly unsuitable for agriculture. Less than 15% of the total land area is arable, and up to one-half of the arable land normally is left fallow each year. Only about 4 million hectares (10 million acres) are cultivated annually. Precipitation varies considerably, but in most areas it is neither adequate nor reliable enough to support extensive farming. Agriculture depends heavily on irrigation from the few permanently flowing rivers, snow and ice melt, and underground water reserves.

Subsistence agriculture dominates Afghanistan's economy. It employs roughly three-quarters of the working population and accounts for more than half of the gross domestic product. Relatively little use is made of machines, chemical fertilizer, or pesticides. Wheat made up nearly half of all agricultural production before the war; this proportion has probably increased.

Afghanistan suffered from unusually low amounts of precipitation in 1984 and the first few months of 1985. Drought reduced production, particularly in the dryland regions in the north, and probably contributed to local food deficits. However, the situation may have eased later in 1985, after unusually high amounts of precipitation fell in the spring. Wheat production in 1985 was probably about equal to average preinvasion production and above the annual average since the invasion.

The net effect of the conflict in Afghanistan on food availability has been to wear away at the margin of agricultural production. Isolated food shortages continue to exist, particularly in those areas where agriculture has been severely disrupted by the war, and are exacerbated by the poor transport network. Food continues to be imported both from the U.S.S.R. and Pakistan. Grain has been substituted for cash crops. Traditional Afghan exports of fruit and vegetables have diminished. Opium, which requires less attention, and is therefore safer to grow, is an exception. Opium production increased in 1985, particularly in the east.

Education and Youth

The effort to educate and influence Afghanistan's youth is an important element in the long-term Soviet program to pacify and Sovietize Afghanistan. In practice this includes using education and the reduction of Afghanistan's overwhelming illiteracy as a means to gain acceptance for Marxist ideology, the Kabul regime, and Soviet hegemony. To rule the country in the future, the Soviets need to develop at least a small cadre that can succeed to leadership of the DRA. The greatest constraint on these efforts is the lack of physical control over most of the population. Although the Soviets thus far have made little progress on literacy or recruitment, they may have gained the loyalty of a few young people in Kabul, particularly among those working for KHAD.

The Soviets have encouraged universal, compulsory education in the areas they control. In the schools, the study of Islam and Western languages has largely been replaced by the study of Marxist ideology and the Russian language. As many as one-third of Afghanistan's teachers and school administrators may be Soviet or bloc nationals, while most of the rest are PDPA members. In February 1985, language teachers from France and West Germany were expelled, ending 60 years of educational cooperation with those countries.

An important part of this strategy is to send Afghans to the U.S.S.R. for training. However, returning students vary greatly in their loyalty to the regime or to the Soviets. With adults sometimes more hostile to the Marxists after a stay in the U.S.S.R., the Soviets have brought children aged 10 or younger north for extended periods of up to 10 years or more. Many are orphans of regime or party personnel.

Human Rights

The 1984 session of the UN Human Rights Commission asked Austrian Professor Felix Ermacora, as the commission's special rapporteur, to report on the human rights situation in Afghanistan. Although the DRA refused him entry, Ermacora was able to interview in Pakistan refugees from over half of Afghanistan's provinces. His report, presented to the Human Rights Commission in March 1985, was highly critical of the Soviet Union and the Kabul regime.

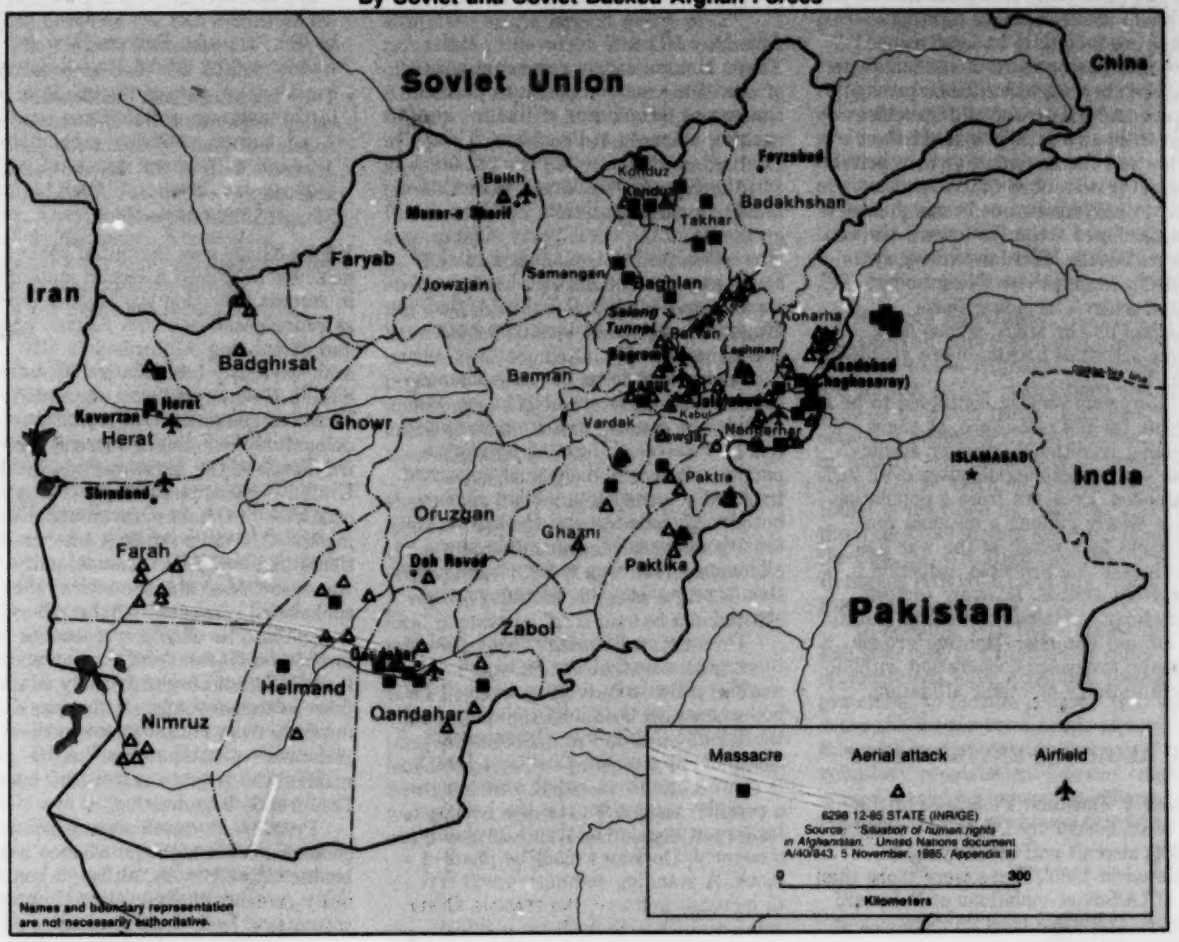
Ermacora found massive and systematic violation of human rights in Afghanistan. He noted that "Since the April Revolution, the internal human rights situation has deteriorated as a result of the absence of popular participation in the choice and administration of government." This situation produced internal conflict and the mass exodus of refugees. "Many lives have been lost, many people have been incarcerated in conditions far removed from respect for human rights and fundamental freedoms, many have been tortured and have disappeared."

Ermacora detailed his political observations, adding, "The regime which was installed in December 1979, like its immediate predecessors, was a regime that was not elected by the people and which had never submitted to a free expression of will by the population and was therefore unrepresentative." He recommended the initiation of a process of political normalization, specifically including the convocation of a *Loyah Jirga.*

The Soviet representative to the Human Rights Commission responded with a barrage of vituperation aimed at discrediting Ermacora's integrity. Nonetheless, the report was acclaimed by the international press.

The 1985 Human Rights Commission extended Ermacora's mandate for another year, asking him to update his initial report and submit an interim draft to the 40th session of the UN General Assembly. After approval by the Human Rights Commission and the UN Economic and Social Council, the Ermacora report was presented to the General Assembly and circulated as a UN document.[1] Based on the report, a

AFGHANISTAN:
KNOWN MASSACRES & AERIAL ATTACKS ON VILLAGES
By Soviet and Soviet Backed Afghan Forces



resolution condemning the violation of human rights in Afghanistan was approved by the General Assembly. This is the first time that the General Assembly has had the opportunity to vote on this issue. Ermacora will convey the final version of the report to the UN Human Rights Commission in March 1986.

Violations of human rights in Afghanistan continued in 1985. Reprisals by Soviet forces against Afghan civilians took on added ferocity with the increased involvement of Soviet troops in the fighting. Due to the savagery of these attacks, Afghan regime soldiers on more than one occasion tried to prevent or limit them.

Some anticivilian attacks were especially large. In early February, for instance, hundreds of civilians were reported killed near Konduz City, north of the Salang Pass. In late March, Soviet soldiers, reportedly drunk, allegedly turned a house-to-house search into a looting spree. When residents protested, the soliders opened fire, killing 17. Also in March, retailatory attacks in Laghman Province, caused nearly 1,000 civilian casualties; in April, hundreds were reported killed when a meeting in a village square was machinegunned.

THE AFGHAN RESISTANCE

The Afghan resistance consists of several elements. Seven major parties in exile—now joined in a single alliance—represent refugee interest and work to promote the political dimension of the resistance (see box, p. 14). They coordinate their activities with *mujahidin* groups inside Afghanistan. In addition to the seven major parties in Peshawar, there are smaller groupings of every political stripe. Parties representing the Shia minority tend to be based in Quetta, in southern Pakistan, and in Iran.

Mujahidin fighters appear to have become increasingly professionalized over the past year. Most, but not all, of the hundreds of separate fighting groups are linked, to at least some degree, to one or more of the major parties. Ordinary Afghan citizens provide support and manpower and sometimes stage their own actions against the regime and the Soviets. Soviet reprisals have generated more caution in the behavior of civilians but in many cases have hardened attitudes toward the occupiers. Finally, there are many sympathizers among those living under regime control, including those employed by the DRA, whose anti-regime activities became more visible in 1985.

Intergroup tension continued to be a problem for the resistance, at times reflecting traditional tribal or ethnic squabbles, sometimes disputes over turf or supplies. Pressure from a population that is slowly gaining a national consciousness as a result of the war has contributed to a probable reduction in intergroup combat. In many sectors, particularly in Helmand, Paktia, Herat, and around Panjsher, fighting groups displayed increased cooperation without regard to party or ethnic affiliation.

THE REGIONAL ENVIRONMENT

Border Violations. Violations of the Pakistani border by DRA, and possibly Soviet, aircraft and artillery again escalated in 1985. There were more than 200 DRA/Soviet violations of Pakistani airspace and more than 25 instances of shelling Pakistani territory. Incidents on the Iranian/Afghan border also occurred. As in previous years, cross-border strikes generally were related to combat taking place near the border inside Afghanistan. There was no single incident as large as the 1984 bomb attacks on Teri Mangal.

Violations were especially numerous around Arandu, opposite Barikot, and all along the tribal areas bordering Paktia Province. One of the worst attacks occurred during the height of the Soviet offensive in the Konar Valley. On May 31, Soviet/Afghan aircraft bombed and rocketed Swir, a village in northern Pakistan, about 20 miles from the border, where 11 civilians died and 32 were wounded.

Pakistan. Pakistan remains stalwart in its support of the Afghan people, both in caring for the refugees and in taking the lead, as at the United Nations, in working for a settlement of the Afghan problem. In his opening speech to the newly elected National Assembly on March 25, President Mohammed Zia ul-Haq stressed Pakistan's continuing and long-term commitment to the Afghan people. Although Pakistan remains susceptible to continuing Soviet/DRA pressure along the border—including a recent upsurge of subversion—a wide consensus evidently exists in favor of the government's efforts to resolve the Afghan crisis.

The New Resistance Alliance

At a May 16 press conference, Malvi Yunus Khalis, widely respected head of one of the major resistance parties, announced the merger of the two then-existing alliances in Peshawar. The existing seven-party "fundamentalist" and three-party "moderate" alliances became a single coalition. Splinter groups from the three-party alliance also ceased to exist, making a total of seven parties. The alliance kept the same name—Islamic Unity of Afghan Mujahidin—previously used by both coalitions.

Pressure to form the new alliance came from supporters both inside and outside the country and from the parties themselves. Infighting among the parties, often within the coalitions, had frequently turned into violent clashes both in Afghanistan and Peshawar. Intensive discussions on possible new alignments had been going on for more than a year when the agreement was struck.

The new coalition's primary goal is to present a unified stance to the world, particularly to international bodies such as the United Nations and the Islamic Conference Organization. A key feature of the alliance is that it is represented by a single spokesman—a position rotated among the party leaders at regular intervals, probably quarterly. Decisions must be unanimous. A standing committee will try to increase military cooperation. Other committees are to focus on political issues, education, and social services. The seven parties agreed to respect continued differences over their views on Afghanistan's future.

The alliance is run by a council comprised of the leaders of the seven component parties:

- The "fundamentalists": Gulbuddin Hekmatyar's *Hezb-e-Islami;* the *Hezb-e-Islami* faction of Yunus Khalis; the *Jamiat-i-Islami* headed by Burhanuddin Rabbani; the *Ittihadia* led by Abdul Rasool Sayyaf.
- The "traditionalists," sometimes called moderates; the *Harakat-e-Inqelab* of Nabi Mohammedi; the *Mahez-e-Milli* of Pir Sayyid Gailani; and the *Jebh-e Najat-e Milli* led by Sibaghatullah Mojadeddi.

Yunus Khalis was the initial spokesman. He delivered a second statement in August asserting the alliance's role as representative of the Afghan people and demanding Afghanistan's UN seat, currently occupied by DRA. Gulbuddin Hekmatyar, who succeeded Khalis as spokesman, led an alliance delegation, including a representative from each of the seven parties, to the United Nations and several friendly countries in October-November. During the UN visit, the first international mission of the alliance, unity was maintained and the role of the spokesman respected by the other delegates. The alliance pressed its case further on November 21, when spokesman Gulbuddin urged friendly countries to transfer Afghan diplomatic missions from DRA control to the resistance; Gulbuddin also has demanded the Afghan seat in the Islamic Conference Organization.

Progress in developing resistance cooperation through the alliance has been relatively swift, although geniune unity remains illusive. Agreed alliance statements have been few—as could be expected. There is no provision for representation by other parties or organized groups within or outside Afghanistan. However, despite the many obstacles, the alliance is expected to play a progressively greater role in presenting the Afghan case to the world—and to help increase coordination among the resistance inside Afghanistan.

Iran. Relations between Iran and the DRA remained cool throughout 1985, following a distinct downturn in relations between the two countries in 1984. The Iranian consulate in Herat remains closed as does the Afghan consulate in Mashhad. Moreover, the Iranians have continued to complain of periodic border violations during the year. In June, the Iranians brought several Afghan Shia resistance groups to Qom. They were addressed by Ayatollah Montazari, Khomeini's designated heir, who encouraged these groups to stop fighting among themselves and concentrate on the invaders.

India. In an address to a joint session of the U.S. Congress in June 1985, and on several other occasions during the year, Prime Minister Gandhi reiterated India's interest in a political solution to the Afghan problem. Bali Ram Baghat, later to be named foreign minister, led a Congress Party delegation to the January PDPA 20th anniversary celebrations. In April, Indian Foreign Secretary Bhandari visited Kabul as part of a trip to all South Asian capitals. A joint statement at the end of the visit expressed support for the UN-sponsored negotiations and concern at increasing militarization of the region. DRA Foreign Minister Shah Mohammad Dost later paid a return visit to Delhi and negotiated an increase in the modest Indian program of nonmilitary assistance to the DRA. India continues to call for an end to foreign intervention and interference in Afghanistan. In 1985, India voted against the release of the Ermacora report in the UN Human Rights Commission and once again abstained on the General Assembly resolution. India also continued to express to Moscow its concern over the situation in Afghanistan.

China. China continues to condemn the Soviet occupation of Afghanistan, citing it as a major obstacle to the improvement of its own relations with the U.S.S.R. In a February 22 press conference, the DRA denounced Chinese support for the Afghan resistance, setting off a media dispute that went on for much of the year. On February 21, the official Chinese *People's Daily* called the DRA charges slander, stating that Soviet actions in Afghanistan represented a threat to Chinese security.

REFUGEES

Pakistan. Afghans in Pakistan consitute the single largest group of refugees in the world. The Government of Pakistan reports registration of over 2.6 million Afghans; numbers continue to grow, although at a slower pace than in years past. Most refugees are located in some 306 camps, primarily in the rural areas of the North West Frontier Province (NWFP) and Baluchistan (see map, p. 9).

Traditional notions of hospitality and strong ethnic and tribal ties between the local inhabitants and the refugees have helped to ease the Afghans' impact on the local population. However, their presence has led to an undercurrent of uneasiness, which is greater outside the areas of ethnic affinity where most of the refugees reside.

The herds of goats, camels, and sheep that the refugees bring with them destroy, through overgrazing, land in the already economically depressed areas of the NWFP and Baluchistan. Also, the refugees compete with the local population for a limited number of jobs. In recent years more than 2 million Pakistani males, some from the NWFP, have emigrated to work in Persian Gulf countries where wages are much higher than in Pakistan. Diminished employment prospects in the gulf, however, have led some of these workers to return to Pakistan. There could well be increased competition for jobs—and rising friction—between the returning Pakistanis and the Afghan refugees in an economy already experiencing high unemployment.

The Soviets and KHAD attempt to exploit Pakistani concern over the refugees. KHAD infiltrators are on the rise, although most have been apprehended by the Pakistani authorities. Several violent incidents in the refugee areas can be attributed to Soviet/KHAD actions designed to increase host-refugee tensions. Late 1985 saw a marked rise in attempted Soviet/DRA subversion in Pakistan's tribal areas along the border.

Refugee Assistance. Pakistan has extended an impressive and continuing welcome to the Afghans. The refugees are subject to few restrictions and are allowed to travel freely, hold jobs, and establish businesses. The refugees are minimally, but adequately, supplied with food, shelter, clothing, and medicine. Relief is provided by Pakistan and by the international community primarily through the UN High Commissioner for Refugees (UNHCR) and the World Food Program (WFP).

In keeping with Government of Pakistan policy, a number of relief organizations have expanded their programming to include projects that address the longer term needs of a population with no immediate prospect of voluntary repatriation. Greater emphasis is now placed on enhancing refugee self-reliance through programs providing

Basic food rations are provided to the Afghan refugees by the international community.

both general education and vocational training. Special efforts are being made to provide female refugees with income-generating skills compatible with local customs. The World Bank, in conjunction with the UNHCR, also has launched a series of forestation, irrigation, and road-building projects designed to employ refugee labor in repairing environmental damage caused by the Afghans' presence.

The U.S. Government contributed about $66 million to the WFP/UNHCR Afghan refugee relief program in Pakistan in fiscal year 1985, including $38 million worth of commodities through the WFP—about one-third of total international contributions to Afghan relief. To date, total U.S. contributions to the Afghan program exceed $430 million. Other major contributors to the UN relief program are Japan, Western Europe, Saudi Arabia, and other Persian Gulf states.

Humanitarian Relief. In addition to U.S. funding of assistance to Afghan refugees in Pakistan, the U.S. Government also has provided a total of $8 million in fiscal year 1985 for short-term humanitarian relief for war-affected Afghans in Afghanistan. This included $4 million of medical supplies and food aid disbursed by the U.S. Office of Foreign Disaster Assistance. A second $4 million portion funded medical, education, and other projects by private voluntary organizations. The objective of the humanitarian assistance program is to improve the ability of the Afghan people to sustain themselves inside Afghanistan.

A long-term program of U.S. humanitarian assistance for war-affected Afghans began in the fall of 1985. Economic Support Funds totaling $15 million have been earmarked for this purpose by Congress in the fiscal year 1986 foreign assistance authorization. Although still being designed, the new program includes the provision of additional food, educational assistance, and medical supplies and training, and for the improvement of livestock and agriculture (partly through the distribution of seeds and farm implements).

Congress has separately authorized $10 million for the transportation of excess Defense Department property of a nonweapons, nonlethal nature to war-affected Afghans.

Iran. The second largest concentration of Afghan refugees outside Pakistan is in Iran. The Iranian Government estimates that there are as many as 1.8 million Afghans within its borders, half of them located in the eastern Provinces of Khorasan and Sistan-Baluchistan. Most Afghans in Iran are integrated into the local population. However, the government does provide assistance through the Council for Afghan Refugees. The UNHCR also operates a small program, budgeted at $10 million in 1986; UNHCR plans to emphasize activities that will promote refugee self-sufficiency. The United States does not contribute to this program.

Chronology

December
27: Kabul quiet on fifth anniversary of invasion.

January
8: Soviet-DRA column turned back in Panjsher; operations in Paktia.
Early January: Postponed celebrations of 20th anniversary of PDPA.
Late January: Resistance commander Zabiullah Khan killed in north.

February
20: DRA condemns Chinese aid to *mujahidin*. Chinese *People's Daily* calls charges "slander."

March
8: Soviet/DRA operations near Qandahar.
10: Konstantin Chernenko dies. Mikhail Gorbachev becomes new Soviet chairman.
23: Panjsheris demolish Soviet convoy near Salang Pass and attack in Panjsher.
25: Pakistani President Zia pledges support for Afghans in address to new Pakistani National Assembly.

April
16: Major ambush of Soviet convoy south of Kabul.
23: Kabul holds *Loyah Jirga*. Peshawar leaders denounce it as sham.
27: Soviet prisoners killed at Mattani.

May
16: Resistance grand coalition Islamic Unity of Afghan Mujahidin announced.
May 23-June 7: Soviet Konar operation.
23: Eight Afghan aircraft bomb and rocket Swir, Pakistan, kill 11.

June
12: About 20 Afghan Air Force planes destroyed in sabotage at Shindand.
17: Pro-Iranian Afghan groups promise to unite and fight the Soviets.
17–18: U.S.-Soviet talks on Afghanistan.
19–25: Fourth round of UN-sponsored Geneva indirect talks between Pakistan and Afghanistan.
Panjsher *mujahidin* overrun Peshghor.

July
13: Afghan Air Force defectors fly two Mi–25 HINDs to Pakistan.
12,000–15,000 Soviet/DRA troops counterattack in Panjsher, retake Peshghor.

August
Aug.-Sept.: Major battles around Khowst, and elsewhere in Paktia Province.
19: Resistance alliance demands political role and Afghan UN seat.
27–30: Fifth round of Geneva talks.

September
19: Reporter Charles Thornton killed near Qandahar.

October
Oct. 23-Nov. 1: Heavy fighting in Herat.
Oct. 31-Nov. 4: Soviet soldier enters U.S. Embassy in Kabul; voluntarily leaves with Soviet Ambassador.

November
13: In 122–19 vote (12 abstentions) UNGA calls for withdrawal of foreign forces from Afghanistan for the seventh time.
21: Afghan politiburo shakeup.

December
16: Opening of sixth round of Geneva talks.

INTERNATIONAL CONCERN

The plight of the Afghan people has not escaped the world's attention. Countries throughout the world took special notice of the fifth anniversary of the Soviet invasion in December 1984. Many governments made formal statements condemning the Soviet occupation. Strong expressions of solidarity and support were made by many Muslim countries and by a wide variety of groups around the world.

The carefully orchestrated 12th World Festival of Youth and Students, held in Moscow from July 27 to August 3, was disrupted by protests from

several delegations against the Soviet occupation of Afghanistan. Swedish delegate Katarina Larsson, who was working in Afghanistan at the time of the invasion, spoke of a growing solidarity movement for Afghanistan. She stated that protests would increase "until the last Russian soldier has left Afghanistan." Soviet interpreters disrupted her presentation and censored her references to Soviet aggression.

International press coverage in 1985 also was higher than at any time since the days immediately after the invasion. Press interest in and reporting of resistance operations increased. This was in marked contrast to the relatively rare coverage of the situation inside regime-controlled areas. Few independent journalists are permitted entry, and they are given little scope to probe conditions in the country.

Soviet concern with foreign media coverage led Soviet Ambassador to Pakistan Vitaly Smirnov to complain about foreign correspondents accompanying the *mujahidin*. He threatened that Western reporters entering the war zone could meet a grim fate.

On the night of September 19, *Arizona Republic* correspondent Charles Thornton became the first American known to be killed inside Afghanistan since the Soviet invasion. Thornton was traveling by truck north of Qandahar in the company of some 15 Afghans when the group was ambushed by a Soviet/DRA unit.

The Department of State has issued a warning against travel in Afghanistan because of the danger and because the U.S. Government is not able, in a hostile war zone, to provide consular protection for American citizens.

UN NEGOTIATIONS

Since January 1980, the UN General Assembly has voted seven times, each by overwhelming margins, for a resolution expressing grave concern at the continuing foreign armed intervention in Afghanistan and calling for the complete withdrawal of foreign forces; the restoration of Afghanistan's independent and nonaligned status; self-determination; and the creation of conditions that would enable the refugees to return home with safety and honor.

The resolution, introduced as in the past by Pakistan, and cosponsored by 46 other countries, passed again on November 13, 1985. It was adopted by a vote of 122 to 19, with 12 abstentions, the widest margin to date.

UN attempts to negotiate a settlement date from a November 1980 mandate of the General Assembly. Negotiations, held periodically since 1982 in Geneva, are led by UN Under Secretary General for Special Political Affairs Diego Cordovez as a personal representative of the Secretary General. Cordovez shuttles between delegations from Pakistan and Afghanistan, officially informing Iran of the discussions while unofficially informing the Soviets. Three rounds of indirect talks were scheduled during 1985, from June 20 to June 25, August 27 to August 30, and December 16 through December 20.

The parties all reported progress at the June session. Undersecretary Cordovez described the talks as "fruitful." The UN has reported agreement on three of four proposed accords, the first dealing with noninterference in Afghanistan's affairs, the second encompassing international guarantees of a final settlement, and the third governing the voluntary return of the refugees. But discussion of a fourth agreement dealing with the key issue of a Soviet troop withdrawal and the interrelationship between that document and the other three, was blocked in August when Afghanistan demanded direct negotiations with Pakistan in place of the "proximity" format. Pakistan has refused to negotiate directly with the Karmal regime.

Despite hopes generated at various points in the negotiations, the sides remain far apart. The Soviet Union has not substantially altered its original position justifying its presence in Afghanistan. But all sides are committed to continuing the talks.

U.S. POLICY

U.S. Government policy on Afghanistan remains unchanged. We strongly oppose the Soviet occupation of Afghanistan and seek the earliest possible negotiated political settlement based on the principles encompassed in the seven General Assembly resolutions.

The United States supports the ongoing UN-sponsored negotiations and is prepared to guarantee a comprehensive and balanced settlement, consistent with the General Assembly's resolutions and predicated on a complete withdrawal of Soviet forces within a fixed and reasonable length of time.

Amnesty International, the Helsinki Watch Committee, and the U.S. Department of State also prepared reports on the human rights situation in Afghanistan in 1985. ■

UN Calls for Soviet Withdrawal from Afghanistan

Following are a statement by Ambassador Vernon A. Walters, U.S. Permanent Representative to the United Nations, in the General Assembly on November 12, 1985, and the text of a General Assembly resolution adopted on November 13.

AMBASSADOR WALTERS' STATEMENT, NOV. 12, 1985[1]

For almost 6 years now, Soviet troops in Afghanistan have waged a relentless war against everything Afghan. Nothing has been spared: not women or children; not animals or crops; not dwellings, mosques, schools, or hospitals; not even Afghan history or culture, religion, tradition.

An ancient land caught in a modern war, Afghanistan is being subjected daily to the full force of Soviet modern-day weaponry and technology. Reports of deadly chemical weapons use continue to surface. Never in its long tumultuous history or resisting marauding armies and foreign invaders has Afghanistan faced as remorseless and heartless an enemy.

Using a combination of military terror on the one hand and psychological manipulation in the form of reeducation and indoctrination efforts on the other, the Soviet forces have tried for 6 years—longer than the duration of the Second World War—to break the Afghan spirit. We are here today to witness that they have failed.

Despite all efforts to impose a virtual black-out on news of the war, eyewitness reports of inconceivable, heinous crimes testify to Soviet callousness in achieving their ultimate goal—creation of a docile, client state. Unable to pacify or control the countryside, the Soviets—with clinical precision—have, in some areas, resorted to tactics aimed at depopulating the land. Over 3½ million refugees—more than the population of many members of this organization and one-fourth of Afghanistan's prewar population—have fled the country. Migratory genocide is how one historian has described it. High altitude saturation bombings, the willful destruction of crops and livestock, widespread use of antipersonnel mines, civilian reprisals, and gruesome violations of fundamental human rights and decency have been and continue to be perpetrated against the Afghan civilian population. These are not tall tales or propaganda but rather a genuine human tragedy. The UN Commission on Human Rights has expressed "its profound concern at the grave and massive human rights violations in Afghanistan," and this aspect of the Afghan tragedy will be considered by the General Assembly later in this session.

But this is not all. In addition to strong-arm tactics aimed at physically crushing the Afghan spirit of resistance, the Soviets have embarked on a long-term effort to reshape this spirit into a docile, pliable mold. In a word, they wish to "Sovietize" it. How else can one explain the revision of Afghan school curricula in which Islamic teaching is replaced by dialectic materialism and Marxist-Leninist ideology? How else to explain the introduction of "new" history textbooks rewritten by Soviet scholars? How to explain the replacement of Aghan professors with those from communist countries who now comprise over 60% of Kabul University's faculty? This effort to "Sovietize" the younger generation of Afghans explains why children as young as 5 and 6 years old are separated from their families for up to 10 years during which they are indoctrinated in communism and the Soviet way of life. Since 1979, an estimated 40,000 Afghan students have been sent to the Soviet Union. These efforts to incorporate and absorb the Afghan people augur ill for an early solution to the war in Afghanistan.

There are currently between 118,000 and 120,000 Soviet troops in Afghanistan and an additional 30,000 poised on the Soviet side of the border. The Soviets continue to escalate their military effort. They continue to upgrade their firepower. They continue to assume a greater direct role in intensified fighting, relying increasingly on dreaded helicopter gunships, airborne troops, and surprise search-and-destroy operations. Their strategy is a long-term one, aimed at wearing down the resistance of and eroding international support for the *mujahidin*.

Despite their military offensives, their brutal scorched earth tactics, and their various subversive strategies, the Soviets are no closer today to achieving their objectives than they were on December 27, 1979, when their invading troops murdered President Hafizullah Amin and installed in his place Babrak Karmal. Hostility and active opposition to the Karmal regime now encompass the entire country. The Soviets cannot operate anywhere in the countryside without danger of attack. Even in Kabul, their most heavily guarded garrisons and airbases have been attacked. Unable to find qualified Afghan technocrats who are willing to participate in this puppet government, the Soviets have been forced to abandon the pretense that they are merely advising the Babrak Karmal regime and now either directly make, or are deeply involved in, every major political, military, or social policy decision of the regime. The Kabul regime's army—rent by disloyalty, desertions, defections, disillusionment, and indiscipline—has shrunk to less than half its preinvasion strength of 90,000.

What the Soviet Union has failed to realize—and, of course, refuses to acknowledge—is that the will of a people united in a national liberation struggle cannot be broken by force of arms. Nowhere in the world is this will stronger or more generalized than in Afghanistan. Nowhere is the simple moral issue of what is right and what is criminally wrong more starkly defined. On the battlefield, the Afghan resistance is better organized, better trained, and more effective militarily than ever before. In the Panjsher Valley, in Konar, in Paktia and Paktika, in Herat—in short, throughout the country—Afghan partisans have given a brilliant account of themselves against Soviet legions equipped with a terrifying array of the most modern instruments of war. *Mujahidin* have fought in other times and in other places. In this conflict, the Afghan *mujahidin* are proving once more that their defense of their faith and country and their desire for freedom are indomitable.

Like a number of my colleagues in this body, I was honored to be able to hear firsthand of the struggle in Afghanistan—from the spokesmen of the Afghan resistance alliance who visited here as a delegation last month. The leader of this delegation and his alliance colleagues not only lead a military struggle against a foreign oppressor but also translate into political terms the will of the Afghan people for freedom. As a former soldier, I know when I am in the presence of courage and resolve. The resistance is alive and well. The morale and determination of its members to continue to fight are unshaken.

It has been said that "in the moral world, there is nothing impossible if we can bring a thorough will to it. Man can do everything with himself, but he must not attempt to do too much with others." Nowhere is this more evident than in Afghanistan. The Soviets will never succeed in imposing their will on the Afghans. They will not succeed in breaking the Afghan national will to fight for their freedom and their way of life. The Afghans will never acquiesce in what amounts to their own destruction as a people and as a nation.

But how long can the world stand by and let this carnage continue? The toll in human lives—not to mention the destruction of homes, crops, and the fragile agricultural infrastructure—is staggering. If both sides remain true to their objectives, the only possible outcome is continued death and destruction. President Reagan, in his October 24 speech to this Assembly stated: "There is no purpose more noble than for us to sustain and celebrate life in a turbulent world. . . . Life—and the preservation of freedom to live it in dignity—is what we are on this earth to do." This body, conceived from the ashes of one war of liberation and dedicated to the preservation of peace, has a moral duty to end this war and the agony of the Afghan people.

The solution to the Afghan tragedy is not a military one. The only lasting solution is a negotiated political settlement that encompasses the four elements in the resolution to be voted on by this body. These are: the immediate withdrawal of foreign troops; restoration of Afghanistan's independent and nonaligned status; self-determination for the Afghan people; and the creation of the necessary conditions which would enable the Afghan refugees to return voluntarily and with honor to their homes.

On six previous occasions, this Assembly has overwhelmingly voted for a resolution urging a political solution to the situation in Afghanistan. Yet the war and the devastation continue. President Reagan's regional initiative, spelled out in his October 24 speech, was meant to spur diplomatic efforts to solve the Afghan tragedy. It is not enough for us to heap praise on the Afghans for their brave exploits against daunting odds. It is not enough to support the Afghan struggle passively. No country—large or small—can be indifferent to the fate of the Afghans. No country that truly loves freedom can vote against this resolution. It provides the basis for a just and viable settlement. It provides the means to stop the Afghan suffering.

The United States is prepared to guarantee a comprehensive and balanced settlement in Afghanistan, consistent with the General Assembly's resolutions and predicated on a complete withdrawal of Soviet forces in a fixed and reasonable length of time. We support and applaud the efforts of the Secretary General and his special representative to find a just and viable settlement that protects the legitimate security interests of all parties. Considerable progress has been made toward this end. The key outstanding issue remains the establishment of a timetable for the withdrawal of Soviet troops from Afghanistan. Without agreement on withdrawal, no solution is possible, and no guarantees can be given. Instead the carnage and destruction will continue.

We hope that adoption of this resolution will serve as renewed evidence of the international community's steadfast commitment to a negotiated settlement and will stimulate prompt resolution of this vital issue. This is the way to offer the Afghans another chance to live in peace and freedom.

UN GENERAL ASSEMBLY RESOLUTION 40/12, NOV. 13, 1985[2]

The General Assembly,

Having considered the item entitled "The situation in Afghanistan and its implications for international peace and security",

Recalling its resolutions ES-6/2 of 14 January 1980, 35/37 of 20 November 1980, 36/34 of 18 November 1981, 37/37 of 29 November 1982, 38/29 of 23 November 1983 and 39/13 of 15 November 1984,

Reaffirming the purposes and principles of the Charter of the United Nations and the obligation of all States to refrain in their international relations from the threat or use of force against the sovereignty, territorial integrity and political independence of any State,

Reaffirming further the inalienable right of all peoples to determine their own form of government and to choose their own economic, political and social system free from outside intervention, subversion, coercion or constraint of any kind whatsoever,

Gravely concerned at the continuing foreign armed intervention in Afghanistan, in contravention of the above principles, and its serious implications for international peace and security,

Noting the increasing concern of the international community over the continued and serious sufferings of the Afghan people and over the magnitude of social and economic problems posed to Pakistan and Iran by the presence on their soil of millions of Afghan refugees, and the continuing increase in their numbers,

Deeply conscious of the urgent need for a political solution of the grave situation in respect of Afghanistan,

Taking note of the report of the Secretary-General, and the status of the diplomatic process initiated by him,

Recognizing the importance of the initiatives of the Organization of the Islamic Conference and the efforts of the Movement of Non-Aligned Countries for a political solution of the situation in respect of Afghanistan,

1. *Reiterates* that the preservation of the sovereignty, territorial integrity, political independence and non-aligned character of Afghanistan is essential for a peaceful solution of the problem;

2. *Reaffirms* the right of the Afghan people to determine their own form of government and to choose their economic, political and social system free from outside intervention, subversion, coercion or constraint of any kind whatsoever;

3. *Calls* for the immediate withdrawal of the foreign troops from Afghanistan;

4. *Calls upon* all parties concerned to work for the urgent achievement of a political solution, in accordance with the provisions of the present resolution, and the creation of the necessary conditions which would enable the Afghan refugees to return voluntarily to their homes in safety and honour;

5. *Renews its appeal* to all States and national and international organizations to continue to extend humanitarian relief assistance with a view to alleviating the hardship of the Afghan refugees, in co-ordination with the United Nations High Commissioner for Refugees;

6. *Expresses its appreciation and support* for the efforts and constructive steps taken by the Secretary-General, especially the diplomatic process initiated by him, in the search for a solution to the problem;

7. *Requests* the Secretary-General to continue those efforts with a view to promoting a political solution, in accordance with the provisions of the present resolution, and the exploration of securing appropriate guarantees for the non-use of force, or threat of force, against the political independence, sovereignty, territorial integrity and security of all neighbouring States, on the basis of mutual guarantees and strict non-interference in each other's internal affairs and with full regard for the principles of the Charter of the United Nations;

8. *Requests* the Secretary-General to keep Member States and the Security Council concurrently informed of progress towards the implementation of the present resolution and to submit to Member States a report on the situation at the earliest appropriate opportunity;

9. *Decides* to include in the provisional agenda of its forty-first session the item entitled "The situation in Afghanistan and its implications for international peace and security".

[2]Adopted by a vote of 122 (U.S.) to 9, with 12 abstentions. ■

Soviet Occupation of Afghanistan

PRESIDENT'S STATEMENT, DEC. 27, 1985[1]

Today, December 27, marks the sixth anniversary of the Soviet invasion of Afghanistan. Since December 27, 1979, when a massive Soviet force crossed the Afghan frontier to support a faltering Marxist regime, the Afghan resistance has grown increasingly effective. The Soviet-supported regime in Kabul has failed to gain even a modicum of popular support or international acceptance. The Soviets and their Afghan surrogates have resorted to barbaric methods of waging war in their effort to crush this war of national liberation. Indiscriminate air and artillery bombardments against civilian areas, savage reprisals against noncombatants suspected of supporting the resistance, and the calculated destruction of crops and irrigation systems have ravaged the Afghan countryside. Thousands of young Afghans are being shipped to the Soviet Union for "reeducation" in summer camps, universities, and specialized institutions.

The Afghan people, however, are unswerving in their determination to resist the invader. The resistance fighters are more numerous, better armed, and more effective than ever before. Unable to trust Kabul's forces to counter the enhanced resistance, the Soviets have begun using their own troops in a more active combat role. But the effort has availed them little. Last summer, when fighting was at its peak, resistance forces repeatedly attacked Soviet lines of communication, convoys, barracks, and facilities and mounted their largest, toughest, and best coordinated offensive operation of the war. The resistance has also drawn together into a political alliance which can present Afghanistan's cause to the world in unambiguous terms and coordinate all aspects of the liberation struggle.

Since 1980 the United States has strongly advocated a negotiated political settlement, the only reasonable alternative to the bleak prospect of an open-ended military struggle. Seven UN resolutions passed by growing and overwhelming margins since that year show that the United States is not alone in this view. These resolutions call for the withdrawal of foreign troops, the restoration of Afghanistan's independent and nonaligned status, self-determination, and the voluntary and safe return of the refugees.

The United States reiterated its support for UN-sponsored talks during the November summit meeting in Geneva. We also indicated that the continued Soviet occupation of Afghanistan remains an obstacle to overall improvement in our relationship. Although we welcome any suggestion that the Soviets are prepared to back UN-led peace efforts, we will await positive developments on the ground and concrete evidence of Soviet willingness to agree to a timetable for withdrawal of their troops.

The victims of this war also command American attention. The United States has played, and will continue to play, a major role in the humanitarian efforts to alleviate the suffering of the 2–3 million Afghan refugees now living in Pakistan. Since 1980 we have spent over $430 million in aid. In the face of deteriorating conditions inside Afghanistan caused largely by the increasingly widespread Soviet reprisals against civilians suspected of opposing the regime, we have allocated, in the current 2-year timeframe, almost $25 million in assistance to the brave people who remain inside Afghanistan.

When the Soviet Union invaded Afghanistan 6 long and bloody years ago, few in the West knew much about that distant land and its proud people. That certainly has changed, as the Afghan people, in their determination to defend their liberty, have added new chapters to the long annal of human courage in the face of tyranny. Forged in a similar crucible two centuries ago, the United States stands squarely on the side of the people of Afghanistan and will continue its support of their historic struggle in the cause of liberty.

U.S.-Soviet Relations

President Reagan's radio address to the nation broadcast November 23, 1985.[1]

This has been a busy and eventful week for Nancy and me. Now that the summit in Geneva is behind us, we need to look ahead and ask where do we go from here?

As I told Congress, we've made a fresh start in U.S.-Soviet relations. Every issue was on the table, and our 15 hours of discussions were tough and lively throughout. I got a better perspective from listening to General Secretary Gorbachev, and I think he went home with a lot to think about, too.

I plan to meet Mr. Gorbachev again next year in Washington, but between now and then, we have much work to do. Opportunities to address important problems of Soviet-American relations should not be squandered. We must always be realistic about our deep and abiding differences, but we should be working for progress wherever possible.

On arms control, the Soviets, after several years of resisting talks, have now agreed that each side should cut nuclear arms by 50% in appropriate categories. And in our joint statement, we called for early progress on this, directing the emphasis of the talks toward what has been the chief U.S. goal all along: deep, equitable, fully verifiable reductions in offensive weapons. If there's a real interest on the Soviet side, there's a chance the talks can begin to make headway.

Mr. Gorbachev and I discussed our work on SDI—America's Strategic Defense Initiative. I told him that we're investigating nonnuclear defensive systems designed to destroy offensive missiles and protect people. Although reluctant to acknowledge it, the Soviets have been carrying forward a research program, far more extensive than ours, on their own version of SDI.

I think it's fair to point out that the Soviets main aim at Geneva was to force us to drop SDI. I think I can also say that after Geneva Mr. Gorbachev understands we have no intention of doing so—far from it. We want to make strategic defense a strong protector of the peace. A research and testing program that may one day provide a peace shield to protect against nuclear attack is a deeply hopeful vision, and we should all be cooperating to bring that vision of peace alive for the entire world.

Regional conflicts were prominent in our discussions, and we'll be watching very closely for any change in Soviet activities in the Third World. Another resounding vote of the UN General Assembly has just called for Soviet withdrawal from Afghanistan. Next month a new round of talks on this question takes place, also under UN auspices. If these talks are to succeed, the Soviets must provide a timetable for getting out and recognize that the freedom fighters will not be conquered.

On bilateral and human rights questions, there were some small, encouraging steps before the summit, and in the agreements we reached there, to promote people-to-people contacts. In both areas, we're hoping greater steps will follow. As I also told the Congress, human rights is a true peace issue.

If there is one conclusion to draw from our fireside summit, it's that American policies are working. In a real sense, preparations for the summit started 5 years ago when, with the help of Congress, we began strengthening our economy, restoring our national will, and rebuilding our defenses and alliances.

America is strong again, and American strength has caught the Soviets' attention. They recognize that the United States is no longer just reacting to world events; we are in the forefront of a powerful, historic tide for freedom and opportunity, for progress and peace.

There's never been a greater need for courage and steadiness than now. Our strategic modernization program is an incentive for the Soviets to negotiate in earnest. But if Congress fails to support the vital defense efforts needed, then the Soviets will conclude that America's patience and will are paper thin, and the world will become more dangerous again.

Courage and steadiness are all important for freedom fighters, too. I made it clear in Geneva that America embraces all those who resist tyranny and struggle for freedom. Breaking faith with freedom fighters would signal that aggression carries no risk, and this we will not allow.

We are entering a season of hope. If we remain resolute for freedom and peace, if we keep faith with God, then our American family, 238 million strong, will be even more thankful for next year.

Nicaragua

Excerpt from President Reagan's radio address to the nation broadcast December 14, 1985.[1]

. . . .

Now, I must address recent disturbing events in a country close to our borders—the communist dictatorship in Nicaragua. Nicaragua today is an imprisoned nation. It is a nation condemned to unrelenting cruelty by a clique of very cruel men—by a dictator in designer glasses and his comrades, drunk with power and all its brutal applications. They stripped the Nicaraguan people of their rights by a state decree last October 15th, yet that decree only made official, and by their reckoning permissible, the theft of liberty that took place years ago.

No institution more deeply embodies or glorifies or seeks to perfect the moral and spiritual goodness of man than the church in all of its denominations. Yet in Nicaragua, the church is the enemy. Protestant ministers and lay people have been arrested, interrogated, and tormented at secret police headquarters; some forced to stand naked in very cold rooms for long periods. A tiny population of Jews was bullied and driven out.

Cardinal Obando y Bravo, a great hero of truth and courage, is prevented from speaking freely to his flock. The state police have expelled foreign priests and drafted seminarians, who are virtual prisoners in the Sandinistas' armed forces.

And the Catholic Church's newspaper has been seized and Radio Catolica censored, sometimes shut down entirely. The same dictators who insulted Pope John Paul II also stopped Radio Catolica from broadcasting a letter from the Pope and this beatitude: "Blessed are those who are persecuted for righteousness sake, for theirs is the kingdom of Heaven." The truth is, these men are nothing but thugs, a gang of hardcore communists to whom the word of God is a declaration of liberation that must be stamped out.

Their denial of rights, their trampling of human dignity, their wrecking of an economy with suffocating socialist controls—all hurt and deeply offend us. But there's a cause for deeper concern: the specter of Nicaragua transformed into an international aggressor nation, a base for subversion and terror.

Some 3,000 Cuban military personnel now lead and advise the Nicaraguan forces down to the smallest combat units. The Cubans fly the Soviet assault helicopters that gun down Nicaraguan freedom fighters. Over 7,000 Cubans, Soviets, East Germans, Bulgarians, Libyans, PLO [Palestine Liberation Organization], and other bloc and terror groups are turning Managua into a breeding ground for subversion. A delegation of Nicaraguans is now in Iran. Nicaragua's border violations against Honduras and Costa Rica continue. And Nicaragua's connection with the recent terrorist attack against Colombia's Supreme Court is now clear.

What are we to do about such aggressions? What are we to do about Cuba's willful disregard of the 1962 Kennedy-Khrushchev understanding of which President Kennedy said, "... if Cuba is not used for the export of aggressive communist purposes, there will be peace in the Caribbean"?

The answer is: more than we're doing now. If Nicaragua can get material support from communist states and terrorist regimes and prop up a hated communist dictatorship, should not the forces fighting for liberation, now numbering over 20,000, be entitled to more effective help in their struggle for freedom?

Yes, and to reinforce this message, I sent my new national security adviser, John Poindexter, this week to visit the Central American democracies and make clear our commitment to a democratic outcome in Nicaragua. Those who struggle for freedom look to America. If we fail them in their hour of need, we fail ourselves as the last, best hope of liberty.

A New International Era: The American Perspective

by Secretary Shultz

Address before the Pilgrims of Great Britain in London on December 10, 1985.[1]

I am very delighted to be here. As it turns out, I am a member of, what I've learned is known as, a sister organization in the United States. And so, I take particular pleasure in appearing at this luncheon.

Of course, there has been a great deal of talk about the Geneva meeting. For a long time, we insisted on calling it a meeting, and that was the word out of the White House. But as it seemed to have been a success, we now call it a summit. And we are even beginning to talk about the next summit. But choice of words is very important in all of these things, as we all know. I was alarmed in Geneva, when we were there before the meeting started. I wandered into a room and there were a bunch of White House people who were plotting things, and they were talking about arranging a tete-a-tete between the President and General Secretary Gorbachev. And I barged in and said, "You have got to knock this off. It's a one-on-one. You keep using these French words, and the next thing you know, you'll be talking about detente."

So much for the summit. A month ago, Washington was charmed by a visit from the Prince and Princess of Wales. We were also pleased and impressed that His Royal Highness visited our Library of Congress and attended a seminar on our Constitution with our Chief Justice and legal scholars. This noble document, of course, was a product of our rebellion against his ancestor; but it was also, we all know, a product of the British political heritage. We have a written constitution; yours is unwritten. But the principle of constitutionalism is the same: government limited by the rule of law to protect the freedom of the individual against arbitrary power.

One of the striking features of today's world is how durable and relevant this ideal is. The principle of liberty turns out to be a hardy and powerful idea with a compelling attraction to peoples around the globe. The notion of restraints on power, of course, has its international application, as statesmen struggle to build stability and balance into the international order.

Yet today, we all know, the world order has been challenged by a host of developments that yesterday's thinkers could not have foreseen. We face new strategic realities, new evidence of the power of ideas, new understanding of economic realities, and a new revolution in technology that will have profound political consequences. Each of these forces has posed a philosophical challenge to established orthodoxy, to conventional wisdom about strategic, political, and economic relations among nations.

The United States approaches this challenge confident that the free nations together are in a strong position to shape the course of events in accordance with our ideals. Perhaps it's just American brashness to feel this way. But in any case, let me describe how America views these new trends—in strategy, ideology, economics, and technology—and why we feel confident about what the future will bring.

The Classical Conception of International Order

Among the ideas that have been decisively altered in the postwar era is our conception of the balance of power. As a British audience knows, the classical conception served well as a functional description of international order. The idea of national sovereignty was born in Europe, and thus the problem of peace was to nurture some kind of equilibrium among sovereign states. Sometimes the balance was stable; sometimes not. When some continental power seemed bent on dominance, Britain would join others in restoring the balance.

Today, the classical conception still serves, to a degree. When faced with Soviet expansionism after World War II, for example, the West had no choice but to unite to deter and resist Soviet ambitions.

But the strategic realities of the postwar era demanded new modes of resistance and deterrence. In the classical or European model, the balance of power tended to be one-dimensional; its objective was the maintenance of equilibrium between the states in question. The balance of power in the contemporary world is, by contrast, multidimensional.

Multidimensional character could not be better illustrated than by the variety of topics on the agenda of the President's recent meetings with Mr. Gorbachev. As the classical conception of the balance of power would imply, the two sides discussed the strategic military balance. But we also discussed regional conflicts, in a world where ideology sometimes reflects and sometimes exploits the turbulence of vast regions of the globe. We discussed human rights, the irrepressible yearning of men and women everywhere for freedom and democracy, an issue which, in fact, lies at the heart of a number of conflicts in the world. And we discussed bilateral issues, seeking more open exchanges as a corrective to the self-isolation and rigidity which Soviet ideology imposes on the Soviet system.

The New Strategic Balance: Offense, Defense, and Stability

In the strategic dimension, the stability of the balance is literally the main focus of American efforts in arms control. Strategic stability, of course, is not just an American concern but an alliance concern. Stability means preventing war.

Sometimes you hear Soviet claims that the danger of war in Europe has been growing. That's nonsense. Since the late 1940s, Europe has faced on its doorstep the most heavily armed power on Earth. Yet in a century that saw two European cataclysms in one generation, Europe has known unprecedented peace in the last four decades. The military balance in Europe is stable because the alliance has maintained the strength to deter attack. We have made clear that a threat to any of us is a threat to all of us. Any would-be aggressor knows in advance that an attack will fail.

The ultimate deterrent to any such threat has been, and continues to be, U.S. strategic forces. Therefore, the Soviet strategic buildup in recent years that threatened to upset the balance had to be met by an American program of strategic modernization. This is essential to Europe's security as well as to our own. For any Soviet perception of a decisive strategic advantage over the United States would only encourage the Soviets to think they had an intimidating advantage over Western Europe. A war might never take place. But European nations would surely find their confidence in American protection diminished, the shadow of Soviet power looming larger, and their control over their own sovereign destiny reduced.

The main danger to strategic stability has come from the Soviet advantage in heavy, accurate ICBMs [intercontinental ballistic missiles] with multiple warheads that could threaten the survival of the land-based portion of U.S. forces. This category of strategic weapons—this *offensive* threat—has been one of our central concerns in arms control for many years. These offensive weapons menace deterrence; these offensive weapons represent a serious imbalance; these offensive weapons pose the danger of surprise attack. Therefore, American proposals for arms control have emphasized radical, equitable, verifiable reductions in these strategically significant systems.

The Soviet response, until very recently, was to ignore the problem. Their most recent proposals now embrace our idea of radical reductions, though not adequately. Their main contribution to arms control was continual denunciation of the President's Strategic Defense Initiative (SDI)—a research program into potential defensive systems that don't yet exist—while slighting the threat from menacing offensive weapons that already exist in excessive numbers.

SDI represents a conceptual leap into the future. If it proves feasible, it will enhance deterrence. It will supplement Western nuclear strategy with the prospect of being able to block or at least blunt an attack, reinforcing the traditional deterrence through retaliation; it will rest defense policy on a kind of mutual assured security instead of mutual assured destruction. The global system will be more stable if the U.S.-Soviet strategic relationship is more stable.

You have heard these points before. But I would stress here the relevance of SDI to Europe's security. First of all, if it proves feasible, it can blunt the threat of SS-20s and other missiles against Europe. It can only enhance the credibility of America's pledge to risk its own safety on behalf of yours. And a structure of deterrence *and* defense, coupled with radical offensive reductions, is likely to be the most stable environment of all, offering hope of a diminished danger of war into the next century.

The revolution in technology is already underway, and prudence clearly requires that we examine all new possibilities. Certainly the Soviets are doing so. Technology doesn't stop; history doesn't stop; the balance of power keeps changing its form. All of us who care about avoiding war and preserving peace must adapt our thinking to new conditions—especially when the new conditions offer a hopeful opportunity and a positive vision of a safer future.

Ideology and Regional Conflicts

The President and Mr. Gorbachev, as I noted earlier, spoke also about conflicts in the developing world that affect the stability of the international system.

It goes without saying that not all of these conflicts represent the division between East and West in miniature. But if there is any real danger of U.S.-Soviet confrontation, it is likely to originate in some crisis in the developing world—precisely because the central military balance in Europe is stable. Angola, Afghanistan, Nicaragua, Ethiopia, Cambodia—remember how these interventions fed the disillusionment with detente in the 1970s, disrupting the arms control process and shattering hopes for better East-West relations.

The problem of our time is to try to contain these regional conflicts—to help resolve them—and to understand what such a diplomacy requires in a turbulent world.

We live in an ideological age, when the international order is challenged by movements and passions that transcend national boundaries. Whatever theory one subscribes to about the true source of Soviet motivation—whether communist ideology or traditional Russian expansionism—it is not difficult to see the advantage to Soviet foreign policy of its alliance with radical movements throughout the developing world. Indeed, until the rise of revolutionary Islam, almost all of these radical forces were left-wing, claiming "socialist" aspirations and seeing the Soviet Union as a natural partner. And even revolutionary Islam shares with other radical forces a profound anti-Western impulse born of historical resentments, local social tensions, and a reflexive resort to force against the established order. This impulse clearly works to the geopolitical advantage of the Soviet Union—threatening moderate pro-Western governments, menacing the West's oil supply, spreading the evil of terrorism and the gospel of upheaval.

All of us in the West favor political solutions to such conflicts. We believe that peoples have a right to choose their own systems and their own leaders; that conflicts should be resolved whenever possible by negotiation and compromise; that a world of diversity and tolerance is a world compatible with our interests. We can live with any political solution that reflects the will of the parties and resolves their differences. Whether there is an important East-West dimension, as in the conflicts I have mentioned, or where there is less of an East-West dimension, as in the Arab-Israeli conflict, the United States adheres strongly to the view that negotiated political solutions represent the best hope for lasting peace. And this is our policy.

But it is important to understand what negotiated solutions depend upon. And here I want to address an issue that has been on my mind for some time, on which we and our European friends have occasionally had tactical differences. And that is the relation between power and diplomacy.

Negotiated solutions require two things. First, we, or the friends we support, must be willing to negotiate a fair solution. Whether we speak of Israel or our friends in Central America or in Africa or Southwest or Southeast Asia, we or our friends must pursue negotiation and compromise in good faith and with dedication. Such an attitude strengthens moderates on the other side, helps defuse radicalism, and offers hope for a solution

But this is only half the story. Almost always, it is the willingness of the other side to negotiate that is far more problematic. And thus a firm policy on our part, or our friends' part, is usually a prerequisite for good-faith negotiation on the other side. Only when they see the futility of their military "solutions" and the resolve of opposing strength will real compromise become possible.

Occasionally, the immediate problem we face is, regrettably, openly military—a Soviet invasion of Afghanistan, a Vietnamese occupation of Cambodia, a massive Soviet and Cuban military intervention in Africa, a Nicaraguan attempt to subvert neighboring countries, and Cuban combatants using Soviet weapons in Nicaragua. Diplomacy is unlikely to work unless there is effective resistance. In many of these countries, there is resistance. It is a tribute to the courage of brave peoples who somehow never heard that communism is the wave of the future, peoples who reject the Brezhnev doctrine and its claims of permanence for communist tyranny.

What the West should do in these situations varies with the circumstances. Sometimes we should give military and economic assistance to neighboring states that are threatened; sometimes we should extend moral or humanitarian or other kinds of support to those resisting. Sometimes help may be better given without open acknowledgment; covert action has been part of the arsenal of states since time immemorial, providing a means of influence short of outright confrontation. We should be prudent, realistic, and always cognizant of the political dimension of the problem. Nevertheless the factor of power is inescapable.

In the 1980s and beyond, most likely we will never see a world in a total state of peace—or a state of total war. The West is relatively well prepared to deter an all-out war, and we have to stay that way, or a Soviet attack on Western Europe or Japan; that's why these are the least likely contingencies. But day in and day out, we will continue to see a wide range of conflicts in a gray area between major war and millennial peace. Some of them—not all—will affect Western interests. Terrorism, particularly state-sponsored terrorism, is already a weapon increasingly resorted to by those seeking to undermine Western nations and friends of the West in the developing world. We must be equally well prepared and organized for this intermediate range of challenges.

We must recognize, as well, that we encourage moderate solutions not only by our own good faith but by denying success to those who seek radical solutions. In the Middle East, for example, the Arab world is divided: Moderates like Egypt and Jordan work actively for peace. But radicals oppose it. Sometimes it is said that the slowness of the peace process is a source of radicalism because it builds frustration. Partly true. But the violence comes from the enemies of peace, from those who would be more angry if the peace process were making rapid progress. These extremists must be resisted, not appeased. They must be shown that military options don't exist, that blackmail and pressures will get nowhere, and that negotiation is the only possible hope for achievement of legitimate Arab objectives.

We differ with some of our European friends over the role of the PLO [Palestine Liberation Organization]. To us it seems obvious that the PLO excludes itself as a player so long as it rejects UN Security Council Resolutions 242 and 338 and Israel's right to exist. Is the PLO becoming a more moderate organization? We shall see. Meanwhile, the PLO is not entitled to any payment in advance so long as it rejects what are, after all, the basic premises of the peace process. A country cannot be expected to make concessions to those who resort to terrorism and who treat negotiation as only a way-station on the road to its ultimate destruction. If PLO policy changes, that fact will be acknowledged. We have always said this. Unlike some of our European friends, however, we feel that gestures toward the PLO, while it has not accepted 242 and 338, only mislead its leaders into thinking their present inadequate policy is gaining them international acceptance and stature.

For diplomacy does not depend on good will alone; it does not depend on good intentions alone. Sometimes it depends on single-mindedness and will. In Lebanon 2 years ago, the Syrians, listening to the debate in the United States, concluded we were, in their words, "short of breath"; the rationale of our diplomacy—that the May 17 agreement was the way to bring Israeli withdrawal—was itself undercut when Israel pulled back.

Today, in Central America, by contrast, we do have staying power; it comes from bipartisan backing in the Congress for our program. In Central America, we are aiding moderates; we are supporting democratic governments like those of El Salvador, Costa Rica, and Honduras, with Guatemala about to form a civilian elected government—all threatened by Nicaragua. I might say that the role of the M-19 in its relationship to Nicaragua has been dramatized in the battle, in the Palace of Justice, in Colombia. So the threat of what Nicaragua supports is seen on a broader scale. Three-quarters of our aid to the region has been economic aid. We are supporting the Contadora process in pursuit of a diplomatic solution, and we are supporting the democratic opposition within Nicaragua, for they need our help to defend themselves against Soviet weapons and Cuban troops.

In the turbulent developing world, a balanced and realistic program of political objectives, leverage, and staying power—these are the ingredients of an effective diplomacy for global peace.

The Democratic Revolution

The course of regional conflict has required adjustments in our thinking about East-West relations and the developing world. But one of these adjustments is a happy one for the West: We must make room in our theories for the new vigor and vitality of the idea of democracy. As the battle rages between moderates and radicals in many regions of the globe, we should never underestimate the longing for peace or the new strength of the moderate center that rejects extremism of both right and left. This too is altering the global balance.

There was a time, not long ago, when it was fashionable to be pessimistic about the fate of democracy in the world at large. Democracy was thought to be culture-bound, a precious family heirloom of the industrialized West—with its prospects somewhat shaky even in parts of southern Europe. The developing world, in any case, seemed an inhospitable soil for democratic habits to take root. The massive social and economic problems that developing nations faced seemed to call for strong central authority; they could hardly afford the "luxury" of limited government; their passionate politics seemed ill-suited to constitutional restraints.

But today, it looks different. We should have known better. We have seen democracy flourish in non-European societies as diverse as Japan, India, and Costa Rica. And today in our own Western Hemisphere, we see the dramatic resurgence of democratic government after a long period of rule by military juntas and dictatorships. Over 90% of the people of Latin America now live under governments that are democratic or are in transition to democracy—in contrast to only one-third in 1979. In the last 6 years, elected civilian leaders have replaced authoritarian regimes in Argentina, Bolivia, Brazil, Ecuador, El Salvador, Grenada, Guatemala, Honduras, Peru, and Uruguay. In Brazil—as well as India—we have seen the tragic death of an elected leader followed by a peaceful constitutional transition to a new democratic leader. With all the problems that many of these countries have, this trend is an inspiring display of people's faith in themselves and of the power of the democratic ideal.

From the perspective of the United States, this means that a belief in democracy is not just a Wilsonian dream, or a naive crusade; it is a reflection of hard reality. Consider too the reemergence of human rights as a legitimate subject of international discourse—especially since the Helsinki Final Act 10 years ago.

As the Helsinki process reminds us, these are not only issues for the developing world but issues quite relevant to Europe—to the eastern half of Europe whose aspirations for freedom remain artificially suppressed.

I will be visiting Eastern Europe in a few days' time. We have all learned a great deal over the postwar period about both the opportunities and the limits of our influence in Eastern Europe. There is a new reality since Helsinki—an even more unmistakable yearning among these peoples for something better. This is a powerful force whose significance should never be underestimated.

Some day, the Soviet Union under wise leadership may learn that its own security needs can be met without suppressing the freedom of its neighbors. In the meantime, we do what we can to foster greater openness in these countries. We differentiate among them, and between them and the Soviet Union, to encourage more independent foreign policies, greater respect for human rights, and economic and social reforms. Governments that show such positive trends receive our reinforcing acknowledgment.

The economy of the future will be based more and more on information technologies. And the flow of information requires... freedom of thought and communication.... The communist rulers thus face an excruciating problem. They remember the power of the Ayatollah's message on tape cassettes in Iran; they fear the photocopying machine as a dangerous instrument to be kept under lock and key.

The Future: The Economic Dimension

Finally, I want to speak of another kind of revolution that is altering the world balance of forces—a reawakening of economic thought and a new era in the technology of communication.

The future of the world economy will do much to shape the world's political future—much more, indeed than some conventional theorists of the balance of power may recognize. I say this not because of a Marxist belief in economic determinism, but because it is obvious that the basic conditions of life can affect the cohesion and goals of societies.

In a world of nations less and less dominated by authoritarian structures and political elites, the basic needs of citizens will be all the more compelling in national policies. In the democratic world, growth is a key to social equity and also to societies' ability to look after essential defense needs; in times of slow growth, investment in defense always comes under budgetary strain. In the developing world, democratic or moderate governments are under stress as they struggle to overcome economic problems.

Economic problems are not new in history. What is new in recent history is the intellectual shift taking place about how to remedy these problems. Lord Keynes's point about practical men being in thrall to some defunct economist may be less true now than in the past. Or perhaps the wise perceptions of Adam Smith two centuries ago are once again gaining practical prominence. At any rate, reality is intruding on some long-held notions about economic policy.

There is a new skepticism about statist solutions, central planning, and government control. Perhaps the extraordinary vigor of the American recovery has made the point: 10 million new jobs created in 3 years, with low inflation and declining interest rates. We have much more work to do. We have to do something about our fiscal deficit. But we have revised our tax system to provide more incentives to work, to save, to invest, to be efficient, to take risks. We have reduced government regulation, intervention, and control. And we think it has paid off.

And this economic wisdom isn't culture-bound either. We see on every continent—Western Europe, East Asia, Latin America, and Africa—movement to decentralize, to deregulate, to denationalize, to reduce rigidities in labor markets, and to enlarge the scope for individual producers and consumers to interact freely in open markets. At the Bonn economic summit last May, the leaders of the industrial democracies stressed the importance of moving in that direction. This insight is revolutionizing agricultural productivity across the globe. It explains the extraordinary growth rates in noncommunist East and Southeast Asia, and it explains the extraordinary effort underway in China to liberate the creative energies of a billion talented people.

This reawakening in economic thinking itself coincides with a revolution in the technological base of the global economy. Microchip computers, advanced telecommunications, and an accelerating process of innovation are transforming the world we live in.

By no coincidence, this creativity is coming from the societies of the democratic world that let ideas, people, and capital resources flow freely across boundaries, that encourage entrepreneurship and experiment. These societies have grasped the plain fact that the source of economic vitality is individual creativity and not the state. The advance of these technologies is bound to challenge many traditional notions of sovereignty. But the West has the advantage because the free flow of information is intrinsic to our political system and principles.

The industrial age is coming to an end. The age when economic power was symbolized by the steel mill and the assembly line is passed. In some places, this age is completely over. The economy of the future will be based more and more on information technologies. And the flow of information requires freedom—freedom of thought and communication. Ideology has nothing to do with this: it's just a fact of life.

The communist rulers thus face an excruciating problem. They remember the power of the Ayatollah's message on tape cassettes in Iran; they fear the photocopying machine as a dangerous instrument to be kept under lock and key. The more they try to stifle these technologies, the more they are likely to fall behind in this movement from the industrial to the information age; but the more they permit these new technologies, the more they risk their monopoly of control over information and communication. In the end, though, they don't really have a choice, because they cannot reverse the tide of technological advance.

Facing the Future

One of the great qualities of America, I think, is its readiness for change, its willingness—indeed, eagerness—to adapt to new conditions. But all the industrial democracies have the same advantages and the same opportunities. We are not *status-quo* powers holding the line against the forces of change: We are the pioneers of change, the champions of the idea of freedom, accustomed to innovating and adapting, strong enough to resist threats to our interests and ideals, and skilled at helping shape positive solutions to international problems.

That is why we can be confident about the future of the West. I do not envy Mr. Gorbachev and the challenge he faces in trying to defy the laws of economics and squeeze more productivity out of a system of imposed discipline and bureaucracy. He must come to realize that he must loosen up. And he will find, as he no doubt fears, that he has whetted the appetites of his people, and the diverse peoples of Eastern Europe, for more freedom. Change is certain.

The West will undoubtedly suffer setbacks. The democracies have not always met their responsibilities—either in deterring aggression or in managing their economies wisely. But we have a precious advantage. We draw strength from our freedom, from one another, and from the newly democratic nations that are joining our ranks inspired by our heritage.

Britain, and America, and all the free nations face an exhilarating challenge, and we are readier for it than many people realize.

---

[1]Press release 275. ■

Berlin and the Cause of Freedom

by Secretary Shultz

Address before the Berlin Press Conference in Berlin on December 14, 1985.[1]

Berlin has a very special quality. To visit this great city is to be reminded of the blessings of freedom and of the responsibilities we all face in preserving it. It is a bracing experience for any American Secretary of State. Together with more than 6,000 Americans who are committed to defend your freedom, I am proud to be here.

There is no place where the vital questions facing the West are seen more clearly than in Berlin. There is certainly no place where the benefits of freedom are more evident than in Berlin. But it is sobering to note that there is no place where the threats to our democracy, to our security, and to our way of life are etched more deeply into the landscape than here in this divided city.

I have visited Berlin once before, as a private citizen, in the spring of 1982. I saw a little of it then, free of the duties and without the entourage of a Secretary of State. I admired the treasures of the Dahlem Museum and Charlottenburg Palace. But I was equally impressed by Berlin as a city of today—a city alive, a city still youthful in its energy and freshness and vigorous development.

Berlin can be proud that it is once again one of the most vital and impressive cities in Europe. It is a city that attracts young people looking for education and excitement; it beckons to men and women of many nationalities seeking a fresh start. Its distinguished universities make Berlin one of the outstanding centers of learning in Europe. The genius of German culture flowers at the *Deutsche Oper* and the Schiller Theater, and the Berlin Philharmonic is the envy of the world.

This is also a city where free enterprise is blossoming. Berliners are creating new companies, marketing new products, and trying out new business ideas. In the past 5 years, over 300 high-technology corporations have been established. Universities are working closely with research institutes and private industries. It reminds me of where I lived at Stanford University in silicon valley, where the same partnership is so evident.

The flourishing of this city is a tribute to its able leadership. It is also testimony to the character of the Berliner—and, I would add, to the strength and the power of the values that inspire free people everywhere. These values that Berlin represents—this is what I want to talk to you about.

Between East and West

You in this city understand the realities of East-West relations, both their limitations and their possibilities. You are optimists and realists at the same time. Your history since 1945 teaches many lessons—lessons that all of us in the free world would do well to learn as we seek to improve the relationship between East and West. So let me identify these lessons.

First, it is important for us all to understand what all Berliners understand when they look at the cruel wall that divides this city: you know that differences between East and West are far more than mere misunderstandings. Berliners know that coercion and control are the essence of governmental authority on the other side, and thus you understand that guns and tanks and rockets are a manifestation of basic differences, not the underlying cause. There isn't a Berlin Wall because there are weapons; there is a military confrontation because of a political system that is so dependent on force that it builds a Berlin Wall. This is why President Reagan has sought to place U.S.-Soviet arms control issues in their political context. East and West need to make progress on fundamental political differences in order to reduce the risk that our weapons will be used against one another—and in order to reduce the numbers of weapons on both sides.

Second, the political line carved through Europe is not the result of democratic decision by the people who live here. Berliners know that their city and all of Germany are not divided because their citizens decided it should be so. Nearly one-third of the German people have been denied the right of self-determination. They did not vote to live under a communist system or to be divided from their friends and relatives in the West. And the nations of Eastern Europe have never been given the right set forth in wartime and postwar agreements—including, I should stress, the Yalta agreement—to decide their own form of government and way of life. Quite the contrary, we have seen repeatedly in the postwar years that the people of East Germany and East Berlin and the citizens of Eastern Europe do not wish to live in a continent divided by barbed wire, under governments sustained by military power.

Third, the burning light of freedom is an attraction which no amount of intimidation or oppression can extinguish. The wall was built not to keep invaders out but to keep people in. Thus it speaks silently but eloquently about the moral condition of the communist system and about the beacon of liberty which the Western sectors of Berlin have always represented. In West Berlin free men and women, endowed by their Creator with rights and free will, choose their own leaders and shape their own destiny. It was your courage as champions of liberty that led John Kennedy to say in the name of free peoples everywhere that we are all Berliners. All free peoples are in your debt for demonstrating so well, and under such difficult circumstances, the vitality and success of freedom. No one can visit and compare the Eastern and Western sectors of this city and not come away with renewed confidence about freedom's future.

Nor can the visitor to the Western sectors be in any doubt of the peaceful intentions of the West. Why should we desire or risk war, when we can create so much and achieve so much, spiritually and materially, in peace? This is the fourth lesson for us of Berlin.

Fifth, Berliners know that the Soviets will push for advantage when they think they see weakness and indecision. In 1948 they sought to starve this city and force the allies out. They assumed that Berliners, exhausted by war and the exertions of rebuilding a devastated city, would simply give up, and that the United States, Britain, and France would stand by helplessly. But the Soviets did not count on the courage of the people of this city or on the unity and determination of the Western powers, who mounted the greatest airlift in history. When all of us stood resolutely with you and had the power to back up our position, the Soviets had no choice but to call off their blockade. Similarly, we had the strength and determination to stand up to Soviet pressures in later crises over Berlin.

The division of this city and the division of Germany are unnatural and inhuman. By staying in Berlin . . . we and our allies demonstrate clearly to all the world that we do not accept incorporation of Eastern Europe . . . into a Soviet sphere of influence.

Thus, the sixth lesson is that Western unity, strength, and patience are necessary to make freedom secure. They are also prerequisites of an easing of tensions and fruitful negotiations with our Eastern neighbors. This is the true significance of the Quadripartite Agreement of 1971. Important practical improvements for everyday living, travel, and communications have been achieved because the West was strong and united behind basic principles.

There are other examples. In the past 2 years, Western unity and firmness enabled us to carry through the NATO decision of December 1979 to maintain the balance in intermediate-range nuclear forces in Europe. We were not frightened when the Soviets walked out of the START [strategic arms reduction talks] and INF [intermediate-range nuclear forces] talks in December 1983 and said they would never talk once our missiles were deployed. The alliance held fast, and the Soviets returned to the bargaining table in 1985.

Then the Soviets said they would not discuss offensive reductions—in either START or INF—until the United States agreed to renounce the Strategic Defense Initiative (SDI). This, President Reagan has made abundantly clear, we will not do. Well, again our firmness produced results. Just over 2 months ago, the Soviets made a counter-proposal. It was deeply flawed, but in it they accepted the principle of deep reductions in offensive forces, on which President Reagan has long insisted. The United States has responded with new ideas of its own, and at the President's meeting with Mr. Gorbachev in Geneva, new impetus was given to the negotiations. Progress in the future, as in the past, depends vitally on Western unity and perseverence.

Challenges for the Future

The United States and the people of Berlin have come a long way together. What of the future?

When President Reagan spoke to the UN General Assembly in October, he reminded us that there can be no true peace where there is repression, partition, or mutual fear, or where we avert our eyes from unpleasant facts. We look to a peace secured by governments responsible to free citizens, to a peace where walls of partition give way to open communication, to a peace based on a balance of safety rather than a balance of terror, and to a peace where the use of force has given way to true observance of the UN Charter by all nations. The only true peace is one based on democracy, freedom, and justice; these principles are the surest foundation of a secure, peaceful, and prosperous world.

This is and will remain our vision. You will remember that President Reagan, when he visited Berlin in 1982, called upon the leaders of the Soviet Union to join him in fulfilling the hopes for unity, peace, and prosperity represented in this city. In his Berlin initiative for peace, the President made new proposals to reduce the threat of nuclear war and to increase contacts among peoples in East and West. Sadly, in 1982, the Soviet Union seemed unable to respond to the President's vision. Perhaps there is greater hope today. In this spirit, let me tell you something of our meetings in Geneva with General Secretary Gorbachev and of our plans and goals for the future.

The Geneva meeting was worthwhile for both sides because it was born in realism and developed into a mature exchange of views and ideas. Everyone in the age of thermonuclear weapons knows that our differences must be contained; our competition must be disciplined by a sense of common risk and an awareness of our common future.

President Reagan and General Secretary Gorbachev discussed the great issues of our time. The President explained how, in recent years, the American people and our allies have questioned the vast Soviet military buildup and the Soviet record of compliance with past arms control agreements. The President explained our proposals for radical reductions—real, equitable, and verifiable reductions that would make the strategic balance more stable and further reduce the risk of war. He described our Strategic Defense Initiative. He told Mr. Gorbachev that SDI means research into a non-nuclear defensive system—a system for blunting an attack—that threatens no one and that might eventually free all nations from the threat of mutual annihilation. He told him we know that Soviet scientists have been researching the same technologies for 15 years or more, and that Soviet military doctrine has always stressed the value of defensive systems. The President expressed his firm conviction that we should cooperate in moving toward a safer, defense-dominant world, if our research does, indeed, prove successful.

The two leaders agreed to keep negotiating our differences with vigor and purpose—and I consider that a good outcome. We also agreed to give a push to a number of other arms control efforts—such as preventing, pursuant to the 1968 treaty, the proliferation of nuclear weapons; reducing the danger of surprise attack in Europe; and halting the proliferation of chemical weapons. The United States, of course, has proposed a comprehensive global treaty banning chemical weapons.

The two sides also discussed the dangers to world peace arising from regional conflicts. The President made clear that our sympathies are always with those who struggle for freedom against tyranny. But he also stressed that we believe in political, not military, solutions. The two sides agreed to continue regular discussions on these issues at the experts' level, and to begin them at the foreign ministers' level.

The third set of issues we talked about was human rights. History teaches no clearer lesson than this: governments that respect the rights of their own people tend, inevitably, to respect the rights of their neighbors. And the yearning for liberty is a universal phenomenon; indeed, it lies at the heart of much of the turmoil we see in the world. Thus human rights, as the President has said, is not an abstract moral issue—it is a peace issue.

Finally, we discussed the barriers to communication between our societies. Americans want to know more about the peoples of the Soviet Union. And the peoples of the Soviet Union, it seems to us, have a right to know more about Americans—about our desire for peace and about how our free system works. We did reach a new agreement on scientific, educational, and cultural exchanges, and further agreed that they should be broadened in the future.

As you know, Mr. Gorbachev agreed to visit the United States next year, and President Reagan will travel to the Soviet Union the following year. We know the limits as well as the possibilities of summit meetings. Yet we believe the continued face-to-face dialogue of our top leaders could help move us forward. Just as we must avoid illusions on our side, so we must dispel them on the Soviet side. Meetings like this can help dispel Soviet illusions about the resolve of the West. And that is good.

It is worthwhile for the new Soviet leadership to see our resolve firsthand. The world can only be better off if these men see that the democracies will stand firm against pressures—and also that we are ready to deal with them constructively across the broad range of our differences. We will not be bullied; but we are ready for give-and-take in negotiations and for fair solutions to the problems that divide us. These are lessons that we have all learned from the brave people of Berlin. So, what does the future hold for this city?

Not surprisingly, some Berliners are asking why, 40 years after World War II, they are still living under a governing arrangement involving foreign powers. They ask whether this is not the time to make some changes. But I think we all understand the continuing conditions that make these arrangements still necessary.

Soviet and East German goals have not changed in Germany or in Europe. Europe, Germany, and Berlin remain divided. These artificial divisions are themselves a cause of tension. A basic tenet of the Western search for peace must be the overcoming of these divisions. But so long as they remain, the Western allies are prepared to preserve their role and act in Berlin as the trustees of the divided German nation.

What are we safeguarding? First, the precious right of all Germans to self-determination. The division of this city and the division of Germany are unnatural and inhuman. By staying in Berlin and retaining our rights here, we and our allies demonstrate clearly to all the world that we do not accept incorporation of Eastern Europe, including the G.D.R. [German Democratic Republic] and East Berlin, into a Soviet sphere of influence. By maintaining freedom in Berlin, we give evidence of our commitment to freedom in all of Europe.

The Soviets and East Germans know this. Why else would they expend so much effort to wall off and undermine the viability of this city? The flourishing of Berlin is a living challenge to their pretensions and their ambitions. I can assure you that the United States understands very well Berlin's important role in Europe and in the Western world. Our commitment to the freedom of the Western sectors is unshakable. Our insistence on strict observance and full implementation of the Quadripartite Agreement, as it applies to all four sectors of Berlin, remains as strong as ever.

But our responsibilities do not end there. Nor do our goals or dreams for this great city. As President Von Weizsaecker, your distinguished former mayor, has said, Americans came to Berlin in 1945 as liberators and became allies and friends. We think in the last 40 years we have also become true partners.

In education, for example, there is the bilingual John F. Kennedy School; the Kennedy Institute at the Free University; the Memorial Library in Kreuzberg; and the Aspen Institute run by New Hampshire-born, but Berlin's honorary citizen, Shep Stone. (I discovered this afternoon when he met my wife that they both grew up in Nashua, New Hampshire—not just New Hampshire.)

We are also partners in industry and development. American industry has invested heavily in this city. Ten percent of Berlin's industrial production is provided by American-owned firms. New investment is also coming, and we in Washington are doing all we can to encourage American companies to come to this showplace city.

We want to do still more—because we believe you want us to be with you in more than a defense and legal capacity, because we are honored to be associated with this great city and its people, and because we have confidence in your future. It is a mutually enriching partnership. We believe that in our continuing collaboration, we contribute an ingredient that makes this city unique among German cities. Berlin is truly an international city, a cosmopolitan city, a place where Europeans and Americans work together for freedom and progress.

Berlin stands today, as it has since 1945, as a model for all of us in the West, as a beacon to all who yearn for freedom everywhere. All who visit this city should contemplate the barbed wire and brick and stone that divide it in two. But they should witness, as well, Berlin's pulsating freedom, dynamism, and spirit. Let them experience firsthand the meaning of liberty, and the courage that sustains it.

This is the real lesson of Berlin today. The renaissance of this great city, as it approaches its 750th birthday in 1987, is a tribute to the faith and values that guide all of us, and an inspiration as we look to the future of the West.

Beyond the Debt Problem: The Path to Prosperity in Latin America

Secretary Shultz's address before the first plenary session of the General Assembly of the Organization of American States (OAS) in Cartagena, Colombia, on December 2, 1985.[1]

Let me restate, at the outset, on behalf of President Reagan and the American people, our profound sympathy for Colombia over the catastrophe of the Ruiz Volcano. Out of the volcanic ashes and the mud of Armero, however, we see once again the courage and resilience of Colombia's people. Just as Colombia has shown its leadership in regional efforts against drug trafficking and for a peaceful, democratic solution in Central America, we are confident that Colombia will overcome this latest challenge.

We in the United States reach out to other human beings beset by great tragedy. We have been privileged to respond immediately to every request from President Betancur's government with rescue workers, tents, helicopters, supplies, and scientific monitoring efforts. The huge outpouring of donations from private U.S. citizens expresses eloquently our sense of compassion and of brotherhood with the people of Colombia.

I also want to take this opportunity to praise President Betancur for his firmness against the criminal terrorists who invaded the Palace of Justice last month. As the terrorists themselves admitted, if they had known their action would be dealt with so firmly, they would not have attempted it. We can all learn from this Colombian example.

Five hundred years ago next month, Christopher Columbus proposed to the Spanish Court at Cordoba a venture to reach China and Japan by sailing West. After 4 years, the committee reviewing the proposal reported to Ferdinand and Isabella:

> We find no justification for Their Highnesses supporting a project that rests on extremely weak foundations and appears impossible to translate into reality to any person with any knowledge, however modest, of these questions.

Nonetheless, after its power was consolidated, the Spanish Crown authorized Columbus to sail—and his leadership, faith, and perseverance made history.

As we approach the 500th anniversary of the discovery of America—and the 100th anniversary of this organization—we, too, are navigating political and economic seas that are not well charted. We, too, must show the faith and fortitude that Columbus showed if this New World is to realize its promise.

Strengthening the OAS

This organization has a strong and proud record of achievement. For nearly a century, it has been a pacesetter for the world in the peaceful settlement of disputes. It has worked persistently and effectively to assure respect for human rights. And now the Secretary General has taken up the challenge of fighting drug abuse, for which my delegation commends him strongly. The United States looks forward to playing an active role in the conference next year on combating narcotics trafficking. We want this organization to be a vital force on all the issues that confront the hemisphere in the years ahead.

Therefore, I hope that in the few days we have together here we can take new steps to strengthen this organization. Can't we all agree, for example, that the Secretary General should be able to bring to our attention any issue that affects the peace and well-being of this hemisphere? Any member of this organization, likewise, should be able to bring to this General Assembly, or to the Permanent Council, any problem that concerns it. And we must all work with the Secretary General to make sure that the financial structure of the organization is repaired and restored to health. Let us take these steps here and now.

Democracy and Its Challenges in This Hemisphere

We meet at a moment of hope in the hemisphere. A democratic revolution has been sweeping Latin America. The United States supports and wants to nurture this process, which is a blessing in itself for the peoples who benefit directly and a vindication of democratic values to inspire the whole world.

In the past year, the democratic surge has been reinforced by presidential elections in Peru and Bolivia, by congressional elections in Argentina, and by Brazil's poignant but successful constitutional transfer of power after the death of its President-elect. Most recently, the elections in Guatemala and Honduras continue the democratic tide. There are still exceptions; there have been instances of backsliding. But liberty is on the march in the Americas.

The OAS Charter says it well:

> [T]he true significance of American solidarity and good neighborliness can only mean the consolidation on this continent, within the framework of democratic institutions, of a system of individual liberty and social justice based upon respect for the essential rights of man.

And precisely because it, too, embodies this democratic imperative, the United States supports the Contadora process, in which nine OAS members are currently engaged.

There are many challenges to democracy—from terrorist violence, from communist subversion, from rulers who refuse to permit free elections. But today, I want to speak about another challenge to democratic governments: the economic problems of this hemisphere. The subject of debt dominates our conversation these days. It was the topic of a conference involving many of your nations in this very city. The United States has been listening. We recognize, as you have urged, that the goal of economic adjustment is economic growth—not only for material well-being but also as a stable foundation for freedom and democracy.

The Debt Problem

Today, the rise in international debt has clearly placed a new hurdle in the path of growth in Latin America and the Caribbean. In 1977, the total external debt of all developing countries—all around the world—importing capital came to roughly $330 billion. By the end of 1984, only 7 years later, the debt had ballooned to $830 billion. Debt service has risen from 15% of exports in 1977 to 25% of exports in 1985. In the Western Hemisphere, debt service now consumes nearly 44% of exports. No one can doubt or ignore this burden on your economies and your people.

In the late 1970s and early 1980s, with the financial strains from the second oil shock, both borrowing countries and lending banks based their policies on the assumption that inflation would continue unabated and real interest rates would remain negative or close to it. Some borrowers and lenders also assumed continuously rising oil prices. Large amounts of debt were incurred at short-term and at variable interest rates. Then policies brought inflation down dramatically, real interest rates rose sharply, and recession struck, upsetting these expectations. The result has been increased debt service and slow growth. We have seen a similar phenomenon in the U.S. farm sector, which borrowed heavily on the expectation of continued low interest rates and rising land prices.

Over the past 3 years, all our countries have worked together to manage this debt burden. We have made progress. Payments problems of a short-term nature have been successfully surmounted; we have avoided major defaults that would have severely restricted the inflow of capital to your countries and constrained growth for a long time; major strides have been made in adjustment of external imbalances; and export-led growth began to recover in 1984. But we have not yet reached our more fundamental goal: to reestablish the conditions for vigorous, durable economic expansion.

Our challenge, in fact, is to combine two objectives:

First, to restore the growth that Latin America and the Caribbean so urgently need; and

Second, to restore debtor countries' creditworthiness and external financial balance.

These two objectives are not contradictory. On the contrary, the keys to resolving the debt problem are also the keys to sustained and vigorous growth. They involve actions that you, the Latin American countries, and the broader international community must take together. Each must do its part. An effective strategy, as I see it, must cover all dimensions of the problem.

First, the Latin American and Caribbean economies need to be able to deploy resources more efficiently, stimulate domestic saving, and encourage productive domestic investment.

Second, conditions must be created to attract inflows of foreign capital, particularly foreign direct investment.

Third, your reform efforts require appropriate support from official multilateral financial institutions and from private commercial banks.

None of these efforts can be truly successful, moreover, unless we all work to assure a growing and open international marketplace that facilitates the growth of exports and global economic expansion.

At the Bank/Fund [World Bank/International Monetary Fund] meeting in Seoul in October, our Secretary of the Treasury, James Baker, developed these points as he offered new proposals—the Baker plan—and explained our strategy. Let me share with you our analysis, reinforcing Secretary Baker's proposals.

Lessons From International Experience

The recent experience of the world economy is instructive. The world is recovering from the adversity of the 1970s and 1980s but at uneven rates. In 1984, the average growth rate for all developing countries was 4.4%. There was a wide variation between Asian developing countries, where growth averaged 8.1%, and sub-Saharan Africa, where growth averaged only 1.6%. The Western Hemisphere average was 3.1%

Why this wide variation? What are the factors that promote growth in some countries and inhibit it in others?

Experience gives us the answer. In good times, economic policy need not be brilliant to show some success. In hard times, enlightened policies make a real difference. The countries that have continued to prosper in the last decade have shared some characteristics. They work, they save, they invest, and they export. Above all, they unleash the creative energies of their peoples.

The successful countries have encouraged private initiative, avoided excessive regulation, and provided adequate incentives for productive investment. They have relied primarily on markets to set interest rates and prices and have maintained appropriate exchange rates. They have avoided excessive government consumption and control. The most successful countries have not relied on protectionism and import substitution but have followed a more outward-looking strategy. Many of them borrowed money—but they used it productively.

In the 1970s, interestingly, large, resource-rich developing countries grew more slowly than small, resource-poor countries. Large domestic markets perhaps gave policymakers the illusion that they could isolate themselves from world market forces. Inefficient industries were established that rapidly became a drain on the economy. When these industries were in the public sector, the damage was often long lasting since they were rarely allowed to liquidate their operations.

Fiscal deficits drain resources from productive use. From the late 1970s to 1983, the fiscal deficits for the developing countries roughly doubled in relation to GDP [gross domestic product], to about 5.5%. The composition of those deficits is striking. An IMF publication notes that, in the 1970s, overall fiscal deficits of a sample of developing countries were about 4.4% of GDP. Of this amount, about three-fourths was attributable to public enterprises. Expenditures for, and borrowing by, public enterprises have been growing rapidly in the developing world. In fact, only about 10% of the investment of public enterprises was self-financed. This reflects the difficulty of running public enterprises efficiently. In countries where capital is scarce, such policies starve the private sector of resources needed for growth. Therefore, it is encouraging that several Latin American governments are beginning to take steps to free themselves of this burden.

Another lesson of experience is about policies toward the outside world. Your economies possess great potential for expansion of output and export earnings. To achieve this potential, you need to take full advantage of the opportunities of the world trading system.

Here, I must be blunt if I am to be honest. Restrictive trade practices have only compounded the problems of many heavily indebted developing countries. All too typically, heavy foreign borrowing has supported fiscal deficits and overvalued exchange rates, putting a great burden on export competitiveness. Import barriers have been erected to protect favored domestic industries from foreign competition. These barriers have severely hampered the growth of trade among Latin American and Caribbean nations. Other distortions have been introduced by subsidies and by controls on prices of consumer goods and on interest rates.

Growth has also been hindered by hostility to foreign direct investment. This has only added to the dependence on debt financing; it has also shut out the potential benefits from the technology and marketing capabilities of

multinational firms. In some cases, foreign direct investment was attracted through promises of a protected market and then burdened by requirements for local content and export performance—a peculiar kind of "double whammy" negating economic efficiency.

Economies ended up hobbled by controls and restrictions, wasting both domestic and foreign capital, starving the external sectors of resources, unable to respond to changes in the external environment, and unable to generate export earnings to service rising debt. And, as in the United States and other countries, protectionist policies create vested interests. If dynamic growth is to be restored, major economic restructuring has to take place, with resources redeployed to the most productive industries that can compete effectively in the world market.

I understand how difficult this prescription is. Governments attempting fundamental reforms face opposition from powerful interest groups currently protected from competition. Governments need to show credible prospects for future improvements in standards of living in order to maintain domestic support for reform.

But to create such prospects requires investment. Domestic and foreign investors are wary. Though the demand for capital in the world may be infinite, the supply is finite. These resources will flow to where they are wanted—to where the conditions are hospitable. Countries wanting development capital will have to compete for it. Before contributing their resources, investors will need to be convinced that sound policies will be sustained.

A Comprehensive Approach

To tie all these elements together, there must be a comprehensive approach. Developing countries, industrial countries, international institutions, and commercial banks all have essential roles to play—in a kind of global bargain, if you will, to get debtor countries back on the path of sustained growth.

When Secretary Baker outlined our approach at Seoul, he stressed what is, in our view, the core of any comprehensive strategy—indeed, the sine qua non: namely, a more focused and determined effort of structural reform in the debtor countries aimed at greater efficiency, more domestic saving, and a more attractive climate for foreign investment. And, in conjunction with this, he addressed two other key elements designed to provide outside support and encouragement for structural reform: namely, more substantial and better coordinated assistance from multilateral institutions and more support from commercial banks. If each of these groups does its part, and if there is a clear need for additional capital for the multilateral development banks to meet the demand for quality lending, the United States would be prepared to address the issue of capital increases.

This was a creative effort, it seems to me, to bring the broader international community into the process of helping solve the debt problem. Both the World Bank and Inter-American Development Bank (IDB) are well placed to complement the continued central role of the IMF by providing financing and advice to countries taking the essential steps toward structural reform. The United States supports a number of creative steps taken recently by the World Bank, including the trade policy loan to Colombia, efforts for greater cofinancing with commercial banks, the decision to double the capital of the International Finance Corporation, and the creation of the Multilateral Investment Guarantee Agency (MIGA). The World Bank's considerable expertise can help devise programs for growth through structural reform. It can support these programs through increased lending to private sectors and through increases in policy-based lending.

We are also calling on the IDB to play a more active role in support of structural change oriented toward growth. This will require difficult reform measures by the IDB. I believe the IDB, with our and your help, can rise to this challenge. In particular, the Bank could introduce a major program of well-targeted nonproject lending as part of the upcoming replenishment negotiations. The Inter-American Investment Corporation, which we expect to become operational soon, should play an important role in developing the private sector in Latin America, particularly small and medium-sized firms.

The new commercial bank lending that Secretary Baker proposed—$20 billion over a 3-year period—is also a vital part of the near-term effort. Bank lending to the principal debtor countries has been declining, with very little new lending anticipated this year. Increased lending can provide important support for policies to promote efficiency, competitiveness, and productivity—the true foundations of growth. Such lending, however, will only be forthcoming if there is a clear commitment to adopt and implement such growth-oriented policies.

In the longer term, we want to see normal, voluntary international flows of capital resume their appropriate role in a way that will not renew or prolong current debt problems. Capital flows will need to be restructured, particularly to reduce reliance on bank lending, and to increase the role of equity finance.

Capital flight must be stemmed or, better, reversed. Our best estimate is that capital flight from Latin America and the Caribbean since 1980 amounts to well over $100 billion—it's your capital, and it's flown—offsetting a very substantial portion of lending to Latin America. In effect, much of your borrowing has gone not to finance productive domestic investment but to finance capital flight. I would like nothing better than to see your governments develop creative ways to attract these resources back to Latin America in the form of equity. Perhaps the privatization of public enterprises could offer an opportunity.

External capital must become better balanced between debt and equity. In the end, this means more foreign direct investment. There is no substitute for it. In bank lending, risk is borne chiefly by the country receiving the capital. Direct investment, on the other hand, allows receiving countries to share the risk with the supplier of the capital. It also provides a greater flow of technology, stronger incentives for productivity, development of local managerial talent, and access to international sales networks. All are vital for stronger growth.

I know of the reluctance of many countries to welcome direct foreign investment. But abuses can be controlled without overly restrictive laws and regulations that choke off the broad benefits of investment.

The international community can help as well. Investment guarantees on a bilateral basis, as provided by OPIC [Overseas Private Investment Corporation], or to be provided on a multilateral basis by the MIGA, could help spread risks and encourage productive investment.

At Seoul, Secretary Baker also proposed that the World Bank, IMF, and other donors develop joint programs to support medium-term structural adjustment in the world's poorest countries. This could be of direct benefit to some countries in this hemisphere. More

broadly, in today's interdependent global economy, the world community's efforts to promote growth throughout the developing world can also mean growing markets for Latin America's exports and a general stimulus to world trade.

But the basic preconditions for a sustainable, balanced inflow of foreign investment and for exploiting trade opportunities are the same preconditions as those for stimulating domestic saving and using it effectively; the internal environment must be attractive to both domestic and foreign savers and investors. Stable, noninflationary economic policies, prices, and interest rates determined by the market, and realistic exchange rates—all of these are vital. Without them, external support will be wasted.

A Sound Global Economic Environment

The external environment is relevant to the debt problem in another sense. Maintenance of an open, growing world economy is an essential prerequisite for solving the problems of debt and growth. The industrial countries bear the main responsibility for the overall, macroeconomic health of the global economic system. We have taken actions to foster stable, durable growth in our own economies, providing growing markets and generating more saving and investment.

Economic recovery in the industrialized world, however, has been accompanied by certain imbalances. These imbalances, the main symptoms of which are the strong dollar and the large U.S. trade deficit, have stimulated an upsurge in protectionist pressures that pose a serious danger to the world trading system and to our prosperity and yours.

The United States is actively involved in cooperative efforts to deal with this danger. On September 22 in New York, the major industrial nations agreed to work harder to achieve sustained and better balanced growth in their economies. The United States pledged to reduce its fiscal deficit and to encourage saving through revenue-neutral tax reform.

Other participants agreed to promote growth by a wide range of market-oriented policies designed to stimulate investment and reduce structural rigidities. We also agreed that a further strengthening of other currencies vis-a-vis the dollar was desirable in view of changing economic conditions and that we would cooperate to encourage this when to do so would be helpful. The initial impact on exchange rates has been gratifying, and I believe the fundamental policy actions underway will go much further in promoting balance and the durability of the recovery.

The U.S. economy, which has vigorously led the world economy out of recession, slowed its pace of growth in the first half of this year; and you all felt it. But the signs of growth have been much stronger in the second half, with a 4.3% annual rate of increase in real GNP [gross national product] for the third quarter. Prospects look solid for the remainder of the year and for 1986. Inflation in the United States remains low; interest rates have fallen sharply since the summer of 1984; and the substantial moderation in the strength of the dollar—especially against the yen—should bear fruit eventually in a stronger external balance.

Our expansion has been of direct benefit to you. Latin America's exports to the United States rose 25% between 1982 and 1984—which was over 75% of the total increase in your exports.

Prospects are good that growth will improve in the rest of the industrialized world. West European countries will be working to improve the strength and flexibility of their economies. Japan has announced measures to promote more domestic-led expansion. In both cases, lower tax burdens and freer markets can help. Lower inflation throughout the industrialized world favors sustained expansion. Protectionist pressures, however, pose continued dangers.

In New York, the industrial nations pledged to do their utmost to resist these pressures. We cannot afford to lose this battle. The stakes are simply too high.

It is essential that the industrialized world keep its markets open to your products. None of us is blameless, but the United States, your most important market, has done well in resisting protectionist pressures—for example, recently on copper and shoes. The latest challenge is the congressional bill sharply restricting imports of textiles and apparel. I will recommend to President Reagan that he veto it. We fully intend to keep up the fight.

Our strategy against protectionism involves three elements.

- The first is to correct the macroeconomic imbalances. We must work for sustained and more balanced growth among the industrial nations and for exchange markets which more fully reflect the progress in this direction.
- The second element is to assure our public that we are being vigilant in protecting U.S. industry, not from efficient foreign competition and shifting patterns of comparative advantage but from unfair foreign trade practices, such as subsidies and dumping. In this context, closed markets abroad seriously undermine our ability to keep markets open at home.
- Third, to build support for free trade, all our publics must see progress toward a strengthened, fairer, and more open world trading system. A new round of GATT [General Agreement on Tariffs and Trade] negotiations is, thus, a vital part of the U.S. strategy. Our aim is to reduce tariffs and quantitative trade controls. It is also to strengthen the role of GATT by reducing barriers and developing new rules for nontraditional areas such as services and high technology.

We are pleased that 90 countries agreed in Geneva last week to establish a preparatory committee for a new trade round. This is a major step forward. The inclusion of trade in services will be a key element in our efforts to strengthen the trading system.

We were disappointed with the hesitant response from many developing countries to the proposal for a new trade round. We believe there is a common interest in reducing barriers, particularly in such areas as agriculture where we and Latin America are both major exporters. We believe you, too, have much to gain from stronger rules governing trade in services. Their availability at reasonable prices and in the most up-to-date form can play a key role in the modernization of developing economies. We applaud the new strength that Mexico brings to the world trading system by joining GATT.

As deliberations proceed toward the launching of the new round, let us work together to overcome the narrow interests that threaten to impede our common progress. We all need a stronger trading system. All our peoples will be the winners.

Our Prospects and Our Opportunity

If all our nations unite behind this comprehensive strategy, I believe we can improve prospects for sustained growth and financial stability throughout the world economy. The industrial countries must promote their own noninflationary

growth and fight protectionism. The debtor countries must tackle the necessity of structural reform to generate and attract the resources needed for growth. The world community must see that its international institutions support the effort. Commercial banks should respond to genuine efforts at reform.

Global economic conditions now offer us a precious opportunity to put ourselves back on the path of sustained long-term growth. We know where we want to go and how to get there. Most of all, it will require us to examine our ways of thinking and to adopt policies that unleash the productive resources and sectors of our economies. The question is, do we have the political will to get the job done?

We in the United States share with the rest of the Americas the goal of surmounting the present economic problems. We will advance all our foreign policy objectives—peace and security, democracy and human rights, economic and social progress—if we succeed in overcoming current impediments to economic growth.

A few years ago, no one predicted the democratic surge that has taken place. Today, many doubt our capacity to restore sustained growth. I believe the skeptics will again be proved wrong.

If we let the lessons of experience serve as our guide, and if we work together to apply these lessons, the coming years can be a new era of prosperity and progress. The blessings of freedom and well-being that have been known by the relative few will be enjoyed by the many.

We cannot afford to let this opportunity slip away. Let us act, and let us act together.

Secretary's Trip to Europe

Secretary Shultz departed Washington, D.C., December 9, 1985, to visit London (December 10–11), where he addressed the Pilgrims of Great Britain (see page 24); Brussels (December 11–13); where he attended the regular semiannual session of the North Atlantic Council ministerial meeting and met with officials of the European Commission; Bonn (December 13–14); Berlin (December 14–15); where he addressed the Berlin Press Conference (see page 27); Bucharest (December 15); Budapest (December 15–17); and Belgrade (December 17–18). He returned to Washington on December 18.

Following are news conferences the Secretary held on various occasions during the trip and the texts of the North Atlantic Council final communique and a statement issued by the council's Foreign Ministers.

NORTH ATLANTIC COUNCIL FINAL COMMUNIQUE, BRUSSELS, DEC. 13, 1985[1]

The North Atlantic Council met in ministerial session in Brussels on 12th and 13th December 1985. Ministers agreed as follows:

1. Encouraging developments have taken place in East-West relations since our meeting in Lisbon in June. They demonstrate the validity of our policy—reaffirmed in the Washington statement—of preserving peace in freedom through adequate military strength and political solidarity and, on that basis, pursuing a more stable and cooperative relationship between the countries of East and West.

2. We welcome recent high-level East-West contacts, notably the meeting between President Reagan and General Secretary Gorbachev, which marks an important step in our efforts to develop a realistic and constructive dialogue with the countries of the East. We hope that this will lead to improved relations, more extensive contacts, including regular high-level meetings, and broad cooperation on the full range of East-West questions. We shall all play our full part in making further progress. We call upon the Soviet Union and its allies to join us in this endeavour.

3. Meanwhile, the continuing build-up of Soviet nuclear and conventional arms remains a major Allied concern. We do not seek military superiority. But we are determined to safeguard our security by maintaining adequate conventional and nuclear forces. Our strategy of deterrence has proved its worth preserving peace, and remains fully valid.

The close and permanent link between North American and European Allies, which has kept the peace for 36 years, remains the basis of our collective security. Alliance cohesion will continue to be ensured through close consultations on all matters affecting our common interests and security. The value of these consultations has again been clearly demonstrated in recent months.

4. We are committed to substantive progress in arms control. This must be based on the criteria of strengthened stability, equitable and significant reductions and effective verification.

5. We have reviewed the U.S.-Soviet negotiations in Geneva on their strategic and intermediate-range nuclear weapons, and on defence and space systems. These aim to prevent an arms race in space and terminate it on earth, limit and reduce nuclear arms and strengthen strategic stability. We strongly support U.S. efforts in all three areas of negotiation. We welcome the agreement between President Reagan and General Secretary Gorbachev to accelerate work at Geneva, in particular in areas where there is common ground, including the principle of 50% reductions in U.S. and Soviet nuclear arms, appropriately applied.

The Allies concerned endorse the constructive proposals on U.S. and Soviet INF [intermediate-range nuclear force] systems recently tabled in Geneva by the U.S., and support the idea of an interim agreement. They reiterate their willingness to modify, halt, reverse or dispense with longer range INF (LRINF) deployment as part of an equitable and verifiable arms control agreement. In the absence of such an agreement, they will continue to deploy LRINF missiles on schedule.[2]

6. The Allies participating in the Vienna MBFR [mutual and balanced force reductions] negotiations proposed on 5th December 1985 a verifiable agreement for U.S.-Soviet ground force reductions, followed by a collective no-increase commitment of three years on U.S. and Soviet and NATO and Warsaw Pact forces. The proposal embodies associated measures which open the way to the establishment of reliable force levels and which are essential to verify compliance with the agreement's provisions. It responds to an earlier Eastern proposal and represents an imaginative attempt to break a longstanding dead-lock.

7. We remain deeply concerned about the proliferation and use of chemical weapons. At the Geneva Conference on Disarmament we seek an effective and verifiable convention on a general and complete prohibition of such weapons and on the the destruction of existing stockpiles. We strongly support the agreement between President Reagan and General Secretary Gorbachev to accelerate their efforts to this end.

8. We call upon the Soviet and East European governments to implement effectively all provisions of the Helsinki Final Act and the Madrid Concluding Document. We note with regret that the Ottawa meeting on Human Rights and the Budapest Cultural Forum, although useful in themselves, revealed persisting deficiencies in the implementation of these documents, and were unable to reach common conclusions.

At the Stockholm (CDE) [Conference on Confidence- and Security-Building Measures and Disarmament in Europe], an integral part of the CSCE [Conference on Security and Cooperation in Europe] process, we are actively working for early agreement consistent with the Madrid mandate. Such an agreement would embody a substantial set of militarily significant confidence- and security-building measures, covering the whole of Europe, and give concrete expression and effect to the existing duty of all participating states to refrain from the threat or use of force.

All participating states reaffirmed their commitment to the Helsinki Final Act on its 10th anniversary. We seek to promote genuine and balanced progress in all its aspects, including those concerned with respect for human rights and the fundamental freedoms of the individual, and those relating to cooperation between states. We remain committed to meaningful results at the forthcoming Berne meeting on human contacts. The Vienna followup will review all aspects of the CSCE process.

9. The maintenance of a calm situation in and around Berlin, including freedom of access to the city, remains of fundamental importance for East-West relations. The strict observance and full implementation of the Quadripartite Agreement are essential to this end. In this connection, we support all efforts to promote the prosperity and viability of the city. We also support the efforts of the Federal Republic of Germany further to develop inner-German relations as a significant contribution to peace and to the well-being of the people of a divided Germany, particularly the Berliners.

10. We urge the Soviet Union to end the unacceptable military occupation of Afghanistan, now approaching its seventh year, to withdraw its troops and agree to a political solution restoring Afghanistan's independence and non-aligned status.

We emphasise the continuing need in Poland for genuine dialogue between the various elements of society and for national reconciliation.

We, for our part, respect the sovereignty and independence of all states. We will remain vigilant and will consult on events outside the treaty area which might threaten our common security.

11. We strongly condemn terrorism and will continue to work to eliminate this threat. We invite all states to join us in this resolve.

12. We have examined ways of enhancing armaments co-operation among all the countries of the Alliance. This co-operation reflects our continuing concern for effective defence, particularly in the conventional field. In the light of our examination, we have decided to implement a strategy aimed at improving co-operation. This should give a fresh boost to the work being done in this field within the Alliance and lead in a short time to specific co-operative programmes encompassing both its European and North American members.

13. In the spirit of Article 2 of the North Atlantic Treaty, we reaffirm the importance of special programmes for less favoured partners and remain committed to promoting the stability and well-being of our community of free nations.

14. The Spring 1986 meeting of the Council in ministerial session will be held in Halifax, Canada, in May.

NORTH ATLANTIC COUNCIL FOREIGN MINISTERS' STATEMENT, BRUSSELS, DEC. 13, 1985

Armaments cooperation plays an important part in our collective security. Ministers have, therefore, agreed to direct the Conference of National Armaments Directors (CNAD) to implement a new armaments cooperation improvement strategy. They have decided to communicate its main elements to the public.

Ministers have instructed the CNAD to address identified conventional deficiencies facing NATO with a view toward coordination of national and multilateral equipment programs, in order to redress these deficiencies expeditiously and effectively, in accordance with established priorities.

Emphasizing their political will to collaborate, ministers have agreed.

- That the challenge is to find improved ways of enhancing collaboration;
- That every effort should be made to harmonize requirements and to explore the prospects for meeting them collaboratively;
- That efforts to increase cooperation in research and technology, in particular to exploit emerging technologies, should be stepped up in order to achieve a more cost-effective use of resources of the countries of the alliance and facilitate the establishment of cooperative projects. A wider exchange of information is a key factor in these endeavors;
- That sustained moves to strengthen cooperation in the early preproject stage would facilitate agreement on common armaments priorities leading to an effective resources strategy of countries of the alliance;
- To stress the importance of effective and coordinated armaments planning of countries of the alliance and, accordingly, to direct the CNAD to place particular emphasis on the identification of opportunities for greater rationalization;
- That the CNAD should study the management of collaborative projects, which become increasingly complex as the number of participating countries increases, and submit its recommendations to the council;
- To encourage and support work aimed at improving industry-to-industry cooperation; and
- To direct the CNAD to study the best means of assisting those countries with a less developed and/or small defense industrial base to obtain a more adequate share of industrial participation in defense research, development, production, and maintenance, in order to enhance their long-term economic strength.

The framework for progress has been laid out. Major improvements will require a long-term sustained effort. The nations of the alliance are committed to carrying out the key elements of the improvement strategy.

NEWS CONFERENCE, NATO HEADQUARTERS, BRUSSELS, DEC. 13, 1985[3]

NATO is in good shape. Our discussion covered the full range of alliance questions, arms control, the important effort to improve NATO's conventional defense through cooperation in the development and production of armaments, and East-West relations. Our discussions reflected a common sense of realism with regard to East-West relations.

The allies reiterated their support for our positions at the arms control talks in Geneva. We all agreed that the true measure of the recent meeting between President Reagan and General Secretary Gorbachev will come in the months and years ahead. For our part, we are ready to continue our give-and-take, problem-solving approach.

I also took the opportunity over the past 2 days to inform the allies about our efforts at home—I might say, very much at the urging of the Europeans, but on our own—to bring down the budget deficit and the possible effect this could have on resources available to meet our foreign policy objectives.

This is the third month in a row that I've come to Brussels. Each time I have benefited enormously from hearing the views of our allies at first hand. These visits underline America's deep commitment to full and intensive consultations.

Q. The Spanish Foreign Minister said some moments ago that you are convinced of two things: that there's going to be a referendum on NATO in Spain and that the government is going to win it. Are you convinced of both things?

A. Of course, it's for the Spanish people to decide, and I certainly hope and I believe it's in their interest to be in NATO. I have appreciated very much my discussions with the Spanish Foreign Minister in this regard, and with the Prime Minister, both of whom very strongly support Spanish participation within NATO.

Q. Based on U.S. verification means, can you confirm or must you deny what Mr. Gorbachev said about dismantling of SS-20 bases in the European part of the Soviet Union?

A. We have no confirmation of that. But I think the point about the SS-20s is that they are mobile missiles, so you have to think about it in a global sense. In all our negotiations with the Soviet Union of these intermediate-range missiles, we have insisted on a global approach, and that, of course, remains our position.

Q. If you recognize a desire to move from generalities to specifics at the next summit meeting, what sort of specifics do you think are possible to achieve at this next meeting?

A. Of course, there were a tremendous number of specifics reflected out of the meeting in Geneva last month; a tremendous number of specifics. They largely fell into the area of bilateral matters. At the same time there were some important developments in nuclear and space talks, particularly in the Soviet counterproposal and our counter to it, prior to the meeting, but in anticipation of the meeting, and then the confirmation of the 50% reduction idea. So there were a lot of things in that meeting.

Insofar as the next one is concerned, of course, we want to see this process move forward. We'd like to see it move forward. And as I said a moment ago, we're committed to a full give-and-take, problem-solving approach. Whether anything will be agreed remains to be seen, and we will search hard for any good agreement that is possible. But, of course, we will not be put in the position where some deadline or the prospect of some meeting would cause us to agree to something that we don't think is in our interests. And I assume the Soviet Union would feel similarly on that.

Q. Two questions with nothing to do with NATO. The draft resolution on the Armenian issues was defeated last night in Washington, thanks to the Reagan Administration's efforts, we are told.

A. Thanks to the growing common sense of those who voted on the issue.

Q. They will try again, we are told, so how long can the Administration continue to put pressure on the Congress on that issue?

A. These issues do come up periodically, as you say. They don't come up if the sponsors think that their chances are low. I think, through our efforts and the efforts of others, there is a growing perception in our Congress of the reasons why such a resolution phrased as it is, is so objectionable, not only to Turkey but to us. That being the case, there are lots of people—we don't have to prompt people to go and give arguments. They know the arguments. And I think that perception grows and is increasingly understood.

Q. You've been talking very recently about the PLO [Palestine Liberation Organization] participating in the peace process. Can you tell us what are your exact, explicit conditions for the PLO to get into the peace process, and do you believe that the PLO can really fulfill them or is it with those conditions that you are trying to push them out of the peace process?

A. We have, for a long time, had certain conditions for a dialogue between the United States and the PLO. The peace process, obviously involving Israel, is a different proposition. As far as we are concerned, recognition of UN Resolutions 242 and 338 and Israel's right to exist have been the conditions. I think I need to say as well, particularly when you're talking about the peace process, that continued participation in terrorist activity would seem to rule anybody out of the peace process. So the so-called armed struggle is a part and parcel of this problem. It's hard, and from Israel's standpoint—well, they'll speak for themselves. But these are the conditions for a dialogue with the United States.

Q. Lord Carrington, under instruction from the DPC [Defense Planning Committee] has written a letter to the Dutch Government asking them to reverse their decision to dismantle two of their nuclear tasks. Has that been an issue in this meeting, and what is the U.S. position in the matter?

A. Of course, we would prefer to see all of these tasks retained. And it has been discussed. I do think that the key important matter right now is the fact that the Dutch have decided to proceed, and many questioned whether they would or would not, and as it's turned out they are. We have always felt confident in the Dutch resolve, just as earlier we felt the same way about the Belgian resolve. I believe that the favorable resolution of these issues in Belgium and Holland has contributed tremendously to the strength and cohesiveness of our alliance and thereby to the prospects of success in our discussions over control of armaments with the Soviet Union. So it is a move in a very positive direction.

Q. We haven't had an opportunity to talk to you since the President issued his Executive order requiring lie detector tests of top Administration officials. What's your reaction to that, and will you take the test?

A. That is, I think, a domestic U.S.-type issue, and I'll respond to it in a domestic setting.

Q. After your stay here in Brussels, you are going to visit some other countries in Europe, among them Hungary. What do you expect from your visit to Hungary, and what do you expect from your conversations there?

A. In Hungary I'm looking forward to an education. I've read a lot about developments in Hungary, and it's one thing to read about developments and it's another thing to talk to people about how they are managing their economic system in particular. And I look forward to talking with them about that and also sharing views about East-West relations generally.

Q. What kind of backing do you feel that the United States got for SDI [Strategic Defense Initiative] out of this meeting?

A. Very good. I think the fact of the matter is that the importance, the responsibility of the United States to undertake this research program is universally accepted; everybody recognizes that. It's not an issue. There are lots of issues, and different countries have different views about whether they wish to take a formal part in the program. But the importance of the United States having this program is not controversial at all, and I feel as though the views are supportive in that sense. We do want to look at the implications of SDI. But, of course, it is a research program, and for the present and foreseeable future we have to remember that deterrence, as presently conceived, has kept the peace in Europe, and it will continue to be what we rely on to keep the peace.

Q. Did you feel the need to counsel restraint here on optimism toward the prospect raised at Geneva, that of early progress on INF forces with the Soviet Union, or perhaps even an interim agreement on INF?

A. It seemed that everyone, as we went around the room, felt the need to counsel everyone else to exercise restraint, and it's a universal recognition that we have to be realistic here. We have the problem of managing a very complicated process. And in a very real sense, the meetings between President Reagan and General Secretary Gorbachev are the tips of the iceberg. They are very important, and they stick up there and everybody looks at them. But there is a big, important process going on here, and we have to recognize its complexity and the great richness of it. So people have counseled each other along those lines, and we have to strike the right balance between having realistic expectations and having aspirations that are appropriate for the importance of the subject. These are very important subjects, and you can be sure that the United States will be bending every effort to find a good agreement if there is such an agreement to be found.

Q. I imagine by now that you've seen the New Zealand Government's legislation on nuclear ship visits. Do you have any fears that any other non-nuclear allies may be tempted to follow suit, and do you have any intention of renegotiating military relations with Australia?

A. Our military relationship under the ANZUS treaty with Australia is very strong, and we've had continuing discussions with Australia. We have no problems. It's very strong, and we see no need for any revision; it's good.

And so far as New Zealand is concerned, what they seem to be in the process of doing is denying ship visits by the United States, and under the circumstances what they are doing is *de facto* withdrawing themselves from the ANZUS treaty, in which case we'll have to adjust our sense of what our responsibilities are. But the treaty will remain there, and if, at some point, there's a shift it will be there.

Insofar as other countries are concerned, no, we haven't seen any tendency to look for legislation similar to New Zealand's

Q. We understand that several European ministers, while perhaps counseling restraint, did say to you yesterday that Western public opinion would expect concrete results from the next summit and that a good atmosphere would not be enough next time. Does that worry you?

A. I think everyone wants to have as concrete and fulsome results to come about at the time of these meetings as is possible. Just as I pointed out earlier, we had quite a number of concrete results, although not in the field of arms control, in the last meeting in Geneva. So we want to work for that. And I recognize that people want that. We all want it.

I believe also people want us to be realistic, and I don't think our publics here or in the United States want the United States to make arrangements that are made at the expense of Western security and Western values. There's no pressure for that at all. We want good agreements. And we do want them. But they have to be good agreements.

Q. Can I ask you for a short statement on what is the aim of your visit to Yugoslavia?

A. It's somewhat the same as I mentioned earlier. I expect to be educated, and I also look forward to discussing the problems that both of us have on our minds, that have to do with world economic developments and the way in which different countries are affected by them. In particular, in Yugoslavia's case, the debt problem and how it's being handled is an important one that I've talked about with Prime Minister Planinc before and look forward to talking with her again about that. And, of course, Yugoslav perceptions of East-West relations are always of tremendous interest to us.

Q. In London in the Pilgrims speech, you gave a rather strenuous defense before a European audience of the notion of giving moral and even armaments support to democratic groups struggling against oppression in Central America, Angola, Afghanistan, and Cambodia. I imagine that at least most of those areas came up in your discussions of regional problems here. Do you have the feeling now that the European allies are more or less convinced of the points that you made in that section of the Pilgrims speech, unhappy with them, or what's the state of their attitude toward those points?

A. Of course, the view that I expressed, and have expressed on other occasions more extensively, is that we're on the side of freedom, and people who are fighting for freedom and independence, therefore, have our support. Now what does that mean? It varies with different circumstances, and you want to do things that are going to be effective. We try to adapt our efforts to the situation and to what can be effective but with no ambiguity about the fact that we're for the people who are fighting for freedom. That is a general view.

Tactically what you should do at a given time in a given situation, people can have different points of view about. I'd have to say that we didn't have here extensive discussions about that topic since our focus of attention was on other matters, and particularly East-West relations.

Q. The day before yesterday, you met with the Turkish minister once again here in Brussels. As the result of the continuing Turkish-American talks, does the U.S. Administration think about the form of a treaty with Turkey at the end of the negotiations?

A. We have an agreement with Turkey under which we proceed, and we continually discuss it and what may or not be needed and adjusting it, and we continue to do that. We don't have any particular end point in mind in terms, certainly not of any new treaty or anything of that kind. But it remains to be seen how we'll want to label this when the time comes. I think the important thing is that we have agreed with

Turkey that we want to work in a very careful and professional way, problem by problem, at resolving them, and we have been making a good effort to do that. Under Secretary [for Political Affairs] Armacost visited Turkey, as he did Greece, some months ago, and we see a continuing process here, and I think a healthy one. The collaboration that we had on the vote that came up here earlier in the press confererence is an example, but there are many other examples of this fruitful collaboration. The Prime Minister visited the United States recently and made a tremendous impression in the country and with our Congress. So it's a good, healthy process. I might say, I particularly look forward to my discussions with the Foreign Minister, whose experience in East-West relations and in the Middle East is quite unusual.

Q. In the section concerning terrorism, it's a line we've seen before: We strongly condemn terrorism. And it's been a very rough year for terrorism. Is there anything a bit stronger that can be said about it? Has anybody proposed—I don't know—a new strike force, anything more concrete than condemning it?

A. I think the words serve the purpose insofar as words are concerned. It seems that it isn't so much words as actions that are what we need to be doing and we are doing. I think that the people are more and more alert to the great importance of this problem—its international aspects. Our intelligence collaboration has improved greatly. Our sense of the ability to manage crises has improved, and so there is an ongoing pattern of action. I think that's where we want to place the emphasis. As far as the communique is concerned, this serves the purpose adequately.

Q. What about an actual force? An international strike force, anything like that?

A. I don't think an international strike force makes any particular sense. There are capabilities within governments. These capabilities need to be nourished, and we have to have the ability to use them in a collaborative and cooperative fashion and exchange ideas on technique, you might say, and we are doing so.

Q. We were told by another American official the other day that on a preliminary basis, it's been decided that on the Salt II Treaty, there will be no expiration date as such on December 31. Can you elaborate on what the position is on the Salt II Treaty?

A. It's the same position that has been in place since the President announced his position, I believe it was last June; namely that he decided there to go the extra mile. It involved breaking up the submarine, and he looks to Soviet performance insofar as compliance is concerned, insofar as arms control is concerned, and he will be examining this whole question, particularly in the light of an additional report on the subject of compliance. If he makes a decision to make a change, it'll be announced. And that's the position.

Q. Yesterday you had your third bilateral meeting with the Greek Foreign Minister. I would like to know if, after these series of meetings, you think there is an improvement in United States-Greek relations and a change in the Greek Government's policy toward NATO. And secondly, I would like to know if there are any encouraging signs from the Greek side if the American bases will remain in Greece after the present agreement expires.

A. Let me just lump both questions together because they are basically similar.

In my first meeting with the new Greek Foreign Minister, he said that his government wished to see the relationship between Greece and the United States improved, and we agree. We also agreed to set about it in a systematic way. And the way to do it, we agreed, was to identify the problems, in a concrete sense, and then try to resolve them—big ones and little ones, but just try to have a problem-solving process. As I mentioned earlier, Under Secretary Armacost visited, and we've had discussions back and forth, and we also agreed that good relations are based on substance. I think it's fair to say, and I believe he would agree, that we have made genuine headway on substance. Therefore I think our relationships are better, and we intend to keep working at it.

Clearly the bases are an important part of the picture, and, of course, from our standpoint in the United States, we need to know early on whether the intention of the Greek Government is to end the bases at the end of this current agreement or not. If the intention is to end them then the United States will just have to make other arrangements. You see, it's one thing to have a negotiation about renewal in the context that both parties agree that the bases will continue, and we've been talking about the terms; it's another thing to have a negotiation where the question is, are the bases going to be there at all? Of course, it affects the U.S. view of what we should currently do with the bases. We're not going to put a lot of money into bases that are about to be abandoned. We'll have to address this issue just as we will address, as we consider it central to our relationship, the Greek participation in NATO. All of these things represent matters that are under discussion and review, and that will continue. I think the record so far in this effort is a good one.

Q. A question about the proposals for an interim INF agreement. The figures which the United States put forward when the Geneva talks resumed for American launchers will be the same as the actual deployment. Does that in any way imply a willingness to delay or alter the deployment schedules over, let's say, the next 6 months or up to the next summit?

A. No, not in the absence of an agreement.

JOINT NEWS CONFERENCE, EUROPEAN COMMISSION, BRUSSELS, DEC. 13, 1985[4]

Jacques Delors, President of the European Communities Commission. May I remind you that this is the fifth time the Secretary of State and the other American ministers are meeting with the commission. This is a meeting which should be seen according to the wishes of the Secretary of State in a larger perspective. We meet frequently, bilaterally, and to congratulate one another; to express a common will or to fight. Therefore, this meeting was meant to draw a balance sheet of the past year and to take a look at 1986, identifying where the difficulties lie and also to extend cooperation and increase it where it is possible.

In that respect, we discussed economic developments in the world, in the United States and in the Community because the United States and the Community just together make up 50% of world GNP. We then discussed monetary matters, financial problems of debt, ways of strengthening world trade, and, finally, matters which are of great interest to the world as a whole but are of particular interest for our bilateral cooperation. We can say that this year, 1985, in terms of the world responsibility of both the Community and the United States, is finishing with better hope for the future than we had thought it would at the beginning of the year. And we hope that the end of next year, and we very much hope in Brussels, we can start the new GATT round which will, of course, last a fair amount of time, but which, when it starts, will be giving a signal to the world as a whole and a signal of the Community and the United States to get us to resist protectionist tendencies which are just as strong in the Community as in the United States, even if they assume a less spectacular shape and form.

Thanks also to the decisions of the Group of Five where we now have a situation where the exchange markets are more transparent and less jittery. Of course a signal like this is not enough, and I know that the intervention of the central banks on its own is not enough. But we now have to create the basis for a healthy pickup in the economy of the world. And everyone should make an effort, not just the United States in reducing its budget deficit, not just Japan by opening up its economy more and making it a full partner in the world economy, but also the Community, which has won the battle against inflation and most countries too have reduced their external deficits. The Community, therefore, should contribute more toward world trade. That was one of the subjects we dealt with, and we went through the proposals that Europe had made to make its contribution to this and to raise these matters and reach a common view at the industrialized summit.

Then on the matter of financial issues—and above all, debt—we took stock of the Baker initiative, and we discussed how we could take it further so that with more trade, with more investment and with more confidence, the LDCs—particularly the indebted LDCs—would find the right way of developing their economies in a healthy way. And here, of course, cooperation between the United States and the Community will be important. Apart from that, we discussed a number of points of joint interest—part of our daily bread-and-butter work—high tech, intellectual property, services. We are already working together on these points. But I think the important thing, as Mr. Shultz said, was that we should have this overall view, the overall perspective. Try and identify the difficulties, try and broaden our cooperation, and I think we can say without being oversatisfied that things are moving in the right direction. The world economy is moving in the right direction. A lot remains to be done, but we intend to do this together united by our common values.

Secretary Shultz. President Delors has given a very full and complete summary of the things that we talked about and the atmosphere of the discussion. I won't repeat it except to endorse what you said.

I think we need to keep reminding ourselves that the United States and Europe have a relationship of tremendous importance, depth, richness, which goes across the board of matters of concern to all of our citizens. And a very important element of it is essentially the economic relationship. These annual meetings have become a kind of stock-taking, as you said, and a report to each other, an assessment of our responsibilities in helping to manage this relationship.

The meeting this year, as you said, has been particularly significant because we had some important, broad matters to discuss. The global bargain on economic issues that's come to be known as the Baker plan, I think, is of great importance, and we talked about that and, of course, the key element in it of the emerging GATT round. I think it was especially significant that we talked about how we each see that and the great potential for collaboration in the preparatory commission and then, eventually, in the negotiations. All of this is of tremendous significance and satisfaction. I might say satisfaction to me because I'm the veteran of four of the five of these meetings that have been held, and this one I might say with the new commission has been particularly satisfying and worthwhile. It's been a pleasure to have this time to sit down with your new commission and exchange views.

Q. I was wondering if you could tell us if you, in the course of your discussions, reached any sort of *modus vivendi* with the Community on how to avoid future situations such as the recent "spaghetti war" and the other trade conflicts that have erupted?

Secretary Shultz. I think that when we come to something that we have a stiff difference of opinion on, we're going to have to fight it out. On the other hand, I think these discussions and the procedures and the understandings that develop out of them teach us that, sooner or later, these disputes are going to get resolved and it might as well be sooner and with as little acrimony as possible. But there may be some that will turn out to be somewhat explosive. So be it. We'll have to keep them in the perspective of the overall relationship.

Q. I have two questions. First, how did you summarize the situation following the Congress' decision concerning U.S. deficit to the Commission, and second, there is a picture of yours in many of today's newspapers showing you yawning at the NATO meeting. Did you find this meeting today less boring or more exciting than that? [Laughter]

Secretary Shultz. I didn't have to spend very much time on the budget reduction legislation, since basically it reflects what the Europeans generally and the European Commission has been telling us we must do. And I hope that we will be able to follow through and actually do it. Of course, one of the reasons why our troops are a little reduced from last year is that Secretary Block [of Agriculture John R.], for example, stayed in Washington. Why? Because we have a farm bill that's full of problems. And its going to cost too much. On the one hand the Congress has passed a bill saying we've got to get spending down and, on the other hand, they're working on a farm bill that's going to get spending up. So we're going to have to work on this very hard.

As far as excitement is concerned, I would say there is an interesting symbolism in having the NATO meeting and the European Commission meeting as two significant events for us back-to-back because it does suggest, again, this broad range of our interests together,

the common values that we share. And the NATO meeting was a very worthwhile and productive one and this one has been too. [Inaudible] seven time zones different, even you might yawn once in a while. [Laughter]

Q. Did you discuss the Jenkins bill, the prospects and whether the President is going to veto it?

Secretary Shultz. Is that the textile bill?

Q. Yes.

Secretary Shultz. Certainly the recommendations across the board here are that he veto it, and I would be astonished if he didn't. He may have already done so. And I might say further we think we have the votes to sustain the veto. So it won't become law.

Q. Last year it seems there was some clash of interests between the United States and the European Community concerning the enlargement. In a few days, the Community will have 12 members, and I wonder if you have come to any sort of agreement on the outstanding problems, mainly on the farm products?

Secretary Shultz. It isn't a clash of interests of the enlargement. We favor the enlargement, and we think a strong Europe is good for the United States as well as for Europe. We have always said we have that feeling but we don't want to have it take place at our expense. There are some real problems in connection with agricultural trade and we haven't got them resolved, but we have them identified and they're going to be worked at.

Q. I have a question for Mr. Yeutter [U.S. Trade Representative Clayton Yeutter], please. I understand the Commission has given you a list of what it considers to be unfair trade practices. Could you tell us something about this list and whether you feel the allegations are correct?

Ambassador Yeutter. I have not yet seen the list, although Commissioner De Clercq has indicated that he plans to provide it to me. So I cannot respond to it. I did give Mr. De Clercq a philosophical response this morning. That was simply that we believe very strongly in free and fair trade and, if there be any legitimate complaints of unfairness from the standpoint of U.S. conduct, we are pleased to have that challenged. We believe the Community has every right to challenge unfair trade practices of other nations or allegations or the prerogative of launching allegations of such conduct whether it be related to the United States or any other country. We feel very strongly ourselves that we should have that same privilege and, as you know, we have launched a number of unfair trade practice complaints during the past several months, a couple of them, *vis-a-vis* the Community. We do not construe action designed to rid the world of unfair trade practices as being protectionist in any way. Obviously, if we feel the Community's allegations are inappropriate, we will say so, just as they have every right to make that same commentary with respect to any allegations we might make. But it is only conjectural at this point since I have not seen the list.

Q. Can I follow that up to Mr. De Clercq, if he could tell us what the list is and what it is that you find unfair in the U.S. trade practices?

Mr. De Clercq. I don't think I'll surprise anyone if I say I am not going to comment on the list. It would be a bit of a diabolical liberty if Mr. Yeutter was to learn what was on the list during a press conference. I have got it in my briefcase. My day at work hasn't yet been completed and tomorrow morning, since I wasn't able to have dinner with Mr. Yeutter last night, I was in the European Parliament—in fact, there are so many, Mr. Yeutter has made so many speeches, in fact, that I had to answer all these points in the European Parliament. So, this shows how determined and how competent he is in defending legitimate interests of his country, but it means for me more work because I have to spend night time sessions dealing with related points in the European Parliament because some of the members of Parliament are a bit upset by these statements. So I missed dinner and I had to have a modest breakfast and between the croissant and the roll, I shall hand over this list and, then after that, we can discuss it, but please, not before.

President Delors. This shows you the competence and vitality of the opposite number of Mr. Yeutter, our equivalent. He also likes making speeches.

Q. Did you raise the question of the decision taken by your government to reduce the budget deficit over a 5-year period in your talks with the Commission, and what did you say about that? What will be the effect of this on trade relations between the United States and the Community? And, the second question, just now you referred to the possibility of disputes which might be of an explosive nature. Do you have any particular dispute in mind?

Secretary Shultz. No, I was just reacting to the spaghetti comment which in my country is called pasta. I assume that's what you are talking about as a very particular thing that gets people quite excited on each side and is important but, at the same time has to be kept in the right perspective. As far as the Gramm-Rudmann bill is concerned, I think I have said about what I have to say on that subject and I don't see that it particularly has any special bearing on trade relations as such.

Q. President Delors has mentioned that you discussed technology. Did you talk about the whole issue of Europe opening telecommunications markets to the Americans which I know Mr. Yeutter is concerned about, and I'd particularly like to ask both him and Mr. Delors that question and if you felt you got any satisfaction on that issue?

Secretary Shultz. Yes. We discussed the general subject of technology, but I'll ask Secretary [of Commerce Malcolm] Baldrige to comment on that or Clayton as well.

Secretary Baldrige. We do have some medium and long-range concerns on the whole issue of telecommunications. We didn't get into that in any depth today but it's very clear that the United States, after the breaking up of AT&T, has seen perhaps the most open telecommunications market in the world. We happen to think that that regulation [sic] was good but, on the other hand, it's certainly increased imports from European communities, Japan, and other places. I think there is an inevitable tug toward wanting now to see other telecommunication markets as open or not as open but getting closer to that point than they are now. So there will be discussions on that, that's for certain. But we didn't go into it in depth today.

President Delors. I have three brief remarks to make. First, a group, a study group, a joint study group involving the United States and the Community has been set up on high technology and this group has in particular discussed matters pertaining to biotechnology and telecommunications. It will continue to do so.

Secondly, I told our American friends, briefly, what the concerns of European firms were. They are trying to see where they stand in this rapidly changing world, particularly with projects as stimulating as are the SDI and others. They need to know whether they are in the starting blocks, if they stand on the same footing as other companies that are not Community companies. This is our preoccupation that leads us to detailed discussion and to a closer cooperation between the United States and the Community.

Thirdly, and this is the most important thing, there can only be coherence and hope for the future of the Community if in parallel it accomplishes its intentions on the internal market and if it participates more in multilateral trade. The two things go hand-in-hand. One cannot imagine building up the internal market on the inside without adopting an equally consistent attitude *vis-a-vis* the outside.

Q. In his introduction to this press conference, President Delors was referring to the Group-of-Five meeting on foreign exchange, and he said that although there was an agreement on intervention, these interventions had not been sufficient. What was the American reaction to that?

Secretary Shultz. I think, and of course President Delors will speak for himself, but I think the impact of the G-5 announcement has been a constructive one. Through some pattern of some intervention, perhaps even to a greater extent, actions within a country that signal what it is doing, such as the somewhat higher rates of interest in Japan and things of that kind, there has been an effect on exchange markets that is good and perhaps it's also good for exchange markets to feel that somebody is watching. On the whole, those are the types of things talked about, and I think probably you and I would agree that this announcement was a good thing. We didn't have a difference about it.

President Delors. Perhaps you misunderstood me, or perhaps I wasn't terribly clear. But I would remind you that at the Fontainebleau summit, I personally suggested that central banks should work more closely together, but I said at that time that this cross-intervention from the central banks could not in the long term remedy the unhealthy aspects of international economy.

But I did say that the meeting of the G-5 had a twofold positive effect. First of all, a psychological signal to the markets. Just a week later, the markets were less jittery and easier to read. This was the clear determination not to allow the markets to be too volatile and to give way to nervous trends, and at the same time, from a technical point of view, this cross-intervention from the central banks, not in excessive amounts, did show that it was effective to a certain extent.

Of course, however, this doesn't mean that we should not get to grips with the basic difficulties. There is, of course, among other things, the U.S. budget deficit. But at the same time, there is insufficient growth in Europe, there is insufficient participation of the Community in certain monetary and economic matters. There is also the role that Japan should play. So we should welcome the effects of this. But let us not have any illusions about this. Intervention of the central banks on their own will not deal with all the imbalances, or the unhealthy aspects of the international economy, and I am sure the Secretary will agree with me. We discussed the other points, the other things that we have to work together on in the broad perspective he sketched out.

Q. The relations which the European Community wishes to intensify with Latin America, particularly—Central America in particular—through the cooperation agreement signed in Luxembourg and which does not preclude Nicaragua. How is this perceived by the government in North America, and what is felt about relations between United States and the European Community and relations between the United States and Central America? Further, in a world shared by two superpowers, Europe is surely an alternative making it possible for Latin America not to have to make a choice with all that it implies between yourselves and the Soviet Union?

Secretary Shultz. First of all on the European meetings with a Central American group, we welcome that. Central America needs help. We try to give a lot of it, and we welcome Europe also giving help. Of course, giving help in this case means opening markets to trade, and we have opened our markets to trade with Central American countries and Caribbean countries on a preferential basis to try to encourage their economic development. That is the principal thing that they need.

As far as Nicaragua is concerned, Nicaragua is isolating itself. It's isolating itself in its own community, and it's isolating itself from its own population. Nothing was more dramatic in that regard than the Nicaraguan involvement with the M-19 terrorist group that murdered justices in Colombia and necessitated that terrible battle at the Palace of Justice in Bogota. And, I must say when I was in Cartagena about a week and a half ago for a meeting with Latin American Foreign Ministers in the OAS [Organization of American States], it was quite apparent that Nicaragua is the odd-man out. So, I expect that Europe may observe that too.

I don't think on your second question that Latin America needs to choose between the Soviet Union and the United States and land on Europe as the alternative. I don't think that's the way to look at it. For one thing, there isn't an alternative between the United States and Western Europe insofar as value systems are concerned. And it's very important to recognize the unity, not disunity, of Europe and the United States in that regard.

Insofar as trade is concerned, help yourself. The great volume of Latin American trade is with the United States and the surge of exports that's helped turn many of those economies around has come from the exports into the U.S. market in the last 2 or 3 years. So it's been of great benefit to them but the more they are able to ship to Europe, why the better. They need growth and they need markets, and we encourage the opening of European markets to them.

NEWS CONFERENCE, BUCHAREST, DEC. 15, 1985[5]

I wish to express my appreciation to President Ceausescu and his colleagues for receiving us today on a weekend and for the lengthy meeting that we had with the President. During the course of the meeting, we discussed all of the issues that were on our agenda to discuss, both in the bilateral area and in the international field; so you can see great significance to both countries. We

found areas of agreement, areas where we didn't see things the same way, others where more effort seemed to be called for. We certainly have determined that we will try to make it because we would like to see the relationship between the United States and Romania be as good as it can be. I again express my appreciation for what I consider to be a constructive and worthwhile and far-ranging discussion.

Q. The existence of a big number of conflicts is always a big danger for today's peace. What do you think about the possibilities to solve a number of existing conflicts, and what do you think about the use of force and intervention? I am referring to all the conflicts in the world, and the possibilities to improve detente on this.

A. Of course, the United States believes in peaceful solutions, in political solutions, in negotiated solutions. I call your attention to the Great Seal of our republic. It shows an eagle, and the eagle has in one claw an olive branch and in the other, arrows. And the eagle is always looking at the olive branch to show that in every sphere, the United States seeks peace. Peace with justice, but the eagle also holds onto the arrows because we have found through our experience that strength is the road to peace.

As we have approached the subject of East-West relations, and as the President approached his recent meeting with Mr. Gorbachev, we spent a great deal of time on the subject of arms control, and some progress was made, and we welcome that. But we recognized, and the President said, that countries arm because of the differences among them and not the other way around. It is important to look at the flashpoints around the world and see what can be done about them. It is important to look at the implications of things such as the Helsinki accords and the Madrid mandate and other things of that kind that go to the relationship between governments and human beings. And of course, also at Geneva, just as here in Romania, we talked about our bilateral relationships. I think there is a great deal that can be done in both cases to improve them.

Q. Could you tell us what you said to President Ceausescu about the pressures that have been building up in Congress to tie MFN [most-favored-nation] status more closely to Romania's human rights performance, and what response you got?

A. It isn't a question of pressures in Congress; it is a question of what, from the standpoint of the United States, we feel is right and proper. We discussed these matters, of course, recognizing the right of every country to govern its own internal affairs, but also the commitments that are undertaken by accords that I mentioned earlier. I consider that our conversations were candid and frank, and, as I said, worthwhile. We have set up some procedures that we hope will resolve what differences there are. Beyond that I don't wish to comment.

Q. At the Soviet-American summit in Geneva, both parties agreed to the principle of substantial, even 50%, reduction of nuclear arms. If there is this readiness, will you kindly explain why the testing and deployment of new arms are going on? Why is not beginning the process of military expenditures, reductions in favor of development?

A. Actually the story of the last decade is one in which the United States has been taking more nuclear weapons out of use than it has put in, in the course of modernization, whereas the Soviets have built up. I think the important thing to focus on is the importance of radical reductions. This has been our program for many years, and it is our program today.

I think it is a matter of some significance that in the counterproposal prior to the Geneva meeting and at the Geneva meeting, the two heads of state personally put their endorsement on this idea of a 50% reduction. That is an important idea. Obviously, it only takes you a certain distance because it is a question of 50% of what, and our views about the "of what" are very different. However, that is what the negotiation is about, to resolve those differences. So the United States will continue to work for radical reductions in nuclear weapons across the board.

Of the weapons that seem to be of greatest concern in Europe are the so-called intermediate-range weapons, our position has been from the beginning, and remains today, that the best solution is zero. Right away. And of course, we have stated, and so have the Soviets, that our ultimate goal is to eliminate nuclear weapons entirely. But you have to walk before you can run, if I can label 50% a walk. That's certainly the step that needs to be taken.

Q. The Romanian President, earlier today talking about U.S.-Romanian relations, said they could be better. After your series of meetings today, how would you characterize this relationship between the United States and Romania?

A. I think the President said it well. They could be better, and so one of the purposes of my trip here on the one hand is to pay my respects to the many interesting stands and positions Romania has taken and the relationship that we do have and its basic fundamental importance, but also to discuss some of the reasons why it isn't better and to see if there are things that we can do to make it so.

Q. You carried a letter from Minority Leader Michel to the Romanian Foreign Minister. Could you tell us something about that? I mean, what was the purpose of this?

A. It was a letter given to me by the Republican leader in the House of Representatives. As it turned out, he had met the Foreign Minister when the Foreign Minister, with another portfolio, happened to be in Washington. So I think it was a natural thing that he should write and express some of his own concerns. But I don't think it is proper for me to disclose the contents of a private letter between Mr. Michel and the Foreign Minister.

Q. President Reagan said once that he recognizes the frontiers in Europe after World War II. That is, that they recognized the political map of the Continent as it is today. As I understand, during your trip—your present trip to Europe—you said that it seems to you that Europe is artificially divided. Now I want to put a very clear question. Do they, the United States, recognize the frontiers as they are today?

A. We don't, in that comment that I made in Berlin last night or in any other comments, suggest that we are

trying to charge the boundaries that are established in Europe. But I think it is a fact that Europe is divided. It is divided artificially; it is divided by barbed wire; it is divided by a Berlin wall; it is divided by restrictions of all kinds on the freedom of Europeans to travel to each other's countries, so there is an artificial division of Europe. It is a division of the people from each other. That is what I referred to. I think the world would be more stable, more peaceful, more joyous if this division were brought to an end. We constantly make that point, and I might say that I have heard many of my friends in Eastern Europe echo the same point.

Q. Did you discuss with President Ceausescu the huge trade imbalance between trade—between Romania and the United States—and if so, what was discussed, and were any plans set forth for addressing this?

A. We discussed the subject of trade, and I discussed it some more with the Minister of Trade who happened to be seated next to me by chance at luncheon. But with the President, the main part of the discussion had to do with our policies on technology transfer, which he criticized and which I tried to explain. And that was the main burden of our discussion. However, the subject of trade is an important bilateral subject, and we would like to see trade flourish to the extent that it can, and I believe that it can increase more in the future, and I hope it does.

Q. I am wondering if you would express your support to President Ceausescu about independent policy of this country? If so, in what way do you express your support?

A. It isn't a question of expressing support; it's a question of having a discussion, which we did at some length, of various issues of foreign policy, and there are many important subjects on which we seem to have a rather parallel view. There are others on which we don't. We went through these, and I think it was quite a worthwhile discussion and worth doing that. I was interested—I don't want to quote the President; he will speak for himself, so I won't expand on the comments, but just say as I did.

Let me just conclude by saying, and I mentioned to the President that at the opening ceremonies in Los Angeles of the Olympic Games a year ago last summer, as the teams from various countries marched into the stadium—I happened to be there with President Reagan—it was quite striking that the team that got the greatest amount of spontaneous applause was the Romanian team. And so in that spirit and with the symbolism of that Olympic event, let me say that as we try to work at the problems that we have and the undoubted problems between the United States and Romania, we agreed that we would work at them in the spirit of the Olympics.

NEWS CONFERENCE, BUDAPEST, DEC. 16, 1985[6]

I'd like first to express my deep appreciation to the leadership and people of Hungary—of course, particularly my host, the Foreign Minister—for inviting me here, and for providing me with such an interesting program. Of course, it was exciting to see the Danube flowing through Budapest and to see the wonderful buildings and museum, but even more exciting were the interesting discussions here with the Hungarian officials, in particular, of course, Mr. Kadar, who was most generous with his time this afternoon.

Q. Would you please give us a post-Geneva rundown, scenario, the way you would like to see for in 1986?

A. I think that's a little hard for me to foresee. The crystal ball has fingerprints all over it. I can't see through it very well. But let me say this about the meeting in Geneva. The President considered it to be a most worthwhile meeting. He had a good opportunity for a thorough exchange of views with Mr. Gorbachev. Some things were agreed to that have genuine significance, and it was interesting to me here to have people point out to me something that I agreed with—namely, there's one thing for each of those leaders to say separately that a nuclear war cannot be won and must never be fought. It has a little bit more weight and meaning when they say it together in a joint statement.

We from the United States side are engaged in a very intensive followup process within our government and already in contact with the Soviet Union in following up on the Geneva meeting because we want to move things forward as much as we can. And it is our impression from the responses on the Soviet side that they are equally serious in trying to pursue the matters discussed at Geneva and do what we can to bring them to a successful conclusion. What the outcome will be I can't forecast. But I can say with great confidence that a strong effort will be made to maintain a constructive spirit and to maintain an ability to agree to things and work out problems to the extent we possibly can.

Q. Along those lines, did your discussions with Mr. Kadar include the question of the role of countries like Hungary in the process of improving relations?

A. My discussions were quite rewarding as far as I'm concerned. I did have some things to say, but I did a lot of listening and I felt that I heard a great deal of wisdom. It is certainly the case that the world and the U.S.-Soviet relationship, East-West relationships, are at a very important moment, perhaps promising moment. And the people here in Hungary, and Mr. Kadar in particular, offered interesting observations, I felt, and that's a genuine contribution. And so I consider my trip to have been most worthwhile.

Q. Did your discussion include a discussion of Mr. Kadar's visiting Washington in the near future?

A. That didn't come up, but I'm certainly in a strong position to say to everyone in Washington that Mr. Kadar is a very interesting interlocutor and well worth listening to.

Q. Did you discuss the prospect of improving trade and cultural exchanges [inaudible] with Hungary?

A. We discussed our bilateral relations quite a bit, and I think on both sides we think that they are progressing in a satisfactory way. We don't have major problems. We would like to see trade expand to a greater extent. The cultural exchange is moving and in process, and there will be coming to the United States this spring—I think it

opens in April—a major display of Hungarian silver and gold works that I'm sure people in the United States will find interesting. I was told in the museum today, that 100,000 people last month came through there, and I'm sure there were some Americans present among them. There is a lot of that kind of exchange and it's certainly to be encouraged.

Q. If my memory doesn't betray me [inaudible] you refer to the unnatural division of Europe. Now what exactly do you mean by that and [inaudible]?

A. Let me say what I don't mean and then what I do mean. I don't mean anything about how the lines are drawn on the map. They're there. They're drawn.

What I do mean is that it seems to be unnatural that there be restrictions on movement of people in Europe from one place to another. I spoke about this particularly in Berlin, where there is the Berlin Wall, and what does it say? It says that it is a symbol of division. And it's not only a symbol, it's a reality of division, and it's unnatural. It's unnatural that German families can't visit each other freely or reunify. And the same through many other dimensions of life. I had a question a minute ago on cultural exchanges. So whether you're talking culture, science, economics, family, the history of Europe is one of diversity among different national groups but of a tremendous flow and exchange among them, and it's unnatural that that not be so. I think we should work to bring it—to make it less so and eliminate it if possible. For example, as I understand it, there is no problem at all about people moving across the Hungarian-Austrian border. There's a free flow there. That's good. That's the sort of thing we ought to see on a more widespread basis. That's what I mean.

Q. According to the last census held in the United States, there are 1.8 million ethnic Hungarians in the United States and half a million of them speak Hungarian. How do you see their role in the relations between the United States and Hungary? Maybe it serves as some kind of link or bridge between the two countries, promoting better understanding of the governments and the peoples.

A. I think you make a very good point about the existence in the United States of people from many different countries and in this case an important group from Hungary. On the one hand, the Hungarian-Americans have made very significant and important contributions to life in the United States, and we appreciate that. On the other hand, they also most generally have an interest and pride in Hungary, and so they call it to our attention. I think it is undoubtedly helpful. It was interesting to me to have our current Ambassador to Hungary, Mr. Salgo, as we were coming out I think it was of the National Museum—point out a sort of a garden nearby and said that when he was a child in school, he used to play in that garden. He brings a special understanding and affection and has been the agent, I think, for a genuine improvement in our relationships, so you have put your finger on something very important with your question.

Q. The assessments that were published in today's papers about Hungarian-American relations mentioned that while it's a very good thing that there is a development in trade but still that many Hungarian managers are at a loss in the [inaudible] because they cannot plan; there is this annual basis of most-favored-nation status, and this really gives a hindrance or an obstacle of a longer or a greater flow of Hungarian-American trade. How do you see this problem, and was this problem raised in the discussion?

A. Yes, this question was brought up with me several times, whether or not there couldn't be some sort of multiyear or elimination of the MFN question. At this point I don't see any particular prospect of a change in the law under which that takes place. And it isn't really a question of Hungary, really.

At the same time, there is no opposition in the United States, or no basis for it, to the continuation or of MFN treatment for Hungary; so, it really isn't an issue. But I think it would be at some point when the time is propitious to deal with the question, because it's quite understandable that it helps to have the certainty that the conditions that are in effect, let's say today, are going to be in effect a year from now or 2 years from now. It helps in the conduct of trade and business and investment without a doubt. But I think that anyone who makes that assumption under today's conditions is making a correct assumption.

Q. It's your first visit to this part of Europe. Did the [inaudible] and information you got so far possibly enrich or probably modify your previous [inaudible] East-West relations [inaudible]?

A. It certainly enriched my understanding. It's always different, and better, [inaudible] to come to a country and talk to people there, as distinct from talking even to the same people in some other place. It's good for me to come here and get a better appreciation of the view of people, of the beauty, of the culture, of the history. You can feel it, when you're here, in a fuller sense. I don't think I could say I was surprised because I expected to have good, frank, searching, worthwhile, and rewarding discussions, and I have. I expected to see some things that would be quite extraordinary, and I have seen them. So I wasn't surprised. My expectations were high, and I wasn't disappointed.

Q. You called Mr. Kadar a wise interlocutor. Could you be more specific on what you wanted to learn from him—a discussion, a little more on your discussions?

A. We talked about developments in Hungary—that was enlightening to me—and how I should understand them. We talked about U.S.-Soviet relationships, and he gave his reflections on the meeting in Geneva and the importance of followup on Geneva, and we exchanged views on that, and we talked in general about East-West relations. He had many comments that I found worthwhile, but I don't think it's proper for me to go into detail, but those are the general areas on which we found it—good.

Q. In your speech in Berlin, you also talked about how the United States does not accept the incorporation of other countries into a Soviet sphere of influence. The United States has been, I think, rather passive in recent years toward most of the countries in this part of the world. Do you foresee, perhaps, more attention being given to having more American influence in the countries which do not perhaps have as good relations with the United States as Hungary does? I'm thinking of Czechoslovakia, Bulgaria, Poland.

A. I think that can very well be a natural tendency, and I hope it takes place just in the natural course of things. If it turns out to be so, and I

hope it will be so, that the general tenor of East-West relationships and U.S.-Soviet relationships improve. We do have some very interesting settings which are important for their own sake and also important for just the question of who's there.

I particularly would single out the Stockholm negotiations on confidence-building measures in Europe. These measures are important, but it's also interesting that attending those meetings and working at it are the NATO countries, the Warsaw Pact countries, and the neutral and nonaligned countries. It's a good mixture, and a good place for people to talk. It provided the occasion for Foreign Ministers' meeting in Stockholm, and, of course, the parent Helsinki process provided a similar setting last summer, and that was fruitful. I think in the normal course of events if things move in a direction we'd like to see them move, and of course they may not, but if they do, then we would expect to see more contacts, certainly.

Q. For Hungary, the economic side of the relationship is quite important. Do you see a possibility for a substantial improvement on this field as a result of your visit?

A. I don't know that it's the result of my visit, particularly, but the amount of trade between us is small. It's significant, but it's small. I think that it shouldn't be difficult to have a big percentage increase. Percentage increases on small bases are always a little deceptive, but if that's what you mean, yes, I think that could happen, and a visit doesn't necessarily solve any of those problems. Those are questions of trade, represent things that businesses do, not things that in our country that governments do, except that the governmental overlay and encouragement, perhaps gives some reassurance, for example, on the MFN question that you raised, and that may help. I hope it does. Also we discussed the general world economic environment and what needs to be done about it because both the United States and Hungary are a part of the world economy. We're affected by it. We're both trading nations, and so what happens in that sphere will have its impact without a doubt.

Q. How high are East-West relations on your personal agenda in American foreign policy? East-West relations turn out to be, in the majority of cases, American-European relations as well, as it became much of a fashion in the United States to talk about the decline of Europe, and about American attention concentrating much to the south and to the west within the United States [inaudible]. How do you see it?

A. I think the general subject of East-West relations and U.S.-Soviet relations is right up at the top of our agenda, and it will get full attention from President Reagan and all the people working with him. We will spare no effort to see that things go forward in that sphere. I think that in doing so, and doing it in collaboration with our friends and allies around the world, not just in Europe, we're doing something that I think people very much want to see. It is true that all around the world people would welcome a more constructive U.S.-Soviet relationship, if one can be built on a realistic basis that serves the interests of people around the world. So they want it, and they want it worked out, and we do, too, and we will do so.

Q. Regarding the policy of differentiating among the nations of Eastern Europe, and between them and the Soviet Union, during your talks, and especially your talks here in Hungary, what do you suppose is the most you can hope for in the way of results from that policy? What would you like to see that policy achieve for the United States?

A. I think that really it's a question of recognizing that countries differ from each other in the natural state of things. We speak of Europe, let alone Western and Eastern Europe, but when you come down to it, those words are a little too broad and you have to speak about individual countries.

The same is true in other areas of the world. Often in the United States, people talk about South America, but when you work at the problems of South America and travel and do business there, and so on, as I have, you quickly drop that and say, we'd better talk about Argentina or Brazil or Venezuela or Mexico or whatever because each country is distinctive in itself. Certainly that's true in this case, and what we seek to do is—where we can, where it's appropriate—develop a reciprocal pattern of improving our relationships with countries around the world, including here in Hungary.

JOINT NEWS CONFERENCE, BELGRADE, DEC. 17, 1985[7]

Secretary Shultz. I appreciate the reception here in Belgrade, and the very fully filled day of discussions. We've covered the subjects in our bilateral relationship, which basically is a good one; we've covered our interests in economic problems, including the international economic environment; and we've discussed political and security issues generally, with many interesting perceptions given to me by my colleagues from Yugoslavia about the development of East-West relationships and our own relationship with the Soviet Union and the President's meeting with Mr. Gorbachev in Geneva. In addition I had the fun of a visit to an extraordinary 19th century house. It was an interesting little visit to the history of your country and I appreciated that as well.

Secretary Dizdarevic. May I say that we quite appreciate the fact that we have Secretary Shultz visiting here with us in Yugoslavia. And as you heard from him already, ever since he arrived in Yugoslavia, until this present moment, we've practically been talking all the time. And at these talks we have exchanged opinions and assessments with regard to all aspects of our relations and also with regard to our bilateral cooperation.

Speaking of our bilateral cooperation, may I proceed from the assessment that our bilateral relations are good and that they are based on the fact that our two countries wish to cooperate, although we have different internal systems and although we have different international positions and although we have different views with regard to quite a few issues. However, there is an interest in cooperation on both sides, and we believe that in this way we can only contribute to world cooperation.

We have discussed a large number of topical international issues during our talks today, and we have heard some very interesting appraisals of the recent Geneva meeting from Secretary Shultz; also with regard to what has been happening since the Geneva meeting and also how he views the aftermath of the Soviet-U.S. relations. We also expressed our views and the views of nonaligned countries with regard to this process of negotiations, and I hope that Mr. Shultz

won't mind if I refer the attention of you all to the toast that he delivered at our luncheon today. I am convinced that it is going to be most useful to you for these particular purposes. May I say in conclusion that we are very satisfied with the talks we have had because these talks were very substantive, very frank and very friendly.

Q. Did you discuss the multiyear rescheduling of Yugoslav debt by Western governments and bilateral trade relations between the United States and Yugoslavia and if so, what's the U.S. position?

Secretary Shultz. You added the last part of your question or I could have just said, "yes." We did discuss those matters. Insofar as trade is concerned, we both believe that it could expand; we'd like to see it expand. I think one of your colleagues just returned from the United States in a mission with the U.S.-Yugoslav economic mission. There are certain problems we discussed: textiles, steel, the application of dumping, and such legislation. All this is part of the scene as it affects all countries, not just Yugoslavia. But I think I can fairly say and my Yugoslav hosts did note that the U.S. market is basically open, and we are ready to receive their goods. We would like to sell goods here. We talked about that, too.

Insofar as the MYRA [multiyear rescheduling agreement] is concerned, we discussed that and also I was able to say on my own behalf and my government's that we're really tremendously impressed with the steps taken here and the results of them. Insofar as the commercial MYRA is concerned, that's been signed. We encourage that. And on the question of MYRA on official debts we have an open mind, and we're prepared to discuss this with the Government of Yugoslavia. We talked enough about the ins and outs of that at some length.

Q. [Inaudible] the irreplaceable role and the contribution of nonaligned countries to the easing of tensions is well-known. How do you view the role of nonaligned countries today, bearing in mind the fact that relations between the two superpowers have thawed?

Secretary Dizdarevic. You know that the policy of nonalignment and the movement of nonaligned countries ever since its very outset, that is, starting with the Belgrade conference, was involved in the easing of tensions, the process of negotiations and cooperation with the participation of all and to the benefit of all. The kind of policy and these objectives of the movement have always received our full support. And as you could see at the conference in Lusaka and also at this present point of time, the dialogue that the two superpowers are involved with now have received the support of the movement of nonaligned countries, which on the one hand did present its point of view with regard to these intentions and the process of negotiating, but on the other hand which also contributed with its own activity to the general international atmosphere, which would be conducive to the development of this process and to giving it a more sustained support. It was, after all, we believe that there could be no detente, no relaxation of tensions, if there is no easing of tensions and, if there is no cooperation between the two superpowers, but we also do not think that this can be a lasting process if it does not encompass all countries and if it does not rely upon the easing of tensions between all countries and with regard to all problems.

Q. At your press conference in Budapest a few days ago, you said that you thought there was an improvement in East-West relations and you also said that it was the point of view of the German side that there have been some positive impulses from the Soviet side. What did you have in mind?

Secretary Shultz. I was referring to the followup process after the Geneva meeting. I said that we were working hard on that on the U.S. side and that we, of course, were having contact with the Soviet side of that process. Judging from the responses that we've had, we would estimate that the Soviet side is working seriously on these issues as we are. So neither we nor the Soviets have taken a deep breath after Geneva and said, "Fine, that's over and now we'll wait a year or something like that." We have picked right up and are following up and doing all that we can to see that as constructive and stable a relationship is developed as is possible.

Q. You said before you left Washington that you would be visiting three countries named Romania, Hungary, and Yugoslavia that would benefit from your visit. Does this still hold true and if so, what benefits did you have in mind? Question for Secretary Dizdarevic. You said that flashpoints of crisis were discussed in these talks. Could you say something more specific on that?

Secretary Shultz. I don't think I said that these three countries would benefit from my visit. That's for them to decide. I hope they do. What I believe I said was that I expected to benefit from the visit myself by virtue of going to, in the case of Yugoslavia, a country that I have been to before but not for quite a while and by visiting two other countries that I haven't visited. And in talking with them about our direct relationship and in reflecting with them about developments in the world, including East-West developments, and hearing their perspectives. That has been clearly helpful to me, and I am glad that I had a chance to make this visit.

Secretary Dizdarevic. We did have an exchange of views on flashpoints of crisis throughout the world, that is, both Secretary Shultz and myself had our talks and also Secretary Shultz in his talks with the President of the Presidency Vlajkovic. Each side expressed its own views with regard to these flashpoints. The thing we have in common, if I can speak on behalf of us both, is that we find it difficult to speak of easing tensions worldwide and to make steps toward a better situation without having these flashpoints overcome.

Q. Did you discuss the question of hijacking and international terrorism, and could you say what the position of the two sides are on the question of Mohamad Abbas?

Secretary Shultz. We did discuss the subject of terrorism and, from the U.S. side, I expressed the great concern we have about this problem, about the fact that it has become a major problem that is not a national problem; it's an international problem. Hijackers and terrorists operate across national boundaries, and so we seek to cooperate with other countries in dealing with this problem. We think that we need to create an atmosphere where terrorists have no place to hide and are brought to justice. We're glad to see the four who are being held in Italy on trial. We would like to see Mr. Abbas in the same position. I expressed my disappointment that he was allowed to pass through Yugoslavia, and, at the same time, I think I can fairly say that the Yugoslavs stated their agreement on the importance of the problem. We've had an exchange through our Ambassador in charge of this problem, Mr. Oakley, who's been here, and we hope to continue to evolve a cooperative relationship with Yugoslavia, because we think

of this as a problem of great importance to both countries and to countries around the world.

Secretary Dizdarevic. We did discuss the problem of terrorism. You are familiar with Yugoslavia's stance and that is that it is a very serious problem that is an international problem. It calls for the involvement of everyone individually and for cooperation in combating terrorism.

Yugoslavia has been active in this respect for a long time, because it has been a victim of acts of terrorism for a long time, too. While expressing our views with regard to this particular matter, we also expressed Yugoslavia's readiness to cooperate with the United States of America with regard to that issue as well.

I should like to remind you of Yugoslavia's point of view with regard to international terrorism and that is also that Yugoslavia clearly distinguishes between the struggle against colonialism, against aggression, against racism on the one hand and terrorism on the other hand. When speaking of terrorism and the struggle against terrorism, one must also view the causes that lead to it, because we believe that by the elimination of positive terrorism, the phenomenon itself can be controlled and eliminated. As regards the Abbas case, I should like to say one thing: Everything that we had to say to each other concerning the Abbas case, we did say at the time when this was a topical issue and as far as Yugoslavia is concerned, this has been overcome.

Secretary Shultz. I would like to add a point, if I may, on this question of causes. Hijacking the Italian ship, murdering an American, torturing and holding of a whole bunch of other Americans is not justified by any cause that I know of. There is no connection with any cause. It's wrong, and the international community must step up to this problem and deal with it unequivocally, firmly, definitely. There must be no place to hide for people who do that kind of thing, and you probably feel the same way.

Secretary Dizdarevic. I told you today and you do know that Yugoslavia is against all forms of terrorism and against all terrorism acts.

Q. In an interview 2 days ago, Yasir Arafat said that the PLO would be prepared to accept all resolutions of the United Nations Security Council including Resolutions 242 and 338. What would the attitude of the U.S. Government toward the PLO and an international conference on these issues be in that case if all of this really materializes—what Arafat mentioned—

Secretary Shultz. U.S. conditions for a discussion with the PLO have been clear for many years: Let them state their support for UN Resolutions 242 and 338, and recognize the right of Israel to exist. I might say from the standpoint of the peace process generally, it's hard to imagine them taking part at the peace table when they advocate the elimination of Israel by armed struggle and take part in terrorist activities. It's not a matter of speculation that they take part; they claim credit for terrorist activities. There has to be a shift of gears and I hope certainly that somehow or other a shift does take place.

Q. [Inaudible] did you discuss hijacking in Romania and Budapest and [inaudible]?

Secretary Schultz. I discussed the subject of terrorism generally in each place that I stopped and I can't think of a country that I ever go to where we don't discuss the subject. It's on everybody's mind. It doesn't have to be me all the time that brings it up. Other people have it on their minds as well.

Q. [Inaudible] the increasing of the hostility of the United States against Nicaragua. So you believe that at any moment the United States can order the invasion of Nicaragua?

Secretary Shultz. No, there's no plan at all for the United States to invade Nicaragua. This is a figment of Nicaragua's imagination. What the trouble with Nicaragua is is that it is alienating itself from its own people and its own neighborhood. The most recent example is, with clear relationship to Nicaragua, the activities of the M-19 terrorist group that took over in the House of Justice in Bogota, Colombia, and in the firefight that ensued, murdered most of the justices. It's clear that what they were after was the justices who were dealing with the drug trafficking, with which these terrorists are aligned. So there's Nicaragua for you and that is what is alarming its neighborhood. Nicaragua's problems are of its own making.

Q. [Inaudible] you have been in Romania first, and as well Bucharest and Budapest, you [inaudible] up the issue of human rights plays a big role although in different ways in both capitals. Now recently is published a report of Amnesty International about Yugoslavia in which Amnesty expresses concerns about the human rights situation in Yugoslavia. Was it also an issue in your talks here in Yugoslavia, and if you say it was so, was there also made the same linkage as was made in Romania and Hungary between economic relations and the human rights record?

Secretary Shultz. The problem is entirely different, and we have said our piece on that. We work constructively with the Government of Yugoslavia on these problems.

Q. You said you condemn acts of terrorism. Do you specifically condemn the hijacking of the Achille Lauro? Secondly, as the Secretary said unequivocally that the PLO is connected with acts of terrorism, do you agree with that statement and will you respond to it?

Secretary Dizdarevic. You could have read that at the time of the hijacking—Yugoslavia's official views as presented in the press release of the Federal Secretariat for Foreign Affairs where this specific action was condemned.

Q. What about the connection between [inaudible] and the PLO and what the Secretary of State said it's not a matter of speculation about those that are involved in terrorist activities?

Secretary Dizdarevic. You know what Yugoslavia's stand with regard to the PLO is. We consider the PLO to be a liberation organization and the legitimate representative of the Palestinian people. The policy of the PLO is not a policy of terrorism. And the acts and views of individual Palestinians and individual groups should not be confused with the PLO as an organization and with the policy of the PLO as an organization. Obviously, our views differ on this matter.

News Conference of December 6

Secretary Shultz held a news conference at the Department of State on December 6, 1985.[1]

On Monday I will begin a trip to Europe—Western Europe and Eastern Europe. In the wake of the Geneva summit, the United Stated rededicates itself to its alliance with its fellow democracies and reaffirms its commitment to the cause of peace and freedom throughout that Continent.

Since the end of World War II, the countries united in the Atlantic alliance have drawn strategic, political, and economic sustenance from cooperation with one another. This solidarity has made the success at Geneva possible. Our hopes for a more constructive East-West relationship depend on the democracies' standing firm on basic principles.

In my discussions with NATO foreign ministers in Brussels and in my visits in London and Bonn, I'll carry forward the intensive consultations which the President began on his way back from Geneva. Economic interdependence is also part of the bedrock on which the alliance is based. At our annual ministerial consultations with the European Community, we will address the pressing issues of trade policy to ensure the openness and fairness of the world trading system.

I'll also visit Berlin. Berlin is an inspring symbol—a city that knows better than any other what is really at stake in the conflict between East and West, a city whose very survival dramatizes how Western solidarity is the key to freedom, prosperity, and peace.

From Berlin, I'll continue on to Romania, Hungary and Yugoslavia. The United States and its allies have always insisted that the division of Europe is artificial, unnatural, and illegitimate. The peoples of the Eastern half of the continent did not choose to be cut off from the peoples of the West. If there are to be more constructive East-West relations, they, too, must share in its benefits.

Romania, Hungary, and nonaligned Yugoslavia have each shown that the countries of the Eastern part of the continent have their own identities and aspirations. My visits there will show that we acknowledge this and support it.

And so our foreign policy is moving forward with our allies, seeking further developments in East-West relations across a broad front.

Q. In your trip to Eastern Europe, would the United States like to see more independence on the part of those countries you're visiting, more of a sense of nonalignment?

A. Well, of course. But we also are interested in their internal situation. I personally will be fascinated to get a firsthand feel of developments in Hungary. We have been very much interested in the extensive emigration from Romania; and Yugoslavia, of course, in its nonaligned status and leadership in that regard has always been a place of great interest to us.

Q. Are there any specific pragmatic things that you are prepared to do to encourage that sense of nonalignment?

A. The visit itself is a recognition of some of the things that are currently going on. And I think it is helpful to us, and I hope to them, to hear from the United States what our view is of East-West relations and what our view is of developing U.S.-U.S.S.R. matters and arms control matters and discussions across the board. And so various officials periodically visit, and this is an opportunity for me to do it. I've wanted to do it for some time, and it's the first real chance I've had.

Q. Could you tell us, please, what is holding up the Mideast peace talks that the United States hoped to see begin by the end of the year?

A. Our problem, of course, is to see how we can get the mechanics of bringing them into being into place. There has been some very considerable progress.

I think the recognition all around that in the end direct negotiations have to be the way in which an answer is found is positive. I think the recognition that it's a process that we need get going rather than feeling that there has to be end result preordained is progress.

But, nevertheless, it's very hard to find what the right way is to represent Palestinians. That's been a problem all along. It's a problem stated, in a sense, in the Camp David accords, and it remains a difficult issue just as the problem of some sort of an appropriate international auspices is a problem. So those are problems, and they're difficult. We're working on them.

I might say Ambassador [Richard] Murphy has had a very interesting trip through the area. He's in London today meeting with ambassadors, and I look forward to talking with him on his return.

Q. You spoke of a preordained outcome. Well, of course, there always had been a notion that the Palestinians—even the Jordanians—know what they want the results to be.

Are you saying that the Palestinians are prepared to go into a Mideast peace conference without a Palestinian state being preordained? Do you know such Palestinians?

A. I see that King Hussein [of Jordan], with support from Palestinians, is prepared to enter a process if we can find the way to do it, and there isn't any preordained outcome. We don't know what the outcome is. That's the whole point of the negotiation. The negotiation will have a dynamic to it once it gets started. That's the way it will work.

As I think is pretty clear, King Hussein has said if the answer is that we enter negotiations and what happens is we go back to the pre-1967 borders and arrangements, he said, "I don't need any Palestinian participation to agree to that." But I assume that that's not what's going to come out of it, and so therefore, there has to be a kind of participation that can allow a deal to be made and lived with.

Q. Are significant numbers of Cuban troops fighting in Nicaragua, and are you concerned, as is Assistant Secretary [Elliott] Abrams, that the next step might be the establishment of Soviet bases in that country?

A. I certainly am concerned about the Cuban presence and military presence in Nicaragua and on the mainland of this hemisphere. It's not news to us that this is taking place, but the bringing down of the helicopter with a Cuban pilot and copilot on it is sort of incontrovertible evidence.

We'll have some more evidence for you by late this afternoon and some defector reports that are being declassified and will be made available through the Press Office. But the fact that the Cubans are active militarily is clear, and the fact that this is happening through Soviet-supplied military equipment is clear.

Q. How about the Soviet-base angle?

A. To the extent that the Soviets are supplying and influencing and have a predominant role in Nicaragua, I suppose you can say that amounts to a base. Now, we certainly don't want that and have been pointing up consistently the potential of this problem.

Q. Following up on that question of the Cuban military personnel in Nicaragua, is there any sense in the Administration that because of that there might be a need to request military aid for the Nicaraguan insurgents from Congress next year?

A. It remains to be seen what we may request next year. I think it is worth noting that in the legislation under which the current assistance is being provided, recognition was made that it's a dynamic situation; and so there is a provision for a privileged—in other words, fast—vote on any request that may be sent up. But beyond that, I don't want to comment right now.

Q. After Mr. [Chester] Crocker's talks in Lusaka with the Angolan Interior Minister, we were told there were reasons for optimism that some kind of peace could be worked out in southern Africa. Could you tell us what those reasons are?

A. Just that there has been some movement and recognition going beyond, on the one hand, acknowledgment of the principle that Cuban troop withdrawal is a part of the problem. It has to be dealt with; do a little bit more discussion about that, on the one hand. And from the South African standpoint, similarly, responsiveness to some of the things that we have been saying.

So I suppose the best way to put it is that the negotiating process is very much alive. But beyond that, I don't want to go into detail about it.

Q. In the past, various members of the Administration have characterized the growing Soviet—or the growing Cuban involvement in Nicaragua as something that is intolerable to the United States. If it's intolerable, what are you going to do about it?

A. I think the first step is to be sure that people see it and understand it and believe it. The Administration has been pointing this up for some time, and we have gotten great skeptical responses. But at this point, I think there are pieces of evidence that are undeniable, and it does pose a serious problem. And as the problem is genuinely taken on board, there may be further steps that will be possible.

Q. The Angolan Government has for some time stated that it accepts the principle that the Cubans must eventually withdraw from Angola but has never done very much to put something on the table that would be meaningful.

Did they do so in these last talks? And number two, what is your view today toward the provision of either overt or covert aid by Congress to the Savimbi people?

A. What has happened is that this issue of principle, in a sense, was resolved, as you pointed out, and we made some more concrete suggestions that laid on the table, so to speak, both in Angola and South Africa, for some time. Now we've seen some responsiveness to those more concrete suggestions.

That doesn't mean that we're somewhere near a settlement, but there has been some responsiveness to things that move beyond a question of principle into things that have quantities and timetables and so forth attached to them. That's where we are.

As far as assistance to UNITA and Mr. Savimbi are concerned, as the President has said and I have said, we support those who fight for freedom against the Soviet and communist regimes around the world, including in Angola. Our desire is to support them effectively. And we don't think that the program being put forward by some in Congress, while its purpose is one that we agree with, is likely to be effective.

Q. Let me go back for a moment to the Middle East, if I may. As a result of the Geneva summit and of Secretary Murphy's travels in the region, do you see any reason to believe that Syria is any more prepared to play a constructive role toward getting to direct negotiations? You said a moment ago that there seemed to be recognition all around. Does that include Syria?

A. I was not including Syria in that. I was thinking about those who have been working on it most intensively, particularly Jordan and the Egyptians, the Israelis and to some extent states that have been supporting the moderate elements.

I would say, without wanting to go into detail on it, that Dick Murphy had some very interesting discussions and worthwhile discussions in Syria, and Syria is obviously a country of key importance, and so we keep in touch with Syria.

Q. Mohammed Abbas, the Palestinian being sought by the U.S., was quoted yesterday as being in Baghdad. He has been in the past traveling on an Iraqi passport.

Has the United States sought Iraqi assistance in extraditing—in confirming whether he's there and extraditing him? Have the Iraqis been cooperative? Is there any consideration, if not, of returning Iraq to the list of terrorist countries?

A. We have been pursuing him, and I believe the Italians are as well now. His complicity is clear, and so far we haven't been successful in getting him. That's where I'll leave it.

Q. You said a little earlier, "Further steps are possible" with respect to a U.S. response to Cuban involvement in Nicaragua. I wonder if you could elaborate on those further steps?

A. No, I wouldn't want to elaborate on those further steps other than pointing out what I already pointed out—that the legislation under which we're operating envisaged in its terms that the situation is dynamic and therefore it provides that, if an Administration request is made, there will be a privileged vote on that request.

Q. In the last 5 years, there's been a gradual escalation of Cuban and Soviet involvement in the country. As far back as 5 years ago the United States had threatened to go to the source and to take action, and it seems, at least from the outside, that so far the American reaction to this escalation has been to increase its support for the insurgents rather than to take direct action against the Cuban Government. Will action be taken against the Cuban Government?

A. I think our strategy in Central America has been working very well as we see the emergence of democracies in the region. We see the increasing isolation and self-isolation of the communist government in Nicaragua from others in the region and increasingly from its own people. We see the recognition of the relationship of that government, for example, to terrorism in the region—the M-19—and so I think the contrast between what they're doing and what they represent, and what others in the region are doing and represent, is increasingly clear.

So, I think, in that sense, our strategy is working. But it is incumbent on us, as a moral matter as well as a strategic matter, to support those in Nicaragua who are fighting for freedom in that country, and we will continue to do so.

Q. Has the U.S. Administration formulated a well-defined attitude or a position toward the idea of an international context for the Middle East negotiation?

A. When you say, "Middle East negotiation," it's a big place, and I call your attention to the fact that the bloodiest war going on right now is the war between Iran and Iraq which we would like to see brought to an end. Our influence with Iran is negligible.

On the other hand, we have been counseling our friends not to send arms to Iran, because they are the intransigent party at this point in coming to a peaceful resolution. And we feel that if that kind of policy can be implemented, including the flow of arms from friends of the Soviet Union, perhaps we can see a resolution to that war.

Now, I don't know whether that's the war you were speaking of, but I think it's well to keep that in mind. It's a very important part of the picture. It has its implications for the gulf, and it's had its fallout into people's concerns about oil supplies and so on.

As far as the Arab-Israeli conflict, we have a clearly defined set of goals and a general strategy for trying to get there; and I've described, in response to an earlier question, some of the tactical difficulties that are, indeed, very great difficulties and have made it hard to move this process forward for some time. There has been some movement, and we'll continue to work on it.

Q. Could you tell us in that context what role you see for the Soviet Union, particularly in terms of an international conference?

A. I think the Soviet Union has to ask itself, is it going to establish full diplomatic relations with Israel so that it has a footing with all of the countries involved? Is it going to examine the way it treats Jews in the Soviet Union? Is it going to take a look at its emigration policies? All of these sorts of things affect the receptivity to the Soviet Union's activities in the region, and these are questions, I think, that need to be asked before we start talking about an international conference.

Q. Can you report any progress on the talks with the Israelis on having Justice Department and, I take it, State Department people in Israel to interrogate people involved in the Pollard case? And can you be more specific on what it is we're looking for from the Israelis? Do we want all the documents back on this case?

And a parallel question: Are you concerned about the case involving the CIA [Central Intelligence Agency] employee with the Chinese Government, because, I mean, after all, we've had friendly relations with the Chinese for some years now and even have offered military help to them, and yet, clearly, espionage activity was going on in that period.

A. Obviously we're concerned about all espionage against the United States, from whatever quarter, and that goes across the board. As far as the Pollard case is concerned, we have had continuing discussions with the Israelis about it, and a team will go to Israel early next week, and we have every reason to believe that the issues involved will be resolved satisfactorily.

Judge [Abraham] Sofaer will lead the team, there will be Justice and FBI [Federal Bureau of Investigation] representation, and we expect matters to go forward expeditiously and properly.

Q. The delivery of American aid to the Nicaraguan democratic forces seems to have a bad case of the hiccups—deliveries not made—and Honduran authorities are now saying that the American Government is holding up economic aid in retaliation. What's the situation, and what's the remedy?

A. The situation is that we are delivering assistance in a proper way. I don't want to describe in detail exactly how that's being done. There are problems. There always are problems. We confront problems; we overcome them. New ones arise; we'll overcome them. But it's an ongoing process, and the instructions to our office that's administering that are: (a) do it properly in faithful conformance to the legislation under which we're operating; (b) get it done, get the deliveries made. And that's what's taking place.

Q. You say U.S. policy in Nicaragua is working well. My question is, where is this policy heading? We have right now the Contadora peace initiative basically disintegrating at the same time that there is an escalation on both sides, if you count helicopters from the Soviet Union and missiles. Where is this going?

A. First of all, when you look at our policy and ask how its doing, what you really have to look at is what is happening; and what is happening is that democracy is taking root in the region, steps are moving forward toward economic development in countries other than Nicaragua. There are great difficulties because of the fighting, but nevertheless there is definitely motion there. The situation is much healthier than it was, let's say, 3 years ago.

And as far as Nicaragua is concerned, the true nature of the Nicaraguan communist government is increasingly clear to everyone—in South America, in Europe, as well as here. And the way in which they are treating their own people is evidenced by the strength of the movement that opposes them and which we support.

Now, we'd like to see this come to an end, and the President some months ago made a peace proposal which the Nicaraguan communists ignored, but that offer, that proposal, remains on the table. In the meantime, however, we will support our friends and try to help them develop and flourish and democracy take root and flourish; and we'll continue to oppose what the Cubans and Nicaraguans, with Soviet support, are trying to do in the region. It's not only bad for Nicaragua, it's a cancer in the region.

Q. The Nicaraguans have withdrawn their ambassador over this incident. They're accusing the CIA of supplying the missile that shot down the helicopter.

First of all, do you have any intention of recalling the U.S. Ambassador for consultations over this? And, secondly, is there any truth to the Nicaraguan charge?

A. There's no truth to the charge that these weapons are being supplied by the United States. Our legislation prohibits that, and we are faithful to the legislation.

Obviously, these kinds of surface-to-air missiles are available on the international market. We know that the Nicaraguan communists have plenty of them themselves, so it may be that they got them out of—captured them from there, but somehow or other they got ahold of them. And the point is that the Soviet and Cuban presence and materiel is there and being used against the Nicaraguan people, and thank goodness

that they did get ahold of some weapons that can knock these choppers down and were able to use them.

Q. On the question of the ambassador?

A. Ambassador [Harry] Bergold happens to be in the United States right now. He wasn't recalled, but we're certainly going to have strong consultations with him. But we don't have any intention at this point of withdrawing him. He provides a valuable presence in Managua.

Q. Going back to the Middle East, since you didn't include Syria in the list of countries which are helpful to the peace process at the present time—

A. We hope that Syria can be helpful to the peace process, and I said that I just—in terms of my statement of all around accepting the idea of direct negotiations, I didn't mean to include Syria. But Ambassador Murphy had very interesting discussions in Syria.

Q. I might just—bear with me—how do you see the Jordanian-Syrian rapprochement? Will it be helpful to the peace process that is going on now?

A. You like to see stability in the region. It's a little bit puzzling to me, and I don't feel that I have a good, full understanding of all of the factors involved in it. But, clearly, that tension between Jordan and Syria has many dimensions to it, including PLO [Palestine Liberation Organization] and Palestinian dimensions and many other elements.

Q. The Soviets have increasingly been talking about Mr. Gorbachev's proposed visit here next year as some kind of a target date or deadline for agreements in the nuclear arms field. Do you think that's useful?

A. Certainly, any major event like that provides a sort of a deadline against which to work. At the same time, the President will approach the next meeting in the same way that he approached the last one—namely, that if there are agreements that are in the interests of the United States to be found, we will want to find them and use whatever incentive a meeting gives to make that search.

On the other hand, we won't be in the position of feeling that the meeting itself provides such a prominent venue that we would be willing to agree to something that we don't think is completely in the U.S. interests. So that's the way we have approached these things in the past. That's the way we'll continue to approach them.

Actually, I think the Geneva meeting did produce, when you look at it in what took place preceding it, quite a little movement in the nuclear and space talks. After all, as part of the prelude to it, the Soviets finally put a counter-proposal on the table, and we came back very rapidly with a counter-counter-proposal. The motion was reflected in the statement of agreement, and so there was some motion connected with that, and perhaps there will be some as we move along—I certainly hope so—next year.

Q. You lamented the unnatural division of Europe; and yet one of the people you're going to see on this trip, Janos Kadar, was the man 30 years ago, when he had the chance, sought to foster the unnatural division. And I wonder, are you visiting him as a kind of a demonstration that a leopard can change its spots?

A. There are a lot of interesting developments in Hungary in the way they are managing their affairs; and as a person interested in economic development, I like to see it first hand. I've had a number of visits from prominent Hungarians since I've been Secretary of State and talked to them here. But I've also had the experience and know that it's one thing to talk to somebody here; it's another thing to go to that person's country and get a feeling for what they're doing. And so I think it will be an interesting experience for me.

Q. I don't know if you answered an earlier question about whether the conflict in Nicaragua is escalating in view of the Soviet helicopters and the surface-to-air missiles (SAMs). Do you think it's escalating down there?

A. The Soviet helicopters and the Cuban presence have been there for quite awhile, and this process of militarization of Nicaragua, as one of the earlier questions brought out, has been going on for a long time. It's not some sudden surge; it's there. And those who oppose the perversion of their revolution have been growing in numbers.

The use of helicopters is an effective military tactic if it isn't opposed, and the fact that the *contras* now seem to have an ability to shoot at these choppers may censor their use somewhat, and that is very good. And I hope they have more of these weapons.

Q. Couldn't it have the reverse effect, that if the *contras* use SAM-7, or whatever, missiles to shoot down helicopters, that the Soviets will, in fact, introduce still a higher escalation of weapons and, in fact, give Salvadoran guerrillas SAM missiles—similar missiles to shoot down U.S.-supplied helicopters?

A. My impression is that they have been putting stuff in there as fast as they can, and as fast as they think it can be absorbed, in any case. So we are basically, or the *contras* are, reacting to what they're contending with, and what they're contending with are these helicopters, and they have to deal with them if they're going to be successful.

Q. But there have been limits—there seem to have been, if you will, sort of lines drawn. The Soviets have not introduced fighter aircraft into Nicaragua. The Salvadoran guerrillas still do not seem to have ground-to-air missiles.

A. I don't think that we can expect people, who are fighting for freedom in their country and facing the kind of fire from helicopters that they have been getting, to think that that can happen and they shouldn't do something about it. If I were them, I'd certainly want to; and they do, and they have gotten ahold of missiles—surface-to-air missiles—and they have figured out how to use them, and they've used it effectively in this case. And I say, fine, I'm all for it.

Q. Has a date been set for a followup summit?

A. No.

Q. And have you got a date to meet with Mr. Shevardnadze again?

A. No.

Q. Do you expect that before the arms control delegations get back to work in Geneva there will be some new instructions worked out, or do you think the United States can stand on its previous counterproposal?

A. On the last question, of course, we have put a counter-counterproposal on the table in Geneva, and that was the last thing that happened at the end of the last round. There wasn't, really, an opportunity for the Soviets to respond. So I think it is perfectly proper and to be expected that the next thing that should happen is that they should respond. So we'll expect that to take place.

Now, certainly, out of the discussion in Geneva that the President had, we will reflect on that. Out of the pledges made on each side that we want to move aggressively in these negotiations, we're going to be examining matters. But basically we have a very interesting counter-counterproposal on the table, and we'll want to see what the Soviet response to it is.

As far as the first two questions are concerned, we are, of course, working on when would be an appropriate date for the General Secretary to come here. There hasn't been anything worked out, but we're working on that. And it's also the case that when we were in Geneva, it was agreed that there should be more frequent meetings other than the annual meeting in connection with the United Nations of Foreign Minister/Secretary of State. And so we are starting to try to find where and when those would take place, but we haven't made any agreement on that as yet.

Q. Would you bear with me for one more followup, and then I will cease. There has been some confusion on just what the Administration intends to do on December 31 about the SALT [strategic arms limitation talks] II Treaty. I and some others have been led to believe that the President's policy of last June is open-ended and that December 31, in itself, is no particular mark that has to be met. On the other hand, some people have drawn attention to it because of the expiration date. What is your view on that?

A. My view is that when the President decides what he wants to do on that subject, it will be announced; and I will wait with bated breath to see what he has to say. But it's a presidential decision, and when he makes it, it will be announced, and I will provide my thoughts to him in the meantime.

Recent Developments in Liberia

by Chester A. Crocker

Statement before the Subcommittee on African Affairs of the Senate Foreign Relations Committee on December 10, 1985. Mr. Crocker is Assistant Secretary for African Affairs.[1]

I am pleased to appear before this committee today to give my assessment of recent developments in Liberia and the consequences for U.S. foreign policy toward that country.

As you know, the United States and Liberia have a history of long, friendly, and special relations. Our country was closely involved in the founding of Liberia. Many Liberians have family ties and educational and other cultural connections in America. Nearly 5,000 Americans live in Liberia. U.S. investment there approaches half a billion dollars. We have important regional communications facilities in Liberia, including the Voice of America transmission station which sends our country's message through radio to people in cities and villages all over Africa and to parts of the Middle East and Southwest Asia. Liberia has been a reliable ally in war and a good friend in peace, at the United Nations and elsewhere. We want to maintain our friendly, mutually beneficial relations with the Liberian Government and people. For all of these reasons, we have taken a special interest in Liberia's efforts to put itself on a course of stability, national reconciliation, democracy, and economic growth following the overthrow of the previous government in 1980.

The October Elections

The Liberian Government under Head of State Doe announced in 1981 its intention to return the country to civilian rule by 1986 through democratic elections. Those elections were held in October of this year, with a view to inaugurating the new civilian government in January 1986. Our government was active in each step along the way, encouraging the Liberian authorities to live up to their promise to issue in a second Republic of Liberia which would extend to all its citizens for the first time in their country's history the right to vote and participate equally in their country's political and economic life.

There have been a number of criticisms of the October elections, and we share some of them, as the Liberian Government knows. In our view, it would have been better if all political parties which wanted to campaign had been allowed to do so. As it was, two were banned—the Liberian Peoples Party and the United People's Party—because, the government said, they proposed socialist programs which had no place in Liberia. Opposition parties which did participate were not registered until late, and Decree 88A, which forbids criticism of the authorities, could inhibit open debate. Finally, the vote was counted behind closed doors without the presence of opposition party representatives, albeit by a large, government-appointed commission of 50 people from various walks of life.

Despite these shortcomings, there were noteworthy, positive aspects of the elections. Four political parties competed for the voters' support. Four newspapers and three radio stations—government and nongovernment ones alike—reported the campaign with coverage of all parties' activities. Those are rare achievements in Africa and elsewhere in the Third World, where one-party elections covered by a single, government newspaper are too often the norm. The turnout of voters was enormous: some people stood in line 10 hours to vote, and the authorities extended the hours of the polls until 11 p.m. so that everyone who wanted to vote could do so. Although there were allegations on all sides that some voting irregularities occurred, there is general agreement of observers—resident diplomats, even Liberian opposition leaders—that election day went off very well, indeed. There is now the beginning, however imperfect, of a democratic experience that Liberia and its friends can use as a benchmark for future elections—one on which they want to build.

Samuel Doe and his National Democratic Party of Liberia were declared the winners by 51% for the presidency and 80% of the legislative seats. The three opposition parties did not accept those results and announced their intention to challenge them in court. Meanwhile, the declared victor—Samuel Doe—called on all citizens for national reconciliation, as did leading religious and other members of the community.

The prospects for national reconciliation were brightened by Doe's claim that he won only a narrow, 51% election victory—virtually unheard of in the rest of Africa, where incumbent rulers normally claim victories of 95% to 100%. In claiming only 51% of the vote, Doe publicly acknowledged that a large segment of society—49% of the voters—supported other points of view and leadership than his own. That public acknowledgment offered the prospect that Doe would accommodate those other interests in the new government which he would head.

He seems to have been moving in that direction in October. We understood that Doe was considering appointing to important positions in his new civilian government some Liberians of proven talent who were not, at the time, members of his party and that some of them were moving toward accepting those appointments. Doe publicly asked opposition members to take the seats in the legislature which they had won in the elections. One of those was Mrs. Johnson-Sirleaf, whom Doe had pardoned after her conviction for violating the law against criticism of government authorities—a law, Doe observed, that was passed by the previous government.

The November Coup Attempt

It was in this setting that the attempted coup d'etat occurred in Monrovia on November 12. The perpetrators apparently were a small group of less than 40, not all of whom were Liberians. They captured the undefended government radio station outside Monrovia and the military Barclay Training Center in Monrovia—an installation whose mission is not combat. Despite broadcasts on the captured radio station that Quiwonkpa was Liberia's new ruler, his small force and those whom he won to his side from the Barclay Training Center were unable to overcome the resistance of the guard at the executive mansion, where Doe was. Once Doe was able to communicate with the First Infantry Battalion some 25 miles outside Monrovia, it was all over. The First Battalion quickly retook the radio station, which then announced that Doe remained in control. The remaining coup participants were defeated or fled soon thereafter.

The coup attempt set back the prospects, as they existed after the October elections, that Liberians might be finding a way toward a measure of national reconciliation and would get on with the difficult business of addressing their pressing economic problems. Events occurred during the coup attempt and the days that followed that have left bitter scars. During the hours of November 12 that Quiwonkpa claimed to be in control of the government, some senior members of Doe's government were brutally assaulted, threatened with execution, and their houses and other property taken or destroyed. Along with the celebration of many in the streets at what they believed was a change in government, there were instances in Monrovia and throughout the country of retribution against Doe's supporters. There seems also to have been some settling of old scores not necessarily related to politics.

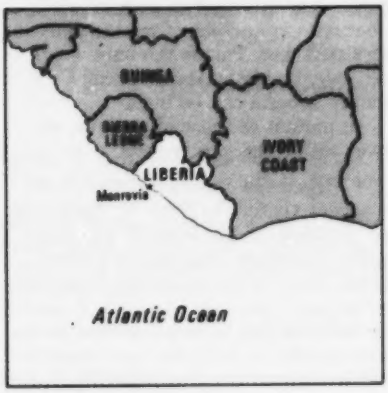
The same was true on the other side once it became known that the coup attempt had failed. Violence against some who staged the coup and those in the military who went over to their side was especially brutal. Retribution—including some killings—against civilians who were thought to have supported or sympathized with the coup attempt occurred, but rumors about this violence far outstrip confirmed reports. We are now beginning to learn that many reports along these lines were wrong, including reports of the death of key opposition leaders.

There is no evidence that the leaders of the coup condoned, much less directed, the violence against civilians which some of their supporters committed. For his part, Head of State Doe

Liberia—A Profile

People

Nationality: *Noun and adjective*—Liberian(s). **Population** (1983 est.): 2.0 million. **Annual growth rate:** 3%. **Ethnic groups:** 5% descendants of freed American slaves, 95% indigenous tribes, the largest of which are Kpelle, Bassa, Gio, Kru, Grebo, Mano, Krahn, Gola, Gbandi, Loma, Kissi, Vai, Mandingo, and Belle. **Religions:** Traditional 65%, Muslim 20%, Christian 15% (est.).



Geography

Area: 111,370 sq. km. (43,000 sq. mi.). **Cities:** *Capital*—Monrovia (pop. 306,000). *Other cities*—Harbel (60,000), Buchanan (25,000), Yekepa (16,000). **Terrain:** Coastal plain rising to rolling plateau and low mountains near inland borders. **Climate:** Warm and humid all year.

Economy

GDP: $315 million at constant factor cost in 1971 dollars. **Annual growth rate:** -9.2% in 1982 (adjusted for inflation). **Per capita income:** $400 (in current dollars). **Avg. inflation rate** (1983): 1.6% per year.

Natural resources: Iron ore, rubber, timber, diamonds, gold.

Agriculture (14.7% of GDP): *Products*—rubber, rice, oil palm, cassava, coffee, cocoa.

Industries (59.9% of GDP): Iron, gold and diamond mining, rubber processing, food processing, lumber milling.

Trade (1981): *Exports*—$540.7 million: iron ore, rubber, timber, diamonds, gold. *Major markets*—FRG, US, Italy, Belgium. *Imports*—$549.0 million: machinery, petroleum products, transportation equipment, foodstuffs. *Major suppliers*—US, Western Europe.

Official exchange rate: Liberia uses US dollars.

US economic aid received (1983): $72.6 million.

Membership in International Organizations

UN and most of its specialized agencies; Organization of African Unity (OAU), Economic Community of West African States (ECOWAS), Mano River Union.

Taken from the *Background Notes* of June 1984, published by the Bureau of Public Affairs, Department of State. Editor: Juanita Adams. ■

quickly appealed publicly for an end to retribution and rumormongering that feed further violence. A curfew was instituted to help preserve the peace.

Nonetheless, bitter memories remain on all sides. The Liberian authorities now are less inclined than they were 5 weeks ago to invite into their Cabinet persons from organizations whom they suspect collaborated in the coup attempt—an attempt which they say was set in motion before the October elections. Opposition leaders may be less willing to serve in a government, some of whose supporters reacted so violently against opposition members after the coup attempt failed. Other Liberians who are not active politically but whose talents would make them valuable government appointees, especially for addressing the country's economic problems, may be reluctant to enter public service after seeing on November 12 how they could be personally threatened if there were a sudden change in government.

Promoting Economic and Political Stability

In the wake of these events, how can we help to get Liberia down the track of political stability that is so essential for economic growth, of national reconciliation, and of democratic practices and respect for human rights?

I believe we must make an effort to achieve those goals. Our long, special ties to Liberia and our important, real interests there require us to try. To walk away would be irresponsible and clearly viewed as such elsewhere in Africa, where we are seen as having a unique responsibility for assisting Liberia. Abdication of that responsibility could provoke chaos and bloodshed, endangering the lives of the nearly 5,000 Americans in the country.

We have already begun. It is essential that we use our influence—and have a basis for influence—with the authorities in Monrovia who last month had a showdown of force with those who wished to replace them. They control the instruments of law and order in Liberia today—the armed forces, the police, the Ministry of Justice, and the courts of law. We want to encourage Head of State Doe to take measures that will win his government the national support and talent that are so necessary for the period of economic austerity and enlightened economic actions that Liberia must experience in the months ahead.

In the economic sphere, the United States has been encouraging the Government of Liberia to make policy changes necessary for economic stabilization—changes which would put Liberia back on the path to long-term growth. Liberia's public sector suffers from a chronic cash shortage which can have a profound effect on Liberia's business climate. Any Liberian Government will face this problem for several years, no matter how responsible its policies. The problems were being addressed through combined U.S., IMF [International Monetary Fund], and IBRD [International Bank for Reconstruction and Development] programs, but during the elections period in Liberia, the IMF program collapsed. Liberia must now undertake major steps to restore its economic credibility. U.S. assistance will be badly needed to keep the arrearages from building to a point which could permanently estrange Liberia from international financial institutions and private creditors. Such a development would not be in the U.S. interest or in the interest of Liberia because it would foreclose the possibility of stabilizing the economy and restoring growth.

Beyond national reconciliation and economic growth, we want to encourage Head of State Doe to follow a course of respect for human rights that will strengthen the fabric of Liberia's national life and win Liberia today added support abroad, including in the United States. And we want to counsel all Liberians—in and out of government—to work together. This is the only way a politically stable and economically healthy Liberia can be built.

In pursuit of those objectives, we have, within the past month:

- Urged the Liberian Government to permit visitors to those civilians who are detained on suspicion of complicity in the November coup attempt—that should clear up uncertainties about their welfare;
- Urged the Liberian authorities to move quickly to hold the open trials in civilian courts that they have promised for civilians suspected of complicity in the coup attempt and to permit outside observers such as local diplomats and the American Bar Association, which has expressed an interest in observing the proceedings;
- Urged the Liberian Government to take concrete measures, such as arrests against those suspected of continued acts of retribution, if Head of State Doe's public appeal for an end to those violent acts is not fully respected; and
- Urged the Liberian Government to continue to seek ways to promote national reconciliation so that the energy, talent, and support of all Liberians can be used to address the difficult economic problems that the country faces.

We are somewhat encouraged by some recent moves of the Liberian Government. Families have begun to visit civilian detainees, and initial reports of their welfare are encouraging. Already, several persons previously rumored to have been killed have been seen to be alive and well. Seventeen civilian detainees—including leaders of two opposition parties—have recently been released for lack of evidence against them. The government says it intends to move quickly to begin civilian trials. As already mentioned, Head of State Doe has called publicly for an end to acts of retribution. The government is moving forward with plans to inaugurate civilian rule next month. The Head of State continues to urge opposition parties to take their seats in the legislature, even those who currently are facing charges of complicity in the coup, if they are not convicted and sentenced. We view it as essential that Doe as President pursue his stated intent to seek national reconciliation as he forms his new government. We note also that some leading members of Liberia's private sector are of the view that the time has come to join in efforts at home to save their country at this critical time.

The Road Ahead

The road ahead will be difficult and uncertain for all. But it is difficult to imagine a course of action that offers better prospects for achieving what we want to do. We want to influence the Liberian Government to act in ways that I have just mentioned to promote national reconciliation and respect for human rights. We want to encourage the Liberian Government to institute needed measures of economic reform that will restore Liberia to international creditworthiness and that will improve its economic management—both key requirements for reversing the economic decline of that country. We want to carry out an economic assistance program in Liberia that will improve the standard of living and quality of life for all the Liberian people, with whom we

have such historic ties. These goals are worth pursuing on behalf of the aspirations that Americans share for Liberia and of our important interests there. As we follow this path, we will carefully assess along the way what has been achieved and the options before us. We intend to remain in touch with the Congress in this effort.

[1]The complete transcript of the hearings will be published by the committee and will be available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. ■

Appointment of Advisory Committee on South Africa

SECRETARY'S STATEMENT, DEC. 19, 1985[1]

Last September 9, the President signed an Executive order concerning our relations with South Africa. Since then, all but one of the major provisions have been elaborated publicly and, basically, have been put into effect. I refer to provisions on bank loans, on sales of sensitive technology, on imports of krugerrands, on the minting of a U.S. gold coin, South African-made weapons, promoting fair labor standards by U.S. firms, and increasing official aid to the country's disadvantaged majority.

As part of the Executive order, the President also directed me to establish an Advisory Committee on South Africa. Today I am very pleased to announce the establishment and the composition of this advisory committee.

Twelve distinguished Americans have agreed to serve on this committee. As you will note, they represent a broad range of views and come from diverse walks of life. Their purpose will be to recommend to me further measures that we, as a government and as a nation, can take to encourage peaceful change in South Africa.

The committee will also render its advice on how U.S. policy can be most effective in promoting equal rights in South Africa and ending apartheid. And it will consider ways in which the U.S. Government can work with private organizations in this country and in South Africa to advance our common objectives in that country.

The committee will be undertaking its task at a truly critical time; 1986 may well determine whether South Africa can emerge as a country at peace with itself and its neighbors or whether it will drift further into violent strife at home and ever greater international isolation.

The next few months will reveal whether the South African Government can muster the vision and bold leadership that will be required to move from confrontation to negotiation and a new constitutional order, deriving its strength from the consent of the governed.

The committee's report, which it will submit by the end of next year, will inevitably reflect its judgment on how this challenge has been met and what the policy implications are for the United States. Its recommendations will help us chart our course for the future.

The President and I are greatly indebted to these 12 Americans for volunteering their service in this undertaking. I've just met with them, and I want their counsel—not only in terms of a final report to be delivered in a year but also as we go along through the year. All of the facilities of this Department will be available to them as they carry out their task. A distinguished former Ambassador, William Kontos, will serve as Executive Director of the committee.

In directing me to establish this committee, the President's goal was straightforward. He wanted me to have the advice of a cross-section of wise Americans on the best ways to promote the central U.S. goal of constructive change in South Africa.

This is a serious undertaking, one that the President and I hope will lead to a bipartisan consensus that is a positive and necessary force behind any effective U.S. foreign policy. I'm looking for straight talk on our policy within the context of the unanimous U.S. position that apartheid must go, that we want it to go in a peaceful way, without a blood bath in South Africa, and that we desire all South Africans to get together urgently to shape a political order based on justice, equality, and rule by the consent of the governed.

The President and I are honored by the participation of these 12 Americans, and we're grateful for their patriotism as they undertake this task.

The Nuclear and Space Arms Talks: Where We Are After the Summit

by Paul H. Nitze

Address before the Atlantic Council on December 5, 1985. Ambassador Nitze is special adviser to the President and the Secretary of State on arms control matters.

We stand today at the edge of what we hope can be a fresh start in the U.S.-Soviet relationship, ushered in by the summit meeting between President Reagan and General Secretary Gorbachev. We are poised not just between rounds III and IV of the Geneva talks but also, in a sense, between the first summit and the beginning of preparations for the second.

It does not detract from the worthwhile nature of the November summit to reflect on the difficult issues which continue to divide the two sides at the Geneva negotiations on nuclear and space arms. It is my intent to review the positions of the two sides in the talks and to dwell for a moment on those differences which appear most intractable.

The November summit and the autumn events leading up to it represent not only the possibility for a fresh start in the U.S.-Soviet relationship but mark what we hope is the beginning of a genuine process of give-and-take in the nuclear and space arms talks. The barriers to agreement are, however, substantial.

Soviet Counterproposal

The first break in the ice came at the end of September with the tabling of a Soviet counterproposal to our March 1985 offer. While the effects of that counterproposal would be inequitable and destabilizing, it also contains, as the President expressed it, "seeds which should be nurtured."

The Soviet offer consists of various bans and freezes, as well as limits on and reductions in offensive forces.

- "Strategic delivery systems" would be reduced by 50%, to a level of 1,250 for the U.S.S.R. and 1,680 for the United States. However, the Soviet definition of strategic delivery vehicles would also cover, on the U.S. side, LRINF missiles and "medium-range" nuclear-capable aircraft in Europe, in Asia, and on all of our aircraft carriers, while about 2,000 comparable Soviet nuclear delivery vehicles, as well as 300 Backfire bombers, would not be limited. Thus, were the United States to retain equality in strategic nuclear delivery vehicles, it would have to cut LRINF missiles and dual-capable aircraft to 430, 20% of the current Soviet level. If the United States were to retain LRINF missiles and dual-capable aircraft at current levels, it would have to cut strategic nuclear delivery vehicles to less than half the allowed Soviet number.
- "Nuclear charges" would be sharply reduced to a level of 6,000. However, they would be defined to include the gravity bombs and short-range attack missiles carried by U.S. heavy and medium-range bombers. By counting such bomber weapons as equivalent to Soviet ballistic missile RVs, despite the massive Soviet air defenses faced by bombers and the lower readiness rate of bombers compared to ballistic missiles, the United States would be significantly penalized.
- "Charges" on any one component (that is, ICBMs, SLBMs, or bombers) would be reduced to 60% of the total, leading to a maximum level of 3,600 ICBM RVs. Although this sublimit would represent a major reduction, Soviet prompt counterforce capabilities would actually grow against the reduced number of U.S. hardened facilities.
- All cruise missiles with ranges above 600 kilometers would be banned, terminating the U.S. ALCM, SLCM, and GLCM programs.
- All "new" nuclear delivery systems would be banned, probably precluding the U.S. D-5 and Midgetman missiles and advanced technology bomber, while allowing the Soviet SS-25, SS-X-24 and SS-NX-23 missiles and Blackjack heavy bomber.
- Research, development, and deployment of "space-strike arms" would be banned, halting the U.S. SDI program and allowing many Soviet ABM activities to continue.

In sum, despite significant reductions, the Soviet counterproposal would block U.S. strategic defense programs while allowing Soviet programs to proceed; it would halt the modernization of U.S. strategic offensive forces; and it would include in reductions U.S. systems which defend our allies and exclude Soviet systems which threaten them. The net effect would be a lopsided nuclear balance, a weakened U.S. deterrent, and decreased stability for both sides.

However, in spite of its numerous flaws, the detailed Soviet counterproposal did include the principle of deep cuts in strategic offensive arms and, along with subsequent offers in Geneva, seemed to contemplate an interim INF outcome which would allow for U.S. LRINF missiles in Europe. Building on such positive elements, President Reagan directed that a new U.S. proposal be advanced at the negotiations on November 1.

U.S. November Proposal

Strategic Offensive Arms. The new U.S. proposal builds on the 50% reduction concept in a constructive and equitable way.

- Reentry vehicles on ICBMs and SLBMs would be reduced to a limit of 4,500—about 50% below current levels.
- Reentry vehicles on ICBMs would be reduced to 3,000—about 50% below the current Soviet level and roughly halfway between our earlier proposal for a limit of 2,500 and their proposed limit of 3,600.

Acronyms

ABM—Anti-Ballistic Missile (Treaty)
ALCM—air-launched cruise missile
GLCM—ground-launched cruise missile
ICBM—intercontinental ballistic missile
INF—intermediate-range nuclear forces
LRINF—longer range intermediate-range nuclear forces
RV—reentry vehicle
SALT—strategic arms limitation talks
SDI—Strategic Defense Initiative
SLBM—submarine-launched ballistic missile
START—strategic arms reduction talks

• The highest overall strategic ballistic missile throw-weight of either side would be reduced by 50%, in this case, from the Soviet level of 11.9 million pounds. (By way of comparison, the United States has 4.4 million pounds.)

• Contingent upon acceptance of RV and throw-weight limits, the United States would accept equal limits of 1,500 on the number of long-range ALCMs carried by U.S. and Soviet heavy bombers—about 50% below planned U.S. deployment levels.

• For reasons previously alluded to, the United States cannot agree to one common limit on ballistic missile RVs and ALCMs. But if the Soviets were to accept our proposed limit of 4,500 RVs along with our proposed limit of 1,500 ALCMs, it would result in reduction to a total of 6,000 ballistic missile RVs and ALCMs on each side.

With respect to strategic nuclear delivery vehicles, the United States has proposed a reduction in strategic ballistic missiles to a limit of 1,250–1,450, or about 40–45% below the current higher Soviet level. In this context, the United States could accept further reduction of heavy bomber limits to 350 (compared to our earlier proposal of 400)—about 40% below the current U.S. SALT-accountable level.

For reasons similar to those applying to an RV and ALCM aggregate, the United States cannot agree to the Soviet proposal to include in a single aggregate strategic ballistic missiles and heavy bombers. However, if agreement were reached on a range of 1,250–1,450 for ICBMs and SLBMs, and on heavy bomber limits of 350, it would result in reduction of the total of strategic ballistic missiles and heavy bombers to between 1,600 and 1,800.

The U.S. proposal also contains a ban on the development and deployment of all new heavy strategic ballistic missiles and on the modernization of existing heavy missiles due to the destabilizing character of such systems. All mobile ICBMs would also be banned because of inherent verification difficulties and asymmetries in deployment opportunities between the sides. "Build-down" is the suggested means of implementing the agreed reductions.

Intermediate-Range Nuclear Forces. With respect to intermediate-range nuclear forces, the United States continues to prefer total elimination of the entire class of U.S. and Soviet LRINF missiles. Thus, our previous proposals remain on the table. We have also made a new proposal as an interim step toward this goal.

• The United States would cap its own LRINF missile launcher deployments in Europe at the number deployed as of December 31, 1985 (140 Pershing II and GLCM) in return for Soviet agreement to reduce SS-20 missile launchers within range of NATO Europe to the same number.

• There would be freedom to mix between systems deployed as of December 31, 1985, but the mix would be a subject for discussion. For example, we could agree on a mix giving the United States an approximately equal number at around 420 to 450 LRINF missile warheads in NATO Europe (based on 4 warheads per GLCM launcher, 1 warhead per Pershing II launcher, and 3 warheads per SS-20 launcher).

• The Soviets would be required to reduce SS-20 launchers in Asia (not within range of NATO Europe) by the same proportion as the reduction of launchers within range of NATO Europe. The end result would be equal global LRINF warhead limits.

• Appropriate constraints would also be applied to shorter range INF missiles.

Defense and Space. With respect to defense and space, the United States has made clear that we are committed to the SDI research program, which is being carried out in compliance with the ABM Treaty. We seek a Soviet commitment to explore with us now how a cooperative transition could be accomplished, should new defensive technologies prove feasible. We are also proposing that the Soviets join us, even now, in an "open laboratories" arrangement under which both sides would provide information on each other's strategic defense research programs and provide reciprocal opportunities for visiting associated research facilities and laboratories.

Verification and Compliance. The United States continues to stress the critical importance of agreeing to effective means of verification so as to be able to assess with confidence compliance with provisions of all agreements resulting from the negotiations. The importance of verification is more evident now than it was before, given Soviet violations of existing arms control agreements.

The United States continues to stress the need for the Soviets to take necessary steps to correct current instances of noncompliance with existing arms control agreements, for noncompliance is both politically corrosive and militarily hazardous. Restoring compliance is, thus, a critical step.

The Soviet Union must alter current practices which obstruct U.S. verification of compliance. One initial step is for Soviets to alter their current encryption of telemetry and revert to telemetry practices in use at the time of signing of SALT II. This is militarily important in its own right and is also of considerable political significance.

The November Summit

You know the duration of the sessions at the November summit between President Reagan and General Secretary Gorbachev: some 5 hours of one-on-one dialogue and more than 8 hours of discussion in plenary. The two leaders had an intensive and frank examination of the issues in all four agenda categories. The potential intangible benefits to be derived from the development of personal rapport between these two men is obvious, so I will confine my observations to the language relating to the nuclear and space talks which appeared in the joint statement published at the conclusion of the summit and to a discussion of issues it addresses.

We were able in the joint statement to achieve Soviet commitment to early progress in the negotiations, focusing particularly on "the principle of 50% reductions in the nuclear arms of the U.S. and USSR appropriately applied" and "the idea of an interim INF agreement." As I have already mentioned, these concepts are common elements in the fall proposals of the two sides, but it is not clear that the Soviets do not still link such language to termination of the U.S. Strategic Defense Initiative. SDI is, of course, not mentioned at all in the joint statement. The Soviets were content, in the end, to repeat the language of the joint agreement of January 8, 1985, which included the goal of preventing an arms race in space. We have made abundantly clear to the Soviets that, in our view, SDI is consistent with this goal; we are calling for a cooperative approach to the deployment of defensive systems—as opposed to a "race"—were our research, or theirs, to demonstrate that such systems could help the world get rid of the threat of mutual destruction.

I would highlight another passage in the joint statement: "During the negotiation of these agreements, effective measures for verification of compliance

with obligations assumed will be agreed upon." It will be useful for us during the negotiations to have this acknowledgment that effective verification measures must be devised concurrently with the resolution of other issues. It represents another modest step in our efforts to put verification concerns on a par with the reductions or limitations themselves.

One of the less encouraging aspects of the summit was Gorbachev's unwavering opposition to SDI. There were, indeed, no signs of movement from even the most untenable elements of the Soviet position on strategic defenses, such as the proposed ban on all research. The Soviets also refused to move from any of their fundamentally unacceptable positions on START and on INF. More encouraging are the growing indications that the Soviets may be willing seriously to discuss all three aspects of the negotiations concurrently when the nuclear and space arms talks resume in Geneva in January without demanding a prior agreement on a ban on SDI research.

It is also noteworthy that the President seems to have made some progress in convincing Gorbachev that he is sincere in his stated intentions for SDI, even though the Soviet leader vigorously disputed the President's conclusions about its consequences.

During the next round of the nuclear and space arms talks, commencing on January 16, 1986, we will be able to judge the Soviet implementation of our mutual commitment to accelerate work. We plan to spend the opening weeks describing our November 1 proposal in greater detail. Max Kampelman[1], Senator Tower[2], and Mike Glitman[3] will have authority to explore opportunities for give-and-take. We hope to elicit constructive responses from the Soviet side so that we may then be able to report that they are engaged in a genuine process of serious negotiation toward balanced and verifiable agreements which will improve stability and reduce the risk of war.

[1]Max M. Kampelman, head of U.S. delegation on arms control negotiations and U.S. negotiator on defense and space arms.

[2]John Tower, U.S. negotiator on strategic nuclear arms.

[3]Maynard W. Glitman, U.S. negotiator on intermediate-range nuclear arms. ■

Nuclear Testing

WHITE HOUSE STATEMENT, DEC. 19, 1985[1]

The Soviet Union has both publicly and through confidential diplomatic channels continued to press its proposal for a moratorium on all nuclear explosions that it made public on July 29.

For our part, the President has long advocated a dialogue with the Soviet Union to arrive at the improved verification procedures necessary for any testing limitations. It was the President who extended an unconditional invitation to Soviet experts to visit the U.S. nuclear test site to measure the yield of a U.S. nuclear test, with any instrumentation devices they deemed necessary. This initiative was designed with the hope that it might set in motion a process that could increase confidence and cooperation between our nations regarding limitations on nuclear testing. The United States would, of course, welcome Soviet willingness to agree to reciprocal visits to nuclear testing sites.

It is through measures of this type that a basis could be created to develop and institute the type of verification measures needed to make effectively verifiable the pending treaties dealing with nuclear testing, namely, the Threshold Test Ban and Peaceful Nuclear Explosions Treaties.

This is an issue, however, quite separate from that of a moratorium on nuclear explosions. As we have stated many times previously, the United States has learned through experience that moratoria cannot be counted on to lead to the enhanced security desired. The Soviet Union broke a nuclear testing moratorium a quarter of a century ago with the most intensive nuclear test series in history—some 40 explosions over a period of several weeks.

We made clear when the Soviets announced their moratorium the reasons for our nuclear testing limitation policy, as well as for continuing the U.S. testing program. U.S. testing is required to ensure the continued credibility and effectiveness of our deterrent and to ensure the reliability and safety of the U.S. arsenal.

While we are actively investigating technologies that may one day make the United States less dependent on offensive nuclear weapons for our security, nuclear weapons will remain, for the foreseeable future, the key element of our deterrent. In such a situation, where both the United States and our allies must rely upon nuclear weapons to deter aggression, nuclear testing will be required.

A comprehensive test ban, however, is a long-term objective of the United States in the context of achieving broad, deep, and verifiable arms reductions; substantially improved verification capabilities; expanded confidence-building measures; greater balance in conventional forces; and at a time when a nuclear deterrent is no longer as essential an element as currently for international security and stability. The United States is currently involved in discussions with the Soviet Union in most of these areas.

Western Proposal Tabled at MBFR Negotiations

PRESIDENT'S STATEMENT, DEC. 5, 1985[1]

Consistent with the joint statement issued by General Secretary Gorbachev and the President at the conclusion of the Geneva meeting, and with our efforts to promote a more constructive East-West relationship, we and our NATO allies are introducing in Vienna today a new proposal designed to break the long deadlock on conventional arms reductions in Europe.

Since the early 1970s, NATO has engaged the Warsaw Pact in discussions aimed at limiting the numbers of troops on both sides in central Europe. These discussions, known as the mutual and balanced force reduction (MBFR) talks, now constitute one of the longest continuously running arms control negotiations in history.

The NATO allies have consistently tried to move these negotiations forward. In 1982 and 1984, the United States and the allies presented new proposals designed to achieve progress in

the MBFR negotiations. Regrettably, both proposals were rejected by the Warsaw Pact. After extensive national reviews of these talks and their objectives, we and our allies have concluded that a significant and forthcoming new move could provide new impetus to the negotiations.

In an effort to move the negotiations forward, and taking into account expressed Eastern concerns, we have today tabled a new proposal for reductions with effective verification.

The proposed package of verification measures is intended to verify the numbers of troops withdrawn as well as the numbers which will remain. Thus, in exchange for a comprehensive and effective package of verification measures, NATO would be willing to accept the general framework of the February 1985 model proposed by the Soviet Union and its allies for a noncomprehensive agreement. We will no longer insist, as we have since the outset of negotiations, that the sides come to an agreement on Eastern troop levels before treaty signature. Nor will we continue to insist, for now, on a comprehensive approach whereby East and West must agree at the outset on all the steps needed to reduce to parity.

In this context, the United States is now prepared to accept a reduction of 5,000 U.S. and 11,500 Soviet ground troops in the central European reduction area. These figures reflect the ratio between existing U.S. and Soviet troop levels in the area.

As soon as these reductions are completed, NATO is prepared to accept a commitment by both alliances not to increase forces in central Europe. As verified by implementation of the verification measures, this no-increase commitment would last for 3 years.

The new Western proposal builds on key aspects of the Warsaw Pact's ideas of February 1985. These include: a time-limited, noncomprehensive agreement; reductions without prior data agreement on Eastern forces; and a no-increase agreement. The main element which NATO has added is in the area of verification.

Fair, effective, and reciprocal verification measures are essential so that both sides will be able to know whether the terms of the accord are being complied with. This is especially important if we are to accept a no-increase commitment on troops in the area without prior agreement on the level of those troops. The Soviets have contended that such prior agreement was unnecessary and that Western concerns could be satisfied through implementation of verification measures. This new Western proposal offers them an opportunity to pursue that approach. Agreement on all aspects of the proposed verification measures would, of course, have to be reached prior to the signature of a treaty.

We urge the Soviet Union and the other Warsaw Pact countries to consider carefully the details of our proposal. This NATO initiative can help fulfill the commitments made at the Geneva summit and produce real progress in Vienna which would reduce forces in central Europe.

WESTERN STATEMENT BY AMBASSADOR ALEXANDER, VIENNA, DEC. 5, 1985[2]

For over 12 years, the participants in these talks have been trying to find a formula which would permit some reduction in conventional military force levels in central Europe. Despite limited progress in some aspects of the talks, real success has remained out of reach. The pattern of proposal and, too often, incompatible counterproposal has been a major reason for this lack of success. The two sides have for too long failed to get into a position where they were talking about the same kind of approach at the same time.

On February 14 this year, the East tabled its "basic provisions" for a first-phase (as opposed to a comprehensive) agreement. The idea of a modest first-phase agreement was first put forward by the West in 1979. It was subsequently, in 1982, dropped in response to Eastern criticism of its alleged lack of linkage with follow-on reductions. Since February the West has been pointing out at length the gaps in the East's text—among them the absence of any requirement for prior agreement between the sides on the size of forces in the reductions area before the implementation of reductions and limitations.

In parallel with this somewhat unproductive debate, Western governments have carried out in recent months a review of the situation in these talks as a whole. Bearing in mind the West's 1979 proposal, our governments have concluded that the approach in the East's basic provisions, despite their imperfections, might form a framework on which the two sides could work together with some hope of reaching an agreement. That our governments have taken the difficult decisions underpinning this conclusion is a measure of the importance they attach to the talks and to resolving the problems with which we are dealing. Our governments have been encouraged in their action by the outcome of the Geneva summit last month.

In the West's view, there is now a considerable number of points—they are enumerated in the full statement—where broad agreement exists between the two sides. The opening up of this area of accord has been made possible by an imaginative act by Western governments, one which involves a basic change in the position which we have maintained consistently since the talks began in 1973. Until today we have always held the view, and it has been eminently reasonable to do so, that an essential prerequisite for progress was a common understanding on the starting point, i.e., on the size of the forces deployed by the two sides in the reduction area.

It has proved impossible to reach such an understanding. After much deliberation, Western governments have, therefore, decided, in the context of a time-limited agreement, to make a major step to move the negotiations forward. Although there remains a very substantial difference between our estimate of the forces deployed in the Eastern part of the reductions area and the Warsaw Pact's own figures, our governments have agreed to offer to negotiate, without further delay, a joint reduction in American-Soviet force levels in central Europe and a subsequent collective no-increase commitment.

In order to ensure that both sides' commitment to the principle of undiminished security is preserved, the West has proposed some changes in the East's approach. These include, most importantly:

- A change in the numbers of American and Soviet forces to be withdrawn under the agreement;
- The giving to each side of discretion to decide how to deal with the armaments of withdrawn troops and the omission of armaments from the no-increase commitment; and
- The establishment of a verification regime capable of giving confidence that the agreement was being honored.

These changes correspond to the need for practicality, precision, and predictability in the agreement. Every

condition in the agreement will apply to both sides. Thus, rights for one side will be rights for the other. There will be no unilateral advantage to be won. Rather there will be a gain in mutual understanding, in mutual confidence, and ultimately in the security of all.

The West has, this morning, taken a major step. It brings the possibility of a limited agreement on force levels in central Europe within reach. We hope there will be no more suggestions from the East that the prior data requirement, that differences of principle, that differences about framework, etc., etc., are blocking the way forward.

Nonetheless, much bargaining undoubtedly lies ahead. The East may not welcome the way we have handled the armaments issue. But they themselves have begun to recognize recently the objective difficulties of including armaments in a limitations agreement. They may not welcome the detail of our ideas on verification. But Foreign Minister Shevardnadze has stated authoritatively to the United Nations this autumn "where verification with national technical means may be inadequate to provide the necessary degree of confidence, we are ready to supplement it with additional mutually agreed procedures." The West welcomes that assurance and hopes the East is ready to act on it.

We are talking about a limited agreement. But an agreement of any kind involving reductions in force levels in central Europe and a subsequent no-increase commitment would be an event of very great political significance. If the East can match the West in flexibility, in imagination, and in pragmatism such an agreement can be reached, and the long deadlock in Vienna can be broken.

AMBASSADOR BLACKWILL'S STATEMENT, VIENNA, DEC. 5, 1985[a]

Introduction

In my plenary statement today on behalf of the West, I recalled that President Reagan on September 26 pledged that the West "will actively seek every avenue of possible agreement in the round in order to achieve a verifiable accord that reduces conventional forces in central Europe in an equitable manner." With the imaginative initiative just put forward today, the West has fulfilled this promise and has brought our talks to a decisive crossroads.

Data Issue

As everyone knows too well, these negotiations have been deadlocked for many, many years. The impasse has persisted. Week after week. Month after month. Year after year.

Our Eastern colleagues have repeatedly made clear that this situation, in their view, is due primarily to what they term the "data barrier." One Eastern representative, for example, has called the data issue the "decisive obstacle on the road to an agreement since the very beginning of the talks." And, another has told us, "in this stalemate, the greatest difficulty, as you know, is created by the question of numbers." It is a matter of record that the main aim of the approach adopted by the East in these talks beginning in 1983 has been to "do away with the 'data barrier.' " Indeed, as a third Eastern representative has noted, this is "central" to the proposals the East has put forward since the January 1983 Prague meeting of the Warsaw Pact Political Consultative Committee.

Our Eastern colleagues, moreover, have repeatedly suggested that if the West were to drop its requirement for prior data agreement, substantive progress could be made; indeed, that the path would be cleared to an agreement. For example, the East has observed that "the key to a decisive step forward in the Vienna negotiations is to free oneself from the undergrowth of the unproductive discussions which have been conducted for many years and to agree without further delay on simple, practical steps to initiate the process of reductions."

For well-known reasons, the West has tried unsuccesfully during the more than 12 years of these negotiations to persuade the East of the merits of first reaching a mutual understanding on the size of the forces in the reductions area. *Inter alia*, this position was based on a sound and logical premise: namely, that there should be an initial meeting of minds on the basic facts of the situation. The sides should know where they are starting from, as well as where they are going.

Despite our continuing conviction that prior data agreement would have been the more sensible and effective means to making progress in these negotiations, in the interest of breaking the decade-long logjam, the West today has announced its willingness to drop this longstanding, important aspect of its position. In doing so, we are prepared at the same time to work toward a time-limited, first-phase agreement, building on the framework proposed by the East in February. We are, in the words of one veteran Eastern representative, prepared to adopt a "radical solution" to the data issue and to "cut this Gordian knot connected with the problem of numbers."

This decision was not taken lightly. It has been considered at the highest levels in the West. It is a sign of our determination to produce a breakthrough in these negotiations.

Areas of Agreement

The initiative advanced by Western participants today, however, goes beyond this historic step to overcome the basic cause of deadlock. As the head of the U.K. delegation has noted, we accept the general framework of the East's February 1985 "basic provisions" proposal. Indeed, he has identified 16 specific areas of agreement which now exist between the Eastern and Western sides to these talks. Nevertheless, as Ambassador Alexander pointed out, there remains more work to finish.

Verification

Not long ago the East stated that "if our Western partners have realistic ideas with regard also to the verification of an agreement, they should have no difficulties in presenting them along with an official response to our proposal of 14 February 1985." We have responded to that invitation today.

We are also mindful of the authoritative statement at the United Nations on October 24, 1985 by Soviet Foreign Minister Shevardnadze: "Where verification with national technical means may be inadequate to provide the necessary degree of confidence, we are ready to supplement it with additional mutually agreed procedures. We state this very emphatically, because there are those who would like to make world public opinion believe that the Soviet Union is against verification." And, as an Eastern representative to these talks stated recently, the Warsaw Pact states "regard verification and associated measures as an important part of a future agreement."

We in the West, too, firmly believe that verification is a fundamental aspect of effective arms control. Indeed, any arms control agreement, if it is to build confidence between the sides, is only as good as its verification regime. As we have explained to our Eastern colleagues on a number of occasions, a set

of effective verification measures is vital. Such measures are manifestly necessary, not only with respect to reductions but particularly with regard to no-increase commitments:

- To help assure all parties that treaty provisions are being fully complied with;
- To deter violations of treaty obligations by increasing the likelihood that such violations would be detected; and
- To assist resolution of any disagreements over compliance.

Conclusion

In the Geneva joint statement of November 21, the United States and the Soviet Union "emphasized the importance they attach to the Vienna negotiations and expressed their willingness to work for positive results."

In its assessment of the summit meeting, the Politburo of the U.S.S.R. noted that "the long-term significance of the Geneva meeting will show itself in concrete practical actions." The West agrees with this view, as the proposal we have put forward today demonstrates beyond a shadow of a doubt. We call on the East to join us now in producing a concrete result in this negotiation. It can be done.

AMBASSADOR BLACKWILL'S STATEMENT, DEC. 12, 1985[4]

I am very pleased to be here today to discuss the Vienna negotiations on mutual and balanced force reductions (MBFR) with you. As you are aware, the NATO allies participating in these talks put forward to the Warsaw Pact last week an imaginative and far-reaching proposal aimed at breaking the decade-long deadlock in these discussions on conventional force reductions in central Europe.

Before turning to this new Western move, perhaps some general comments regarding the Vienna negotiations are in order.

These talks—which now constitute the longest continuous arms control negotiations in history—are a unique case of NATO-Warsaw Pact dialogue. They are the only forum in which we and our NATO partners regularly discuss security concerns and arms control with the Warsaw Pact on an alliance-to-alliance basis. As you know, our NATO allies attach great political and military importance to MBFR—not least because it is an East-West arms control forum in which they are able to participate directly and actively.

This said, the talks have failed to date to achieve their declared objective; that is, the negotiated reduction and limitation of forces in central Europe. During the past 12 years, some progress has been made on several issues, but real success has remained out of reach. Fundamental differences have persisted on two key points.

First, there has been a longstanding disagreement over the number of Warsaw Pact troops stationed in central Europe—the so-called data issue. Since the outset of the negotiations in 1973, the West has tried unsuccesfully to persuade the East of the merits of first reaching a common understanding on the size of forces in the reductions area.

Second, the sides remain far apart on the question of verification. There are differences on the actual scope and functioning of negotiated verification measures and on the necessary degree of intrusiveness of the verification regime. There are also differing views over the question of when measures should go into effect, i.e., during or after reductions. The East has so far refused to accept verification measures as precise and comprehensive as those proposed by the West.

After extensive national reviews of these talks and their objectives, we and our NATO allies recently concluded that a significant and forthcoming new move could provide new impetus to the negotiations. Consistent with the joint statement issued by the President and General Secretary Gorbachev at the conclusion of the Geneva summit meeting—and with our efforts to promote a "fresh start" and a more constructive East-West relationship—the United States, together with our NATO allies, introduced on December 5 a major new proposal designed to break the long deadlock in Vienna.

Despite our continuing conviction that prior agreement on force data would have been the more sensible and effective means to making progress, NATO now is willing to drop this longstanding, important aspect of its position in the interest of breaking the decade-long logjam at the Vienna talks. This move comes in response to repeated Eastern suggestions over the years that if the West were to drop demands for prior data agreement, substantive progress could be made—indeed, that the path would be cleared to an agreement.

In addition to this major step, the West now accepts the general framework of the East's February 1985 "basic provisions" proposal; that is, we agree to negotiate on a time-limited, first phase agreement consisting of initial U.S. and Soviet ground force reductions, followed by a no-increase commitment covering the forces in central Europe of all participants in the MBFR negotiations.

This willingness to accept the framework proposed by the other side is an important development. In the past, the negotiations have been characterized by one side advancing a proposal, followed by the other side—usually after some interval—tabling a counterproposal. Too often these have borne little or no relation to each other, thus limiting practical possibilities for real negotiation. Now for the first time in the negotiations, the sides—as a result of the Western move—are in a position where they are talking about the same kind of approach at the same time. Whether this marks a beginning of real negotiations will depend, of course, upon the Eastern reaction to our proposal.

With regard to the specifics of the Western proposal, we have identified at least 16 specific points on which, as a result of the West's review of its position and subject to resolution of detail, there would now seem to be broad agreement between the two sides. These are identified in the attachment to my statement. There also are a number of areas in which the sides appear to be in near agreement—for example, on a provision allowing for normal peacetime military activities such as NATO reinforcement exercises and the call-up of reservists for training.

The most important differences between the new Western positions and those of the East are as follows.

First, the West is now proposing that initial reductions should be 5,000 American and 11,500 Soviet ground troops. These figures reflect the ratio of U.S. and Soviet forces in the reductions area. The new figures thus continue to provide for a proportionate level of reduction and verification procedures of this first-phase agreement.

Second, while the East has proposed that troops to be withdrawn take with them their organic armaments and combat equipment, the West proposes that, in order to achieve a timely first-phase agreement, each side should have discretion to decide for itself how to deal with such armaments. Moreover,

we do not believe it would be meaningful or practicable to apply a no-increase commitment to armaments, as the East has proposed. Indeed, the East itself has begun to recognize recently the difficulties of including armaments in a limitations agreement.

Third, as noted previously, the East envisages minimal provisions for verification. The West proposes an effective verification system which has several key features.

- It converts the observation points proposed by the East into permanent and permanently manned entry and exit points through which all forces—those entering as well as those leaving the reductions area—should pass.
- It provides for the exchange of detailed information, disaggregated down to the battalion level, on forces remaining in the reductions area after initial U.S. and Soviet withdrawals. The initial information exchange would constitute the basis for verifying the no-increase commitment.
- It provides for an inspection regime under which each side would have the right to conduct 30 inspections during each of the 3 years immediately following the completion of U.S. and Soviet reductions.
- It provides for the establishment of a consultative commission, whose tasks would include clarifying ambiguities expeditiously and helping to resolve disputes.

Fourth, while the East envisages both alliance-wide and national ceilings on armed forces, the West believes the no-increase commitment should simply be alliance-wide, with subceilings only on U.S. and Soviet forces, since they are the only forces involved in initial reductions.

Finally, as in any international agreement of this kind, the West proposes to include a clause recognizing the right of each side to take steps to protect its security interests in the event of activities by the other side which are incompatible with the object or purposes of the agreement or which jeopardize those interests.

It is too soon to predict how the negotiations will evolve in the wake of the West's new proposal. The Western move, however, offers a unique opportunity to maintain the momentum following the Geneva summit and to produce real progress in Vienna.

The Soviet representative, on behalf of the East, has promised that the Western proposal would be "thoroughly studied." We will probably have to wait until the next negotiating round, which begins on January 30, before any authoritative Eastern views are registered. It was, however, disappointing that the Soviet representative, as a preliminary reaction, also ventured to express the view that the Western proposal "does not inspire optimism" and to suggest that the Western position on dealing with armaments and verification "does not contribute to the achievement of a mutually acceptable agreement." Eastern press reaction we have seen thus far, moreover, has followed this line and has failed to acknowledge the many positive elements in the new NATO initiative.

This said, it is now up to the Soviet Union and its Warsaw Pact allies to show that they can match the West in flexibility, imagination, and pragmatism.

ATTACHMENT: POINTS OF AGREEMENT

As a result of the West's review of its position and subject to resolution of the details, there would now seem to be broad agreement between the two sides on the following points.

1. The concept of a first-phase agreement as providing a general framework for our future work.
2. The omission in the context of a first-phase agreement of any reference to the need for prior agreement on data.
3. Initial reductions by the United States and the Soviet Union within 1 year from the entry into force of the agreement.
4. Reductions in units, with up to 10% as individuals.
5. Withdrawn forces shall return to within their national boundaries.
6. Withdrawn forces shall not be deployed in new locations in such a way as to diminish the security of any state participant in the negotiations, including those with special status.
7. Lists shall be exchanged of the American and Soviet military units to be withdrawn from the area of reductions.
8. The United States and the Soviet Union shall inform all parties about the start of the practical arrangements to reduce their ground forces in central Europe and about their completion.
9. Observation points should be established through which withdrawn Soviet and American forces shall pass.
10. Each side should determine independently the location of these points in its own territory.
11. There shall be a no-increase commitment following the period of reductions.
12. National technical means of verification should be used in a manner consistent with generally recognized principles of international law and the sides should undertake not to interfere with the national technical means of verification of the other side.
13. The agreement envisaged should be of limited duration.
14. Implementation of a verification regime would also provide most valuable experience in applying associated measures, which would prove useful in the future in the course of more substantial reductions.
15. The agreement should be legally binding.
16. The East proposes that the sides should undertake to pursue the negotiations on the reduction of armed forces and armaments in central Europe with the object of reaching parity at equal collective levels of up to 900,000 men, including up to 700,000 men in ground forces. The West agrees that, subject to the successful implementation of a first-phase agreement, this should remain our objective.

Soviet Noncompliance With Arms Control Agreements

Following is the President's unclassified report on Soviet noncompliance with arms control agreements along with his letter of transmittal to the Speaker of the House of Representatives and to the President of the Senate on December 23, 1985.

Transmittal Letter

Dear Mr. Speaker (Dear Mr. President):

In response to Congressional requests as set forth in Public Law 99-145, I am forwarding herewith classified and unclassified versions of the Administration's report to the Congress on Soviet Noncompliance with Arms Control Agreements.

Detailed classified briefings will be available to the Congress early in the new year.

I believe the additional information provided, and issues addressed, especially in the detailed classified report, will significantly increase understanding of Soviet violations and probable violations. Such understanding, and strong Congressional consensus on the importance of compliance to achieving effective arms control, will do much to strengthen our efforts both in seeking corrective actions and in negotiations with the Soviet Union.

Sincerely,

RONALD REAGAN

Unclassified Report

In reporting to the Congress on February 1 of this year on Soviet noncompliance with arms control agreements, I have stated that:

> In order for arms control to have meaning and credibly contribute to national security and to global or regional stability, it is essential that all parties to agreements fully comply with them. Strict compliance with all provisions of arms control agreements is fundamental, and this Administration will not accept anything less. To do so would undermine the arms control process and damage the chances for establishing a more constructive U.S.-Soviet relationship.

I further stated that:

> Soviet noncompliance is a serious matter. It calls into question important security benefits from arms control, and could create new security risks. It undermines the confidence essential to an effective arms control process in the future. With regard to the issues analyzed in the January 1984 report, the Soviet Union has thus far not provided satisfactory explanations nor undertaken corrective actions sufficient to alleviate our concerns. The United States Government has vigorously pressed, and will continue to press, these compliance issues with the Soviet Union through diplomatic channels.

The important role of treaty compliance for future arms control was recently recognized by the United Nations. On December 12, 1985, the General Assembly passed by a vote of 131-0 (with 16 abstentions), a resolution on arms control compliance which had been introduced by the United States and other co-sponsors. The resolution:

- urges all parties to arms limitation and disarmament agreements to comply with their provisions;
- calls upon those parties to consider the implications of noncompliance for international security and stability and for the prospects for further progress in the field of disarmament; and
- appeals to all U.N. members to support efforts to resolve noncompliance questions "with a view toward encouraging strict observance of the provisions subscribed to and maintaining or restoring the integrity of arms limitation or disarmament agreements."

At the request of the Congress, I have in the past two years provided three reports to the Congress on Soviet compliance issues. The first, forwarded in January 1984, reviewed seven compliance issues, concluding that the Soviet Union had, in fact, violated a number of important arms control commitments.

In September 1984 I provided, at the request of the Congress, a report on Soviet noncompliance prepared by the independent General Advisory Committee on Arms Control and Disarmament. That report concluded that over a 25-year span the Soviets had violated a substantial number of arms control commitments.

In February 1985, I submitted a report to the Congress updating the Administration's January 1984 report and reviewing 13 issues that could be treated in unclassified terms and an additional group of six issues treated on a classified basis. That report discussed the pattern of Soviet arms control violations, probable violations, or ambiguous activity in seventeen cases. The U.S. Government found seven Soviet violations, three probable violations, one likely and one potential violation. The Soviets were found to be in compliance in two other cases examined.

One of those issues, Yankee-Class submarine reconfiguration, is not addressed in the current report. While a submarine reconfigured to carry long-range cruise missiles constitutes a threat similar to that of the original SSBN, I reported in February that Soviet reconfiguration activities have not been in violation of the SALT I [strategic arms limitation talks] Interim Agreement. This issue, therefore, requires no further judgment in terms of compliance at present.

Public Law 99-145 requires the Administration to provide on an annual basis by December 1 of each year a classified and unclassified report to the Congress containing the findings of the President and any additional information necessary to keep the Congress informed on Soviet compliance with arms control agreements.

The current report responds to this Congressional requirement. It is the product of months of careful technical and legal analysis by all relevant agencies of the United States Government and represents the Administration's authoritative updated treatment of this important matter.

The current unclassified report examines one new issue and updates all of the issues studied in the classified report of February 1985, except the issue of Yankee-Class submarine reconfiguration. There are violations in nine cases. Of the nine cases involving violations, one SALT II issue—that of Soviet concealment of the association between missiles and their launchers—is examined for the first time. The Soviet Union has now also violated its commitment to the SALT I Interim Agreement through the prohibited use of remaining facilities at former SS-7 ICBM [intercontinental ballistic missile] sites. In addition, Soviet deployment of the SS-25 ICBM during 1985 constitutes a further violation of the SALT II prohibition on a second new type of ICBM. Several other issues involve potential, probable or likely violations.

The current unclassified report reaffirms the findings of the February 1985 classified report concerning ABM [antiballistic missile] issues, making public two of them for the first time. It also reaffirms the February findings concerning SALT II issues involving violations,

including one concerning strategic nuclear delivery vehicles, which has not previously been made public. In two SALT II issues with respect to which the Soviets were not judged to be in clear violation in the classified report of last February, the findings are altered or updated. These two issues are the SS-16 and an issue made public for the first time—Backfire Bomber production rate.

The Administration's most recent studies support its conclusion that there is a pattern of Soviet noncompliance. As documented in this and previous reports, the Soviet Union has violated its legal obligation under or political commitment to the SALT I ABM Treaty and Interim Agreement, the SALT II agreement, the Limited Test Ban Treaty of 1963, the Biological and Toxin Weapons Convention, the Geneva Protocol on Chemical Weapons, and the Helsinki Final Act. In addition, the U.S.S.R. has likely violated provisions of the Threshold Test Ban Treaty.

While we remain concerned about Soviet violations of Basket I of the Helsinki Final Act and the Limited Test Ban Treaty, there is no unambiguous evidence of new 1985 Soviet violations of these two treaties. With regard to the Biological and Toxin Weapons Convention, or the Geneva Protocol on Chemical Weapons, there also is no unambiguous evidence of new 1985 Soviet lethal attacks that meets our strict standards of evidence. However, the Soviets clearly remain in violation of the Biological and Toxin Weapons Convention.

THE SIGNIFICANCE OF SOVIET NONCOMPLIANCE

Through its noncompliance, the Soviet Union has made military gains in the areas of strategic offensive arms as well as chemical, biological and toxin weapons. If the yields of Soviet nuclear tests have been substantially above 150 kilotons, then Soviet testing would allow proportionately greater gains in nuclear weapons development than the U.S. could achieve. The possible extent of the Soviet Union's military gains by virtue of its noncompliance in the area of strategic defense also is of increasing importance and serious concern.

In a fundamental sense, all deliberate Soviet violations are equally important. As violations of legal obligations or political commitments, they cause grave concern regarding Soviet commitment to arms control, and they darken the atmosphere in which current negotiations are being conducted in Geneva and elsewhere.

In another sense, Soviet violations are not of equal importance. While some individual violations are of little apparent military significance in their own right, such violations can acquire importance if, left unaddressed, they are permitted to become precedents for future, more threatening violations. Moreover, some issues that individually have little military significance could conceivably become significant when taken in their aggregate.

The Krasnoyarsk Radar

The radar under construction near Krasnoyarsk in Siberia is disturbing for both political and military reasons. Politically, the radar demonstrates that the Soviets are capable of violating arms control obligations and commitments even when they are negotiating with the United States or when they know we will detect a violation. The 1972 ABM Treaty prohibits the Soviets from siting an ABM radar, or siting and orienting a ballistic missile detection and tracking radar, as the Krasnoyarsk radar is sited and oriented.

Militarily, the Krasnoyarsk radar violation goes to the heart of the ABM Treaty. Large phased-array radars (LPARs) like that under construction near Krasnoyarsk were recognized during the ABM Treaty negotiations as the critical, long lead-time element of a nationwide ABM defense.

When considered as a part of a Soviet network of new LPARs, the Krasnoyarsk radar has the inherent potential to contribute to ABM radar coverage of a significant portion of the central U.S.S.R. Moreover, the Krasnoyarsk radar closes the remaining gap in Soviet ballistic missile detection and tracking coverage.

ABM Territorial Defense and Other ABM Activities

The Krasnoyarsk radar appears even more menacing when considered in the context of other Soviet ABM-related activities. Together they cause concern that the Soviet Union may be preparing an ABM territorial defense. Some of these activities, such as permitted LPARs and the Moscow ABM deployment area, are consistent with the ABM Treaty. Others involve potential or probable Soviet violations or other ambiguous activity, including:

- the apparent testing and development of components required for an ABM system which could be deployed to a site in months rather than years;
- the probable concurrent testing of air defense components and ABM components;
- the development of a modern air defense system, the SA-X-12, which may have some ABM capabilities; and
- the demonstration of an ability to reload ABM launchers and to refire the interceptor missile in a period of time shorter than previously noted.

Soviet deployment of an ABM territorial defense contrary to the ABM Treaty would have profound implications for Western security and the vital East-West strategic balance. A unilateral Soviet territorial ABM capability acquired in violation of the ABM Treaty could erode our deterrent and leave doubts about its credibility. Such a capability might encourage the Soviets to take increased risks in crises, thus degrading crisis stability.

SS-25

The SS-25, a clear and irreversible violation of the Soviet Union's SALT II commitment, also has important political and military implications. Testing and deployment of this missile violates a central provision of the SALT II Treaty, which was intended to limit the number of new ICBMs. The Treaty permits only one new type of ICBM for each Party. The Soviets have informed us that their one new type will be the SS-X-24, which is now undergoing testing, and have falsely asserted that the SS-25 is a permitted modernization of the silo-based SS-13 ICBM.

Under the pretext of permitted modernization, the Soviets, since the last compliance report, have deployed a prohibited second new type of missile, the SS-25, which is mobile and could be made more lethal. The SS-25 also could be modified to carry more than a single warhead. Most worrisome is the technical argument by which the Soviets sought to justify the SS-25, for it might be applied to additional prohibited new types of ICBMs in the future.

Telemetry Encryption and Concealment of Missile/Launcher Association

Two other Soviet violations impede our ability to verify the Soviet Union's compliance with its political commitments. Soviet use of encryption impedes U.S. verification of Soviet compliance and thus contravenes the provision of the SALT II Treaty which prohibits use of deliberate concealment measures which impede verification of compliance by national technical means. A new finding of this report is that current Soviet activities violate the provision of the Treaty which prohibits use of deliberate concealment measures associated with testing, including those measures aimed at concealing the association between ICBMs and launchers during testing. These deliberate Soviet concealment activities impede our ability to know whether a type of missile is in compliance with SALT II requirements. They could also make it more difficult for the United States to assess accurately the critical parameters of any future missile.

Since the SALT I agreement in 1972, Soviet encryption and concealment activities have become more extensive and disturbing. These activities, Soviet responses on these issues, and Soviet failure to take the corrective actions which the United States has repeatedly requested, are indicative of a Soviet attitude contrary to the fundamentals of sound arms control agreements. Soviet encryption and concealment activities present special obstacles to maintaining existing arms control agreements, undermine the political confidence necessary for concluding new treaties, and underscore the necessity that any new agreement be effectively verifiable. Soviet noncompliance, as documented in current and past Administration reports and exemplified by the encryption and concealment issues, has made verification and compliance pacing elements of arms control today.

Chemical, Biological and Toxin Weapons

The Soviet Union's violations of its legal obligations under the Biological and Toxin Weapons Convention and the Geneva Protocol have important political and military implications. The Soviets had a program of biological and toxin weapons before they signed the multilateral Treaty. Upon signing the Treaty, the Soviets not only did not stop their illegal program but they expanded facilities and were instrumental in the use of prohibited agents.

The Soviet Union has a prohibited offensive biological warfare capability which we do not have and against which we have no defense. This capability may include advanced biological agents about which we have little knowledge. Evidence suggests that the Soviets are expanding their chemical and toxin warfare capabilities in a manner that has no parallel in NATO's retaliatory or defensive programs. Even though there has been no unambiguous evidence of lethal attacks during 1985, previous activities have provided testing, development and operational experience.

Nuclear Testing

With respect to the Threshold Test Ban Treaty, Soviet testing at yields above the 150 kiloton limit would allow development of advanced nuclear weapons with proportionately higher yields than the yields of weapons that the U.S. could develop under the Treaty. The U.S. Government judges that Soviet test activities constitute likely violations of the 150 kiloton limit.

Other Issues

Military significance is evidently not necessarily the determining factor in Soviet decisions or actions which violate their arms control commitments. The Soviet Union has also violated or probably violated arms control obligations and commitments from which at present it appears to reap little military gain. The following cases are relevant in this regard:

- the use of remaining facilities at former SS-7 ICBM sites since the February 1985 compliance report (SALT I Interim Agreement);
- exceeding the strategic nuclear delivery vehicle limits (SALT II);
- probable deployment of the SS-16 (SALT II); and
- underground nuclear test venting (Limited Test Ban Treaty).

The 1981 Soviet violation of the military exercise notification provisions of the Helsinki Final Act involved an action contrary to the confidence building measures included in that agreement.

Soviet deployments of Backfire Bombers to Arctic staging bases are inconsistent with the Soviet Union's political commitment to the SALT II Treaty. In addition, while there are ambiguities concerning the data, there is evidence that the production rate of the Backfire Bomber was constant at slightly more than 30 per year until 1984, and slightly less than 30 per year since then. These Soviet Backfire Bomber activities will continue to be monitored and assessed.

THE SOVIET RESPONSE

At the same time as the Administration has reported its concerns and findings to the Congress, the United States has had extensive exchanges with the Soviet Union on Soviet noncompliance in the Standing Consultative Commission (SCC), where SALT-related issues (including ABM issues) are discussed, and through other appropriate diplomatic channels. I expressed my personal concerns directly to General Secretary Gorbachev during my recent meeting with him in Geneva.

All of the violations, probable violations and ambiguous situations included in this report and previously reported on have been raised with the Soviets, except certain sensitive issues. The Soviet Union has thus far not provided explanations sufficient to alleviate our concerns on these issues, nor has the Soviet Union taken actions needed to correct existing violations. Instead, they have continued to assert that they are in complete compliance with their arms control obligations and commitments.

U.S. POLICY

In contrast with the Soviet Union, the United States has fully observed its arms control obligations and commitments, including those under the SALT I and SALT II agreements. As I stated in my message to the Congress on June 10 of this year concerning U.S. interim restraint policy:

> In 1982, on the eve of the Strategic Arms Reduction Talks (START), I decided that the United States would not undercut the expired SALT I agreement or the unratified SALT II agreement as long as the Soviet Union exercised equal restraint. Despite my serious reservations about the inequities of the SALT I agreement and the serious flaws of the SALT II agreement, I took this action in order to foster an atmosphere of mutual restraint conducive to serious negotiation as we entered START.
>
> Since then, the United States has not taken any actions which would undercut existing arms control agreements. The United States has fully kept its part of the bargain.

However, the Soviets have not. They have failed to comply with several provisions of SALT II, and we have serious concerns regarding their compliance with the provisions of other accords.

The pattern of Soviet violations, if left uncorrected, undercuts the integrity and viability of arms control as an instrument to assist in ensuring a secure and stable future world. The United States will continue to pursue vigorously with the Soviet Union the resolution of our concerns over Soviet noncompliance. We cannot impose upon ourselves a double standard that amounts to unilateral treaty compliance.

On June 10, I invited the Soviet Union to join the United States in an interim framework of truly mutual restraint on strategic offensive arms and to pursue with renewed vigor our top priority of achieving deep reductions in the size of existing nuclear arsenals in the ongoing negotiations in Geneva. I noted that the U.S. cannot establish such a framework alone and that it would require the Soviet Union to take positive, concrete steps to correct its noncompliance, to resolve our other compliance concerns, to reverse its unparalleled and unwarranted military buildup, and actively to pursue arms reduction agreements in the Geneva negotiations.

In going the extra mile, I have made clear that as an integral part of this policy, we will also take those steps required to assure our national security and that of our Allies that were made necessary by Soviet noncompliance. Thus, as I indicated to the Congress on June 10, "appropriate and proportionate responses to Soviet noncompliance are called for to ensure our security, to provide incentives to the Soviets to correct their noncompliance, and to make it clear to Moscow that violations of arms control obligations entail real costs."

As we monitor Soviet actions for evidence of the positive, concrete steps needed on their part to correct these activities, I have directed the Department of Defense to conduct a comprehensive assessment aimed at identifying specific actions that the United States could take to augment as necessary the U.S. strategic modernization program as a proportionate response to, and as a hedge against the military consequences of those Soviet violations of existing arms control agreements which the Soviets fail to correct. We will carefully study this report as soon as it has been completed.

As we press for corrective Soviet actions and while keeping open all programmatic options for handling future milestones as new U.S. strategic systems are deployed, we will continue to assess the overall situation in light of Soviet actions correcting their noncompliance, reversing their military build-up, and promoting progress in Geneva.

I look forward to continued close consultation with the Congress as we seek to make progress in resolving compliance issues and in negotiating sound arms control agreements.

The findings on Soviet noncompliance with arms control agreements follow.

THE FINDINGS

Anti-Ballistic Missile (ABM) Treaty

Treaty Status

The 1972 ABM Treaty and its Protocol ban deployment of ABM systems except that each party is permitted to deploy one ABM system around the national capital area or, alternatively, at a single ICBM deployment area. The ABM Treaty is in force and is of indefinite duration. Soviet actions not in accord with the ABM Treaty are, therefore, violations of a legal obligation.

1. The Krasnoyarsk Radar

• **Obligation:** To preclude creation of a base for territorial ABM defense, the ABM Treaty provides that radars for early warning of ballistic missile attack may be deployed only at locations along the periphery of the national territory of each party and that they be oriented outward. The Treaty permits deployment (without regard to location or orientation) of large phased-array radars for purposes of tracking objects in outer space or for use as national technical means of verification of compliance with arms control agreements.

• **Issue:** The January 1984 and February 1985 reports examined the issue of whether the Krasnoyarsk radar meets the provisions of the ABM Treaty governing phased-array radars. This report reexamines this issue.

• **Finding:** The U.S. Government reaffirms the conclusion in the February 1985 report that the new large phased-array radar under construction at Krasnoyarsk constitutes a violation of legal obligations under the Anti-Ballistic Missile Treaty of 1972 in that in its associated siting, orientation, and capability, it is prohibited by this Treaty. Continuing construction and the absence of credible alternative explanations have reinforced our assessment of its purpose. Despite U.S. requests, no corrective action has been taken. This and other ABM-related Soviet activities suggest that the U.S.S.R. may be preparing an ABM defense of its national territory.

2. Mobility of ABM System Components

• **Obligation:** The ABM Treaty prohibits the development, testing or deployment of mobile land-based ABM systems or components.

• **Issue:** The February 1985 report examined whether the Soviet Union has developed a mobile land-based ABM system, or components for such a system, in violation of its legal obligation under the ABM Treaty. This report reexamines this issue.

• **Finding:** The U.S. Government judges that the evidence on Soviet actions with respect to ABM component mobility is ambiguous, but that the U.S.S.R.'s development and testing of components of an ABM system, which apparently are designed to be deployable at sites requiring relatively limited site preparation, represent a potential violation of its legal obligation under the ABM Treaty. This and other ABM-related Soviet activities suggest that the U.S.S.R. may be preparing an ABM defense of its national territory.

3. Concurrent Testing of ABM and Air Defense Components

• **Obligation:** The ABM Treaty and its Protocol limit the Parties to one ABM deployment area. In addition to the ABM systems and components at that one deployment area, the Parties may have ABM systems and components for development and testing purposes so long as they are located at agreed test ranges. The Treaty also prohibits giving components, other than ABM system components, the capability "to counter strategic ballistic missiles or their elements in flight trajectory" and prohibits the Parties from testing them in "an ABM mode." The Parties agreed that the concurrent testing of SAM [surface-to-air missile] and ABM system components is prohibited.

• **Issue:** The February 1985 compliance report examined whether the Soviet Union has concurrently tested SAM and ABM system components in violation of its legal obligation since

1978 not to do so. It was the purpose of that obligation to further constrain testing of air defense systems in an ABM mode. This report reexamines this issue.

• **Finding:** The U.S. Government reaffirms the judgment made in the February 1985 report that the evidence of Soviet actions with respect to concurrent operations is insufficient fully to assess compliance with Soviet obligations under the ABM Treaty. However, the Soviet Union has conducted tests that have involved air defense radars in ABM-related activities. The large number, and consistency over time, of incidents of concurrent operation of ABM and SAM components, plus Soviet failure to accommodate fully U.S. concerns, indicate the U.S.S.R. probably has violated the prohibition on testing SAM components in an ABM mode. In several cases this may be highly probable. This and other ABM-related activities suggest the U.S.S.R. may be preparing an ABM defense of its national territory.

4. ABM Capability of Modern SAM Systems

• **Obligation:** Under the ABM Treaty, each party undertakes not to give non-ABM interceptor missiles, launchers or radars "capabilities to counter strategic ballistic missiles or their elements in flight trajectory, and not to test them in an ABM mode. . . ."

• **Issue:** The February 1985 classified report examined whether the Soviet Union has tested a SAM system or component in an ABM mode or given it the capability to counter strategic ballistic missiles or their elements in flight trajectory in violation of their legal obligation under the ABM Treaty. This report reexamines this issue.

• **Finding:** The U.S. Government reaffirms the judgment made in the February 1985 report that the evidence of Soviet actions with respect to SAM upgrade is insufficient to assess compliance with the Soviet Union's obligations under the ABM Treaty. However, this and other ABM-related Soviet activities suggest that the U.S.S.R. may be preparing an ABM defense of its national territory.

5. Rapid Reload of ABM Launchers

• **Obligation:** The ABM Treaty limits to 100 the number of deployed ABM interceptor launchers and deployed interceptor missiles. It does not limit the number of interceptor missiles that can be built and stockpiled. The Treaty prohibits the development, testing or deployment of "automatic or semi-automatic or other similar systems for rapid reload" of the permitted launchers.

• **Issue:** The February 1985 classified report examined whether the Soviet Union has developed, tested or deployed automatic, semi-automatic, or other similar systems for rapid reload of ABM launchers in violation of its legal obligation under the ABM Treaty. This report reexamines this issue.

• **Finding:** The U.S. Government judges, on the basis of the evidence available, that the U.S.S.R.'s actions with respect to the rapid reload of ABM launchers constitute an ambiguous situation as concerns its legal obligations under the ABM Treaty not to develop systems for rapid reload. The Soviet Union's reload capabilities are a serious concern. These and other ABM-related activities suggest that the U.S.S.R. may be preparing an ABM defense of its national territory.

6. ABM Territorial Defense

• **Obligation:** The ABM Treaty allows each party a single operational site, explicitly permits modernization and replacement of ABM systems or their components, and explicitly recognizes the existence of ABM test ranges for the development and testing of ABM components. The ABM Treaty prohibits, however, the deployment of an ABM system for defense of the national territory of the parties and prohibits the parties from providing a base for such a defense.

• **Issue:** The February 1985 report examined whether the Soviets have deployed an ABM system for the defense of their territory or provided a base for such a defense. This report reexamines this issue.

• **Finding:** The U.S. Government judges that the aggregate of the Soviet Union's ABM and ABM-related actions (e.g., radar construction, concurrent testing, SAM upgrade, ABM rapid reload and ABM mobility) suggests that the U.S.S.R. may be preparing an ABM defense of its national territory.

SALT II Treaty

Treaty Status

SALT II was signed in June 1979 and has not been ratified. In 1981 the United States made clear to the Soviet Union its intention not to ratify the SALT II Treaty. Prior to this clarification of our position in 1981, both nations were obligated under customary international law not to take actions which would defeat the object and purpose of the signed, but unratified, Treaty. Such Soviet actions prior to 1981 are violations of legal obligations. Since 1981, the United States has observed a political commitment to refrain from actions that undercut the SALT II Treaty so long as the Soviet Union does likewise. The Soviets have told us they also would abide by these provisions. Soviet actions inconsistent with this commitment are violations of their political commitment with respect to the SALT II Treaty.

1. The SS-25 ICBM

• **Obligation:** In an attempt to constrain the modernization and the proliferation of new, more capable types of ICBMs, the provisions of SALT II permit each side to "flight test and deploy" just one new type of "light" ICBM. A new type is defined as one that differs from an existing type by more than 5 percent in length, largest diameter, launch-weight or throw-weight or differs in number of stages or propellant type. In addition, it was agreed that no ICBM of an existing type with a post-boost vehicle and a single reentry vehicle would be flight-tested or deployed whose reentry vehicle weight is less than 50 percent of the throw-weight of that ICBM. This latter provision was intended to prohibit the possibility that single warhead ICBMs could quickly be converted to MIRVed systems.

• **Issues:** The January 1984 and February 1985 reports examined the evidence: whether the Soviets have tested or deployed a second new type of ICBM (the SS-25) which is prohibited; whether the reentry vehicle (RV) on that missile, if it is not a new type, is in compliance with the provision that for existing types of single RV missiles, the weight of the RV be equal to at least 50 percent of total throw-weight; and whether encryption of SS-25 flight test telemetry impedes verification. This report reexamines these issues.

• **Findings:**

a. *Second New Type—Testing and Deployment:* The U.S. Government judges, based on convincing evidence about the SS-25, that the throw-weight of the Soviet SS-25 ICBM exceeds by more than 5 percent the throw-weight of the Soviet SS-13 ICBM and cannot therefore be considered a permitted modernization of the SS-13 as the Soviets claim. The SS-25 is a prohibited second "new type" of ICBM and its testing, in addition to the testing of the SS-X-24 ICBM, thereby is a violation of the Soviet Union's political commitment to observe the "new type" provision of the SALT II Treaty. The deployment of this missile during 1985 constitutes a further violation of the SALT II prohibition on a second "new type" of ICBM.

b. *RV-to-Throw-weight Ratio:* The U.S. Government reaffirms the conclusion of the January 1984 report regarding the SS-25 RV-to-throw-weight ratio. That is, if we were to accept the Soviet argument that the SS-25 is not a prohibited "new type" of ICBM, it would be a violation of their political commitment to observe the SALT II provision which prohibits the testing of such an existing ICBM with a single reentry vehicle whose weight is less than 50 percent of the throw-weight of the ICBM.

c. *Encryption:* The U.S. Government reaffirms its judgment made in the January 1984 report regarding telemetry encryption during tests of the SS-25. Encryption during tests of this missile is illustrative of the deliberate impeding of verification of compliance in violation of the U.S.S.R.'s political commitment.

Despite U.S. requests for explanations and corrective actions with regard to the SS-25 ICBM-related activities, Soviet actions continue unchanged, and the Soviet Union has proceeded to deployment of this missile.

2. Strategic Nuclear Delivery Vehicle Limits

• **Obligation:** The Soviet Union's political commitment to abide by SALT II is interpreted by the U.S. Government as including an obligation not to increase the number of strategic nuclear delivery vehicles (SNDVs) in its arsenal. The Soviet Union had 2,504 SNDVs when it signed SALT II.

• **Issue:** The February 1985 classified report examined the issue of whether the Soviet Union has abided by its commitment not to exceed the level of 2,504 SNDVs. This report reexamines this issue.

• **Finding:** The U.S. Government interprets the Soviet commitment to abide by SALT II as including the existence of a cap on SNDVs—at a level of 2,504 existing at the time SALT II was signed. The Soviet Union has deployed SNDVs above the 2,504 cap in violation of its political commitment under SALT II. Such activity is indicative of a Soviet policy inconsistent with this political commitment.

3. SS-16 Deployment

• **Obligation:** The Soviet Union agreed in SALT II not to produce, test or deploy ICBMs of the SS-16 type and, in particular, not to produce the SS-16 third stage or the reentry vehicle of that missile.

• **Issue:** The January 1984 and February 1985 reports examined the evidence regarding whether the Soviets have deployed the SS-16 ICBM in spite of the ban on its deployment. This report reexamines this issue.

• **Finding:** The President's February 1985 Report to Congress which noted that the evidence is somewhat ambiguous and we cannot reach a definitive conclusion, found the activities at Plesetsk to be a probable violation of the U.S.S.R.'s legal obligation and political commitment under SALT II. Soviet activity in the past year at Plesetsk seems to indicate the probable removal of SS-16 equipment and introduction of equipment associated with a different ICBM.

4. Backfire Bomber Intercontinental Operating Capability

• **Obligation:** At the signing of SALT II, the U.S.S.R. gave the U.S. assurances about the BACKFIRE bomber's intercontinental operating capability. The Soviet statement of June 16, 1979, read, in pertinent part, as follows:

> The Soviet side informs the US side that the Soviet "Tu-22M" airplane, called "BACKFIRE" in the USA, is a medium-range bomber, and that it does not intend to give this airplane the capability of operating at intercontinental distances. In this connection, the Soviet side states that it will not increase the radius of action of this airplane in such a way as to enable it to strike targets on the territory of the USA. Nor does it intend to give it such a capability in any other manner, including by in-flight refueling. . . .

This unilateral statement is an integral part of the SALT II agreement and the U.S. considers it to be incorporated in the Soviet Union's political commitment to abide by SALT II.

• **Issue:** The February 1985 classified report addressed the issue of whether temporary deployments of BACKFIRE bombers to Arctic bases constitute actions inconsistent with Brezhnev's June 16, 1979, statement not to give the BACKFIRE an increased radius of action and the capability of operating at intercontinental distances. This report reexamines this issue.

• **Finding:** The U.S. Government judges that the temporary deployment of BACKFIREs to Arctic bases is cause for concern and continued careful monitoring. By such temporary deployment of BACKFIREs, the Soviet Union acted in a manner inconsistent with its political commitment in the June 1979 BACKFIRE statement not to give Backfire the capability to strike targets on the territory of the United States.

5. Backfire Bomber Production Rate

• **Obligation:** At the signing of SALT II, the U.S.S.R. gave the U.S. assurances about the BACKFIRE bomber's production rate. The Soviet statement read, in pertinent part, as follows: ". . . the Soviet side states that it will not increase the production rate of this airplane as compared to the present rate." Soviet President Brezhnev, according to Secretary Vance's SALT II transmittal letter to the Senate, "confirmed that the Soviet BACKFIRE production rate would not exceed thirty per year." President Carter stated that the United States enters into the SALT II Agreement on the basis of the commitments contained in the Soviet statement and that it considers the carrying out of these commitments to be essential to the obligations under the Treaty. The U.S. considers the Soviet unilateral statement to be an integral part of the SALT II Agreement and, as such, to be incorporated in the Soviet Union's political commitment to abide by SALT II.

• **Issue:** The February 1985 report examined the question of whether the Soviet Union has produced more than 30 BACKFIREs per year and increased the production rate since signing SALT II. This report reexamines this issue.

• **Finding:** The U.S. Government judges that the Soviet Union is obligated to produce no more than 30 BACKFIRE bomber aircraft per year. There are ambiguities concerning the data. However, there is evidence that the Soviet BACKFIRE production rate was constant at slightly more than 30 per year until 1984, and decreased since that time to slightly below 30 per year.

6. Encryption of Ballistic Missile Telemetry

• **Obligation:** Provisions of SALT II ban deliberate concealment measures that impede verification by national technical means. The Treaty permits each party to use various methods of transmitting telemetric information during testing, including encryption, but bans deliberate denial of telemetry, such as through encryption, whenever such denial impedes verification.

• **Issue:** The Janaury 1984 compliance report examined whether the Soviet Union has engaged in encryption of missile test telemetry (radio signals) so as to impede verification. This issue was reexamined in the February 1985 compliance report and is examined again in this report.

• **Finding:** The U.S. Government reaffirms the conclusion in the February 1985 report that Soviet encryption practices constitute a violation of a legal obligation under SALT II prior to 1981 and a violation of their political commitment since 1982. The nature and extent of such encryption of telemetry on new ballistic missiles, despite U.S. requests for corrective action, continues to be an example of deliberately impeding verification of compliance in violation of this Soviet political commitment.

7. Concealment of Missile/ Launcher Association

• **Obligation:** Article XV of the SALT II Treaty prohibits "deliberate concealment measures which impede verification by national technical means of compliance with the provisions of this Treaty." This obligation is further clarified in a Common Understanding that states that Article XV applies to all provisions of the Treaty and "includes the obligation not to use deliberate concealment measures associated with testing, including those measures aimed at concealing the association between ICBMs and launchers during testing."

• **Issue:** This report examines for the first time the issue of whether the Soviets have concealed the association between an ICBM and its launcher during testing in violation of their obligation not to use deliberate concealment measures which impede verification.

• **Finding:** The U.S. Government judges Soviet activities related to the SS-25 to be a violation of the Soviet Union's political commitment to abide by the SALT II Treaty provision prohibiting concealment of the association between a missile and its launcher during testing.

SALT I Interim Agreement

Treaty Status

The SALT I Interim Agreement entered into force for the United States and the Soviet Union in 1972. Dismantling procedures implementing the Interim Agreement were concluded in 1974. The Interim Agreement, by its own terms, was of limited duration and expired as a legally binding document in 1977. The applicability of the Interim Agreement to the actions of both parties has, however, been extended by the parties by a series of mutual political commitments, including the President's May 31, 1982, statement that the United States would refrain from actions which would undercut existing strategic arms agreements so long as the Soviet Union shows equal restraint. The Soviets have told us they would abide by the SALT I Interim Agreement and SALT II. Any actions by the U.S.S.R. inconsistent with this commitment are violations of its political commitment with respect to the Interim Agreement and its implementing procedures.

Use of "Remaining Facilities" at Former SS-7 Sites

• **Obligation:** The SALT I Interim Agreement and its procedures prohibit the Parties from using facilities remaining at dismantled or destroyed ICBM sites for storage, support, or launch of ICBMs. Any Soviet actions inconsistent with this commitment are violations of a political commitment with respect to the Interim Agreement and its implementing procedures.

• **Issue:** The February 1985 report examined whether the U.S.S.R. has violated the SALT I Interim Agreement prohibition against using facilities remaining at dismantled former SS-7 ICBM sites for the storage, support or launch of SS-25 ICBMs. This report reexamines this issue.

• **Finding:** The U.S. Government judges that Soviet use of former SS-7 ICBM facilities in support of the deployment and operation of the SS-25 mobile ICBMs is in violation of the SALT I Interim Agreement. Should the Soviets use "remaining facilities" in the future at other former SS-7 sites where the SS-25 is now in the process of being deployed, such use will also constitute Soviet violation of its political commitment under the SALT I Interim Agreement.

Biological Weapons Convention and 1925 Geneva Protocol

Chemical, Biological, and Toxin Weapons

• **Treaty Status:** The 1972 Biological and Toxin Weapons Convention (the BWC) and the 1925 Geneva Protocol are multilateral treaties to which both the United States and the Soviet Union are parties. Soviet actions not in accord with these treaties and customary international law relating to the 1925 Geneva Protocol are violations of legal obligations.

• **Obligations:** The BWC bans the development, production, stockpiling or possession, and transfer of microbial or other biological agents or toxins except for a small quantity for prophylactic, protective or other peaceful purposes. It also bans weapons, equipment and means of delivery of agents or toxins. The 1925 Geneva Protocol and related rules of customary international law prohibit the first use in war of asphyxiating, poisonous or other gases and of all analogous liquids, materials or devices and prohibits use of bacteriological methods of warfare.

• **Issues:** The January 1984 and February 1985 reports examined whether the Soviets are in violation of provisions that ban the development, production, transfer, possession and use of biological and toxin weapons and whether they have been responsible for the use of lethal chemicals. This report reexamines this issue.

• **Finding:** The U.S. Government judges that ongoing Soviet activities confirm and strengthen the conclusion of the January 1984 and February 1985 reports that the Soviet Union has maintained an offensive biological warfare program and capability in violation of its legal obligation under the Biological and Toxin Weapons Convention of 1972.

Allegations concerning the use of lethal chemicals or toxins in Kampuchea, Laos, or Afghanistan have subsided in 1985. However, there is no basis for amending the February 1985 conclusion that, prior to this time, the Soviet Union has been involved in the production, transfer, and use of trichothecene mycotoxins for hostile purposes in Laos, Kampuchea, and Afghanistan in violation of its legal obligation under international law as codified in the Geneva Protocol of 1925 and the Biological and Toxin Weapons Convention of 1972.

Threshold Test Ban Treaty

Nuclear Testing and the 150 Kiloton Limit

• **Treaty Status:** The Threshold Test Ban Treaty (TTBT) was signed in 1974. The Treaty has not been ratified but neither party has indicated an intention not to ratify. Therefore, both Parties are subject to the obligation under customary international law to refrain from acts that would defeat the object and purpose of the TTBT. Soviet actions that would defeat the object and purpose of the TTBT are therefore violations of their legal obligations. The United States is seeking to negotiate improved verification measures for the Treaty. Both Parties have separately stated they would observe the 150 kiloton threshold of the TTBT.

• **Obligation:** The Treaty prohibits any underground nuclear weapon test having a yield exceeding 150 kilotons at any place under the jurisdiction or control of the Parties beginning March 31, 1976. In view of the technical uncertainties associated with estimating the precise yield of nuclear weapon tests, the sides agreed that one or two slight, unintended breaches per year would not be considered a violation.

• **Issue:** The January 1984 and February 1985 reports examined whether the Soviets have conducted nuclear tests in excess of 150 kilotons. This report reexamines this issue.

• **Finding:** While ambiguities in the pattern of Soviet testing and verification uncertainties continued in 1985, the U.S. Government reaffirms the February 1985 finding that Soviet nuclear testing activities for a number of tests constitute a likely violation of legal obligations under the Threshold Test Ban Treaty of 1974, which banned underground nuclear tests with yields exceeding 150 kilotons. These Soviet actions continued despite U.S. requests for corrective measures.

Limited Test Ban Treaty

Underground Nuclear Test Venting

• **Treaty Status:** The Treaty Banning Nuclear Weapon Tests in the Atmosphere, in Outer Space and Under Water (Limited Test Ban Treaty—LTBT) is a multilateral treaty that entered into force for the United States and the Soviet Union in 1963. Soviet actions not in accord with this treaty are violations of a legal obligation.

• **Obligations:** The LTBT specifically prohibits nuclear explosions in the atmosphere, in outer space and under water. It also prohibits nuclear explosions in any other environment "if such explosions cause radioactive debris to be present outside the territorial limits of the State under whose jurisdiction or control such explosion is conducted."

• **Issue:** The February 1985 report examined whether the U.S.S.R.'s underground nuclear tests have caused radioactive debris to be present outside of its territorial limits. This report reexamines this issue.

• **Finding:** The U.S. Government reaffirms the judgment made in the February 1985 report that the Soviet Union's underground nuclear test practices resulted in the venting of radioactive matter on numerous occasions and caused radioactive matter to be present outside the Soviet Union's territorial limits in violation of its legal obligation under the Limited Test Ban Treaty. The Soviet Union failed to take the precautions necessary to minimize the contamination of man's environment by radioactive substances despite numerous U.S. demarches and requests for corrective action.

Helsinki Final Act

Helsinki Final Act Notification of Military Exercises

• **Legal Status:** The Final Act of the Conference on Security and Cooperation in Europe was signed in Helsinki in 1975. This document represents a political commitment and was signed by the United States and the Soviet Union, along with many other States. Soviet actions not in accord with that document are violations of their political commitment.

• **Obligation:** All signatory States of the Helsinki Final Act are committed to give prior notification of, and other details concerning, major military maneuvers, defined as those involving more than 25,000 troops.

• **Issue:** The January 1984 and February 1985 reports examined whether notification of the Soviet military exercise "Zapad–81" was inadequate and therefore a violation of the Soviet Union's political commitment under the Helsinki Final Act. This report reexamines this issue.

• **Finding:** The U.S. Government previously judged and continues to find that the Soviet Union in 1981 violated its political commitment to observe provisions of Basket I of the Helsinki Final Act by not providing prior notification of exercise "ZAPAD–81." While the U.S.S.R. has generally taken an approach to the confidence-building measures of the Final Act which minimizes the information it provides, Soviet compliance with the exercise-notification provisions was improved in 1983. In 1984, the Soviets returned to a minimalist approach providing only the bare information required under the Final Act. The Soviet Union continued this approach during 1985.

The U.S. and the Philippines: Dangers and Opportunities

by Michael H. Armacost

Address before the World Affairs Council in Portland on December 5, 1985. Ambassador Armacost is Under Secretary for Political Affairs.

I would like to speak to you about the Philippines—a country with which we have had a long and close association and in whose future we have an important stake. I had the rare privilege of serving there as U.S. Ambassador from 1982 to 1984. It is difficult for me to speak about the Philippines with clinical detachment; like all who have experienced the hospitality of Filipinos, their good humor and their friendly disposition toward Americans, I developed a deep affection for the country and its people.

When you read the press, sometimes you get the idea that our exclusive interest in the Philippines is our air and naval bases at Clark Field and Subic Bay. That is grossly unfair to the Filipinos and demeans the very real importance of the Philippines and the Filipino people, to whom we are inextricably bound by ties of history, sentiment, and national interests. For both peoples, these interests extend well beyond the bases—important as they are to the security of our respective nations.

I am glad there is now so much public interest in the Philippines. The Filipino people deserve our concern and our support. But I would like to offer a little perspective to the discussion. Contrary to the glib analysis of many commentators, the Philippines is not Vietnam and most certainly not Iran. The Philippines is a unique society that must be understood in its own terms, a rich amalgam of Asian, Hispanic, and American cultures that is much more than the sum of its parts. Philippine solutions must be devised for their current problems, and U.S. policies must respond to Philippine realities and Filipino aspirations.

If the Philippines is unique, so has been our experience with it. It was our only real colony. Our destinies intertwined for nearly a century. The friendship between our peoples survived the colonial era undiminished. That owes much to the fact that we early encouraged the principle of self-government. We created a system of public education open to all. We provided a common language in a land of many languages. We accepted early on the inevitability of Philippine independence. We fought side by side with Filipinos against Japanese imperialism. When MacArthur honored his pledge to return, he earned the gratitude of an entire people. Thousands of Americans who served in the Philippines as Thomasite teachers, Peace Corps volunteers, and AID [Agency for International Development] representatives claimed the respect of Filipinos—from aristocratic families to rural peasants. We bequeathed to the Filipinos our commitment to representative institutions, our enthusiasm for elections, the rhetoric of democratic idealism, and—I must add—the exuberant practice of ward-heeler, party-machine, pork-barrel politics. We cannot be indifferent to the fate of this legacy. What happens in the Philippines makes a difference to Americans.

The Nature of the Crisis

Everyone agrees that the Philippines faces enormous problems, but we ought to be precise about their nature. The difficulties are threefold: each element feeds on the other:

First, there is a challenge to the legitimacy of government institutions;

Second, severe economic and financial difficulties; and

Third, a communist-led insurgency that is exploiting these conditions to establish a foothold in the rural areas.

The cumulative effect of these problems poses a crisis for the Philippines. In some Asian languages, the word for crisis suggests elements of danger *and* opportunity, and that is how we should view the situation in the Philippines. There are dangers of polarization and growing internal conflict; there are also opportunities for national reconciliation, the revitalization of democratic institutions, the restoration of sustained economic growth, and the return of the Philippines to a leadership position in Southeast Asia. To avert the dangers and capitalize on the opportunities will not be easy, and it will take sustained efforts by Filipinos as well as substantial support from their friends, particularly our own country.

The Political Dimension

There is a strong democratic tradition in the Philippines. President Marcos emerged as a political leader out of that tradition. He served as a member of the House of Representatives. He was a leader of the Senate. He was elected President in 1965 and again in 1969. In 1972 he imposed martial law in response to what he characterized as government paralysis and the spread of lawlessness. While the early period of martial law saw some reforms and a reestablishment of public order, democratic institutions were compromised in the process. The centralization of power and the further concentration of wealth gradually alienated elements of the rural population as well as the middle class.

Pressures for political liberalization increased in the late 1970s and early 1980s. They intensified dramatically following the assassination of Benigno Aquino in 1983. The murder of this major opposition leader, whom many regarded as a possible successor to Marcos, occurred under conditions which provoked widespread suspicions of complicity on the part of governmental officials. This, in turn, produced insistent demands not only for a thorough investigation of the murder but a normalization of the country's political life—early elections, clarification of the rules of succession, and stronger procedures of accountability in government.

Economic Crisis

While the Philippine economy compiled a respectable performance in the 1970s, its growth rate suffered in the early 1980s. More recently, the Philippines has experienced negative growth, a debt crisis, high inflation, and weak investment. To some degree, these problems were attributable to low world market prices for commodities and high interest rates for credit. Yet monopolistic practices, government interference in the marketplace, and import substitution policies were also responsible. These problems were exacerbated by compara-

tively weak incentives offered for foreign investment and, particularly, by the economic uncertainties and the capital flight triggered by the Aquino assassination.

The Insurgency

The third element of the crisis is a growing rural insurgency. The New People's Army (NPA)—which has waged guerrilla war against the Marcos government for more than a decade—may include within its support base well-meaning individuals who have been frustrated by the economic downturn, disillusioned by the atrophy of representative institutions, or alienated by the sometimes undisciplined conduct of the military and police.

But we should not delude ourselves. The NPA leaders are not agrarian reformers. They are ruthless; they are opportunistic; they have systematically used violence to intimidate local officials and to expand their influence in the rural areas. They are communists bent on radically altering the character of the Philippines and the close relations we have enjoyed with that country should they ever come to power. They do not represent democracy any more than communists have represented democracy anywhere else in the world.

While the NPA does not pose an imminent threat to the Philippine Government, its growth in recent years is very worrisome. NPA guerrillas are now fighting the government in at least 59 of the nation's 73 provinces. The number of their armed regulars and irregulars is increasing. So, too, is the base upon which the insurgents rely for support. Their supply of weapons is growing, and they are provoking more frequent and more violent incidents.

The NPA's recent growth has certainly been facilitated by the emerging political and economic crises. Those factors also exacted their toll on the effectiveness of a military establishment whose budget was sharply cut during the last 3 years when the insurgency was taking off. The Armed Forces of the Philippines now lacks many of the rudimentary items, such as fuel, ammunition, and trucks, needed to wage a vigorous counterinsurgency.

An Early National Election

Responding to these pressures and problems, President Marcos announced on November 1 that an early election for president and vice president would be held.

We welcome this decision. Presidential and vice-presidential elections in February 1986, and the local elections which will follow in May, present a timely opportunity to clear the air and to revive the democratic process in the Philippines. A credible government that has public confidence is an essential precondition to the solution of the country's problems. Fair elections are the means—the only means—to achieve such credibility.

This is an opportune moment for elections in another respect. The recent aquittal of all defendants in the Aquino trial may have ended the case but did not dispose of the controversy. Indeed, the court's decision is impossible to reconcile with the conclusions of the widely respected Agrava commission which unanimously rejected the government's suggestion that Aquino was assassinated by a lone gunman with links to the NPA—the hypothesis which the court embraced. Ultimately, the Filipino people must judge the credibility of the court's decision and assess rival assertions of accountability for this brutal crime. A fair election is an appropriate vehicle for registering their judgment.

The outcome of these elections is for Filipinos to decide. It would be wrong for American officials to express a preference for particular candidates. We can confidently expect to work effectively with any government produced by an election which Filipinos consider to have been fair and honest. If the elections are rigged or the rules stacked, this will surely increase political cynicism, further polarize the country, demoralize the forces of moderation, accelerate NPA growth, and deprive whoever wins of the domestic legitimacy and the international support necessary to revive the economy and combat the insurgency.

An overwhelming majority in our Congress—which holds the purse strings of our aid program—recently passed a concurrent resolution affirming American interest in fair and free elections in the Philippines. They further stipulated the conditions which they expected would condition Philippine judgments about the fairness of the electoral process. These included the nature of the electoral code; the impartiality of the government Commission on Elections (COMELEC); accreditation of the National Citizens' Movement for Free Elections (NAMFREL), which has an admirable record as an independent election-monitoring organization; the access afforded the opposition to the print media, television, and radio; and the neutrality of the military during the campaign and vote count. The executive branch shares the convictions that prompted this resolution. All the conditions mentioned in the resolution are important to a free election. But of these, a truly independent COMELEC and full scope for NAMFREL poll watching are the most essential.

We also welcome the fact that election of presidential and vice-presidential candidates will take place simultaneously. Uncertainties about the succession process invite fears of military intervention, inspire rumors of palace cabals, undermine investor confidence, and spur doubts about the future stability of the country. The vice-presidential election can help lay such fears to rest if the candidates selected possess authentic credentials as national leaders.

I would reiterate the central point: our policy interest is not directed toward backing a candidate or picking a winner. Rather, we seek to promote an electoral process which provides a level playing field for all contenders.

Some may ask whether we are indifferent to the position of the various candidates on issues of consequence to us, such as the bases. Of course not, but I, for one, am confident that we can sustain base rights on acceptable terms with any Philippine administration enjoying a popular mandate. The mutual benefits of our security ties are widely appreciated by Filipinos; widespread popular opposition to our base presence is not apparent; and the neighbors of the Philippines all desire our continued strategic presence in the area.

Elections and Reform

It would be naive to assume that fair elections, in and of themselves, will resolve the economic and security problems facing the Philippines. But they can give to those who triumph at the polls the confidence, the public support, and the credibility to tackle those problems more effectively. The communist insurgency in the Philippines may be around for some years, but honest elections perceived as such can restore the authority and prestige of the government and stymie the guerrillas. An effective response will require a broad and sustained national effort that encompasses political, economic, and military measures.

Reform of the armed forces is an essential prerequisite for any successful counterinsurgency effort. Undisciplined

behavior by the military, when it occurs, fuels popular support for the NPA, alienates the Philippine military from the people, and diminishes government influence in the countryside. It is for this reason that we have laid stress on improving the morale and discipline within the armed forces and emphasized the paramount importance of professional leadership at all levels of the command structure.

Military reform and reorganization plans have been announced, and some are underway. Pay raises for enlisted personnel and officers—to raise morale and reduce incentives for corruption—have been authorized. Retraining of units has been initiated. President Marcos has declared his intentions to retire many overstaying officers and to reinvigorate the military leadership with younger professionals. The success of reform efforts will, of course, depend upon the scope and vigor which they are implemented.

The recently announced reinstatement of General Fabian Ver as Chief of Staff of the Armed Forces places a cloud over these reform plans. In particular, it raises questions as to whether factional loyalties or professional accomplishments will determine advancement in the Philippine Armed Forces.

On the economic front, structural reforms will be necessary to stimulate a broadly based recovery. Revival of investment requires confidence in the future. On that score, the elections can help. But if the future economic winners and losers are determined by political decisions rather than by the free play of market forces, the banks will probably remain reluctant to roll over old loans, let alone put up new money, and foreign investors will look elsewhere for opportunities.

Unquestionably, the Philippines faces serious problems. They will not be resolved overnight. It would be an anomaly of history if this largely Catholic, pro-Western country with its democratic traditions and its impressive human and natural resources should yield to communist insurgents. I do not believe Filipinos are about to let this happen.

The U.S. Role

The United States, as I have said, has an important stake in the success with which the Filipinos surmount their current problems. Our strategic interests and our friendship for the Philippine people require that we lend a helping hand. At times, I suspect some Filipinos believe we furnish mainly smug criticism and gratuitous advice. That is not the case. Others may think we have more influence than we really have. Our role is limited, but I think we are meeting our responsibility.

- We are furnishing substantial military and economic assistance as part of the compensation package negotiated for base access rights. We shall continue to meet our obligation.
- We have also provided significant development assistance, with emphasis on problems in the hard-pressed rural areas.
- We have supported, through our contributions to the international financial institutions, efforts to redress current balance-of-payments difficulties and to undertake important structural adjustments.
- We facilitated the conclusion of an agreement between the Philippine Government and foreign commercial banks to restructure its foreign debt.
- We have offered additional PL–480 funds to encourage the wider opening of the agricultural sector for market forces.
- And we will provide appropriate help, as desired, to encourage a free and fair electoral process.

Thus, we have not been indifferent to the fate of our Filipino friends. In my view, moreover, we should be prepared to consider substantial increases in our economic support for their efforts if a Philippine Government emerging from free and fair elections demonstrates the determination and ability to tackle the hard problems with boldness and imagination.

Prospects

Much of the reporting about the Philippines tends to be apocalyptic, filled with pessimism and foreboding. Unquestionably, the Philippines faces serious problems. They will not be resolved overnight. But pessimism is unwarranted. Filipinos are talented and resilient people. Their friendship for America is deep. It would be foolhardy to embrace self-fulfilling prophecies of doom.

There are ample reasons for expecting that the Philippines will weather its current problems; among them are these.

- There is a strong natural preference among Filipinos for democracy, peaceful change, and an impressive potential for national reconciliation.
- There are sufficient natural resources and human talent in the Philippines to permit a fairly rapid turnaround in economic fortunes if confidence in the future is restored.
- There is a reservoir of friendship between our peoples that will survive any adversity.

But the dangers are real. And there are no grounds for complacency.

We are at one of those rare moments in history when we, Filipinos and Americans, are faced with truly crucial decisions. The most important decisions are in the hands of Filipinos, who have it within their power in the next few months to give their country a fresh chance, a fresh start. The election is timely; it gives the people of the Philippines the great good fortune to be able to choose their course and give their government a mandate to proceed. Their freedom to exercise that choice is a precious human right that only a minority of peoples in the world enjoy. We in the United States will do whatever we can to support that right and that freedom. ■

U.S.-China Nuclear Cooperation Agreement

PRESIDENT'S STATEMENT, DEC. 16, 1985[1]

I am pleased to sign into law today S.J. Res. 238, in which the Congress states that it favors the agreement for peaceful nuclear cooperation between the United States and the People's Republic of China, which I transmitted to Congress on July 24, 1985. The agreement will have a significant, positive effect on the relations between the United States and the People's Republic of China and will lead to a continuing dialogue with China on important nuclear energy and nonproliferation matters. It will further U.S. nonproliferation and other foreign policy interests. I, therefore, welcome the Congress' support for the agreement.

Since I submitted the agreement without exempting it from any requirement in Section 123(a) of the Atomic Energy Act, no affirmative legislation was required to permit the agreement to be brought into force after the legally stipulated time periods for congressional

review had been completed. The agreement may, therefore, be brought into force at that time in accordance with the procedure set forth in Article 10 of the agreement.

The joint resolution does require a one-time certification and a one-time report before exports to China under the agreement may commence. It assigns exclusively to the President the responsibility to review the matters to be certified to and to decide whether the certification may be made. Three matters must be certified: (1) that the arrangements for visits and exchanges of information made pursuant to Article 8 of the agreement are, as called for by this article itself, designed to be effective in ensuring that nuclear exports under the agreement are used solely for intended peaceful purposes; (2) that, after examining all information available to the U.S. Government, including any additional information that China has provided, nuclear exports to China are not precluded under Section 129(2) of the Atomic Energy Act; and (3) that the obligation to consider favorably a request to carry out activities described in Article 5(2) of the agreement does not prejudice the decision of the United States to approve or disapprove such a request. In addition, the joint resolution requires a report on Chinese nonproliferation policies and practices before exports commence.

The joint resolution also states that U.S. exports are subject to U.S. laws and regulations in effect at the time of export. This is a restatement of existing U.S. law and does not conflict with any obligations undertaken by the United States under the agreement. Finally, the joint resolution contains a section intended to ensure that the provisions in the China agreement that are textually different from provisions of the type contained in other U.S. peaceful nuclear cooperation agreements will not be the starting point for future nuclear cooperation agreement negotiations with other countries.

This joint resolution serves our interests in promoting peaceful nuclear cooperation and a nonproliferation dialogue with China. For this reason, I have decided to sign the joint resolution.

I appreciate the efforts of Senators Lugar and Cranston and Representatives Fascell, Broomfield, Bonker, Solarz, as well as others, in developing a joint resolution text that both the Administration and the Congress could accept.

I understand that an amendment relating to the U.S.-China peaceful nuclear cooperation agreement is currently under consideration in the conference on the continuing resolution. I strongly object to that amendment.

Countering Communist Espionage in the U.S.

by Rozanne L. Ridgway

Statement before the Permanent Subcommittee on Investigations of the Senate Governmental Affairs Committee on December 5, 1985. Ambassador Ridgway is Assistant Secretary for European and Canadian Affairs.[1]

I appreciate the opportunity to testify before the subcommittee on the role of the Department of State in countering hostile espionage activities in the United States and in achieving reciprocity in all areas for our missions and diplomatic personnel abroad. These two objectives are often mutually reinforcing but sometimes require difficult decisions. They have become the twin pillars of our policies toward foreign missions and their personnel in the United States.

I believe the subcommittee's hearings have contributed to a better understanding on the part of the American public about the nature and extent of the threat posed by hostile intelligence services operating in our country. As the recent and continuing spate of spy cases demonstrates, the threat is real. The President has made clear the Administration's commitment to prosecute these cases. This will help deter future espionage, as well as punish those who have been caught.

Thanks to the support of Congress, our counterintelligence resources are being restored. The Administration has been considering what new restrictions might be applied to reduce the size of the hostile intelligence threat and better control foreign missions and their personnel which pose significant espionage threats. Today I would like to share with you some of our thinking and our conclusions.

Although the FBI has the main responsibility for protecting against the espionage threat within the United States, the Department of State plays an important supportive role. The Department works closely with the FBI and other members of the intelligence community in the common effort to counter the hostile intelligence threat by regulating and controlling the activities of hostile country missions and personnel and by reviewing visa applications and, where necessary, limiting the number of authorized diplomats/officials.

We all share the common objective of maintaining reciprocity in our relations with other countries, and especially the Soviet Bloc states, in terms of numbers, status, privileges and immunities, travel accommodations, and facilities. This Administration from the first has taken steps to better ensure reciprocity for our diplomats and to improve our ability to counter the hostile intelligence threat in this country. The Foreign Missions Act of 1982 provided the legal basis for major steps forward. Through the Office of Foreign Missions, closer cooperation between the Department and the counterintelligence community has been institutionalized. Within that community, the Department of State, as the principal foreign affairs agency of the government, has two responsibilities:

- To contribute to the most effective counterintelligence policies and programs;
- To assure that a balance is found between our national security interests at home and our national security interests abroad.

In weighing potential measures, we must remain mindful of the need to balance overall U.S. Government interests. A truly effective policy to control the hostile intelligence threat must weigh both the counterintelligence benefits and the cost to U.S. national interests, as represented by our own presence in other countries, including our own ability to operate, travel, have access, and to collect critical information. Finding the balance is a most difficult challenge and one that requires all of us—the Congress and the executive branch—to work well and closely

together so that our collective wisdom can make sure that two important national security interests are equally well served and that where a choice must be made, it is made in full awareness of the costs to be paid.

Restrictions on Soviet Bloc Diplomats

This being said, let me review briefly what the Department has done over the years, and since the passage of the Foreign Missions Act of 1982, to maintain reciprocity in its relations with Soviet Bloc countries and control the hostile intelligence threat directed against the United States.

As far back as the 1950s, we imposed travel controls on Soviet diplomats and closed a number of areas in the United States to match areas in the U.S.S.R. closed to foreigners. In recent years, as the Soviets and their allies have stepped up their espionage activities against the United States, we have imposed and strengthened controls on the activities of Soviet, East European, and Cuban officials.

- In 1980 we imposed a ceiling on the number of Soviet diplomatic and consular personnel allowed in this country.
- In 1982 we imposed the requirement that all nonofficial Soviet visitors remain within a set radius of their destination unless special approval is obtained.
- In the same year, we also took steps to control overstays by Soviet officials on temporary assignment in the United States through tighter limits on their length of stay in this country.
- Soviet officials are limited to a reciprocal number of approved entry/exit points in the United States. Since 1984 the Soviets have had five approved entry/exit points (New York, Washington, Rouses Point, San Francisco, and Baltimore by ship only).
- In August 1984, Department of State commenced issuance/replacement of all foreign mission automobile license plates. This has been of significant assistance to the FBI in its identification of hostile country officials.
- In November 1984, we informed the Soviets that leases of real property would have to be approved by the Department. In addition, the Bulgarian and Czechoslovak Embassies now lease all housing through the Department. Several requests have already been denied for national security reasons. Real property acquisitions, including residential dwellings by hostile country missions and personnel, must be approved by the Office of Foreign Missions.
- Since August 1985, the Soviets have been required to obtain through the Office of Foreign Missions all construction materials for their new embassy complex.
- In September 1985, we imposed travel controls and Office of Foreign Missions travel service requirements on those UN Secretariat employees whose UN missions were already under such restrictions. These are the Soviets, Afghans, Iranians, Libyans, and Vietnamese.
- Since October 1985, the Department has required the Soviet and Eastern bloc countries to obtain permission to purchase and install telecommunications equipment. The Department recently denied a Soviet request to install a parabolic dish antenna at their new embassy site and at their recreational facility at Pioneer Point, Maryland.
- The Office of Foreign Missions works closely with the Customs Service, which carefully monitors Soviet and East European customs shipments.
- Most recently, we have imposed Office of Foreign Missions travel service requirements on East German, Polish, Czech, and Bulgarian officials assigned to diplomatic, consular, and commercial missions in the United States, as well as other official government offices.
- We have also placed the Soviet Union's Warsaw Pact allies on notice that areas of the United States now closed to travel for the Soviets may also be closed to them for upwards of a year if any of their personnel are detected in espionage activities in those closed areas.

In combating the hostile intelligence threat, we have not restricted ourselves only to areas covered by the Foreign Missions Act, useful as it has been. Several U.S. Government agencies are actively engaged to prevent technical penetration of U.S. missions abroad and to protect against electronic eavesdropping by hostile country missions here in the United States. In this regard, special measures have been taken in Washington, New York, and San Francisco—where Soviet diplomatic missions are located—to protect sensitive U.S. Government communications.

This subcommittee has just heard Mr. Nolan [James E. Nolan, Director, Office of Foreign Missions] describe the mechanisms by which the Office of Foreign Missions regulates travel, housing, and other benefits accorded to Soviet and certain other foreign officials. The effect is to control the movement and activities of these personnel, to provide us with critical information, and to help the FBI to carry out its responsibilities more effectively with the resources available. With the help of Congress, the Department has used its Office of Foreign Missions as a means to control the activities of diplomats from certain nations posing a significant intelligence threat.

The Bureau of European and Canadian Affairs and the Office of Foreign Missions consult closely on all issues related to Soviet and Eastern bloc missions. For example, on travel by Soviet personnel, the Office of Soviet Union Affairs is in daily contact with the Office of Foreign Missions' interagency liaison group that reviews travel to evaluate the impact on national security. On a whole array of other issues—customs, purchase of materials, leasing of property, etc.—we regularly consult. More has been done in the past 4 years—with the passage of the Foreign Missions Act and increased funding for counterintelligence—than in the previous 40. As the hostile intelligence threat continues to grow, we need to look at new ways to deal with it. I would, however, repeat my previous point. There is no substitute for the serious discussion among all interested parties which is needed to weigh each proposed action to determine the net gains and losses across the range of all our national security interests, here and abroad.

Having discussed movements and activities let me now address the other main aspect of our strategy to counter the threat posed by foreign intelligence services in this country, namely, controlling the numbers.

Controlling the Number of Diplomats

Any U.S. counterintelligence effort would be overwhelmed if the numbers of hostile intelligence agents deployed in our country were allowed to increase without limit. Therefore, this Administration's strategy is to limit, in keeping with treatment reciprocally accorded U.S. personnel, the number of foreign officials serving in those diplomatic and other establishments which are most favored as cover for espionage operatives. Here, again, the question of balance arises. In implementing the Administration's strategy, we seek to maximize counterintelligence benefits

while minimizing potential harm to the capability of our diplomats, military attaches, and other personnel to operate effectively in the difficult environment of these closed societies.

In January 1980, we imposed a ceiling on the number of authorized Soviet diplomatic and consular personnel permanently assigned to their bilateral missions. That ceiling capped them at the existing level of 320 diplomatic and consular personnel. We have 232 diplomatic and consular personnel permanently assigned to our Embassy and Consulate General in the U.S.S.R. In Geneva President Reagan and General Secretary Gorbachev agreed to open one new Consulate General in each country. The Department has decided that no Soviet national employees of the consulate, if there are any, will have access to the consular office building in Kiev. The new Soviet Consulate General in New York will have no more employees than the number of Americans assigned to Kiev.

We support the goal of achieving substantial equivalence in the respective number of Soviet and American diplomatic and consular personnel. The Department supported the language of the Leahy-Cohen amendment that called for substantial equivalence in this area. In April 1985, the Secretary approved a plan to enhance security at our Embassy in Moscow. One element of the plan is to replace a substantial number of Soviet national employees with Americans. Full implementation of this plan, which will be accomplished by the time we move into our new Embassy 2–3 years from now, will result in substantial equivalence in the respective sizes of the Soviet and U.S. Embassies in each capital. Thanks to Congress' willingness to appropriate the necessary funds, we already plan to fill as many as 57 new American positions in Moscow over the next several years.

Americans in Eastern Europe will be increased as we progressively replace local national personnel in certain unclassified jobs. In both the Soviet Union and Eastern Europe, we will continue to review all Foreign Service national positions to determine whether replacement by American personnel will contribute to the enhancement of embassy security and maintain an ability to provide a workable setting for those Americans who are there.

East European Involvement

Clearly, Moscow's East European allies do involve themselves as surrogates for the Soviet Union in the illegal acquisition of intelligence and controlled technologies. The recently issued assessment, *Soviet Acquisition of Militarily Significant Western Technology*, deals with but one aspect of this serious problem. However, it underscores the active and often effective role played by East European surrogates in obtaining controlled technology for the Soviets. In taking steps to reduce the espionage threat in the United States, we are mindful of the East European dimension.

The asymmetry of open versus closed societies is an important factor in this equation. Given the closed and controlled nature of East European societies, our ability to travel unimpeded by controls or restrictions is of significant value to us. The East Europeans do not impose discriminatory restrictions on travel by U.S. personnel in their countries. Our personnel can travel at will without advance notification or authorization. Hence, in reviewing possible travel restrictions on East European personnel in this country, the challenge to our own interests is clear. We need to preserve our ability to acquire vital political and economic information; maintain contacts with religious leaders, dissidents, academics, and cultural figures; monitor military maneuvers or the installation of new weapons systems;

24th Report on Cyprus

MESSAGE TO THE CONGRESS, NOV. 25, 1985[1]

In accordance with Public Law 95-384, I am submitting to you a bimonthly report on progress toward a negotiated settlement of the Cyprus question.

Since my previous report, the United Nations Secretary General has continued to work with the two Cypriot communities to achieve a framework agreement for a comprehensive Cyprus settlement. As I reported to you earlier, the Secretary General announced in June that the Greek Cypriot side had accepted revised documentation incorporating such an agreement. On August 8 the Turkish Cypriot leader, Mr. Denktash, sent the Secretary General a letter with detailed comments on the Secretary General's documentation and expressed willingness to meet with him for further discussion.

The Secretary General invited Mr. Denktash to New York and they met on September 12–13. Following their meetings the Secretary General said he had most useful talks with Mr. Denktash and that these talks would be helpful in deciding the steps to be taken in the near future.

The Security Council heard an oral report from the Secretary General on September 20. He told the Council that his efforts had brought the positions of the two sides closer than ever before; and he expressed his conviction that what had been achieved so far should lead to an early agreement on a framework for a just and lasting settlement of the Cyprus question. The United Kingdom Permanent Representative to the Security Council, speaking as President of the Council, expressed strong support on behalf of its members for the mandate of the Secretary General and called upon all parties to make a special effort in cooperation with the Secretary General to reach an early agreement.

Continuing his consultations, the Secretary General met with President Kyprianou on October 16 and October 25 for discussion of recent developments on the Cyprus issue. The Secretary General also met on October 25 with Turkish Prime Minister Ozal.

During this period, American officials continued their active efforts in support of the Secretary General's good offices mission and urged a cooperative and constructive attitude by all the parties. Ambassador Boehm encouraged support for a negotiated settlement in his meetings with President Kyprianou and Mr. Denktash. Secretary Shultz met with the Secretary General and during the General Assembly with the Greek and Turkish Foreign Ministers. Under Secretary Armacost also had useful talks with senior officials of Greece and Turkey during his October 28–November 3 visit to those countries.

Sincerely,

RONALD REAGAN

[1]Identical letters addressed to Thomas P. O'Neill, Jr., Speaker of the House of Representatives, and Richard G. Lugar, Chairman of the Senate Foreign Relations Committee (text from Weekly Compilation of Presidential Documents of Dec. 2, 1985). ■

expand opportunities for American businessmen; and provide the full range of consular services to American citizens in distress. Our policy on dealing with the East European espionage threat should also take account of the differing levels of intelligence activity conducted by the various East European governments.

The measures we have taken recently to impose Office of Foreign Missions service restrictions on East German, Polish, Czech, and Bulgarian personnel will significantly enhance our ability to monitor and deter espionage activities. Their personnel are now required to book commercial transportation and hotel accommodations through that office. While the East Europeans do not require our personnel to obtain these services through a central government office, we believe that these measures are, nonetheless, necessary to improve our counterintelligence capability. Similarly, we have put all of the U.S.S.R.'s East European allies on notice that areas of the United States now closed to the Soviets will be closed to them if any of their personnel are detected in espionage activities in those closed areas.

These measures have two objectives.

First, we will improve the capability of our law enforcement agencies to monitor movements of East European personnel.

Second, and equally important, we will increase the cost to the East Europeans should they engage in espionage, thereby introducing an element of deterrence. By making it clear to the individual East European nations that engaging in espionage will have severe consequences for their presence, including travel, in this country, we increase the price an individual country must contemplate paying for engaging in espionage, either on its own behalf or for another power.

Other Measures Under Review

In addition to the measures I noted that have already been taken, the Administration is currently considering additional steps to further reduce the Soviet and East European hostile intelligence threat. Among the measures we are presently examining are:

- Ways to further reduce the overall Soviet presence in this country;
- Increased border controls on Soviet personnel;
- Placing greater controls on the financial/banking activities of hostile foreign missions; and
- Requiring the divestiture of property owned by hostile country missions that do not permit the U.S. Government to own property in their countries.

We believe that the strategy we are now carrying out—comprising the elements of enhanced control and monitoring, constraints applied to the size and activities of hostile country establishment here, and deterrence—is a sound and effective approach to addressing this serious threat to our national security. As I said earlier, much has been accomplished already, but much more remains to be done. The Secretary and the Department of State are committed to taking further realistic and effective action with the tools now at our disposal. We are convinced that with the continued cooperation of the counterintelligence community, we can significantly reduce the ability of hostile intelligence agencies to compromise our national security, while protecting significant national interests of our own in the areas of collection or communication.

NATO Defense Planning Committee Meets

The Defense Ministers of the North Atlantic Treaty Organization (NATO) met in Brussels December 3, 1985. The United States was represented by Secretary of Defense Caspar W. Weinberger. Following is the text of the final communique.

The Defense Planning Committee of the North Atlantic Treaty Organization met in ministerial session in Brussels on 3rd December 1985.

2. Ministers welcomed the results achieved by President Reagan in his talks with General Secretary Gorbachev. We restated our full support of the efforts of the United States, in close consultation with its Allies, to reach agreement with the Soviet Union in order to provide a more stable peace. We are hopeful that this meeting has laid a basis for better relations between East and West. We especially welcome the commitment of both sides to making early progress in the negotiations in Geneva, in particular in areas where there is common ground, including the idea of an interim INF [intermediate-range nuclear forces] agreement and the principle of 50 percent reductions in nuclear arms of the United States and the Soviet Union, appropriately applied. In this context, we expressed strong support for the United States stance concerning intermediate-range, strategic and defense and space systems. Alliance solidarity and cohesion have played an important role in bringing these developments about and will remain equally vital for future progress. We call upon the Soviet Union to work to achieve this early progress.

3. We noted with satisfaction that deployment of longer range INF missiles is proceeding on schedule in all the countries involved, in the absence of a concrete negotiated result with the Soviet Union which would obviate the need for such deployment. At the same time, we reiterated our willingness to reverse, halt or modify this development—including the removal and dismantling of missiles already deployed—upon achievement of a balanced, equitable and verifiable agreement calling for such action.[1]

4. We are convinced that a continued strong and united Alliance is essential for achieving our goal of peace and security at the lowest possible level of forces. The objective of NATO's strategy of flexible response and forward defense is the prevention of all war. Nuclear weapons play an essential part in achieving this objective. But we are determined to strengthen the credibility of our strategy by avoiding an undue reliance on the early use of nuclear weapons through the special effort to improve our conventional capabilities.

5. This year we have set in hand actions that provide the necessary framework for achieving our objective of improving our conventional defenses. Much of the significance of this work lies in the longer term, and we expect a steady pattern of improvements. We welcomed first signs of progress but stressed that this must be a continuing effort. Achieving more effective conventional forces will require sustained commitment by all. The work underway includes:

• The Conventional Defense Improvements (CDI) effort, a comprehensive review of Alliance defense requirements which encourages a greater degree of convergence between Alliance and national planning and which identifies those areas where special attention will provide the greatest return, both in the medium and long term. The first reactions to CDI have been encouraging. We welcome the progress already made in addressing the key deficiencies and reaffirm our determination to place special emphasis on these areas in our national planning;

• Steady modernization through the introduction of modern, more capable systems. As a result of this process, the ratio of new to old equipment in our armed forces is improving markedly and will do so even more substantially in the future;

• The decision last December to double the infrastructure budget and increase the number of hardened aircraft shelters: planning is well advanced to increase the pace at which NATO can complete infrastructure projects and roughly 90 percent of the budget will be spent on projects related to CDI;

• Implementation of the decision last December to acquire more ammunition stocks for selected battle decisive systems. The results are promising, particularly in the central region. Most nations plan more rapid progress towards achieving the 30-day objective in the selected high priority items and there have also been improvements in plans for other ammunition items;

• Continued exploitation of emerging technologies;

• Progress towards a NATO Identification System (NIS);

• A fresh emphasis on the need to provide more aid, and by more nations, to Greece, Portugal and Turkey in order to help them overcome known deficiencies in their forces and carry out their mission more effectively to the advantage of the Alliance;

• Endorsement of a conceptual military framework developed by NATO's military authorities which provides nations with broad, longer term guidance on the military requirements of NATO strategy;

• The improved co-ordination of the various planning areas to help provide a more effective distribution of resources.

6. Recalling the documents in the 1982 Bonn Summit, we reaffirm the position adopted in previous communiques concerning developments outside the NATO Treaty area that might threaten the vital interests of members of the Alliance. Against the background of United States planning for its rapidly deployable forces, we reviewed continuing work on measures necessary to maintain deterrence and defense within the NATO area. We will ensure that NATO defense planning continues to take account of the need for compensatory measures.

7. With the objective of improving our conventional forces firmly in mind, we discussed the results of the 1985 Annual Defense Review and adopted the NATO Force Plan for 1986–1990.

8. Achieving the objective of better conventional forces will not be easy. The provision of adequate resources in accordance with the 1985 ministerial guidance will continue to be a serious challenge for all nations. This will require an even greater emphasis on making better use of resources and on improved co-operation and co-ordination. Better arms co-operation and sharing of technology between European and North American and the developed and developing members of the Alliance are vital parts of this process, as is the continued protection of militarily relevant technology.

9. We emphasized the major contribution which co-operation on the research, development and production of armaments can play in the strengthening of conventional defenses in the context of the current Conventional Defense Improvements effort. We welcomed a report by the CNAD on the enhancement of Alliance armaments co-operation, and we noted that this is to be considered by the North Atlantic Council at their meeting on 12th/13th December 1985. At a recent special meeting, the North Atlantic Council had positive discussions on several concrete measures, including co-operative research and development programs. We welcomed in particular the major step forward by the CNAD in developing an improvement strategy for the enhancement of armaments co-operation with which all the governments of the Alliance can be associated. We committed ourselves to carry forward this important work.

10. We are confident that we have laid the essential groundwork in the short, medium and long term for the objective of achieving more effective conventional forces. Much, of course, remains to be done. We need a continuing and sustained effort. But we have made a good start; current progress augurs well for the future.

Greece reserves its position on the INF and space system issues.

The Minister of Defense of Spain reserves his Government's position on the present Communique.

---

[1]Denmark reserves its position on INF [footnote in original]. ■

CSCE Cultural Forum Meets in Budapest

The Cultural Forum, mandated by the concluding document of the Madrid review conference of the Conference on Security and Cooperation in Europe (CSCE), met in Budapest October 15–November 25, 1985. It was the first CSCE meeting to deal exclusively with the cultural provisions of the Helsinki Final Act and the first to be held in a Warsaw Pact country. The U.S. delegation was headed by Ambassador Walter J. Stoessel, Jr., and consisted of 25 distinguished artists, writers, and experts representing the diversity of American cultural life, as well as officials from the Department of State and the congressional Commission on Security and Cooperation in Europe.

The mandate for the forum called for discussion of the interrelated problems of creation, dissemination, and cooperation, including expansion of cultural contacts and exchanges. Seventeen Western delegations (NATO members and Ireland) tabled a far-reaching draft concluding document on these issues, affirming the importance of individual rights and freedoms. Although the 35 participating delegations could not agree on the text of a final document, they were able to discuss important issues and lay the basis for more extensive cultural contacts in the future.

Following are statements made by Ambassador Stoessel before the Cultural Forum on October 15 and before the congressional Commission on Security and Cooperation in Europe on December 11 and the text of the Western draft concluding document.

AMBASSADOR STOESSEL'S STATEMENT, CULTURAL FORUM, BUDAPEST, OCT. 15, 1985

On behalf of the U.S. delegation, I would like to join those who have spoken before me in expressing our appreciation to Dr. Hermann and his colleagues in the Executive Secretariat for the excellent facilities we will be working in and enjoying. I want to thank the Government of Hungary for hosting the Cultural Forum, a significant and unique undertaking in the CSCE process. I hope that in the weeks ahead, we will have the opportunity to enjoy the distinctive national culture of Hungary and the many beauties of Budapest, a country and city which have experienced and participated in so much of our world's history.

Our task at hand is to engage in an examination of one of the noblest activities of mankind—culture in its many dimensions. In a very real sense, we are about to explore that aspect of the human experience which elevates us as a species and gives our daily lives a sense of beauty and proportion. Equally important, the issues on our agenda have a direct bearing on better mutual understanding among our peoples.

What we will be discussing here has an immediate relationship to a more peaceful, secure world. There are many ways to contribute to this goal. One way to contribute to better mutual understanding is through the free flow of information about our respective cultures. Without effective communications, it becomes difficult and more dangerous to deal with the increasingly complex problems confronting the world today. These problems call out for new, creative thinking, and we hope that our efforts here will contribute to improved communications and understanding. I can think of no challenge that has greater meaning and importance for the peoples we represent.

The United States is largely a nation of immigrants. Every country represented at this forum has seen its sons and daughters emigrate to my country. As a consequence, the cultural life of the United States owes a great debt to every other country here, for so much of your culture has influenced our own. And whose culture has not been enriched by the many writers, composers, painters, and artists from all parts of the European Continent and North America? If we take only one of the newer forms of artistic expression—the art of film, for example—my country owes a debt of gratitude to such pioneers as George Cukor and Michael Curtiz, both of whom came from Hungary.

Although not alone in this regard, the United States has long served as a sanctuary for artistic talent and a crucible for cultural creativity. We have welcomed those who, for reasons of persecution or repression of artistic expression, were compelled to leave their native countries. Some were fortunate enough to be able to return to their homelands to continue their creative work in freedom. Others remained in my country, enriching our cultural life. We hope that the legacy of what they have given to my country will one day also be shared freely and fully by their own countrymen, for their creative talents reflect the cultural heritage from whence they came.

The mandate that brings us here today and for the coming weeks resides in two documents—the Helsinki Final Act and the Madrid concluding document. Had the cultural provisions of the Final Act been better implemented, the Budapest Cultural Forum would not have to discuss the interrelated problems of creation, dissemination, and cooperation, including the expansion of contacts and exchanges.

But it is a tragic fact, as Secretary Shultz noted on the 10th anniversary of the Helsinki Final Act, that Europe is a divided continent. The visible barriers that exist are, in fact, the tangible evidence of deeper divisions—divisions over what man can think and create. How else are we to understand such statements as "too many foreign plays are being performed on our stages" or "artistic creation outside of politics does not exist"?

We take seriously the mandate of the Madrid concluding document—to discuss interrelated problems of creation, dissemination, and cooperation. It is our desire that this discussion should be conducted in a balanced and constructive manner. Our goal is a positive one. We seek to lift the barriers to cultural creativity and cooperation. At the same time, we will not shirk our responsibility by failing to deal with the fundamental problems that affect the cultural issues we are here to explore. We believe it is essential to explore the impediments to creativity, dissemination, and cooperation.

Because we believe strongly in the innate right of an individual to express him or herself freely, including in artistic and cultural endeavors, we think it is important to search for ways to remove obstacles to self-expression. The same holds true for dissemination and cooperation. Moreover, we believe that all peoples and national minorities should have the unquestioned right and opportunity to pursue and develop their cultural heritage in all its dimensions, including the teaching of language as an integral part of self-expression.

How can one advocate the importance of cultural interchange for peace and better understanding and at the same time deny the right of an artist to accept an invitation to exchange ideas and experiences with colleagues from other countries or prevent his or her works from being published or performed? These are the questions, together with exploring ways to expand cooperation, that deserve our serious attention and efforts in the weeks ahead.

Let me say clearly that we want greater and more diverse exchanges and contacts at all levels between our peoples and countries. Toward this end, we will be submitting proposals aimed

at lowering impediments to contacts and improving our ability to communicate more directly and effectively. If we can move in this direction, the value of our efforts here will be beyond doubt.

The mandate for the forum also states that leading personalities in the field of culture will attend. In keeping with our belief that cultural creativity is inherently an individual endeavor, best left untouched by the hands of government, we have no ministry of culture. Therefore, our cultural representatives have no instructions. They will be expressing their own views and experiences on the questions under discussion. They may well disagree among themselves on how to approach particular issues. We think this is the natural order of things, including in the sphere of culture. We hope their efforts here will not be burdened with bureaucratic procedures or drafting responsibilities. On the contrary, we hope they will grapple seriously with the problems confronting us, that they will find new, untried ways to think creatively about how we can solve them.

It is fortunate that some know each other already through visits and cultural missions; some are even close colleagues who have worked to promote the goals of the Helsinki Final Act. Others will be meeting for the first time, and we hope they will form direct, close friendships in a common cause. Seldom, if ever, have so many leading cultural figures come together to discuss mutual problems, experiences, and ideas. That is the most unique and promising aspect of the Budapest Cultural Forum. Let us hope and work for an atmosphere in which our leading cultural personalities can do their share in seeking to lift the barriers to genuine, unfettered cultural creativity and cooperation.

We know from the Holy Scriptures of old and from a Soviet novel of our time that man does not live by bread alone. To surmount the travails of existence, we need inspiration that expands our intellect, that fires our imagination, that nourishes our soul. As we begin this forum, let us pledge ourselves to a frank and substantive exploration of the issues our mandate has set before us. Let us together find the means by which we can remove obstacles to freedom of expression, direct cultural contacts, and uninhibited cultural development. We owe it to ourselves; we owe it to mankind.

Seldom, if ever, have so many leading cultural figures come together to discuss mutual problems, experiences, and ideas. That is the most unique and promising aspect of the Budapest Cultural Forum.

AMBASSADOR STOESSEL'S STATEMENT, COMMISSION ON SECURITY AND COOPERATION IN EUROPE, DEC. 11, 1985[1]

I welcome the opportunity to testify today before the Commission on Security and Cooperation in Europe to present my assessment of the Budapest Cultural Forum to you and your distinguished colleagues. With your permission, I would like to request that this statement and attached documents from the forum itself, including U.S. plenary statements, be made a part of the record of this hearing.

The Cultural Forum—held in Budapest October 15 through November 25—was the most recent of a series of CSCE experts' meetings agreed at the Madrid review conference. It was the first such meeting devoted to the cultural content of the Helsinki Final Act, the first to bring together hundreds of distinguished individuals from different fields of cultural activity in the 35 participating states of Europe and North America, and the first to be held in a Warsaw Pact state. It was a unique gathering that produced both achievements and disappointments. I will try to give you a flavor of both, along with some firsthand observations on the conduct of the meeting itself.

I would first like to acknowledge the debt the U.S. Government owes to the 25 private American citizens who took time out from their professional and private lives to participate at Budapest. They gave willingly and freely of their vast expertise in exchanging views on professional topics with their counterparts. They repeatedly demonstrated the serious attitude of our country toward respect for CSCE commitments and repeatedly raised important problems of cultural communication and cooperation. We can be proud of our delegates' contributions, as well as respectful of their integrity. I also want to express my sincere appreciation to the staff members of the CSCE Commission who so competently and energetically contributed to the performance of the U.S. delegation.

In summarizing the results of the Cultural Forum, I must acknowledge that not all hopes were met. Western delegates, for instance, chafed under formal CSCE procedures that regulated discussion through use of a set speakers' list. Although the West pressed for revised procedures to promote free debate among the cultural figures, the East said no, except on two brief occasions. Also frustrating for delegates was the fact that in the two large working groups, several distinct fields of culture were under review at the same time. Most delegates participated for only a week at a time, having relatively few chances to take the floor. Nonetheless, cultural personalities from 35 countries met, conversed, exchanged ideas, and opened new horizons for each other—demonstrating the value of direct contact among people. They made many unofficial proposals for improving and expanding East-West cultural relations.

Another problem at the forum was that the 35 participating states were, as you know, unable to reach consensus on a concluding document. None was specifically required, although the demand and efforts for a written result ran high among most delegations. My own view is that the lack of consensus represents the reality of the gap between East and West on matters concerning human rights and fundamental freedoms, pertaining in this instance to the conditions for cultural activity within and among states.

The mandate for the Cultural Forum was to discuss the interrelated problems of creation, dissemination, and cooperation in the different fields of culture.

The United States and its NATO allies insisted, therefore, that a final document—to be acceptable—would have to give balanced treatment to these three themes and reach conclusions and recommendations pertinent to the problems discussed. The criteria applied by the Soviet Union and its Warsaw Pact allies to a final document were quite different. They wished to avoid stipulation of problems and concentrate solely on further plans for cultural cooperation.

I do not think that sort of document—one lacking substance—would have done the CSCE process much good. Despite exhaustive efforts by the West and the neutral countries to identify common ground in accordance with the mandate, the East refused to budge from its unacceptable position and created the choice—as at the Ottawa human rights experts' meeting—between a bad document and no document. I trust you will agree that the major obstacle to progress in the CSCE process is the lack of compliance with existing documents, not the lack of new ones.

When intense negotiations revealed that a substantive document was not within reach, Hungary proposed a short statement of the fact that the 35 states had met to discuss the problems of the mandate and expressed different and at times contradictory views. This alternative to a substantive document, while not ideal, would at least have acknowledged the disagreements between East and West at the forum. Romania blocked consensus on the Hungarian initiative, perhaps reflecting bilateral strains between the two countries.

The U.S. approach to the Cultural Forum was straightforward: to adhere to the excellent mandate in identifying problems relating to cultural activity and communication and to suggest possible solutions. We sought to ensure attention to all three themes of the mandate, to focus attention on specific problems and on possible avenues of resolution, and to promote productive discussions among the cultural figures. I think it would be instructive to mention some of the problems we considered most important to the deliberations of the forum and how we handled them.

The legitimate role of nongovernmental organizations (NGOs) in the field of culture was a primary concern of the United States, our allies, and many of the neutral countries, especially in light of the experience in Budapest of the International Helsinki Federation. I will return to this matter. Several NATO countries joined us as cosponsors of an official proposal on the role of NGOs. This was one of the principal themes of the comprehensive draft document agreed by the Western nations at the forum and a regular topic of discussion by U.S. and other Western delegates.

U.S. delegates brought attention during formal sesions of the forum to conditions of cultural repression in the U.S.S.R., Poland, Czechoslovakia, and Romania by raising the names of known victims of repression and the generic situations that produce such victims. Numerous delegates from other Western countries did likewise. We reinforced our public stance in private bilateral meetings with the delegations of the U.S.S.R., Poland, and Romania. The U.S. delegation also took occasions to meet with and, therefore, show support for local dissident cultural figures.

In plenary speeches and interventions in the working groups, U.S. delegates emphasized the right of national minorities and religious groups to preserve and develop their particular cultures, including language instruction and the preservation of cultural and historical monuments. These interventions and a strong Western proposal on the issue made it an important theme in the forum's deliberations, to the discomfort of the U.S.S.R. and Romania in particular. Even a Hungarian delegate got into the spirit by referring publicly to the problems of the Magyar minorities in neighboring countries, making it clear he meant Romania and Czechoslovakia.

Censorship, jamming, restrictions on travel, and impeded access to cultural products were addressed repeatedly by the United States and other Western delegations in the working groups, plenary sessions, and numerous formal proposals. Since Western cultural figures, in many cases, have had direct experience with barriers to the free exchange of people, ideas, and information in the East, their interventions were especially eloquent.

Our NATO allies were broadly supportive of the U.S. approach in Budapest, although initially not as forthright as U.S. representatives in the working groups and more receptive at times than we to the East's emphasis on cooperation. We received enthusiastic NATO support for our official proposals that were intended to strengthen observance of cultural rights and freedoms.

Common Western cultural values and a joint determination that the Cultural Forum produce meaningful conclusions are amply reflected in the draft final document that the Western group (NATO plus Ireland) tabled when negotiations with the East stalemated. This document distills the Western negotiating position and sets out the results we think should have been reached at the Cultural Forum. I believe that the document will usefully serve as one of the bases for allied participation in next year's CSCE review conference in Vienna and hope it will gain currency among the concerned publics of Europe and North America.

The Eastern approach to the Cultural Forum involved procedural inflexibility, a preference for long speeches listing cultural accomplishments, emphasis on the "historic responsibility" of artists for peace, opposition to Western defense (especially nuclear weapons) policy, and avoidance of the numerous aspects of the forum's mandate where Eastern performance falls short. The Soviets and some of their Warsaw Pact allies also sought to drive wedges in the Western position by referring none too subtly to a European cultural unity, implicitly excluding North America and by constantly asserting that it was the U.S. delegation which opposed a final document. Neither theme found much support from Western or neutral delegations.

When the West raised relevant issues of cultural rights and freedoms, the East responded (sometimes with outlandish invective) that we were trying to disturb rather than contribute to the work of the forum by introducing extraneous political matters. Stressing the need for greater cooperation among the CSCE states, the Soviets and their allies made many suggestions for increased exchanges and joint projects of experts and students in the different fields of culture, under official or quasiofficial sponsorship and control.

Cooperation was a popular theme at the Cultural Forum, since it was part of the mandate and since all Eastern and some Western delegates often found it more congenial to consider fresh ideas for working together across borders than to tackle resistant and established obstacles. Our view, one that permeates the Western draft final document, is that true cooperation among states derives from the ability of their citizens to choose freely how, when, and where to express themselves and to share the

fruits of their creativity. Governments have no business controlling cultural cooperation but should rather ensure that the conditions for such cooperation are optional. The proposals for cooperative action contained in the Western document are set in this context.

At the Cultural Forum, as at other CSCE meetings, the neutral and nonaligned countries played a key role in trying to bridge the differences between East and West. Delegates from these states played an active role in the working groups, often independently confirming points made by the West regarding the importance of freedom for individuals and groups to pursue their cultural interests. Toward the end of the forum, the neutrals informally presented to both East and West a draft final document that synthesized the discussions in a way they hoped would satisfy the interests of both sides. We considered the neutral draft a positive though not entirely adequate effort. We entered into negotiations with the East on the basis of this paper, hoping that our primary concerns could be accommodated.

The Eastern approach to the neutral paper was much less forthcoming and ultimately destructive to the chances of reaching consensus. The Soviets said the neutral paper was "West-leaning" and insisted that it could be a basis for negotiation only if a long series of distorting Soviet amendments were accepted.

It is important to consider events outside the forum that had a bearing on those within in order to get a full picture of what was and was not achieved. I regret—and at the time strongly protested publicly and privately—the decision of the Government of Hungary to prevent the International Helsinki Federation from conducting publicly a by-invitation-only symposium in Budapest during the first week of the forum. This decision violated Hungary's commitment as host to follow the precedent of the Madrid meeting concerning the important relationship of NGOs to the CSCE process. Other delegations felt as we did and expressed their criticism in various ways, public and private.

Aware of the issues at stake, we followed developments closely, noting that the federation was able to conduct its scheduled activities in private locales, without interference or harassment, and with Western media representatives in attendance. U.S. and other Western delegates also attended the symposium as observers in a show of solidarity and shared copies of manuscripts presented there with other interested delegates at the forum.

. . . U.S. delegates emphasized the right of national minorities and religious groups to preserve and develop their particular cultures. . . .

There were two concerns that flowed from the circumstances confronting the federation: One was that there be no official repercussions for Hungarians who chose to attend, and the other was that Hungary's action not constitute a precedent for subsequent CSCE meetings. I spoke directly on these issues during plenary meetings and in private conversations with Hungarian authorities and believe there can be no doubt about how seriously the United States would view further misinterpretations of the Madrid precedent. The significance of NGOs to the CSCE process is well reflected in the Western document, in the formal proposal submitted by several Western delegations, and in numerous interventions made by U.S. and other Western delegates.

There was substantial media interest in the United States and Europe in the Cultural Forum, as the large number of journalists attested, but not nearly as much coverage as all of us would have liked. My interviews before and during the meeting—especially in *The New York Times, Christian Science Monitor,* and *Washington Post* and with the wire services—presented our positions to the American public. Coverage by the Voice of America, Radio Free Europe/Radio Liberty, and *Radio im amerikanischen Sektor* in West Berlin reached audiences in the Soviet Union and Eastern Europe. In addition, I gave interviews to Hungarian and West European print and electronic media. The problems of the International Helsinki Federation during the first week of the forum and the closing of the conference generated articles here and in Western Europe, and European colleagues in Budapest informed me that media interest in their countries was sustained throughout the forum, primarily on account of the participation of the eminent cultural figures. The press spokesman for the U.S. delegation briefed the VOA, RFE/RL and other correspondents at least twice a day on the forum's proceedings and arranged numerous interviews with U.S. cultural figures.

In addition to the participants from the United States in the International Helsinki Federation symposium, some 20 individuals and representatives of NGOs from the United States visited the U.S. delegation. We benefited from their expertise, as we did from the rich supply of materials sent to us by NGOs before the forum began. For our part, we assisted those NGOs who came to Budapest with information about the conference and practical advice and initiated a series of mailings to interested parties in the United States to keep them abreast of statements by U.S. delegates. We have in the mail to them now the draft Western document, and I intend to circulate this statement as well.

In drawing up a balance sheet on the Cultural Forum, I must candidly say that I wish it had accomplished more—that the 35 participating states had been able to do something to resolve the real problems that affect cultural creation, dissemination, and cooperation. However, if we continue our commitment to the CSCE process as an incentive for change over time in Eastern behavior, as I believe we must given the lack of feasible alternatives, then the absence of breakthroughs in Budapest should not disappoint us. In this light, I think we might reflect on the following results of the forum.

- The cultural figures from the 35 participating states, whatever their frustrations with the forum, built bridges among themselves that promote mutual understanding across borders;
- Soviet and East European delegations had no choice but to hear about their shortcomings in the cultural field from exceptionally articulate private citizens from the West, whose opinions carried irrefutable moral authority;
- Western attention to the problems and cases of cultural repression and insistence on compliance with the provi-

sions of the Final Act give sustenance to the victims of such repression and others in the East who want their governments to uphold Helsinki commitments.

• Although no consensus document was reached (because a good one was not possible), the West has an agreed text that can serve our common interests at the Vienna review conference.

I will not attempt to oversell these results, but I do consider them positively and believe they represent the honest fruit of collective efforts by Western delegations at the forum.

TEXT OF WESTERN DRAFT CONCLUDING DOCUMENT

1. In accordance with

—the provisions of the Final Act of the Conference on Security and Co-operation in Europe

—the relevant provisions of the Madrid Meeting

—the report of the meeting of experts which took place in Budapest from 21 November to 4 December 1984,

the Cultural Forum took place in Budapest, Hungary, from 15 October to 25 November 1985. It was attended by leading personalities in the field of culture from the participating States.

2. After the formal opening of the Cultural Forum, participants were addressed by Mr. Gyorgy Lazar, Prime Minister, on behalf of the Government of Hungary.

3. Under agenda item 2 of the Forum, opening statements were made in open plenary meetings by representatives of the participating States. The views of UNESCO were presented by a representative of that Organization.

4. Under agenda item 3 of the Forum, and in accordance with the mandate for the Forum, participants discussed, both in plenary and in subsidiary working bodies, interrelated problems concerning creation, dissemination and co-operation, including the promotion and expansion of contacts and exchanges in the different fields of culture.

5. The discussion of the above-mentioned interrelated problems was conducted in the context of the following fields:

• **Plastic and Applied Arts**—painting, graphic and photographic arts, sculpture, design, architecture, preservation of cultural and historical monuments;

• **Performing Arts**—theatre, dance, folklore, music, film, cultural programmes on radio and television;

• **Literature**—literature, publishing and translation, including reference to less widely spoken languages of the participating States;

• **Mutual Cultural Knowledge**—research, training and education in the arts, libraries, cultural heritage, preservation of and respect for the diversity and originality of the cultures of the participating States, museums, exhibitions.

6. The discussion covered a wide range of subjects in the cultural field. It also reflected the unique character of the Cultural Forum itself within the framework of the CSCE process and the vitality, strength and diversity of the various cultures of the participating States. The participants endeavoured to contribute to the discussion with a view to promoting further creation, dissemination and co-operation in the fields of culture. During the discussion different and, at times, contradictory opinions were expressed not only on matters of substance but also on the procedure of the meeting.

7. A large number of proposals were presented under agenda item 3 both in the plenary and in the appropriate subsidiary working bodies.

8. As a result of its proceedings the Cultural Forum concluded the following:

• In the course of its history, Europe has developed a cultural identity of its own which is also part of the North American heritage. This identity is reflected in a basic unity of cultural values which has survived and had proved its cohesion and resilience despite present political and ideological divisions.

• Since the signing of the Final Act, cultural exchanges and co-operation have proved to be a stabilizing factor in relations between States participating in the CSCE. They contribute to a better understanding between individuals and among peoples and thus help to promote conditions conducive to the building of confidence and the development of normal and friendly relations.

• International co-operation in the different fields of culture since the signing of the Final Act of the CSCE has been greater in some areas than in others. The present conditions for cultural creation and dissemination as well as for international exchanges and co-operation in the different fields of culture still require improvement in many respects.

• Such improvements should be sought and achieved by taking active steps to allow the full and unimpeded development of artistic creativity and the recognition of the role of individual artists and the integrity of their creation. They should also be sought and achieved by the unimpeded dissemination of cultural works through facilitating and supporting discussion and co-operation among individuals, groups and private organizations in the different fields of culture; through providing equitable opportunities for wider communication, more direct contacts and travel for personal as well as professional reasons. Similarly, improvements should be made at governmental and non-governmental levels, bilaterally and multilaterally, through agreements between Governments and non-governmental organizations and international programmes, as part of a general expansion of cultural co-operation.

• This goal can, however, be reached only by respect for all the principles and by full implementation of the relevant provisions of the Final Act and the Concluding Document of the Madrid Follow-Up Meeting. It was stressed that there was a critical need to make immediate, tangible and balanced progress in such implementation, particularly with regard to creation, dissemination and co-operation in the different fields of culture. The participants in the Forum urged all participating States to observe the spirit and the letter of the Final Act and the Madrid Concluding Document in this respect.

• It is furthermore emphasized that full respect for human rights and fundamental freedoms, including cultural rights and freedoms, and including those of persons belonging to national minorities and regional cultures, by all States represents one of the basic principles for a significant improvement in their mutual relations, and in international cultural co-operation at all levels.

9. The participants in the Forum discussed, *inter alia*, the following specific problems relating to its mandate:

• The denial of opportunities in some participating States for individuals in the different fields of culture to form independent institutions and organizations and to play, as individuals or as members of these independent bodies, a full and unhindered part in the cultural activity of their own States and internationally;

• Limitations on access to and the use of information, publications and materials relating to culture;

• Restrictions on access to the cultural achievements of other participating States, e.g. through cultural institutes;

• The denial to persons belonging to national minorities and regional cultures of adequate protection, legal or otherwise, for the full development of their culture; and

• The need to support the efforts of individuals to reflect and promote the unity of European culture, which transcends the division of Europe.

10. The participants in the Cultural Forum urge the participating States to:

• Remove existing impediments which prevent individuals from forming or joining independent institutions and organizations in order to pursue and promote, as individuals or as members of these independent bodies, their interests in the different fields of culture, including the protection and promotion of cultural freedom and the respect shown by governments, including their own, for that cultural freedom;

• Ensure unimpeded communication, direct contact and co-operation, such as the holding of meetings and exhibitions by private persons, institutions and organizations active in the field of culture;

• Facilitate for humanitarian reasons the provision of the fullest information to artists and others in the field of culture, who have attempted, without success, to contact their colleagues in another participating State;

• Remove legal and administrative measures, such as censorship, which constitute barriers to creation and dissemination in the different fields of culture;

• Remove, while respecting intellectual property rights, restrictions on obtaining, possessing, reproducing, publishing and distributing materials related to the different fields of culture, including books, publications, films and videotapes, as well as on the private ownership and use of and access to typewriters, word processors and copying machines;

• Ensure unimpeded access of individual believers and communities of believers to religious publications and related materials;

• Ensure unimpeded access to public archives, libraries, research institutes and similar bodies for scholars, teachers, students and others who wish to undertake research.

• Permit unimpeded reception of broadcasts and place no restrictions on the right of individuals to choose freely their sources of broadcast information and culture;

• Abstain from placing undue obstacles to access to direct broadcasting satellites transmitting radio and television programmes, including those of a cultural nature, and allow individuals and groups to acquire the necessary equipment;

• Ensure that individuals engaged in the different fields of culture are free to travel abroad, and, in particular, that those invited officially or privately to travel to other participating States have the opportunity to do so;

• Make it possible, on the basis of bilateral arrangements, for each participating State to establish cultural institutes on the territory of the other participating States and to guarantee unhindered public access to them; and

• Protect the unique identity of national minorities and foster the free exercise of cultural rights by persons belonging to them; ensure in practice unhindered opportunities for these persons independently to maintain and develop their own culture in all its aspects, including religion, cultural monuments, historical artefacts, language, literature; and to ensure unhindered opportunities for them to give and receive, individually or collectively, instruction in their own culture, especially through the parental transmission of language, religion and cultural identity to their children.

11. Therefore, the participants in the Cultural Forum recommend that the participating States encourage, facilitate and support the initiatives which official institutes, non-governmental organizations and individuals wish to undertake to promote the aims of the CSCE in the field of culture, e.g., meetings, symposia, exhibitions, festivals, research, training and co-production programmes in which scholars, specialists and artists of the participating States may freely participate and to which they may freely contribute, in order to realize progressively the objective of promoting knowledge and culture which transcend geographic boundaries.

12. In particular, the participants in the Cultural Forum recommend that the participating States:

• Facilitate the participation in international drama festivals of individuals, productions or companies chosen by the organizers and not replace them by any other individuals, productions or companies without prior consultation;

• Encourage invitations to conductors and individual performers from other participating States to perform with orchestras and choirs in their own States;

• Promote the exchange of members of art and music academies as well as of teachers and students of drama and dance schools;

• Take into account the important role that exchanges of teachers, students and material play in the education of young film makers, particularly through festivals and prizes;

• Remove barriers to participation in film festivals, including restrictions on public access to such festivals and censorship and control on what films may be shown;

• Might consider the possibility of a meeting of writers on the subject of "Liberty, Equality and Fraternity in Today's World"; a symposium on the subject of "The Impact of the Discovery of America on European Culture"; and a meeting of historians and cultural figures on "Transmission of Culture Through Emigration";

• Remove barriers to unimpeded participation in book fairs, displays and exhibits by prospective displayers; restrictions on public access to such book fairs, displays and exhibits; and censorship and control on what books or publications may be displayed;

• Consider the aesthetic aspects of the environment in the preservation, reshaping and building of cities;

• Might identify historic towns and cities for conservation and restoration projects in which other participating States might join;

• Might consider the possibility of establishing an international folklore centre of States participating in the CSCE which would be responsible for the collection, systematization and publication of the folk heritage of the participating States for educational purposes;

• Explore the possibility of computerization and dissemination in standard form of bibliographies and of catalogues of cultural works and presentations, such as musical scores, contemporary public sculpture, films, videotapes, documentary programmes shown on television, plays and the performances of artists and ensembles;

• Encourage the translation of research and literature, with special attention to bilingual editions as well as to the translation, publication and dissemination of literary works published in the less widely spoken languages in the participating States;

• Might consider proclaiming a city in a participating State "Capital of European Cultural Heritage" for one year. In the course of that year, the participating State in question would endeavour to make a special contribution to European culture in all its forms by organizing events and taking other initiatives in the city in question, including works by groups of artists. All other participating States would be invited to take part;

—Facilitate the holding of exhibitions which have a special reference to present everyday life;

—Encourage co-operation in protecting and preserving film material;

—Encourage the acquisition, co-production and regular exchange of television and radio cultural programmes;

• Encourage the appropriate national and international non-governmental organizations to work out a general framework regarding cultural exchanges such as exhibitions, guest performances, etc., including general and administrative guidelines, the possible simplification of customs and other procedures and ways of facilitating payment of fees to individuals and organizations where direct payments are rendered difficult by currency restrictions or economic constraints;

• Might consider the possibility of establishing a cultural foundation of States participating in the CSCE, which would aim at improving the conditions and opportunities of artistic creation; facilitating the dissemination of culture within and among States participating in the CSCE; and promoting cultural exchanges and co-operation among them.

13. The participants also considered a wide range of other proposals, not all of which have been reflected in this Report.

14. The participants expressed their appreciation of the effort which went into the preparation of these proposals, all of which will be recorded as they were submitted, annexed to this report, and sent forward for consideration in any further discussion of cultural questions within the framework of the CSCE.

15. The results of the Cultural Forum in Budapest will be taken into account, as appropriate, by the participating States at the next Follow-Up Meeting of the Conference on Security and Co-operation in Europe, scheduled for November 1986.

16. The participants expressed their gratitude to the Government of Hungary for the excellent organization of the Cultural Forum and for the warm hospitality extended to them during their stay in Budapest.

---

Safeguarding Human Rights

PRESIDENT'S REMARKS, DEC. 10, 1985[1]

Today we mark the 37th anniversary of the signing of the Universal Declaration of Human Rights, a document to which virtually every nation on Earth subscribes. It's a day for us to take stock, to survey the globe with an eye not so much to words as to actual deeds, to measure the world against the noble assertions of the Universal Declaration, and to reaffirm our commitment to the cause of human dignity.

America has, since its founding, been a refuge for those suffering under the yoke of oppression. A belief in the dignity of man and government by the consent of the people lies at the heart of our national character and the soul of our foreign policy. I had the pleasure of explaining that to a gentleman in Geneva not too long ago. [*Laughter*] But here the difference is our documents, such as the Constitution, say we, the people, will allow government to do the following things.

Today, more than ever, we're proud to be champions of freedom and human rights the world over. So, in observing Human Rights Day, we celebrate our commitment to the beliefs and moral teachings on which our own nation is founded, a belief in liberty, in the dignity of man, and in the inalienable rights of free men and women to choose their destinies.

We have not hesitated when these rights and freedoms have been threatened. Last month on Veterans Day, I visited the graves of our soldiers who gave their lives so that the rest of us might know the blessings of peace and freedom. Our sons, brothers, and fathers also lie in cemeteries and fields from Flanders to Manila, under undying testimony to our determination that these rights shall not perish.

We've learned from history that the cause of peace and human freedom is indivisible. Respect for human rights is essential to true peace on Earth. Governments that must answer to their peoples do not launch wars of aggression. That's why the American people cannot close their eyes to abuses of human rights and injustice, whether they occur among friend or adversary or even on our own shores. And we must be particularly appalled that, on the threshold of the 21st century, when man has made gigantic strides in opening the universe of space and finding cures for dread diseases, millions of our fellow men still suffer the grossest abuses. There are regimes—some friendly, some adversarial—that engage in frequent violations of human rights. There are other regimes which by their very nature are built upon the denial of human rights and the subordination of the individual to the state.

In Afghanistan and Cambodia, for example, alien dictatorships, with the support of foreign occupation troops, subject their peoples to unceasing warfare. Today, 6 years after the Soviet invasion of Afghanistan, up to 120,000 Soviet troops remain. They have slaughtered innocent women and children. They have employed poison gas. And they have loaded toys with small explosives, an attempt to demoralize the people by crippling Afghan children. Some 3.5 million Afghans, fully one-fourth of the prewar occupation, have been forced to flee to Pakistan and Iran. The communist rulers of Vietnam have launched vicious attacks upon Cambodian refugees, refugees who were fleeing a communist regime in Cambodia itself, which led to the deaths of up to one-quarter of the entire Cambodian population.

In Ethiopia a Marxist government has used famine to punish large segments of its own population. Vice President Bush visited a camp for Ethiopian refugees in the Sudan last March. Men and women of all ages were dying; but the Vice President told me there's something unbearably painful about seeing the eyes of the children, the huge, sad eyes of starving children. And the peoples and governments of the democracies have responded generously to those pleas with tangible evidence of our concern.

In the Western Hemisphere, where so much progress toward democracy has been made, Cuba stands out as the country where institutionalized totalitarianism has consistently violated the rights of the citizens. Unfortunately, the Sandinista regime in Nicaragua seems determined to embark on the same course.

On three continents we see brave men and women risking their lives in anticommunist battles for freedom. We cannot and will not turn our backs on them. This year the House of Representatives has heeded their call and voted aid to the freedom fighters in Cambodia, Afghanistan, and Nicaragua and repealed a ban on aid to freedom fighters in Angola.

Elsewhere we have seen considerable progress toward observance of human rights. In El Salvador, Grenada, and Honduras, freely elected governments represent the best hope of their peoples for the future. And just over the last weekend, a new civilian president was elected in Guatemala—that's the first time in 15 years. We laud those achievements, but our concern remains for those who are still captive and oppressed. This is where our voices must speak for justice, for the force of world opinion can and does make a difference.

One of the more tragic cases today is that of the Baha'i, whose leaders are with us today. The Government of Iran is engaged in rampant religious persecution, especially against the Baha'is. Since 1979, 198 Baha'is have been put to death, 767 are imprisoned, some 10,000 made homeless, and over 25,000 forced to flee their country. Only the continued world outcry can help bring an end to their suffering.

In South Africa the inhuman policy of apartheid continues. The declaration of a state of emergency has given the police in that country essentially unlimited powers to silence critics of the government. Thousands of South African citizens have been detained without charge and denied even elementary judicial protection. I have said that apartheid is abhorrent. It's time that the Government of South Africa took steps to end it and to reach out for compromise and reconciliation to end the turmoil in that strife-torn land.

In Chile and the Philippines, too, we've shown our strong concern when our friends deviate from established democratic traditions.

In Eastern Europe the hopes and aspirations of millions of people for religious freedoms, civic rights, remain alive despite years of repression. The Solidarity labor union is still outlawed in Poland, and the Polish regime has once again moved to restrict the few freedoms that its people still enjoy. In Romania religious persecution includes the destruction of Bibles, while in Bulgaria the repression of the Turkish minority and the Islamic faith is witness to the unyielding denial of the basic freedom of speech, assembly, religion in this region.

I addressed human rights in my meetings with General Secretary Gorbachev, and I made it very clear to him that human rights are an abiding concern of the American people. We had a long and confidential discussion, and at

the conclusion of our meetings, we declared in a joint statement that humanitarian issues would be resolved in a humanitarian spirit. Americans will be watching hopefully to see whether that pledge is observed.

Make no mistake about it, human rights will continue to have a profound effect on the U.S.-Soviet relationship as a whole, because they are fundamental to our vision of an enduring peace. President Lincoln once called America the last, best hope of man on Earth. Mr. Lincoln's remark has special poignancy today, when American determination and strength are central to the peace and freedom of the entire democratic world. It is, therefore, incumbent upon us to work for the expansion of freedom throughout the world.

In this great effort, my friends, I deeply believe we have a good cause for hope. Evidence of the triumph of the ideal of freedom and respect for human rights can be seen in every corner of the globe, and this is because freedom is not only morally right but practical and beneficial. Indeed, governments that rest upon the consent of the governed and the rule of law are more successful in fulfilling their people's aspirations for a better life. Democratic government and economic freedom have turned a number of small nations into economic giants. It even appears to have roused a giant nation from its economic slumber.

Permit me in closing to return to Mr. Lincoln: "What defined America, what gave our nation its purpose and mission," he once said, "was something in that Declaration of Independence giving liberty not alone to the people of this country, but hope to the world. It was that which gave promise that in due time, the weights should be lifted from the shoulders of all men."

Well, let us always be true to that distinctly American cause. Let us never cease to work and pray that the weights should be lifted from the shoulders of all men.

Thank you, and God bless you, and I will now sign the proclamation designating December 10th as Human Rights Day and December 15th, 1985, as Bill of Rights Day, and the week beginning today is now recognized officially as Human Rights Week.

[1]Made at a ceremony at the Old Executive Office Building commemorating Bill of Rights Day and Human Rights Day and Week, 1985 (text from Weekly Compilation of Presidential Documents of Dec. 16, 1985). ■

Bill of Rights Day, Human Rights Day and Week, 1985

PROCLAMATION 5420, DEC. 10, 1985[2]

On December 15, 1791, the adoption of the first ten amendments to the Constitution of the United States—the Bill of Rights—gave legal form to the noble principles which our Founding Fathers had set forth in the Declaration of Independence as the very basis for the birth of our Nation.

Benjamin Franklin, then 81 years old, in a moving address, reminded the members of the Constitutional Convention that it was God who had seen them safely through the War of Independence and that it was only through His "kind Providence" that they were able to meet in peace to shape "the means of establishing . . . future national felicity. . . . And if a sparrow cannot fall to the ground without His notice," Franklin asked, "is it probable that an empire can rise without his aid?"

Mindful of this, and deeply convinced that fundamental human rights are not a concession from the state but a gift of God, the Founding Fathers knew that government has a solemn obligation to safeguard those rights. That is why they were at pains to devise and ordain a constitutional system that would ensure respect for the dignity and uniqueness of every human being. Thus, they brought into existence a form of limited government—representative democracy—whose powers are circumscribed by law and whose legitimacy derives from the consent of the governed. For the first time in the history of nations, a written Constitution based on the inalienable God-given rights of the individual was promulgated.

It is with sincere thanksgiving that we reflect on the successful efforts of those wise patriots of two hundred years ago who laid the political foundations of our beloved Nation, and also to those millions of citizens ever since who have cherished and defended the Constitution and the principles it embodies. Many have given their lives on the field of battle so that freedom and human dignity might live both at home and abroad; let us never forget our debt to them or fail to honor their sacrifice and courage.

One hundred and fifty-seven years after the adoption of our Bill or Rights, the fundamental concepts enshrined in our Constitution were internationally acknowledged as applying to all peoples when the United Nations adopted the Universal Declaration of Human Rights on December 10, 1948.

Although we can take heart at the number of nations in which human rights are respected and real progress towards democratic self-government is being made, a disturbingly large number of governments continue to commit serious abuses of human rights. In the tradition of our forefathers, we protest against these abuses wherever they occur. We condemn the practice of torture, racial and religious persecution, and the denial of the right of free expression and freedom of movement.

The United States will never cease to be in the forefront of the noble battle for human rights. We have committed our resources and our influence to efforts aimed at extending throughout the world the rights we enjoy, rights which are rightly the prerogative of all people. This Nation must remain and will remain a beacon of hope for all who strive for human dignity. There is no better way of showing our gratitude for our inheritance of liberty.

We believe it is a right, not a privilege, to be allowed to speak freely; to assemble peacefully; to acquire and dispose of private property; to leave the country of one's residence; to form trade unions; to join or not to join groups and associations; and to worship according to one's conscience. Experience teaches us that the best check against tyranny is a government of the people in which leaders are elected in fair and open balloting and where the government's powers are subject to constitutional limitations. We pray that one day all nations of the earth may share with us the joys and rewards of living in free societies, and we resolve not to rest from our labors until the most noble longings of the human spirit, those for freedom of belief and expression, are fully realized.

During this commemorative week, let us rededicate ourselves to the advancement of human rights throughout the world, recalling the words of Alexander Hamilton that "natural liberty is a gift of the beneficent creator to the whole human race . . . and cannot be wrested from any people without the most manifest violation of justice."

NOW, THEREFORE, I, RONALD REAGAN, President of the United States of America, do hereby proclaim December 10, 1985, as Human Rights Day, and December 15, 1985, as Bill of Rights Day, and I call upon all Americans to observe the week beginning December 10, 1985, as Human Rights Week.

IN WITNESS WHEREOF, I have hereunto set my hand this 10th day of December, in the year of our Lord nineteen hundred and eighty-five, and of the Independence of the United States of America the two hundred and tenth.

RONALD REAGAN

Arms Sales to Jordan

PRESIDENT'S STATEMENT, NOV. 25, 1985[1]

On October 21, I submitted to the Congress a formal notification of the proposed sale of fighter aircraft, air defense missiles, armored vehicles, and other equipment to the Hashemite Kingdom of Jordan. The number and type of arms included in our proposal were selected only after careful study of Jordan's legitimate defensive needs.

I have today signed into law Senate Joint Resolution 228, which provides that no letter of offer for any of the advanced weapons systems, including advanced aircraft and advanced air defense systems, included in our proposed sale to Jordan will be valid before March 1, 1986, unless Jordan enters direct negotiations with Israel before that date. This legislation expresses Congress' belief that the peace process should be our primary concern.

Peace remains my main concern, as it is that of King Hussein, Prime Minister Peres, and other responsible leaders throughout the Middle East. King Hussein has taken dramatic steps toward peace, steps which have exposed him and the people of Jordan to strong pressure and bloody violence from those adamantly opposed to any peaceful settlement. Our arms proposals are designed to strengthen Jordan's ability to pursue its demonstrated commitment to peace.

In the months between now and March 1, we will continue to work toward achieving the goal we all share, the goal King Hussein outlined in his recent speech to the UN General Assembly: prompt, direct negotiations between Jordan and Israel. I remain equally committed to providing Jordan the defensive arms it requires. These weapons are neither a reward nor penalty for Jordan's actions but tangible proof that we remain committed to providing a good friend of many years with the tools needed to protect itself during the search for peace in a troubled region.

UN Decade for Women Conference Held in Nairobi

The 1985 World Conference to Review and Appraise the Achievements of the UN Decade for Women was held in Nairobi July 15–27, 1985. It was attended by delegations from 157 countries, as well as representatives of intergovernmental organizations, UN agencies, nongovernmental organizations, and national liberation movements. At the conclusion of this conference—the event culminating the UN Decade for Women (1975–85)—a final document was adopted by consensus which contains forward-looking strategies of implementation for the advancement of women from 1986 to 2000.

Following are statements by Maureen Reagan, head of the U.S. delegation, in a plenary session of the conference on July 16 and in UN General Assembly Committee III (Social, Humanitarian, and Cultural) on November 5.

CONFERENCE PLENARY, JULY 16, 1985[1]

Thank you, Madame President [Margaret W. Kenyatta of Kenya]. On behalf of my entire delegation, I would like to convey our congratulations on your election to the presidency of this conference. Under your leadership, we have faith this conference will be most productive and successful. I would also like to extend our congratulations to all the members of the bureau. Kindly also relay to your government, and to all the Kenyan people, our sincere thanks for the way they have opened up their hearts and welcomed us to your beautiful country.

It is especially fitting that this major gathering of the world's women should take place in Africa. Africa today symbolizes the unique importance of women in shaping the present and future of humankind. Africa is a continent of pain and promise, of richness and scarcity, of intense suffering and undying hope. At the heart of these poignant contrasts, the women of this continent toil. At a time when food production is critical, their labors produce most of this continent's food crops. At a time when economic development is crucial, they account for a large part of Africa's labor force in its most crucial economic sectors. Clearly, the great promise of Africa will only be fulfilled, if, as President Moi [of Kenya] yesterday declared, we keep faith with Africa's women. So the women of Africa represent and symbolize the critical role, the passionate hopes, and the striving future of us all.

The U.S. delegation represents over 100 million women in the United States, women concerned with the issues this conference will address. They have achieved dramatic progress during this decade for women, and I would like to speak briefly of their achievements.

Of course, it is easy to point out sparkling examples of individual success. During this decade, the United States witnessed the appointment of the first woman Justice of our Supreme Court, three women serving simultaneously in the Cabinet of our government, the space flight of the first American woman astronaut, and the first nomination by a major party of a woman candidate for the vice-presidency.

But the advancement of America's women during the decade goes far beyond these individual cases. By the end of the decade, we have seen the percentage of women presidential appointees rise. Women now occupy more than 1,600 high-level policymaking positions in our Federal Government. Participation by women in the labor force at large has grown from 40 to 44%. While the average wage for women is still less than that of men, here too there has been improvement over this decade. We need to build on this progress, and I hope the next 15 years will witness even more improvement.

At the start of the decade, American women had already achieved substantial political equality through legislation. Women had the right to participate fully in political affairs and had obtained legislative guarantees prohibiting discrimination in employment and pay. Discrimination in housing, credit, and education had also been prohibited. Since the decade began, legislative progress has been made in tax laws, in social security regulations, in pregnancy discrimination, in job training, as well as in the field of prevention and treatment of child and spousal abuse.

But we still are not satisfied. While all legal barriers to political equality have long since been eliminated, there

still exist cultural, sociological, and economic barriers. These are problems faced by women throughout the world, and we are here to discuss these problems and to join you, the women of the world, in formulating strategies to overcome them.

During this conference, the U.S. delegation will be seeking to focus on four issues of special concern to my country: women refugees, women in development, literacy, and domestic violence. We will be hosting special conversation groups to concentrate on these issues. The United States has invited a number of the delegations here assembled to participate in these groups.

It is a tragic commentary on modern times that more than 10 million refugees suffer daily from deprivation, disorientation, and degradation. Since 1975 the United States has accepted nearly one-half of all the refugees resettled to third countries in the world. The needs of refugee women in the United States is a background and a tradition in which women do not take aggressive roles outside of the home, and where they are taught to be dependent upon others. Self-sufficiency skills are crucial for successful integration into American life.

Therefore, the main job of our refugee resettlement program—both public and private—is to help women from these traditional cultures learn to be full partners in our society—whether they work in the marketplace or in the home.

Let us not forget in these discussions, however, the root causes which have brought about nearly 10 million refugees and many more displaced persons in the world today—famine, drought, war, and, particularly, the wholesale loss of human freedom. When we see the suffering of women and children refugees in the world today, we must deplore the actions of governments which force people from their homes in search of freedom.

The desire for freedom is also at the heart of the vital role played by women in the development process. Governments have their targets and their 5-year plans. Women have dreams and aspirations. Our experience convinces us that the ability of women to choose their own paths and, therefore, to participate completely in all aspects of development is essential.

In many developing countries, women play a major role in those sectors of the economy where private effort and initiative are vital. Particularly in the least developed countries, they are the food farmers, they are the merchants, they are shopkeepers—the backbone of the local market economy. The experience of over two decades of development efforts around the world has shown that countries which place the emphasis upon the private economic sector achieve the best development results. This means that, especially for the least developed countries, the women's path to development is the best path. Emphasis upon the problems, concerns, and capacities of women is the bright hope of the development future. The private sector is often the women's sector. Particularly in the least developed countries, emphasizing this role of women of the private sector often means the role of women. Could this be one reason private sector approaches meet so much resistance from government bureaucracies?

While government projects and government control have not proven to be the keys to development, governments do have a responsibility to encourage effective development approaches. Over a decade ago, the U.S. Congress approved regulations requiring the U.S. Agency for International Development (AID) to allocate resources to ensure that bilateral development projects include programs specifically designed to help women. That agency is also required to consider the potential impact on women in all its development projects.

Through voluntary contributions to several UN programs, such as the UN Development Program, UNICEF, and the UN Voluntary Fund for the Decade for Women, the United States has generously contributed to these multilateral programs. These in turn have supported improving the condition of women in developing countries. We are committed to encouraging these kinds of activities that will foster the full and equal participation of women in their communities, in their nations, and in the world. We believe the United Nations can continue to play an important role as a catalyst in achieving this goal. It has already done so during the Decade for Women, and we anticipate it will continue to do so in the future.

Literacy is an area of major concern to the United States. While basic illiteracy is no longer a major problem for us, achieving true functional literacy is a major challenge. Functional literacy means the knowledge that makes everyday life work. Meeting this challenge will allow women to further improve their own lives and the lives of their families and their societies.

Finally, American women are increasingly coming to grips with the devastation caused by family violence. Now some of you may see this as a concern only in Western context. But violence in the home, whether based on traditional customs or spousal abuse, is all too prevalent worldwide. Family privacy, feelings of guilt, or embarrassment have often covered up this worldwide phenomenon. Help must come from outside the family. The most effective way to deal with family violence is to recognize that it is a criminal act and to treat it within the judicial system. The legal response should be guided by the nature of the abusive act, not the relationship between victim and abuser. I hope that we can share information on practical measures we have taken to meet this worldwide problem and to make a contribution to its solution.

I have just described the four issues that are of special importance to the United States in this conference. They were chosen by our delegation as areas of special interest and concentration because we believe that progress in these four areas in the coming years will have the greatest positive impact on the condition of women throughout the world. I realize, however, that other delegates consider other issues to be of greater importance. We are here to listen to those concerns. In doing so, we hope to promote greater understanding among all women.

For example, many delegations, especially those from Africa, believe it is of utmost importance that this conference address the question of apartheid in South Africa. Others believe that the situation of Palestinian women deserves special attention. The United States has never, and does not now, object to the discussion of these issues at the conference.

Apartheid is abhorrent to the Government and to the people of the United States. In addition to its demeaning and destructive effect upon the black people of South Africa, its effects upon women are especially severe. The forward-looking strategies should address ways to overcome the effects on women of this evil and inhumane system.

Similarly, we recognize that many delegations feel very strongly about discussing the situation in the Middle East and its effect upon women. We are prepared to work constructively with those delegations in a spirit of consensus-building to arrive at results that all can accept.

I realize that this conference offers to many women a platform from which to speak that may be denied to them elsewhere. I am blessed to be a citizen of a nation where women are free to speak out about their political views and to work within a democratic system to see that their views prevail. That is what I have done for my entire adult life. I would never deny to any woman an opportunity such as that presented here to use that platform, no matter how much I might disagree with her position.

We have been concerned, it is true, over the possibility that generalized political issues with only a nominal connection to the unique concerns of women might come to dominate our conference. This is a result that we will work hard to prevent. We want this to be remembered as a conference of women, by women, and for women. I am hopeful that in the spirit of compromise and consensus that has marked the opening of our work here in Nairobi, this result can be achieved.

COMMITTEE III,
NOV. 5, 1985[2]

The world conference in Nairobi last July marked the completion of the UN Decade for Women and witnessed the adoption, by consensus, of a forward-looking strategies document to the year 2000. It was, in short, a major milestone in the advancement of women.

We, like everyone else who attended the conference, want to thank Secretary General Perez de Cuellar; Madam Leticia Shahani, Secretary General of the conference; and all the UN officials who helped us through the conference process. Additionally, we would like to thank the chair of the conference, Madam Margaret Kenyatta. We ask that she take back with her our thanks to President Daniel arap Moi and to all the people of Kenya who opened their hearts to all of us visitors and made us feel at home. We will never forget you.

When the U.S. delegation journeyed to Nairobi, we went with great hope. We also went with the realization that in a political arena, there are volatile issues on which any world conference can be grounded.

Our goals were clearly stated in Vienna, here in New York, in conversations around the world, and in Nairobi. We wanted to participate in a full discussion of issues of unique concern to women, and we were anxious to adopt a consensus document which reflected the best agreement among the women of the world. This document would contain the dreams, the goals, and the ambitions of those of us who labored in Nairobi—and the millions of women on whose behalf we worked.

Because of our tremendous respect for the women and men who worked so tirelessly for this document, my delegation firmly believes that we should not and cannot allow the momentum gained in Nairobi to be lost. The U.S. delegation will make every effort to ensure that the ideas which emerged from Nairobi will not be confined to some forgotten archive. With these ideas, we will find practical solutions to the monumental problems faced by women every day.

We have listened with great interest in the last week to this debate because, like everyone else, we are currently digesting the document and looking for avenues of implementation.

These avenues are sometimes simple and other times more tortuous. An example of a simple goal traveling a complex road to achievement is paragraph 120. We heartily agree that the unremunerated work of professional homemakers should be included in calculations of gross national product. To facilitate this, we must gather a great deal of information from a variety of sources on the numbers of homemakers, definitions of responsibilities, a numerical quotient for each of several categories, and then an examination of what legislation may be required.

To point out that a goal—stated simply—will require great effort to implement only points up the problems women always face when striving for equality and recognition.

Unlike in some countries, women and men in the United States enjoy an open, democratic society which protects basic human and civil rights and which responds to the legitimate concerns and grievances of its citizenry. We believe that without this freedom all talk of the advancement of women is only that—talk.

Throughout the United States are thousands of nongovernmental organizations. These groups of individual volunteers devote tremendous time and energy to enhancing life in their communities. Some work for better cultural expression or health care for the elderly. Some give educational assistance to the young or give help to displaced workers, including displaced homemakers. Others counsel and comfort victims of rape, battering, and other violent crimes. There are local organizations—State and national associations—and many which join together internationally to assist at times of sudden or continued natural disaster. The generosity and caring of these people are well known around the world.

Political change and legislative refinement also begin with grassroots organizations. It is as a result of the numerous women's groups in my country that such issues as women's suffrage, protection of women's rights, and better job opportunities have found expression in local and State laws and have gained the attention of the Federal Government. In addition, private American institutions and companies have launched programs over the past 15 years specifically aimed at increasing the active participation of women in the professions and business and at ensuring that women not become victims of gender-based stereotyping.

I mention our private sector because to implement the forward-looking strategies in the United States, we need the interest and effort of our grassroots. In the United States, the people direct our government, and we depend upon their wisdom and concern.

For that reason, we feel the most important first thing we must do as a nation in implementing the forward-looking strategies is the distribution of the final report of the General Assembly with our own national report of the Nairobi conference. This information in the hands of elected officials at every level of government across the country and among those thousands of organizations with community responsibility will allow us to correct the remaining inequalities and enlarge women's opportunities in our country.

These concerned Americans I speak of do not see the forward-looking strategies as only directed toward what individual countries can and should do for themselves. They and we believe it is time for action by the United Nations. By this I mean considerably more than submitting reports on developments in member countries or issuing press releases, documentation, and rhetoric on the results of Nairobi. While these activities help in spreading the word, the United Nations should actively promote the principles and objectives which form the basis of the document. It should avoid the temptation to get side-tracked by irrelevant and politically motivated arguments. The United Nations needs to lead by example: It must begin by

looking at itself to see how best it can show the way to fulfilling the promises of Nairobi. The United Nations—the world's largest international bureaucracy—should improve the situation of women within its own system by placing more of them in policymaking positions and ensuring they have the same benefits and opportunities that their male counterparts enjoy. The United States will work to ensure equality of opportunity for women in the UN system.

The specialized agencies should pay particular attention to those sections of the final document which affect their specific areas of action. For example, the issue of women in development—a large section of the forward-looking strategies—should receive careful attention from the UN Development Program to ensure that projects are geared toward helping women develop and take advantage of their economic role. In the field of refugees, my delegation sees a need for projects which take into account the particular concerns of women refugees and their children. Greater direction in these areas would contribute significantly toward meeting the objectives of the final document.

I wish to point out that the U.S. Congress has ensured that our own bilateral development projects include programs specifically designed for women. Particular consideration is also given to the impact on women of all development projects. Our delegation went to Nairobi to gather information on such programs. The relationships we established with women from around the world will enable us to have a stronger voice in this policy development now and in the future.

I believe that it is clear that the UN agencies can play a similar, active role in fostering the objectives of the women's decade—without simply creating more paper and more bureaucracy.

At its regular session in 1984, the UN Commission on the Status of Women discussed the role of the commission in monitoring and implementing the goals of the decade and the 1985 world conference, as well as the role for women in the UN system. This subject was also widely discussed in Nairobi.

The agenda for our meeting in Vienna next year will provide an opportunity for us to explore fully the future role of the commission. We were particularly excited by the proposal last week by the representative of France that the commission be renamed for the "Advancement of Women." It seems to us a positive approach and one we can wholeheartedly support.

There is clearly a need for the commission to become more energetic in promoting the interests of women within the United Nations. The commission must provide guidance on women's concerns to UN agencies, the General Assembly, and member countries. It can and should be an instrument with which to implement the forward-looking strategies and the many other good ideas which emerged from the conference.

In addition to the forward-looking strategies, 105 resolutions were introduced. Through tremendous effort at agreement and amalgamation, that number was reduced to 86. Because of time, these resolutions are annexed to the report of the conference. Since no action was taken on them in Nairobi, these resolutions, as such, no longer fit in the system. But the subjects they covered do belong and are very important to the future of women.

Reality tells us that those topics of general international debate covered by several of the resolutions will continue to be part of the agenda of the United Nations. But what about the serious, dangerous violence against women in the home? What about the specific proposals on development and health for women not contained in the forward-looking strategies? What about the proposals for better education of women and young girls, which is only lightly addressed in the forward-looking strategies? Will there also be a place for these issues in a general UN debate?

What Nairobi should tell the world community is that we, the women of the world, are no longer a separate agenda item. We must be part of all agendas now and in the future. We, by our consensus on issues of our unique concern, speak as at least half the world's population and we say: When the United Nations debates education, the special needs of women and young girls will be addressed. When the United Nations debates refugees, the particular problems of violence against women and the need for special counseling and distribution of health and human services will be addressed. When development of water resources and security of food supplies are on the agenda, women must be present to offer their insight to these serious hazards to their well-being. When the spotlight shines on development of income generation, women must be a part of the process.

There is no issue on Earth which does not contain some unique effect upon women, and we insist on integration into governments and international organizations where we can work for the solutions, not simply live with the problems.

---

[1]USUN press release 82 of July 17, 1985.
[2]USUN press release 138.■

December 1985

The following are some of the significant official U.S. foreign policy actions and statements during the month that are not reported elsewhere in this periodical.

December 6
Defense Secretary Weinberger and British Defense Minister Halseltine sign an agreement by which the U.K. joins the Strategic Defense Initiative research effort.

December 9–11
Commerce Secretary Baldrige attends the annual meeting of the U.S.-U.S.S.R. Trade and Economic Council. While in Moscow, he also meets with Soviet Minister for Foreign Trade Aristov for discussions on nonstrategic trade opportunities consistent with existing U.S. policies and regulations.

December 9–17
Assistant Secretary Wolfowitz visits Hong Kong (Dec. 9–10), Laos (Dec. 15–16), and Burma (Dec. 16–17) for discussions with host-government officials. On December 11–14 he visits Bali to attend the U.S.-Indonesia Bilateral Conference co-sponsored by the Asia Foundation and Indonesia's Center for Strategic and International Studies.

December 9
The UN General Assembly adopts by consensus a resolution condemning "as criminal all acts, methods, and practice of terrorism wherever and by whomever committed, including those which jeopardize friendly relations among states and their security."

December 10
In a report submitted to Secretary Shultz, the Reform Observation Panel unanimously reaffirms the 1984 U.S. decision to withdraw from UNESCO. The panel also recommends that the U.S. retain its observer status through 1986 at a reduced staff level.

December 12
The U.S. votes against four UN General Assembly resolutions on the question of Palestine. The resolutions endorsed the immediate need for a Middle East peace conference under UN auspices, the work of the Palestinian Rights Committee, appropriating funds for the Secretariat's Division of Palestinian Rights, and asked the Secretariat's Department of Public Information to continue its cooperation with these two organizations.

December 13
The UN General Assembly unanimously agrees to hold an international conference on drug abuse and illicit trafficking in Vienna in 1987. It is expected the ministerial-level meeting will generate universal action and adopt an outline of activities to combat the worldwide drug problem.

December 16–17
Guatemala's President-elect Vinicio Cerezo makes a private visit to the U.S. to meet with various government officials and Members of Congress.

December 17
By a vote of 91 to 6 (U.S.) with 49 abstentions, the UN General Assembly adopts a resolution requesting that the U.S. trade embargo against Nicaragua be revoked.

December 18
The UN Security Council unanimously adopts a U.S.-initiated resolution that condemns "all acts of hostage-taking and abduction" and calls for the immediate release of all hostages.

December 30
The UN Security Council unanimously condemns the "unjustifiable and criminal terrorist attacks" at the Rome and Vienna airports on December 27 and urges that those responsible for the attacks "be brought to trial in accordance with due process of law." The Security Council also calls upon "all concerned to exercise restraint and to refrain from taking any action inconsistent with their obligations under the UN Charter and other relevant rules of international law." ■

Current Actions

MULTILATERAL

Antarctica
Recommendations relating to the furtherance of the principles and objectives of the Antarctic Treaty (TIAS 4780). Done at Canberra July 24, 1961. Entered into force Apr. 30, 1962. TIAS 5094.

Recommendations relating to the furtherance of the principles and objectives of the Antarctic Treaty (TIAS 4780). Adopted at Buenos Aires July 28, 1962. Entered into force Jan. 11, 1963. TIAS 5274.

Recommendations, including agreed measures for conservation of Antarctic fauna and flora. Adopted at Brussels June 2–13, 1964. Entered into force July 27, 1966, except for III–VII, III–VIII, III–XI; Sept. 1, 1966, for III–XI; Dec. 22, 1978, for III–VII. TIAS 6058, 10485.

Measures relating to the furtherance of the principles and objectives of the Antarctic Treaty (TIAS 4780). Adopted at Santiago Nov. 18, 1966. Entered into force Oct. 30, 1968, for IV–20 thru IV–28. TIAS 6668.

Measures relating to the furtherance of the principles and purposes of the Antarctic Treaty (TIAS 4780). Adopted at Paris Nov. 29, 1968. Entered into force May 26, 1972, for V–1 thru V–4 and V–9; July 31, 1972, for V–7 and V–8. TIAS 7692.

Recommendations relating to the furtherance of the principles and objectives of the Antarctic Treaty (TIAS 4780). Adopted at Tokyo Oct. 30, 1970. Entered into force Oct. 10, 1973, for VI–1 thru VI–7 and VI–11 thru VI–15. TIAS 7796.

Recommendations relating to the furtherance of the principles and objectives of the Antarctic Treaty (TIAS 4780). Adopted at Wellington Nov. 10, 1972. Entered into force May 29, 1975, for VII–1 thru VII–3, VII–6 thru VII–8; Aug. 4, 1983, for VII–4 and VII–9. TIAS 8500.

Recommendations relating to the furtherance of the principles and objectives of the Antarctic Treaty (TIAS 4780). Adopted at Oslo June 20, 1975. Entered into force Dec. 16, 1978, for VIII–6 thru VIII–8 and VIII–10 thru VIII–14; Sept. 1, 1980, for VIII–3 and VIII–4; Jan. 26, 1984, for VIII–9. TIAS 10486.

Recommendations relating to the furtherance of the principles and objectives of the Antarctic Treaty (TIAS 4780). Adopted at London Oct. 7, 1977. Entered into force Sept. 8, 1983. TIAS 10735.
Notification of approval: China, Dec. 11, 1985.

Containers
International convention for safe containers, 1972, as amended (TIAS 9037, 10220). Done at Geneva Dec. 2, 1972. Entered into force Sept. 6, 1977; for the U.S. Jan. 3, 1979.
Accessions deposited: Benin, Nov. 1, 1985; Honduras, Sept. 24, 1985; Portugal, Oct. 22, 1985.

Environmental Modification
Convention on the prohibition of military or any other hostile use of environmental modification techniques, with annex. Done at Geneva May 18, 1977. Entered into force Oct. 5, 1978; for the U.S. Jan. 17, 1980. TIAS 9614.
Accession deposited: Afghanistan, Oct. 22, 1985.

Judicial Procedure
Convention on the taking of evidence abroad in civil or commercial matters. Done at The Hague Mar. 18, 1970. Entered into force Oct. 7, 1972. TIAS 7444.
Extended by United Kingdom to: Guernsey, Nov. 13, 1985.

Marine Pollution
International convention for the prevention of pollution of the sea by oil, with annexes. Done at London May 12, 1954. Entered into force July 26, 1958; for the U.S. Dec. 8, 1961. TIAS 4900.
Acceptance deposited: Bahrain, Oct. 21, 1985.

Amendments to the international convention for the prevention of pollution of the sea by oil, 1954, as amended (TIAS 4900). Adopted at London Oct. 12, 1971,[1] and at London Oct. 15, 1971.[1]
Acceptances deposited: Bahrain, Oct. 21, 1985.

International convention relating to intervention on the high seas in cases of oil pollution casualties, with annex. Done at Brussels Nov. 29, 1969. Entered into force May 6, 1975. TIAS 8068.
Accession deposited: Benin, Nov. 1, 1985.

International convention on the establishment of an international fund for compensation for oil pollution damage. Done at Brussels Dec. 18, 1971. Entered into force Oct. 16, 1978.[1]
Accession deposited: Benin, Nov. 1, 1985.

Protocol to the international convention on civil liability for oil pollution damage, 1969. Done at London Nov. 19, 1976. Entered into force Apr. 8, 1981.[2]
Accession deposited: Poland, Oct. 30, 1985.

International convention for the prevention of pollution from ships, 1973, with protocols and annexes. Done at London Nov. 2, 1973.[1]
Accession deposited: Benin, Nov. 1, 1985.

Protocol of 1978 relating to the international convention for the prevention of pollution from ships, 1973. Done at London Feb. 17, 1978. Entered into force Oct. 2, 1983.
Accession deposited: Tuvalu, Aug. 22, 1985.

Maritime Matters
International convention on load lines, 1966. Done at London Apr. 5, 1966. Entered into force July 21, 1968. TIAS 6331, 6629, 6720.
Accessions deposited: Bahrain, Oct. 21, 1985; Benin, Nov. 1, 1985; Tuvalu, Aug. 22, 1985.

Amendments to the international convention on load lines, 1966 (TIAS 6331, 6629, 6720). Adopted at London Oct. 12, 1977,[1] and at London Nov. 12, 1975.[1]
Acceptances deposited: Bahrain, Oct. 21, 1985; Honduras, Sept. 24, 1985.

International convention on tonnage measurement of ships, 1969, with annexes. Done at London June 23, 1969. Entered into force July 18, 1982; for the U.S. Feb. 10, 1983. TIAS 10490.
Accessions deposited: Bahrain, Oct. 21, 1985; Benin, Nov. 1, 1985; Tuvalu, Aug. 22, 1985.

Convention on the international regulations for preventing collisions at sea, 1972, with regulations. Done at London Oct. 20, 1972. Entered into force July 15, 1977. TIAS 8587.
Accessions deposited: Bahrain, Oct. 21, 1985; Benin, Nov. 1, 1985; Honduras, Sept. 24, 1985.
Notification of succession: Tuvalu, Aug. 22, 1985, effective Oct. 1, 1978.

International convention for the safety of life at sea, 1974, with annex. Done at London Nov. 1, 1974. Entered into force May 25, 1980. TIAS 9700.
Accessions deposited: Bahrain, Oct. 21, 1985; Benin, Nov. 1, 1985; Cyprus, Oct. 11, 1985; Honduras, Sept. 24, 1985; Tuvalu Aug. 22, 1985.
Ratification deposited: Congo, Sept. 10, 1985.

Protocol of 1978 relating to the international convention for the safety of life at sea, 1974 (TIAS 9700). Done at London Feb. 17, 1978. Entered into force May 1, 1981. TIAS 10009.
Accessions deposited: Cyprus, Oct. 11, 1985; Honduras, Sept. 24, 1985.

International convention on standards of training, certification, and watchkeeping for seafarers, 1978. Done at London July 7, 1978. Entered into force Apr. 28, 1984.[2]
Accessions deposited: Benin, Nov. 1, 1985; Honduras, Sept. 24, 1985; Hungary, Oct. 15, 1985; Portugal, Oct. 30, 1985; Tuvalu, Aug. 22, 1985.

International convention on maritime search and rescue, 1979, with annex. Done at Hamburg Apr. 27, 1979. Entered into force June 22, 1985.
Accession deposited: Portugal, Oct. 30, 1985.

Rubber
Extension of the international natural rubber agreement, 1979 (TIAS 10379). Adopted by the International Natural Rubber Council at Kuala Lumpur June 12, 1985.
Entered into force: Oct. 22, 1985.

Terrorism
Convention on the prevention and punishment of crimes against internationally protected persons, including diplomatic agents. Adopted at New York Dec. 14, 1973. Entered into force Feb. 20, 1977. TIAS 8532.
Ratification deposited: Italy, Aug. 30, 1985.

Wheat
1983 protocol for the further extension of the wheat trade convention, 1971 (TIAS 7144). Done at Washington Apr. 4, 1983. Entered into force July 1, 1983.

1983 protocol for the further extension of the food aid convention, 1980 (TIAS 10015). Done at Washington Apr. 4, 1983. Entered into force July 1, 1983.
Ratified by the President: Dec. 3, 1985.
Ratifications deposited: U.S. Dec. 3, 1985.
Definitive entry into force for the U.S.: Dec. 3, 1985.

BILATERAL

Barbados
Convention for the avoidance of double taxation and the prevention of fiscal evasion with respect to taxes on income, with exchange of notes. Signed at Bridgetown Dec. 31, 1984.
Senate advice and consent to ratification with reservation: Dec. 16, 1985.

Brazil
Agreement extending the agreement of Dec. 1, 1971 (TIAS 7221), as amended and extended, relating to a program of scientific and technological cooperation. Effected by exchange of notes at Brasilia Nov. 4 & 18, 1985. Entered into force Nov. 18, 1985; effective Dec. 1, 1985.

Chile
Agreement concerning the use of Mataveri Airport, Isla de Pascua, as a space shuttle emergency landing and rescue site. Signed at Santiago Aug. 2, 1985.
Entered into force: Nov. 6, 1985.

China
Agreement for cooperation concerning peaceful uses of nuclear energy, with annexes and agreed minutes. Signed at Washington July 23, 1985.
Entered into force: Dec. 30, 1985.

Agreement concerning fisheries off the coasts of the U.S. with annexes and agreed minutes. Signed at Washington July 23, 1985.
Entered into force: Nov. 19, 1985.

Costa Rica
Agreement for the sales of agricultural commodities. Signed at San Jose Nov. 29, 1985. Enters into force when the importing country notifies the exporting country that all constitutional requirements have been met.

Cuba
Agreement extending the provisional application of the maritime boundary agreement of Dec. 16, 1977. Effected by exchange of notes at Washington Nov. 20 & Dec. 3, 1985. Entered into force Dec. 3, 1985; effective Jan. 1, 1986.

Cyprus
Convention for the avoidance of double taxation and the prevention of fiscal evasion with respect to taxes on income, with related notes. Signed at Nicosia Mar. 19, 1984.
Senate advice and consent to ratification: Dec. 16, 1985.
Ratified by the President: Dec. 23, 1985.
Ratifications exchanged: Dec. 31, 1985.
Entered into force: Dec. 31, 1985.

International express mail/datapost special express memorandum of understanding, with detailed regulations. Signed at Nicosia & Washington Sept. 13 & Oct. 18, 1985. Entered into force Nov. 1, 1985.

Dominican Republic
Agreement on international narcotics control cooperation. Signed at Santo Domingo Nov. 18, 1985. Entered into force Nov. 18, 1985.

Egypt
Fifth amendment to grant agreement of Aug. 29, 1982 (TIAS 10472), as amended, for decentralization sector support. Signed at Cairo Aug. 15, 1985. Entered into force Aug. 15, 1985.

Grant agreement for local development program II. Signed at Cairo Sept. 12, 1985. Entered into force Sept. 12, 1985.

Grant agreement for national agricultural research project. Signed at Cairo Sept. 12, 1985. Entered into force Sept. 12, 1985.

Grant agreement for cash transfer in the amount of $250,000,000 to provide balance-of-payments and budget support to Egypt. Signed at Cairo Sept. 24, 1985. Entered into force Sept. 24, 1985.

Grant agreement for development training project. Signed at Cairo Sept. 26, 1985. Entered into force Sept. 26, 1985.

El Salvador
Memorandum of understanding amending the air transport agreement of Apr. 2, 1982 (TIAS 10488). Effected by exchange of notes at San Salvador July 16 & 24, 1985. Entered into force July 24, 1985.

European Atomic Energy Community (EURATOM)
Agreement relating to the additional agreement for cooperation concerning peaceful uses of atomic energy of June 11, 1960, as amended and extended (TIAS 4650, 5104, 5444, 7566). Effected by exchange of notes at Washington Dec. 16 & 17, 1985. Entered into force Dec. 17, 1985.

Finland
Arrangement for the exchange of technical information and cooperation in nuclear safety matters. Signed at Vienna Sept. 25, 1985. Entered into force Sept. 25, 1985.

Honduras

Beyond the Debt Problem: The Path to Prosperity in Latin America, Secretary Shultz, OAS General Assembly, Cartagena, Dec. 2, 1985 (Current Policy #768). ■

Foreign Relations Volume Released

The Department of State on December 16, 1985, released *Foreign Relations of the United States*, 1955–1957, Volume I, Vietnam. The volume contains 900 pages of previously classified documents on U.S. policy with regard to Vietnam.

This volume presents the record of early crises in the relationship between the United States and the South Vietnamese Government of Prime Minister Ngo Dinh Diem. During 1955, Diem struggled with various dissident groups for control of the government. The ousted French colonial power warmed to Diem reluctantly. The U.S. officials in Saigon and in Washington had lingering doubts about Diem's ability to maintain a viable government and weighed alternative leadership. American policy nevertheless remained committed to Diem. Programs to strengthen South Vietnam militarily and economically were undertaken. When Diem made a state visit to Washington in 1957, his authority at last seemed confirmed, but doubts persisted and grew among American officials about the lack of popular support for the Diem regime, as well as about the best way to aid the fledgling nation.

The *Foreign Relations* series has been published continuously since 1861 as the official documentary record of U.S. foreign policy. The volume released December 16 is the first to be published for the years 1955–57.

Press release 276 of Dec. 12, 1985. ■

Basic Documents Volume Released

The Department of State on December 26, 1985, released *A Decade of American Foreign Policy: Basic Documents, 1941–1949*. This is a revised edition of a 1950 documentary publication with the same title that was prepared jointly by the Senate Foreign Relations Committee and the Historical Division of the Department of State. This original publication became a standard reference source of the basic public documents on U.S. foreign policy during the 1940s. It has long been out of print. Furthermore, the experience of the intervening years indicated that the text of the volume was marred by certain unintentional omissions, oversights, and editing anomalies. The Department of State decided to revise and reissue it as a service to the public and government officials as well as to commemorate the momentous changes in international relations that occurred during and immediately after World War II. This decade now can be seen more clearly as a turning point in history and the foundation of 40 precarious years of peace among the great powers of the world.

The volume released December 26 is an improved version of the original 1950 edition. Nearly all of the documents of the first edition have been retained in the present volume. The order of documents has been reorganized to reflect more accurately the development of major foreign affairs issues. Documents have been added to fill important gaps in the historical record. Like all the documents in the original edition, these additional papers were released to the press and public at the time or shortly thereafter. Typographical and editing errors in the source texts have been corrected, and footnotes have been expanded to include better information on the location of authoritative primary texts. The revised edition also contains 3 maps and 36 photographs. The cover design of the book is a montage of additional photographs from the period.

The revised edition of *A Decade of American Foreign Policy: Basic Documents, 1941–1949* was prepared in the Office of the Historian, Bureau of Public Affairs, Department of State. Copies of this book, which has been published only in soft cover, may be purchased for $20.00 (domestic postpaid) from the Superintendent of Documents, U.S. Government Printing Office (Department of State Publication No. 9443; GPO Stock No. 044-000-02050-5). Checks or money orders should be made payable to the Superintendent of Documents.

Press release 299 of Dec. 26, 1985. ■

Background Notes

This series provides brief, factual summaries of the people, history, government, economy, and foreign relations of about 170 countries (excluding the United States) and of selected international organizations. Recent revisions are:

Belgium (Nov. 1985)
Burundi (Oct. 1985)
Cuba (Aug. 1985)
Guinea (Oct. 1985)
Kuwait (Sept. 1985)
Malawi (Sept. 1985)
Poland (Aug. 1985)
Taiwan (Sept. 1985)
Uganda (Sept. 1985)
Zaire (Nov. 1985)

A free **single** copy of one of the above (and an index of the entire series) may be obtained from the Correspondence Management Division, Bureau of Public Affairs, Department of State, Washington, D.C. 20502.

For about 60 *Background Notes* a year, a subscription is available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, for $32.00 (domestic) and $40.00 (foreign). Check or money order, made payable to the Superintendent of Documents, must accompany order. ■

The DEPARTMENT OF STATE BULLETIN, published by the Office of Public Communication in the Bureau of Public Affairs, is the official record of U.S. foreign policy. Its purpose is to provide the public, the Congress, and government agencies with information on developments in U.S. foreign relations and the work of the Department of State and the Foreign Service.

The BULLETIN's contents include major addresses and news conferences of the President and the Secretary of State; statements made before congressional committees by the Secretary and other senior State Department officials; selected press releases issued by the White House, the Department, and the U.S. Mission to the United Nations; and treaties and other agreements to which the United States is or may become a party. Special features, articles, and other supportive material (such as maps, charts, photographs, and graphs) are published frequently to provide additional information on current issues but should not necessarily be interpreted as official U.S. policy statements.

Mexico

President's Visit to Mexico

President Reagan visited Mexico on January 3, 1986, for a meeting with President Miguel de la Madrid Hurtado. Following are arrival remarks and luncheon toast made by President Reagan during the visit.[1]

Arrival Ceremony, Mexicali, Jan. 3, 1986

It is a special privilege for me to begin my new year with you. As one year becomes another, we're reminded of those meaningful items in our lives that remain constant even through the passage of time. I think we can all be grateful, on both sides of the border, for one thing that has remained constant over these many years: the good will between our peoples. Good relations have been part of our past; they are an important part of our present; and will most assuredly be part of our future.

The trust and cooperation between our two countries are mirrored in the solid personal and professional relationships President de la Madrid and I have developed. I have met with him on three occasions, and the telephone line between Mexico City and Washington, D.C., has been kept busy with our calls.

I'm looking forward to our meeting today; we have much to discuss. The economies of our countries are already closely linked. As we prepare for a better future, we should explore new ways of improving the well-being of both our peoples by enhancing the business, trade, and financial ties that bind us. In our relationship, clearly, we help ourselves by helping each other.

I also look forward to discussing with you other areas of mutual concern and cooperation. The good and decent people of both our countries have made a strong commitment to fight the scourge of narcotics and drug trafficking. This battle continues. Issues of regional and global peace are of intense interest to us both, as is the expansion of democracy in this hemisphere. Cross-border environmental questions are important. As one would expect of close neighbors, we have much to talk about. As one would expect between friends, I am certain our exchange will be in the spirit of mutual respect and understanding.

Citizens of Mexico and the United States share a very human relationship. This was never clearer than when earthquakes savaged your country a few months ago. The heart of the American people went out to you. My wife, Nancy, returned home from visiting the devastation with stories of the quiet dignity and perseverance displayed by your people in the face of great personal tragedy. We are proud to be friends of such people. Again, it is a pleasure to be here with you today. There is every reason to look to the future with optimism and confidence.

Luncheon Toast, Jan. 3, 1986[2]

This visit marks the fourth meeting that I've had with President de la Madrid. And I hope you agree, Mr. President, that each meeting seems more productive than the last.

I deeply appreciate the open and candid manner in which we are able to discuss the issues at hand. It speaks well of our personal relationship and that of our countries. We examined, in our meeting, trade and investment between the United States and Mexico. This is an area in which, I believe, more progress can be made with great benefits to both our peoples.

Mexico's debt burden remains a serious challenge. But I am impressed with the commitment that you've made to meet this challenge and to take the necessary steps to achieve a robust, growing Mexican economy. The United States remains ready and willing to work with you to reach that goal.

We also discussed today the considerable progress made since the signing of the Border Environmental Agreement in 1983. Men may have drawn a line in the ground to determine the boundary between us, but God made the land on both sides of that line. And it's up to us to take care of resources that are placed in our care.

With a 2,000-mile border, there is considerable room for expanding our cooperation in this area. I took special note of the recent agreement to proceed with a major reconstruction of bridges. We also had an opportunity today to review the ongoing battle with the drug traffickers, as you have just said—a fight in which Attorneys General Garcia Ramirez and [Edwin] Meese are playing a leading role.

Cleansing our societies of this evil is not without cost. America joins with you in mourning the death of those valued Mexican officials who have been killed in the struggle against narcotics. There are tears on both sides of the border for the Mexican policeman killed recently in the State of Veracruz. They have shown honor and courage that transcends international boundaries. Our own DEA [Drug Enforcement Administration] agent, Enrique Camarena, brutally murdered in the line of duty exemplifies this. He is an American hero born here in Mexicali.

President Reagan shakes hands with President de la Madrid.

(White House photo by Terry Arthur)

Our meeting today has afforded us a good opportunity to discuss our differences and to expand our cooperation in many areas of mutual interest. It appears these areas are expanding. And that, I believe, should surprise no one.

We share many fundamental values and, in the end, these values will draw us closer. Exemplifying this was an interview you recently conducted with a Mexican newspaper. And in it, you applauded the progress toward democracy being made throughout Latin America and concluded that the tendency of all the world is to seek democracy. Furthermore, you said, and I quote, "Regimes of force or authoritarian regimes are not the solution to overcoming economic and social problems in Latin America. Democracy is more effective in accomplishing these aims in a lasting way than the authoritarian regimes." Well, your words ring true, Mr. President. A commitment to democracy is the only true path to justice and to economic progress. Mexico and the United States can and should stand shoulder to shoulder in support of democracy in this hemisphere.

FEATURE
Mexico

Outside this building is a bell, symbolic of the bell rung by an historic champion of human freedom, Father Hidalgo. This priest rang the parish bell in 1810 to rally the American [Mexican][3] people to fight against oppression. Miguel Hidalgo, Jose Maria Morelos, and many other brave Americans [Mexicans][3] gave their lives for this cause. And on the eve of September 16th, the bells are rung to commemorate your country's independence.

We in the United States also have a bell symbolic of our liberty and independence; it's called the Liberty Bell. It's a national treasure, kept in Philadelphia at our Independence Hall. As we leave here today, let us pledge to each other that Mexico and the United States will ring the bells of freedom as Hidalgo, Jefferson, Juarez, and Lincoln did before us. It's a sound sweet to the ear of all who long to be free. Let us ring the bell of freedom so that all citizens of this hemisphere—and we are all Americans, North, Central, and South—will hear. And so, I ask you all to join me in a toast to my friend, the great leader of the Mexican people, President de la Madrid, and to the friendship between our two peoples.

Background on Mexico

GEOGRAPHY

The topography of Mexico ranges from low desert plains and jungle-like coastal strips to high plateaus and rugged mountains. Beginning at the Isthmus of Tehuantepec in southern Mexico, an extension of a South American mountain range runs north almost to Mexico City, where it divides to form the coastal Occidental (west) and Oriental (east) Ranges of the Sierra Madre. Between these ranges lies the great central plateau, a rugged tableland 2,400 kilometers (1,500 mi.) long and as much as 800 kilometers (500 mi.) wide. From a low desert plain in the north, it rises to 2,400 meters (8,000 ft.) above sea level near Mexico City.

Mexico's climate is generally more closely related to altitude and rainfall than to latitude. Most of Mexico is dry; only about 12% of the total area receives adequate rainfall in all seasons, while about one-half is deficient in moisture throughout the year. Temperatures range from tropical in the coastal lowlands to cool in the higher elevations.

PEOPLE

Mexico is the most populous Spanish-speaking country in the world and the second most populous country in Latin America (after Brazil). More than one-half of the people live in central Mexico. Many Mexicans emigrate from areas lacking in job opportunities—such as in the underdeveloped southern states and the crowded central plateau—to the industrializing urban centers and the developing border areas of the northern states. According to 1985 estimates, the urban population of Mexico City may have grown to 18 million, which would make greater Mexico City the largest urban concentration in the world. The northwestern region also had a sharp rise. Guadalajara, Monterrey, and other urban areas also showed large increases.

Education in Mexico is being decentralized and expanded. A major attempt is underway to promote educational activity in rural areas, and the increase in school enrollments during the past two decades has been dramatic. Education is mandatory from ages 6 through 14 or until primary education is completed. Primary enrollment from 1970 through 1980 increased from less than 10 million to 16 million. In 1980, 86% of the population between ages 6 and 14 were in school. Enrollments at the secondary level have more than quintupled since 1955. Estimates of such increases suggest that enrollments increased from 1.4 million in 1972 to as many as 3.4 million by 1981. Between 1959 and 1980, enrollments in institutions of higher learning increased from 62,000 to 770,000.

At the heart of its cultural expression are Mexico's history and quest for national identity. Contemporary artists, architects, writers, musicians, and dancers continue to draw inspiration from a rich history of Indian civilization, colonial influence, revolution, and the development of the modern Mexican state. Artists and intellectuals alike emphasize the problems of social relations in a context of national and revolutionary traditions.

HISTORY

An advanced Indian civilization existed in Mexico before the Spanish conquest. Major Indian cultures included the Olmec, the Maya, the Toltec, and the Aztec. Hernan Cortes conquered Mexico in 1519–21 and founded a Spanish colony that lasted nearly 300 years. Independence from Spain was proclaimed by Father Miguel Hidalgo on September 16, 1810, and the republic was established on December 6, 1822. Prominent in the War for Independence were Father Jose Maria Morelos; Gen. Augustin de Iturbide, who defeated the Spaniards and ruled as emperor for a

short period; and Gen. Antonio Lopez de Santa Ana, who controlled Mexican politics from 1833 to 1855.

Santa Ana was Mexico's leader during the conflict with Texas, which declared itself independent from Mexico in 1836, and during the war with the United States (1846–48). The presidential terms of Benito Juarez (1858–71) were interrupted by the period of the empire. Archduke Maximilian of Austria, who was established as emperor of Mexico in 1864 by Napoleon III of France, was deposed by Juarez and executed in 1867. Gen. Porfirio Diaz was president during most of the period between 1877 and 1910.

Mexico's drastic social and economic problems erupted in the revolution of 1910. Prominent leaders in this revolution—some were rivals for power—were Francisco I. Madero, Venustiano Carranza, Pancho Villa, Alvaro Obregon, and Emiliano Zapata. The Institutional Revolutionary Party, under various names and after a number of reorganizations (now known as the *Partido Revolucionario Institucional*—PRI), continues to be the most important political force in the nation.

Mexico—A Profile

People

Nationality: *Noun and adjective*—Mexican(s). **Population** (1985 est.): 78.6 million. **Annual growth rate** (1985 est.): 2.5%. **Ethnic groups:** Indian-Spanish (mestizo) 60%, American Indian 30%, Caucasian 9%, other 1%. **Religions:** Roman Catholic 97%, Protestant 3%. **Language:** Spanish. **Education:** *Years compulsory*—10. *Literacy*—74%. **Health:** *Infant mortality rate*—55.9/1,000. *Life expectancy*—65.4 yrs. **Work force** (21,500,000, 1983): *Agriculture, forestry, hunting, fishing*—26%. *Manufacturing*—12.8%. *Commerce*—13.9%. *Services*—31.4%. *Mining and quarrying*—1.3%. *Construction*—9.5%. *Electricity*—0.3%. *Transportation and communication*—4.8%.

Geography

Area: 1.978 million sq. km. (764,000 sq. mi.); about three times the size of Texas. **Cities:** *Capital*—Mexico City (pop. 18 million, 1985 est.). *Other cities*—Guadalajara (3 million), Monterrey (2.7 million), Ciudad Juarez (1.12 million), Puebla de Zaragoza (1.1 million), Leon (1 million). **Terrain:** Varies from coastal lowlands to high mountains. **Climate:** Varies from tropical to desert.

Government

Type: Federal republic. **Independence:** First proclaimed September 16, 1810; Republic established 1822. **Constitution:** February 5, 1917.

Branches: *Executive*—president (chief of state and head of government). *Legislative*—bicameral. *Judicial*—Supreme Court, local and federal systems.

Political parties: Institutional Revolutionary Party (PRI), National Action Party (PAN), Unified Socialist Party of Mexico (PSUM), Mexican Democratic Party (PDM), Socialist Workers Party (PST), Popular Socialist Party (PPS), the Authentic Party of the Mexican Revolution (PARM), Mexican Workers Party (PMT), Revolutionary Workers Party (PRT). **Suffrage:** Universal over 18.

Administrative subdivisions: 31 states and the federal district.

Flag: Green, white, and red vertical bands. An eagle holding a snake in its beak and perching on a cactus is centered.

Economy

GDP (1984): $185 billion. **Per capita GDP:** $2,350. **Annual real GDP growth rate** (1984): 3.7%. **Avg. inflation rate** (1984): 59.2%.

Natural resources: Petroleum, silver, copper, gold, lead, zinc, natural gas, timber.

Agriculture (9.5% of 1984 GDP, including fishing and forestry): *Products*—corn, beans, oilseeds, feedgrains, fruit, cotton, coffee, sugarcane, winter vegetables. *Total farmland*—23 million hectares (57.1 million acres).

Industry (1984): *Types*—manufacturing (23.9% of GDP), services (24.7%), commerce (24.0%), transportation and communications (7.6%), petroleum and mining (3.8%).

Trade (1984): *Exports*—$25.2 billion: petroleum and derivatives (67%), coffee, cotton, fruits, vegetables, manufactures, mining. *Imports*—$11.3 billion: grains, machinery, equipment, industrial vehicles, intermediate goods. *Major trading partners*—US, EC, Japan.

Official exchange rate (Dec. 1985): 345 pesos = US$1 (controlled rate); 490 pesos/US$1 (free market rate).

Membership in International Organizations

UN and some of its specialized and related agencies, including the World Bank and the International Monetary Fund (IMF); International Civil Aviation Organization (ICAO); Seabeds Committee; Inter-American Defense Board (IADB); Organization of American States (OAS); Latin American Integration Association (ALADI); INTELSAT; and others.

FEATURE
Mexico

On September 19, 1985, Mexico suffered the worst earthquake in its recorded history. The earthquake, which was centered off of Mexico's Pacific coast, caused at least 10,000 deaths and approximately $5 billion dollars in damage, mostly in Mexico City. Nevertheless, most of Mexico's citizens and buildings escaped harm. As of late 1985, the Mexican Government was completing its long-term plans for earthquake reconstruction.

GOVERNMENT

The constitution of 1917 provides for a federal republic with a separation of powers into independent executive, legislative, and judicial branches of government.

The executive branch is dominant. Executive power is vested in the president, who promulgates and executes the laws of the Congress. The president also legislates by executive decree in certain economic and financial fields, using powers delegated from the Congress. The president is elected by universal adult suffrage a 6-year term and may not hold office a second time. There is no vice president; in case of the removal or death of the president, a provisional president is elected by the Congress.

Congress is composed of a Senate and a Chamber of Deputies. Consecutive reelection to the Congress is prohibited. Sixty-four senators (two from each state and the federal district) are elected to 6-year terms.

Under constitutional and legislative reforms adopted in 1977, the Chamber of Deputies was enlarged in the 1979 elections (from the former 237 members) to allow 300 deputies to be elected in single-member districts by a plurality system and 100 deputies to be elected by proportional representation from the minority parties. This reform is intended to provide minority parties with greater representation in the Chamber of Deputies. Deputies serve 3-year terms. The Mexican Congress is empowered to legislate on all matters pertaining to the national government.

The judicial system consists of local and federal courts and a Supreme Court. Supreme Court justices are appointed by the president and approved by the Senate.

Mexico has 31 states and a federal district. Each state is headed by an elected governor. Powers not expressly vested in the federal government are reserved to the states.

Mexico's armed forces in 1985 numbered about 125,000 officers and troops. The army makes up about three-fourths of the total. One year of limited training is required of all males reaching age 18. A paramilitary force of communal landholders is maintained in the countryside. Principal military roles include maintenance of public order and civic action assignments, such as road-building and disaster relief. Military expenditures constituted 1.4% of the central government budget for the year ending December 31, 1985.

Principal Government Officials

President—Miguel **de la Madrid** Hurtado

Ministers

Government (Interior)—Manuel **Bartlett** Diaz
Foreign Relations—Bernardo **Sepulveda** Amor
National Defense—Gen. Juan **Arevalo** Gardoqui
Navy—Adm. Miguel Angel **Gomez** Ortega
Finance—Jesus **Silva Herzog** Flores
Programming and Budget—Carlos **Salinas** de Gortari
Energy, Mines, and Parastate Industry—Francisco **Labastida** Ochoa
Commerce and Industrial Development—Hector **Hernandez** Cervantes
Agriculture and Water Resources—Eduardo **Pesqueira** Olea
Communications and Transportation—Daniel **Diaz** Diaz
Urban Development and Ecology—Guillermo **Carrillo** Arena
Public Education—Miguel **Gonzalez** Avelar
Health and Public Assistance—Guillermo **Soberon** Acevedo
Labor and Social Welfare—Arsenio **Farell** Cubillas
Agrarian Reform—Luis **Martinez** Villicana
Tourism—Antonio **Enriquez** Savignac
Fisheries—Pedro **Ojeda** Paullada
Federal District—Ramon **Aquirre** Velasquez
Attorney General—Sergio **Garcia** Ramirez

Attorney General for the Federal District—Victoria Adato de **Ibarra**
Comptroller General—Francisco **Rojas**

Ambassador to the Organization of American States (OAS)—Rafael de **la Colina**
Ambassador to the United Nations—Mario **Moya** Palencia
Ambassador to the United States—Jorge **Espinosa** de los Reyes

Mexico maintains an embassy in the United States at 2829 - 16th Street NW., Washington, D.C. 20009 (tel. 202-234-6000). Consular offices are located at 1019 - 19th Street NW. (tel. 202-293-1710). Consulates general are located at Chicago, El Paso, Los Angeles, New Orleans, New York, San Francisco, and San Antonio, and consulates (partial listing) at Boston, Dallas, Detroit, Miami, Philadelphia, and St. Louis.

POLITICAL CONDITIONS

President Miguel de la Madrid Hurtado began his 6-year term in 1982. De la Madrid, a lawyer, has been a university professor, finance director for PEMEX, Director General for Credit at the Treasury, Undersecretary of the Treasury, and the Secretary of Programming and Budget.

The *Partido Revolucionario Institucional* (PRI)—Institutional Revolutionary Party—has been the dominant political force in Mexico since 1929; not only all of its presidential candidates but almost all of its candidates for congressional and state offices have been elected. PRI membership is taken from labor, agrarian, and popular groups, from which candidates for elective office

are selected. The PRI faces several opposition parties. In July 1985 nationwide congressional elections, vote percentages were distributed as follows: PRI (64.85%), PAN (15.5%), PSUM (3.22%), PDM (2.73%), PST (2.46%), PPS (1.95%), PARM (1.65%), PMT (1.55%), PRT (1.26%), other and annulled votes (4.83%).

Significant political themes of the De la Madrid administration have included an emphasis on economic austerity, a drive against corruption in government, and reorganization of all police forces.

ECONOMY

Mexico's economy is experiencing a slow and trying recovery from its 1982 crisis. Nineteen eighty-five is the third year of a 3-year extended fund facility arrangement with the International Monetary Fund (IMF). Since Mexico began the arrangement, inflation has dropped from 100% in 1982 to 80% in 1983, to 59.2% in 1984. For the first half of 1985, however, inflation grew at about the same rate as in 1984. The financial deficit as a percentage of gross domestic product (GDP) decreased from 17.6% in 1982 to 8.5% in 1983, to 7.4% in 1984. Mexico's trade balance turned from a negative $4.5 billion in 1981 to a positive $6.8 billion in 1982, a positive $13.8 billion in 1983, and a positive $12.8 billion in 1984. Mexico's foreign debt has grown to almost $100 billion, and annual public sector interest payments amount to about $10 billion.

Earthquakes in September 1985 will have a significant impact on the Mexican economy. The costs of cleaning and reconstruction will run into the billions of dollars. Most of the funds will go into building construction and the repairing of telecommunications and water supply systems.

During the 1970s, the economy experienced difficulties largely as a result of an ambitious public expenditure program that could not be financed by domestic savings, causing the government to borrow substantial funds from abroad. These policies led to burgeoning public sector deficits, accelerating inflation, and an increase in the Mexican public sector's external debt from $4 billion (12% of GDP) in 1970, to $59 billion (36% of GDP) in 1982, to $97 billion (54% of GDP) in mid-1985.

When President de la Madrid took office in December 1982, the economy was plagued by rising inflation, capital flight, and falling output and employment. Foreign exchange reserves were not sufficient to meet even the country's short-term external liabilities. The new President's inauguration followed by only 4 months the events of August 1982, when the Mexican economic crisis came to a head. At that time, the country was forced to seek emergency assistance to avoid running out of foreign exchange and to begin planning in earnest an economic adjustment program to bring about major structural changes in the economy.

In 1984, the Mexican economy surpassed its growth targets with real GDP growth of 3.5% following real declines of 5.3% in 1983 and 0.5% in 1982. The growth came primarily from nonpetroleum exports, steel, chemicals, in-bond industries, and automobiles.

Petroleum production in 1984 was slightly above that in 1983 even with a temporary production cutback in November. Petroleum exports at $16.6 billion in 1984 accounted for 69% of all of Mexico's merchandise exports. The trade surplus for 1984 was almost $13 billion, and the current account surplus was about $4 billion. Nonpetroleum exports were up by about 26%. Imports were up 18% in dollar terms but remained well below 1982 and 1981 levels.

The international petroleum market and interest rates have had considerable influence on Mexico's economy in 1985. Petroleum prices have already been adjusted downward three times without an increase in volume, causing a decline in export revenues. Lower world interest rates have brought about savings in debt-servicing costs on foreign loans, but higher domestic interest rates have offset some of the consequent budget savings.

During the first half of 1985, foreign exchange reserves contracted as exports decreased and imports increased. Capital flight also contributed to the decline in foreign exchange reserves. The exchange rate has been under pressure since the 1982 crisis, sliding from 26 pesos per dollar at the start of 1982 to 148 pesos per dollar at the end of 1982. The government adopted a dual exchange rate system in December 1982. The official market rate of exchange for the peso declined to 210 at the end of 1984. In December 1985, the official controlled rate for international trade and debt payments was around 345 pesos to the dollar, while the market rate was around 490.

International Trade

Petroleum constitutes about 69% of Mexico's total exports. Manufactures, including chemicals, transport equipment, textiles, shoes, iron, steel, and electric and electronic products make up about 20% of Mexico's exports. Other leading exports include coffee and winter vegetables. Imports are largely of capital and intermediate goods and grains.

Mexico signed a subsidies agreement with the United States in March 1985, which gave Mexico the injury test in countervailing duty cases but called for a progressive elimination of all export subsidies.

The United States purchases about 60% of Mexico's exports and supplies around 65% of its imports. Tourism and in-bond industries are important foreign exchange earners for Mexico, bringing in a total of $2.5 billion in 1984.

Agriculture

Mexico's agrarian reform program was begun more than 50 years ago, and almost all available land has been distributed. Raising the productivity and living standards of subsistence farmers has been slow, however. Self-sufficiency in basic crops such as corn and beans is being stressed by the government, but emphasis is also given to export crops such as coffee, tomatoes, and winter

vegetables. Mexico's agriculture suffers a drought in 4 years out of every 10. In 1980, Mexico began importing large quantities of corn, other feedgrains, and oilseeds to meet domestic needs. In 1984, Mexico was again a net importer of agricultural products as imports of $2.3 billion outpaced exports of $1.7 billion.

Mineral and Energy Resources

Mexico is rich in mineral and energy resources, and mineral exports are an important element in foreign trade. A leading producer of silver, sulfur, lead, and zinc, Mexico also produces gold, copper, manganese, coal, and iron ore. The discovery of extensive new oil fields in the coastal regions along the Gulf of Mexico in 1974 enabled Mexico to become self-sufficient in crude oil and to export increasing amounts of petroleum. Recent estimates put the country's potential petroleum reserves as the fourth largest in the world. It also is now the fourth largest oil producer and exporter in the world.

Manufacturing and Foreign Investment

Mexico's manufacturing sector now accounts for about one-fifth of the GDP. Important gains have been made in the production of cement, aluminum, artificial fibers, chemicals, fertilizers, petrochemicals, and paper. A growing automobile industry has become one of Mexico's most important industrial and export sectors.

The 1973 law governing direct foreign investment in Mexico requires majority Mexican ownership in all new investments except those deemed to be in the national interest by a commission established by the law. In general, the law codifies the existing laws, decrees, and regulations that previously governed the role of foreign direct investment in Mexico.

The De la Madrid administration has said publicly that it welcomes foreign investment on a selective basis and that it will be flexible in applying the law. Foreign investments most likely to be approved are those which complement domestic investment, bring needed technology, help increase exports or reduce imports, or are labor intensive. Flexibility has been seen in the recent approval of a 100% foreign-owned IBM investment proposal.

Other key elements of Mexico's investment policy are a rationalization of industries (i.e., to limit competitors in order to achieve economies of scale), a decentralization of manufacturing industries away from Mexico City and the surrounding area, local content and export performance requirements, and a diversification of foreign investment sources. Currently, an estimated 35% of Mexico's nonpetroleum exports are by foreign-owned firms, which account for only about 4% of total private investment.

Transportation and Communications

Mexico's land transportation network is one of the most extensive in Latin America. The 36,000 kilometers of railroads are government owned. Tampico and Veracruz on the Gulf of Mexico are Mexico's two major ports, although the government is developing new ports on the Gulf of Mexico and the Pacific. A number of international airlines serve Mexico, with direct or connecting flights from most major cities in the United States, Canada, Europe, and Japan. Most Mexican regional capitals and resorts have direct air links with Mexico City or the United States.

Mexico has a well-developed telecommunications system, with its own satellites, 211 television stations, 1,061 radio stations, 3 land satellite receiving stations, and 5.0 million telephones. Earthquake damage to these facilities in September 1985 was extensive. Mexico is a member of the International Telecommunications Satellite Consortium (INTELSAT).

Travel Notes

Customs: A tourist card is required for entry.

Climate and clothing: The high plateau area around Guadalajara and Mexico City is spring-like throughout the year, a bit cooler in winter, and a little warmer in summer. The Yucatan Peninsula, the Monterrey area, and the US border areas are very hot in summer and pleasant in winter. Business suits for men and street dresses or pantsuits for women are appropriate in the cities. Sport shirts are worn for all social occasions in the coastal zones.

Health: Cooked food is safe to eat; raw vegetables often are not. Tapwater may not be potable. Medical facilities in the larger cities are good. A leisurely pace is recommended for the first first few days in the higher altitudes.

Telecommunications: Long-distance telephone and telegraph service to major cities is good. Mexico City is one time zone behind eastern standard time.

Transportation: Direct international air service from many US airports is available to Mexico City, Cancun, Guadalajara, Merida, Monterrey, and other points. Bus service in Mexico is good, and the highway system is extensive. Auto rental is available.

Tourist attractions: About 4 million tourists, about 90% of them US citizens, visit Mexico annually. Among the richest archeological sites are Teotihuacan (with its famous pyramids) and Tula near Mexico City, Monte Alban and Palenque in the south, and Chichen Itza and Uxmal in the Yucatan. The National Museum of Anthropology in Mexico City is one of the world's finest. Other important museums include the Colonial Museum in Tepozotlan, Chapultepec Castle, and the Museum of La Venta at Villahermosa, Tabasco. The major coastal resorts are Acapulco, Puerto Vallarta, Ixtapa, Cozumel, and Cancun.

FOREIGN RELATIONS

The Government of Mexico, in modern times, has sought to maintain its interests abroad and project its influence largely through moral suasion and selective economic assistance. In particular, Mexico champions the principle of nonintervention and certain legal corollaries: the Estrada, Calvo, and Drago doctrines.

During the last 5 years, the Mexican Government has expressed concern about intensified conflict in Central America. Mexicans believe that insurgency in Central America stems principally from economic and social injustices in that area. A Franco-Mexican declaration on El Salvador, issued in late August 1981, pressed for a political settlement that would recognize armed insurgents as "a legitimate political force." Since early 1983, Mexico, Venezuela, Colombia, and Panama have expanded their collaboration in an effort to bring the states of the region together and restore peace.

Mexico and Venezuela have also been collaborating to promote economic progress in the region for the last 5 years. The two countries jointly have sold oil on concessional terms to the developing countries of Central America and the Caribbean, under the 1980 San Jose agreement.

Mexico has shown a marked preference for resolving regional disputes through the United Nations, rather than the Organization of American States (OAS). Mexican leaders have also stated, however, that the OAS should be retained as a forum for Latin American countries to discuss issues in a general way with the United States.

Mexico has been selective in its membership in other international organizations. To date, it has declined to become a member of the General Agreement on Tariffs and Trade (GATT), the Organization of Petroleum Exporting Countries (OPEC), or the Non-Aligned Movement. However, in November 1985, President de la Madrid announced Mexico's intention to seek formal accession to the GATT.

U.S.-MEXICAN RELATIONS

Mexico and the United States have maintained close and friendly relations since 1938, when a major confrontation over the expropriation of oil holdings was resolved. These friendly relations were reinforced by U.S. measures in 1982 to help Mexico deal with its economic problems. Purchases for the U.S. Strategic Petroleum Reserve, with a large advance payment, emphasized the cooperative nature of the U.S.-Mexican energy relationship.

Much of the progress in U.S.-Mexican relations over the past several years has resulted from the close working relationships and frequent meetings between U.S. Presidents and their Mexican counterparts, as well as from high-level day-to-day contacts by the U.S. Ambassador. The most recent presidential meeting was between Presidents Reagan and de la Madrid in Washington, D.C., in May 1984.

Beyond financial cooperation, the United States and Mexico are cooperating in efforts to solve various other problems, the most important of which are narcotics and dangerous drug traffic into the United States, immigration matters, border environmental issues, and trade issues.

International Boundary and Water Commission

Preceded by several short-term commissions to survey and mark the boundary after its creation in 1848 and modification in 1853, the International Boundary Commission was established as a permanent, joint commission by treaty in 1889. The Water Treaty of 1944 extended its authority to the land boundary, and added to its responsibilities the boundary water problems, then becoming very important. The 1944 treaty renamed the body The International Boundary and Water Commission (IBWC). It also required that the U.S. and Mexican commissioners be engineers.

The IBWC has a wide range of responsibilities and specific programs for solution of U.S.-Mexican water and boundary problems. These include distribution between the two countries of the waters of the Colorado River and the Rio Grande; joint operation of international dams on the Rio Grande to control floods, conserve waters, and to generate electricity; other joint flood control works along boundary rivers; solution of border water quality control problems; and stabilization of the river boundaries. These responsibilities and programs are carried out in accordance with various treaties and agreements.

The IBWC has successfully resolved many difficult and longstanding problems. For example, the Chamizal Settlement of 1963 resolved a 100-year-old dispute at El Paso/Ciudad Juarez by exchange of territory and rechanneling the Rio Grande. A permanent solution to the international problem related to the salinity of the Colorado River was reached in 1973. In the 1980s, the IBWC has focused on troublesome border sanitation problems and has been studying groundwater resources along the boundary.

The United States includes the following in its foreign policy objectives toward Mexico: to maintain friendly relations, to assure maximum cooperation between Mexico and the United States, and to settle all differences in the spirit of mutual respect and neighborly understanding. A strong and prosperous Mexico is in the U.S. interest.

Principal U.S. Officials

Ambassador—John Gavin
Deputy Chief of Mission—Morris D. Busby
Counselor for Political Affairs—Robert S. Pastorino
Counselor for Economic Affairs—Richard H. Morefield
Counselor for Labor Affairs—John B. Gwynn
Counselor for Public Affairs (USIS)—Sally Grooms
Counselor for Consular Affairs and Consul General—Charles Brown
Counselor for Scientific and Technological Affairs—Reynaldo Morales
Counselor for Administrative Affairs—Douglas K. Watson
Counselor for Commercial Affairs—Emilio Iodice
Legal Adviser to the Ambassador—Michael Hancock

Consuls General and Consuls
Consulate General, Ciudad Juarez—Michael Hancock
Consulate General, Guadalajara—A. Irwin Rubenstein
Consulate, Hermosillo—J. Christian Kennedy
Consulate, Matamors—Danny B. Root
Consulate, Mazatlan—Elayne J. Urban
Consulate, Merida—Virginia C. Young
Consulate General, Monterrey—Martin G. Heflin
Consulate, Nuevo Laredo—Manuel R. Guerra
Consulate General, Tijuana—Robert D. Emmons

Consular Agents
Acapulco—Lambert Jean Urbanek
Cancun—Genevieve Elisabeth Browning de Valdez
Durango—Kenneth F. Darg
Mulege—Donald J. Johnson
Oaxaca—Roberta K. French
Puerto Vallarta—Jenny McGill
San Luis Potosi—Margaret M. Snydelaar
San Miguel de Allende—Col. Philip Maher
Tampico—Mary Elizabeth Alzaga
Veracruz—Edwin L. Culp

The U.S. Embassy in Mexico is located at Paseo de la Reforma 305, Mexico 06500, D.F. (tel. 905-211-0042).

U.S. Ambassador to Mexico

John Gavin was born on April 8, 1931, in Los Angeles, California. He attended Stanford University on a full academic scholarship and wrote his senior honors thesis on Latin American economic history. He graduated with an A.B. degree in 1952.

The following 3 years, he served as an officer in the U.S. Navy. During combat duty in Korea and with the U.S. Seventh Fleet in the Pacific, he won four battle stars. Subsequently, he became flag lieutenant and aide to the Commandant of the 15th Naval District in Panama; there he worked on massive flood relief operations in Panama and Honduras. He speaks fluent Spanish and Portuguese.

While best known for his film, stage, and television performances over the past 25 years, much of Ambassador Gavin's educational and professional experience has focused on Latin America.

During 1961–1974, he served as special adviser to the Secretary General of the Organization of American States. In 1974–1980, he was spokesman for the Bank of America. Ambassador Gavin served on the Board of the Screen Actors Guild from 1966 to 1973, and was named president and chief executive officer in 1971. He is a trustee of the Villanova Preparatory School in Ojai, California.

He was sworn in as U.S. Ambassador to Mexico on May 13, 1981. ■

U.S. Relations With Mexico and Canada

President Reagan's radio address to the nation on January 4, 1986.[1]

Permit me to start today by wishing you and your families a happy and prosperous 1986. As we begin this year, we can be grateful that America is at peace, that our economy is growing, and that throughout the land there's a renewed sense of confidence in America and our future.

I'd like to speak to you today about two vital aspects of foreign policy: our relations with our neighbors, Mexico and Canada. Just yesterday I traveled to Mexicali, Mexico, to meet President de la Madrid. This was our fourth meeting since his election and my seventh with a Mexican President since my own election in 1980.

Today relations between the United States and Mexico are good. There's no clearer proof than our cooperation in rescue efforts after an earthquake struck Mexico City last September. And my talks yesterday with President de la Madrid were marked by an air of friendship. We've made progress in a number of areas which concern our two nations directly, including the improvement of Mexican-American bridges and border crossings and the expansion of trade between our two nations.

We paid particular attention to the fight against illegal drugs, both drug production and smuggling. In the past, our cooperation in this effort has helped stem the flow of narcotics into the United States. But in recent months, drug smuggling has been picking up. President de la Madrid and I have agreed to redouble our efforts to bring this illegal trade—this trafficking and the warping and destruction of human life—to an end. We're of one mind about the need to eliminate drug crops, to provide heavy patrols on the border, and to step up the prosecution of those who deal in illegal narcotics.

Both Mexican and American officials have given their lives in the battle against illegal drugs. For the sake of those brave men and every young person whose life is at stake, we must all and will continue the fight until victory is won.

In the international field, President de la Madrid and I expressed our respective viewpoints, notably on the problems of Nicaragua and other countries in Central America. President de la Madrid stressed that the conflicts in Central America have, in many cases, arisen from social and economic injustices.

For my part, I agreed that the nations of Central America have for many years been beset by poverty. And I pointed out that the United States is currently providing some $1.2 billion a year to the region in economic aid. But I felt bound to add something else, something crucial: The answer to Central America's problems is political and economic freedom, not Soviet tanks and ruthless regimes like the communist dictatorship in Nicaragua that wages war against its own people. And this is why the United States will continue to support those fighting for freedom and democracy in Nicaragua.

Permit me to turn now to Canada, our neighbor to the north. Last March I traveled to Quebec City to meet Canadian Prime Minister Brian Mulroney. The Prime Minister and I agreed that relations between our two countries are excellent. Canada and the United States maintain the largest trade between any two nations on Earth. We cooperate in the defense of North America and are partners in the NATO alliance. We share a tradition of democracy and political stability and a firm commitment to economic growth. We're not only friends and neighbors, we're cousins.

Since our March meeting, the Prime Minister and I have worked to improve our relations still further. Already, we've committed ourselves to joint efforts in defense, the environment, and space.

With regard to trade, I've informed the Congress that I want to begin negotiations with Canada on an agreement of historic significance to both countries. Our goal is to promote free and open economic competition and to reduce those few barriers to our trade that still remain. When Prime Minister Mulroney visits Washington this March, I believe the mid-1980s will already have taken shape as the most productive period in the long history of Canadian-American friendship.

During my 1980 campaign for office, I called for a North American accord—a renewed spirit of friendship and cooperation between the United States, Mexico, and Canada, the three great nations which share this continent. I was delighted to see that spirit so much in evidence yesterday in Mexicali. And I'm confident that this spirit of friendship among our three countries will mark 1986 and the years beyond.

U.S.-U.S.S.R. New Year's Messages

President Reagan and Soviet General Secretary Mikhail Gorbachev simultaneously exchanged televised New Year's addresses on January 1, 1986.[1]

PRESIDENT REAGAN'S ADDRESS[2]

I'm pleased to speak to you on the occasion of the New Year. This is a time for reflection and for hope. As we look back on the year just concluded and on the year that is to come, I want to share with you my hopes for the New Year, hopes for peace, prosperity, and good will that the American and Soviet people share.

Just over a month ago, General Secretary Gorbachev and I met for the first time in Geneva. Our purpose was to begin a fresh chapter in the relations between our two countries and to try to reduce the suspicions and mistrust between us.

I think we made a good beginning. Mr. Gorbachev and I spent many hours together, speaking frankly and seriously about the most important issues of our time: reducing the massive nuclear arsenals on both sides, resolving regional conflicts, ensuring respect for human rights as guaranteed under international agreements, and other questions of mutual interest.

As the elected representative of the American people, I told Mr. Gorbachev of our deep desire for peace and that the American people do not wish the Soviet people any harm. While there were many areas which we did not agree, which was to be expected, we left Geneva with a better understanding of one another and of the goals we each have. We are determined to build on that understanding in the coming months and years.

One of the most important things on which we agreed was the need to reduce the massive nuclear arsenals on both sides. As I have said many times, a nuclear war cannot be won and must never be fought; therefore, we agreed to accelerate negotiations where there is common ground to reduce and eventually eliminate the means of nuclear destruction.

Our negotiators will soon be returning to the Geneva talks on nuclear and space arms, where Mr. Gorbachev and I agreed we will seek agreements on the principle of 50% reductions in offensive nuclear arms and an interim agreement on intermediate-range nuclear systems. And it's my hope that one day we will be able to eliminate these weapons altogether and rely increasingly for our security on defense systems that threaten no one.

Both the United States and Soviet Union are doing research on the possibilities of applying new technologies to the cause of defense. If these technologies become a reality, it is my dream that, well, to one day free us all from the threat of nuclear destruction.

One of the best ways to build mutual understanding is to allow the American and Soviet peoples to get to know one another better. In Geneva we signed a new agreement to exchange our most accomplished artists and academics. We also agreed to expand the contacts between our peoples so that students, teachers, and young people can get to know each other directly. If people in both countries can visit, study, and work together, then we will strengthen the bonds of understanding and build a true foundation for lasting peace.

I also discussed the American people's strong interest in humanitarian issues. Our democratic system is founded on the belief in the sanctity of human life and the rights of the individual—rights such as freedom of speech, of assembly, of movement, and of worship. It is a sacred truth to us that every individual is a unique creation of God, with his or her own special talents, abilities, hopes, and dreams. Respect for all people is essential to peace, and as we agreed in Geneva, progress in resolving humanitarian issues in a spirit of cooperation would go a long way to making 1986 a better year for all of us.

A safe and lasting peace also requires finding peaceful settlements to armed conflicts, which cause so much human suffering in many parts of the world. I have proposed several concrete steps to help resolve such conflicts. It is my hope that in 1986 we will make progress toward this end. I see a busy year ahead in building on the foundations laid in Geneva. There is much work to be done.

Mr. Gorbachev will visit the United States later this year, and I look forward to showing him our country. In 1987 I plan to visit your country and hope to meet many of you.

On behalf of the American people, I wish you all a happy and healthy New Year. Let's work together to make it a year of peace; there is no better goal for 1986 or for any year. Let us look forward to a future of *chistoye nyebo* [blue skies] for all mankind.

GENERAL SECRETARY GORBACHEV'S ADDRESS[3]

I see a good augury in the way we are beginning the new year, which has been declared the Year of Peace. We are starting it with an exchange of direct messages, President Reagan's to the Soviet people and mine to you.

This, I believe, is a hopeful sign of change which, though small, is nonetheless a change for the better in our relations. The few minutes that I will be speaking to you strike me as a meaningful symbol of our mutual willingness to go on moving toward each other, which is what your President and I began doing at Geneva. For a discussion along those lines, we had the mandate of our peoples. They want the constructive Soviet-American dialogue to continue uninterrupted and to yield tangible results.

As I face you today, I want to say that Soviet people are dedicated to peace, that supreme value equal to the gift of life. We cherish the idea of peace, having suffered for it. Together with the pain of unhealing wounds and the agony of irretrievable losses, it has become part and parcel of our flesh and blood. In our country there is not a single family or a single home that has not kept alive the memory of their kith and kin who perished in the flames of war, the war in which the Soviet and American peoples were allies and fought side by side.

I say this because our common quest for peace has its roots in the past, and that means we have a historic record of cooperation which can today inspire our joint efforts for the sake of the future.

The many letters I have received from you and my conversations with your fellow countrymen—Senators, Congressmen, scientists, businessmen, and statesmen—have convinced me that in the United States, too, people realize that our two nations should never be at war, that a collision between them would be the greatest of tragedies.

It is a reality of today's world that it is senseless to seek greater security for oneself through new types of weapons. At present, every new step in the arms race increases the danger and the risk for both sides and for all humankind. It is the forceful and compelling demand of life itself that we should follow the path of cutting back nuclear arsenals and keeping outer space peaceful. This is what we are negotiating about at Geneva, and we would very much like those talks to be successful this year.

In our efforts for peace, we should be guided by an awareness of the fact that today history has willed our two nations to bear an enormous responsibility to the peoples of our two countries and, indeed, the peoples of all countries for preserving life on Earth. Our duty to all humankind is to offer it a safe prospect of peace, a prospect of entering the third millenium without fear. Let us commit ourselves to doing away with the threat hanging over humanity. Let us not shift that task onto our children's shoulders.

We can hardly succeed in attaining that goal unless we begin saving up, bit by bit, the most precious capital there is: trust among nations and peoples. And it is absolutely essential to start mending the existing deficit of trust in Soviet-American relations.

I believe that one of the main results of my meeting with President Reagan is that, as leaders and as human beings, we were able to take the first step toward overcoming mistrust and to activate the factor of confidence. The gap dividing us is still wide, to bridge it will not be easy, but we saw in Geneva that it can be done. Bridging that gap would be a great feat, a feat our people are ready to perform for the sake of world peace.

I am reminded of the title of a remarkable work of American literature, the novel "The Winter of our Discontent." In that phrase let me just substitute hope for discontent. And may not only this winter but every season of this year and of the years to come be full of hope for a better future, a hope that, together, we can turn into reality. I can assure you that we shall spare no effort in working for that.

For the Soviet people, the year 1986 marks the beginning of a new stage in carrying out our constructive plans. Those are peaceful plans. We have made them known to the whole world.

I wish you a happy New Year. To every American family I wish good health, peace, and happiness.

---

[1]Text from Weekly Compilation of Presidential Documents of Jan. 6, 1986.

[2]Recorded at 9:18 a.m. in the Cypress Room at the Century Plaza Hotel in Los Angeles, California, on Dec. 28, 1985, for broadcast in the Soviet Union at 1 p.m. on Jan. 1, 1986.

[3]Address printed follows the unofficial Soviet translation carried in the text of the White House press release. ■

News Conference of January 7 (Excerpts)

Excerpts from President Reagan's news conference of January 7, 1986.[1]

. . . .

Q. You said in your opening statement that there is irrefutable evidence that Colonel Qadhafi was involved in the airport attacks. The European allies seem less convinced. What proof is there of Qadhafi's involvement in those attacks?

A. The only thing I can say in answering that question—and I can't do all that you would like to do because there are things that should not be revealed—but I can assure you that we have the evidence. We have the evidence of the amount of training that has been given; that, too, he has denied. I don't think he's capable of telling the truth about these things. But we know the location of training camps for terrorists, and we also know that Abu Nidal has more or less moved his headquarters there into Libya. So, we speak with confidence. And I would like to remind you that in the first moments or days or hours following these last two, he did openly praise them as heroic undertakings. And then very shortly, along about the time that the *Coral Sea* was leaving Naples—and it was only leaving because its leave time there was up—but he suddenly decided that, no, he was distressed by these acts of terrorism. I think he was speaking more honestly the first time.

Q. You say that you could prove—that you have conclusive evidence that he, Col. Qadhafi, is personally involved in those attacks that killed Natasha Simpson and the others?

A. We are satisfied that, yes, his regime—and I don't think that his regime is doing anything without his guidance.

Q. For some 40 years, American Presidents have been confronted directly with the Middle East problems. You and your predecessors have often spoken of the legitimate rights of the Palestinians. My question is how did Palestinians attain these rights? How do they rid themselves of foreign occupation? Should they emulate the U.S.-backed freedom fighters in Afghanistan, the *contras* in Nicaragua, or is there a peaceful way?

A. The peaceful way is the thing we've been trying to promote—the idea of peace between the Arab states and Israel. And we have emphasized from the very first that the problem of the Palestinians must be a part of any solution.

But I would also like to point out that virtually every Arab country has thousands and thousands of Palestinians. In fact, some of them, they're practically a majority of their population. So, they are in a number of countries, and in many of these countries they are not made citizens of those countries. They're allowed to live there and so forth, but they don't have passports. They don't have all of the privileges that a citizen of the country would have. And there has to be a solution, particularly—we're not talking about all of those; they seem to be content with where they're living—but those that became refugees, the great refugee camps that we found in Lebanon. Those are the ones that are literally people without a country, and we think there has to be a solution found for them. The reason that we have not approved the dealing with Arafat and that sect—the PLO [Palestine Liberation Organization]—is because how could they sit in in a peace conference when they deny the right of Israel to exist as a nation and have refused to endorse or support or accept the two resolutions, 242 and 338, of the United Nations?

Q. Will Israel accept the existence of the Palestinians, or will the United States continue to give Israel the veto power over any Palestinian negotiating for their people?

A. No, and I don't think that they ask for that. Theirs is—and I would say this of any other country that they're working with—that you can't ask them to negotiate with someone who's sitting on the opposite side of the table saying that they start from the negotiating position that Israel doesn't have any right to exist. And this is the main thing; it's the reason why we have not felt free to talk with an Arafat until he gives up that position.

Q. You have said that your policy toward terrorists is swift and effective retribution. And after the *Achille Lauro* case you said "you can run, but you can't hide." But isn't this one more case where there is no retribution and where the people behind the terrorism have, in effect, been able to hide?

A. Now you mentioned the people behind the terrorism. I'd like to point out that all this talk that there's been about harsh talk and no action and so forth—could I recap just a moment here?

Two of the great terrorist actions against the United States took place in Lebanon: the bombing of our Embassy and the slaughter of our Marines there. But in both cases, the perpetrators of those acts died with the victims; they were suicide atacks. Now, we've made every effort to try and establish, well, who brought these people there? They certainly can't be questioned. How did they get there? Now we've had two more recent attacks. But in these two attacks, the perpetrators are either dead, killed on the scene, or they're wounded and in hospitals under arrest.

But, again, here is a better opportunity now. This was something of a suicide attack, and Qadhafi himself has referred to more suicide terrorist actions.

In other words, finding some poor souls that are fanatic enough that they can be told that they got a free ride to heaven if they'll go out and give up their own lives to kill someone else, innocent people. The only actual case where there were terrorists, and there they were, and we knew their location and where they were trying to go, and we brought them down—and that was the *Achille Lauro* case—and turned them over to the Italians at their request. After all, it was their territory and their ship, and they wanted to do the prosecuting. And they will be prosecuted.

I know it appears that we sit here and are not doing anything. I'd like to tell you something that we have done. We have actually recorded in the last year, and know, that we have aborted 126 terrorist missions. I won't go any further, and I'm not going to tell you how this was done. But in our intelligence and working with the other countries, we have been able to anticipate and, as I say, abort that many terrorist missions.

Q. What you seem to be saying is that in this particular case, in terms of going to the source, going after Abu Nidal or going after the Libyan training camps, it's basically going to be next time for a military strike. And I wonder, given your criteria, which are that there has to be a direct link between the terrorists and the target and that no innocent civilians can be hit, why should Muammer Qadhafi or Abu Nidal believe you?

A. I'm not going to talk beyond the action that we've taken here. I am not going to make any comment as to whether we have other actions in mind or what might be done. I think that Mr. Qadhafi would be very happy if I did answer such a question, but I'm not interested in making him happy.

Q. Were any of these terrorist missions that you say the United States aborted in the United States?

A. I'm not going to comment on that or their location or anything further on it. I'm just going to assure you that we have the intelligence that led us to be able to do that. They weren't all in the United States, or I don't know how many. I haven't got the count before me right now.

Q. You signed a directive which would have required a great number of government employees to take lie detector tests for security purposes. But when Secretary Shultz publicly complained, you changed your mind and cut back on that directive. And one of your aides said to reporters that you really hadn't understood what was in it when you signed it, My question is, did you understand it when you signed it originally, and if so, why did you change your mind?

A. If there was an aide that said anything of that kind, he wasn't an aide. [Laughter]

Q. He won't be tomorrow.

A. No. No, when Secretary Shultz came back, he had been accosted by the press in Europe. And they were leading to believe that I had okayed virtually *carte blanche* the 2½ million Federal employees subject to lie detector tests. And they would be tested based on their personalities or their own personal lives and so forth. None of this was true.

And the document I signed was not changed nor did I change my mind. I was able, when the Secretary and I had a chance to talk when he came back, to point out that what I had signed was a directive that was creating an investigative policy that we were—I did not create it—in that I asked for and was proposing that we come together on a policy for heading off espionage. And, therefore, out of the thousands and thousands of employees, there is a very limited number that actually deal with classified material or could possibly be involved in this. And I recommended, among other things, that this be included as an investigatory tool in such investigations, and it would be limited to what we were trying to find out—espionage and whether to head it off or not.

So, whoever was telling that, and I've seen it and heard it and so forth, and I've sat there fidgeting in my chair because it wasn't true. That's what I signed, and that's what's still signed.

Q. Secretary Shultz made the point that he doesn't believe lie detector tests are accurate, that often they catch people who are not guilty, and even let people who are guilty go. I take it you think they are accurate.

A. I think that it's a useful tool. I know that he does not have too high an opinion of them, and I think that he was thinking also if you're going to have one of those in which you get into people's personal lives and so forth. But also there are others who have a greater confidence in them in such an investigation, where you are directly going at a subject. One of the things that they've done, and the record of polygraph tests throughout our land has proven, that they have been responsible for more confessions than anything actually proven there, that the very nature of the test has led to a multitude of confessions of various crimes and so forth.

Q. The last time you asked the Europeans to take any sort of sanctions against any of the states which might be responsible for terrorist acts, you asked them to stop flying commercial flights into Beirut. The policy was not a notable success. The Europeans have proven extremely reluctant. Is there any reason for you to believe, or for us to believe, that things will be any different this time, simply because you are asking them yet again?

A. I don't know. We're going to consult with them. I don't know that we're going to outright ask them. We're going to tell them what we're doing. They have told us in the past that the limited actions that we had taken against Libya earlier were rather ambiguous. Now we're taking some that are a little unambiguous, and maybe that'll change some of their minds, maybe it won't. Some of them may have problems of their own, in their own economies, that's just going to render this nearly impossible. But we're going to consult and see how much cooperation we can get.

Q. But if they can't do it, it severely curtails the effect of your sanctions. Doesn't it frustrate you?

A. It may be frustrating, but we're going to go on with what we think has to be done.

Q. How seriously do you take the threat of Mr. Qadhafi that if there is some indication of Israeli or American military retaliations, that Washington, D.C., will become a target for hit squads?

A. I wish he was planning to do that himself. I'd be happy to welcome him. [Laugher] But, no, how can you not take seriously a man that has proven that he is as irrational as he is on things of this kind. I find he's not only a barbarian, but he's flaky. [Laughter]

Q. Are you now looking forward to a second summit with Mr. Gorbachev in September or the fall, perhaps, rather than in June, and what has led to that slippage?

A. I don't know. Someone on their side has suggested later in the fall. We thought that June would be a nice time to do it, and not get around to waiting and saying that it's got to be a year between visits. In fact, the last words of the General Secretary to me when we said goodbye was that we should keep in touch and not just wait until there was another meeting, but to keep on with what was started there. And I said to him—proposed that it might be in late June, in the summer. And he nodded his approval of that when he accepted my invitation. Now others have perhaps suggested that it should be at another time. But there hasn't been a date set, and other than the suggestion, they haven't given us any reason why they think that later in the fall would be better than in June.

Q. In terms of the atmosphere between the United States and the Soviet Union, the other day the Soviet officials were complaining about such things as "Rambo" movies and "Rocky" movies which cast the Soviets in a bad light. Do you think that's an appropriate sort of thing? Are you talking to your friends in Hollywood about the kind of movies being made these days? [Laughter]

A. No, I was talking to my friends in Hollywood back at a time when they seemed to be making procommunist pictures.

Q. Back on the subject of terrorism, what effect, if any, do you think the actions you have taken today will have on the welfare of the U.S. hostages in Lebanon?

A. I think we are talking about two separate subjects here, even as to the nature of the people that are holding them and the other terrorists that we've been talking about. But I can only tell you that we have been meeting with, talking with, a number of individuals, a number of other governments, following every lead that we can that would lead to their rescue. And we're not going to let up until we're successful in that.

Again, I can't get specific on the things that we're doing other than it is a constant and all-out effort. But I think that it would be counterproductive for me to explain any of the things that we're doing.

Q. Can you tell us what you know about their welfare?

A. We have no reason to believe that they are not—I hesitate to say well treated. Let us say that, apparently, they're in as reasonably good health as could be expected in view of their incarceration.

Q. In connection with your next meeting with General Secretary Gorbachev, the Russians, in response to the terrorist activities that you have been talking about this evening, have made some very defensive statements of Libya and of Qadhafi. And as you know, they supply Libya with a good deal of their military equipment and possibly some of the training, some of which may be then passed on to the terrorists. I would like to know, when you sit down and talk to General Secretary Gorbachev or if you're in communication with him before your next meeting, do you intend to bring this up and suggest to him that they could be more forthcoming in areas outside of your direct talks and make the climate better?

A. Yes. This was very definitely one of our conversations, or one of our topics in our one-on-one conversations about why we had a suspicion of them. And it was incorporated in a subject that I had brought up in which I said that it was obvious that both of us suspected the other, distrusted the other, and that it was going to take more than words, but take deeds for us to eliminate that distrust. And if we could do that, then we could get on with the business of reducing arms and so forth instead of looking at each other as antagonists all the time.

Q. Have you considered directly communicating with Gorbachev about this recent incident and about possibly using his leverage with Qadhafi?

A. Again, you're getting around to details that I don't want to get into.

Q. Would your response to the terrorist incident have been different if there were not more than a thousand Americans still in Libya?

A. Very obviously, they have to be a consideration. As you will recall, the first time that we took some economic actions, there were roughly 8,000 Americans in Libya. And we asked—did not order and did not declare an emergency, but asked them to come back. And now there are between a thousand and 1,500 there. But, yes, you have to consider them as potential hostages.

Q. You said earlier that you thought Mr. Qadhafi was flaky. Do you seriously think that he might be emotionally or mentally unbalanced?

A. Oh, no, I used that in the term that we use it in conversation about someone. No, I just think that the man is a zealot. He is pursuing a revolutionary cause that could affect a great many countries. And you only have to look at his performance in Chad in which he then violated the word that he had given to France with regard to his aggression there and other places. So, I feel that you have to be on guard against virtually any kind of act.

Q. How safe or how risky do you think it is for Americans to travel to Europe these days? And are you satisfied that our allies have redoubled their efforts for airport security, as you asked them to do last summer?

A. I think there's been great improvement in airport security. And yet when you have suicide attacks as we did in the Rome and Vienna airports, you have to ask yourself what can be done about that to prevent it. I have to feel that a—well, as a matter of fact in recent travels and over the holidays, and I can't tell you how many people of the type that could be expected to be taking European trips or world trips, how many of them went out of their way to tell me that they would plan no such trips under the present situation.

Low-Intensity Warfare: The Challenge of Ambiguity

Secretary Shultz's address before the Low-Intensity Warfare Conference at the National Defense University on January 15, 1986.[1]

I commend the Department of Defense, the National Defense University, and Secretary [of Defense Caspar] Weinberger for convening this conference. It comes at an important time, for it addresses one of the most pressing problems in U.S. foreign and defense policy today.

The problem of low-intensity warfare requires us to confront a host of political, military, intellectual, legal, and moral questions. The label, indeed, may be misleading. When they are shooting at you or trying to blow you up, it's pretty high intensity. Nor is low-intensity warfare the same as limited war.

No, it's a more complicated set of new and unconventional challenges to our policy. It is the scourge of terrorism worldwide; the struggle for Nicaragua between the democratic resistance and the communist regime; it is the insurgencies against the Soviet and Cuban intervention in Angola and Ethiopia; the civil war and terrorism in Lebanon; our rescue of Grenada; and the Cambodian resistance against the Vietnamese occupation. It is the heroic struggle of the Afghan people against Soviet aggression and occupation. It is a matrix of different kinds of challenges, varying in scope and scale. If they have a single feature in common, it is their ambiguity: the fact that they throw us off balance, that we grope for appropriate means to respond, and that we as a society even debate sometimes over the need to respond.

The ironic fact is, these new and elusive challenges have proliferated, in part, *because* of our success in deterring nuclear and conventional war. Our adversaries know they cannot prevail against us in either type of war. So they have done the logical thing: they have turned to other methods. Low-intensity warfare is their answer to our conventional and nuclear strength—a flanking maneuver, in military terms. They hope that the legal and moral complexities of these kinds of challenges will ensnare us in our own scruples and exploit our humane inhibitions against applying force to defend our interests. Ambiguous warfare has exposed a chink in our armor.

The Nicaraguan communists, for instance, have done all they can to hide their true ambitions. Some were fooled by this. The Nicaraguans used progressive rhetoric to obscure their totalitarian goals. They imported Cuban experts to construct a totalitarian state, but, at first, only a small number, so as to not attract attention. Then, as the numbers rose, we were told the Cubans were teachers or construction workers (who happen to handle guns quite well, as we learned in Grenada). Now we are told they aren't really organized troops, just advisers—who seem to wander into combat. We warned against the Nicaraguans' import of MiGs and other advanced weapons; so they have brought in powerful weapons below that threshold, like Hind helicopters. They have committed aggression against their neighbors and provided arms to terrorists like the M-19 group in Colombia, but cynically used the International Court of Justice to accuse *us* of aggression because we joined with El Salvador in its defense.

These tactics obviously play on the moral scruples that discipline our power, on the American people's antipathy to violence and desire for peace. Well, the truth—which most of us here long recognized—is now gaining wider and wider acceptance. A consensus is emerging in Congress that the Sandinistas are not reformers—or even Sandinistas—but Leninists who seek a monopoly of power at home and subversion of their democratic neighors—and who must be stopped.

But look at the time the Nicaraguan communists have gained to consolidate their tyranny. Years in which we have been consumed in acrimonious internal debate have been used by them to tighten their grip and heighten the danger to the whole region.

In Grenada, the tactics were similar. Documents we captured when our forces landed there 2 years ago reveal how ambiguity and deception were employed as tools of power. The construction of an airport whose true aim was to serve as a Soviet/Cuban base was, we were told, for civilian purposes to aid the local economy. And if we had not intervened when we did, that "civilian" airport might have been in service today, as a transit point for sending more Cuban mercenaries to Angola or more Libyan arms to Nicaragua or more terrorists to our hemisphere.

In southern Africa, of course, the problems are not solely the result of communist subversion. There is the profound problem of South Africa's internal policies and Namibia's right to independence. But there *is* a serious East-West dimension which we, because of the Clark amendment, prevented ourselves from grappling with for 10 years: this is the extraordinary Soviet and Cuban military intervention in Angola, in which we have just seen a massive escalation in the last year and a half. Some will argue that this threat is not serious enough to warrant a response from us, or that we'll be on the wrong side, or that *we* would be escalating. This illustrates the seeming ambiguity of such geopolitical challenges to Western interests. But what would it mean globally, or for Africa, if Soviet/Cuban military intervention—and escalation—became the arbiter of local or regional political conflicts?

Terrorism, of course, is the most striking example of ambiguous warfare. Terrorist acts are a form of criminality, waged by surprise against unarmed men, women, and children in cold blood. Terrorist attacks are sometimes the random, senseless acts of zealots; more often, they are systematic and calculated attempts to achieve political ends. Despite the horror they inflict and the widespread recognition that their acts are criminal, few terrorists are caught, and fewer still are punished to the full extent they deserve. They know we abhor the loss of innocent lives; so they live and train in the midst of their women and children. And we debate among ourselves over the appropriate targets or the foreign policy consequences of a punitive blow. Terrorism is the newest strategy of the enemies of freedom—and it's all too effective.

We are right to be reluctant to unsheath our sword. But we cannot let the ambiguities of the terrorist threat reduce us to total impotence. A policy filled with so many qualifications and conditions that they all could never be met would amount to a policy of paralysis. It would amount to an admission that, with all our weaponry and power, we are helpless to defend our citizens, our interests, and our values. This I simply do not accept.

So we must meet this challenge of low-intensity conflict and ambiguous warfare. We have no choice.

The Intellectual Challenge of Ambiguous Warfare

Our first task, it seems to me, is to come to grips with the problem intellectually.

For various reasons, at least in this century, we Americans have been uncomfortable with conflicts involving limited uses of force for limited ends. Nor have we had to confront systematic terrorism here at home, as Israel has for almost four decades. We have, sometimes, been slow in confronting dangers from abroad, waiting until a limited or ambiguous challenge has escalated into one of global dimensions. Today, we are faced with demands that we be absolutely certain of the need to act before doing so; that we act openly, swiftly, and conclusively; and that we support only those whose aims and conduct we approve in every way.

We know, today, that such simple clarity in the use of power is often elusive in the modern world. We have seen and we will continue to see a wide range of ambiguous threats in the shadow area between major war and millennial peace. Americans must understand, and I believe most Americans do understand, that a number of small challenges, year after year, can add up to a more serious challenge to our interests. The time to act, to help our friends by adding our strength to the equation, is not when the threat is at the doorstep, when the stakes are highest and the needed resources enormous. We must be prepared to commit our political, economic, and, if necessary, military power when the threat is still manageable and when its prudent use can prevent the threat from growing. We have far less margin for error today than we did even 30 years ago. We cannot afford to be complacent about events around the world in the expectation that, in the end, we will have the strength to overcome any challenge. We do not have the luxury of waiting until all the ambiguities have disappeared.

This is the essence of statesmanship—to see a danger when it is not self-evident; to educate our people to the stakes involved; then to fashion a sensible response and rally support.

Our intellectual challenge is especially to understand the need for prudent, limited, proportionate uses of our military power, whether as a means of crisis management, power projection, peacekeeping, localized military action, support for friends, or responding to terrorism—*and* to coordinate our power with our political and diplomatic objectives. Such discreet uses of power for limited purposes will always involve risks. But the risks of inaction will, in many circumstances, be greater.

Our political analysis must be clear sighted. Allies and friends may object to our action—or say they object. But this cannot be decisive. Striking against terrorism in the Middle East, for example, is bound to be controversial. But the worst thing we could do to our moderate friends in the region is to demonstrate that extremist policies succeed and that the United States is impotent to deal with such challenges. If we are to be a factor in the region—if we want countries to take risks for peace relying on our support—then we had better show that our power is an effective counterweight to extremism.

Among other things, this has to include the military supply relationships we have long had with our friends in the Arab world. This is tangible backing for their security in a dangerous period and an important factor for regional stability.

And we must show staying power. Americans are a nation of problem-solvers, and that is a mark of our greatness. Yet many of the problems we face are not susceptible to a quick fix. Few threats can be dealt with as rapidly as Grenada. Most will require perseverance and a longer term commitment. The struggle against terrorism will not be ended by a few dramatic actions. The safeguarding of fragile democracies and vulnerable allies against subversion and covert aggression, in Central America or elsewhere, will require more than brief and quickly completed uses of American power.

Our objective in these situations will always be to prevail. Sometimes, as in the case of Grenada, success will take the form of a total military victory and the removal of foreign troops. In other cases, success will consist of denying victory to the adversary so that political solutions become possible.

We must avoid no-win situations, but we must also have the stomach to confront the harder-to-win situations that call for prudent involvement, even when the results are slow in coming. Steadfastness and endurance are the keys to success; our adversaries notice when we are impatient, uncomfortable, or vacillating. Thus, we lose our leverage, and we *make* the problem more prolonged and more difficult to resolve.

The Political, Legal, and Moral Challenges

Unfortunately, in the wake of Vietnam, our endurance against any kind of challenge has been open to question.

Recent decades have left a legacy of contention between the executive and legislative branches and a web of restrictions on executve action embedded in our laws. The result has been a loss of coherence and recurring uncertainty in the minds of friend and foe about the constancy of the United States. The War Powers Resolution sets arbitrary 60-day deadlines that practically invite an adversary to wait us out, that invariably send signals that the United States, despite all our power, may be "short of breath." That description—"short of breath"—was offered by a Syrian, 2 years ago, who watched our congressional debates and concluded that we lacked staying power; this undercut the prospects for successful negotiation. The rationale of our diplomacy—that the May 17 agreement was the way to bring Israeli withdrawal—was itself undercut when Israel pulled back. This problem can recur as we seek to meet other challenges.

We must tackle this political dilemma head on. Recently, a legislator criticized us for not consulting with the Congress before our interception of the airliner carrying terrorists who had killed an American. But if we delayed acting in order to consult, the terrorists would surely have escaped. I have no doubt that the American people want to see their President acting flexibly, effectively, and decisively against the terrorist menace to defend our citizens. Surely there can be accountability without paralysis.

The fact is, we will never face a specific threat that does not involve some hard choices that are difficult for a democracy. The simple, tragic truth about many low-intensity challenges is that the "rules of the game" are often blurred, at best. Terrorists do not abide by the Geneva convention. They place a premium on the defenselessness and helplessness of their victims. The more heinous the crime, the more attention terrorists attract to their "cause."

The same is true of communist guerrillas, whose fundamental tenet is that the goal of seizing power justifies any method that comes to hand—urban terrorism or waging war on the civilian economy, as in El Salvador. They believe, as Castro once said, that history

will absolve them. In the Philippines, the communist guerrillas are men of extraordinary brutality; they have been compared to the Cambodian communists, and this is not a wild comparison.

In the wake of the recent attacks at the Rome and Vienna airports, we have heard it asserted that military action to retaliate or preempt terrorism is contrary to international law. Some have suggested that even to contemplate using force against terrorism is to lower ourselves to the barbaric level of the terrorists. I want to take this issue head on.

Unlike terrorists and communist guerrillas, we do not believe the end justifies the means. We believe in the rule of law. This nation has long been a champion of international law, the peaceful settlement of disputes, and the UN Charter as a code of conduct for the world community.

But the Charter's restrictions on the use or threat of force in international relations include a specific exception for the right of self-defense. It is absurd to argue that international law prohibits us from capturing terrorists in international waters or airspace; from attacking them on the soil of other nations, even for the purpose of rescuing hostages; or from using force against states that support, train, and harbor terrorists or guerrillas. International law requires no such result. A nation attacked by terrorists is permitted to use force to prevent or preempt future attacks, to seize terrorists, or to rescue its citizens when no other means is available. The law requires that such actions be necessary and proportionate. But this nation has consistently affirmed the right of states to use force in exercise of their right of individual or collective self-defense.

The UN Charter is not a suicide pact. The law is a weapon on our side, and it is up to us to use it to its maximum extent. Cooperation in law enforcement, international agreements against hijacking and terrorism, extraditing and prosecuting terrorists when captured—these are indispensable tools. But we can go further.

There should be no confusion about the status of nations that sponsor terrorism against Americans and American property. There is substantial legal authority for the view that a state which supports terrorist or subversive attacks against another state, or which supports or encourages terrorist planning and other activities within its own territory, is responsible for such attacks. Such conduct can amount to an ongoing armed aggression against the other state under international law. As the President said last week:

> By providing material support to terrorist groups which attack U.S. citizens, Libya has engaged in armed aggression against the United States under established principles of international law, just as if [it] had used its own armed forces.

Think about the practical and strategic implications of allowing a state to evade responsibility for the acts of its terrorist surrogates: a nation like Qadhafi's Libya would acquire immunity while carrying on the secret or ambiguous warfare which poses such a threat today to the security and well-being of free nations. And to let ourselves be deterred by Qadhafi's threats from doing what is needed to stop him will only establish in his mind, and in the minds of other fanatics, that the scheme has worked. State-supported terror will increase through our submission to it, not from our active resistance.

The future will be grim, indeed, if we permit this. The potential gravity of terrorist acts is certain to increase as terrorists obtain the means to use weapons far more destructive and harmful than guns, grenades, and bombs. In fact, state support will probably be the single most important factor in enabling terrorists to acquire such weapons, which may well include nuclear devices small enough for terrorists to assemble but devastating enough to destroy a government's leadership and a nation's morale. We must use the law to preserve civilized order, not to shield those who would wage war against it.

The armed ideologues of the world may believe that our devotion to international law will immobilize us abroad, just as they may believe our political system will immobilize us at home. As we have shown in response to Nicaragua's hypocritical suit in the World Court, we will not permit our enemies—who despise the rule of law as a "bourgeois" notion—to use *our* devotion to law and morality as a weapon against us. When the United States defends its citizens abroad or helps its friends and allies defend themselves against subversion and tyranny, we are not suspending our legal and moral principles. On the contrary, we are strengthening the basis of international stability, justice, and the rule of law.

Our morality must be a source of strength, not paralysis. We cannot walk away from every situation that poses a moral dilemma. The use of force at *any* level involves moral issues. We should use our military power only if the stakes justify it, if other means are not available, and then only in a manner appropriate to a clear objective. But we cannot opt out of every contest. We cannot wait for absolute certainty and clarity. If we do, the world's future will be determined by others—most likely by those who are the most brutal, the most unscrupulous, and the most hostile to everything we believe in.

A Strategy for Ambiguous Warfare

Thus, the United States needs an active strategy for dealing with ambiguous warfare. We must be better prepared intellectually and psychologically as a nation; we must be better prepared organizationally as a government. Many important steps have been taken. But more needs to be done.

First of all, our policy against ambiguous warfare must be *un*ambiguous. It must be clearly and unequivocally the policy of the United States to fight back—to resist challenges, to defend our interests, and to support those who put their own lives on the line in a common cause. We must be clear in our own minds that we cannot shrink from challenges.

For this, there must be public understanding and congressional support. That is why, again, I applaud you for holding this conference—not only for probing deeper into the problem but for contributing to the body of public knowledge and education.

In fact, we are much farther along as a nation in this regard than we were a few short years ago. Unfortunately, much of what we learned, we learned the hard way. Public discussion and debate about the problem must continue—not to magnify our hesitations but to crystallize a national consensus.

Second, we must make the fullest use of all the nonmilitary weapons in our arsenal. Strengthening the collaboration of governments, developing new legal tools and methods of international sanctions, working to resolve conflicts through diplomacy, taking defensive measures to reduce our vulnerability—all this we must keep doing.

Our programs of security and economic assistance to friends are essential. In this era of budgetary stringency, I want to record an urgent plea on behalf of security assistance. As the President has said, "Dollar for dollar, security assistance contributes as much to global

security as our own defense budget." In El Salvador, we see how the wise provision of sufficient economic and military assistance obviates the need to consider any direct involvement of American forces. And we must extend moral or humanitarian or other kinds of support to those resisting totalitarianism or aggression. Our ideals and our interests coincide.

We must also strengthen our intelligence capabilities—not only intelligence collection and intelligence cooperation with allies but also our means for covert action. In this regard, it is imperative that we stop leaks. There is no disagreement within this Administration that unauthorized disclosure of military or intelligence information is a crime. Since time immemorial, governments—including democratic governments—have conducted sensitive activities in secret, and the democracies only court disaster if they throw away this instrument through indiscipline.

One of the cliches one hears these days is that covert operations leak, so why try to do things covertly? First of all, I think we can keep things secret if we try harder. Second, other countries working with us often have good reasons not to want publicity, and unacknowledged programs afford them some protection, even if there are leaks in the press. It can mean the difference between success and failure for our effort. In addition, unacknowledged programs mean a less open challenge to the other side, affording more of a chance for political solutions. Covert action is not an end in itself, but it should have a place in our foreign policy.

Finally, there is the military dimension of our strategy. Just as we turned to our men and women in uniform when new conventional and nuclear threats emerged, we are turning to you now for the new weapons, new doctrines, and new tactics that this new method of warfare requires.

I have no doubt that we have the physical resources and capability to succeed. To combat terrorism we have created the Delta Forces; we have created the Special Operations Forces for a multitude of tasks; the Army is forming new light divisions; the Marines are developing new capabilities; the Air Force and Army are developing new concepts and doctrines. The courage and skill of our armed forces have been proven time and again—most recently in Grenada and in the capture of the *Achille Lauro* hijackers.

But the challenge we face continues. I am confident you will know what is required to ensure coordination and effectiveness. I do know we will need the closest coordination between our military power and our political objectives—because I, as Secretary of State, know full well that power and diplomacy must go together. We need to re-learn how to keep our military options and preparations secret. There may be an important new role for our military in the area of covert operations.

Cap [Weinberger] and I discuss these issues and these challenges frequently, and we will be working together, in full agreement on the urgency of the problem.

Prospects

So, in conclusion, I can tell you that your topic is a prime challenge we will face, at least through the remainder of this century. The future of peace and freedom may well depend on how effectively we meet it.

I have no doubt we can succeed. We have learned much in recent years—about terrorism, about Soviet-backed insurgencies, and about how to use American power prudently. Our armed forces are better equipped, both physically and psychologically.

The American people are today more confident in themselves, in their nation, and in the rightness of their principles, and this will be a source of enormous strength in the future. And we draw strength from the newly democratic nations which have joined our ranks and look to us for leadership.

With the necessary will, hard work, and a degree of wisdom, we will prevail over this challenge, as we have prevailed over so many others in our proud history.

---

The Writer and Freedom

Secretary Shultz's address before the Poets, Playwrights, Essayists, and Novelists International Conference in New York City on January 12, 1986.[1]

I was in Cartagena, Colombia, last month, for the annual meeting of the Foreign Ministers of the Organization of American States, a group not especially known for the elegance of its prose, and certainly not much of literary note was going on while I was there. Two days after I left, however, the *New York Times* correspondent reported from Cartagena that:

> . . . scantily dressed women danced the rumba, a local politician made a speech about love and death, proud relatives toasted the author's fortune with rum, and, in the steaming tropical port where it is set, Gabriel Garcia Marquez's new novel was launched.

Probably all you writers have experienced something like that kind of reception for your work. But when Stanford University published my latest book, nobody in Palo Alto even did the foxtrot.

A book that tries to explain economic policy beyond the headlines certainly is not a poem or a novel; it's not far from an essay, though. But I recognize that I'm not standing here today simply because of my achievements as an essayist. Indeed, I can only regard Norman Mailer's invitation to me as another shining example of that charitable spirit for which New York literary circles have long been famous. But it wasn't until I read the *New York Times* on Friday that I realized that I've become the latest PEN [Poets, Playwrights, Essayists, and Novelists] controversy. In Norman's world, that's a high form of flattery—and that's how I take it. And I salute you for taking this decision in favor of free speech.

In the few minutes I have here, I want to presume to make a few comments not only in my present official role but also from the standpoint of some other aspects of my experience.

Nearly every field of knowledge emulates—or ought to emulate—literary models of analysis, persuasion, and explanation. Clarity, insight, illumination—these are the qualities at the very heart of every serious intellectual endeavor. Literature is a first order, leading intellectual endeavor. If mathematics is the Queen of Sciences, literature surely is the King of the Humanities.

In my own field—economics—like literature, we think and analyze with metaphor and seek to persuade through considerations of analogy, symmetry, and the beauty of the argument. Even statistics can be figures of speech.

All this leads me to two observations: first, Ken Galbraith deserves to be a member of PEN, despite the fact that he once wrote a novel about diplomacy; and, second, that I regard the creative literary writer as an individual of primary importance for the entire range of thought, culture, and human existence.

So I am pleased and honored to be here. It has been a long while since the International Conference of PEN has been held in the United States. America is proud to have you here. Diversity, debate, contrast, argumentativeness are what we as a people thrive on. So, as individuals, each of you is truly welcome here. And PEN as your collective spirit and organization is welcome as well, for the larger and noisier PEN has become, the more it has been able to do for freedom around the world.

Freedom—that is what we are all talking about and why we are here. And the writer is at the heart of freedom. There is no more striking image of freedom than the solitary writer, the individual of imagination, creativity, and courage, imposing through language the perceptions and prescriptions that can illuminate and, perhaps, change the world. The writer needs freedom, but the writer also is the creator of freedom. No government or ideological system has ever yet succeeded in stopping the writer, although some are trying very hard.

That is why the theme of this Congress is a serious one, and I would like to say something about it.

As you recognize, there is often a built-in tension between the aims of the writer and the very concept of the state. The state aims to provide social order, and the writer aims to create an imaginative order of his own. Sometimes their relations are amicable, and the tension can be creative rather than oppressive. In an enlightened society, the writer is free to pursue his thoughts, to offer new visions.

At other times, relations between the writer and the state may be strained, even hostile. And when the state falls short, as it is bound to do, writers and intellectuals become its most articulate and forceful critics—the conscience of society. Here in America, the literary vision of the 1940s and the 1950s—both black and white—affected public attitudes and perceptions in ways indispensable to the epic political and social achievements of the civil rights movement of the 1960s.

But the conflict between the writer and the state can assume vastly different forms. One of the first responsibilities of intellectuals everywhere is to think clearly, to make distinctions. That responsibility is especially serious when it comes to thinking about politics. It seems to me that if the history of the 20th century teaches anything, it is the intellectual and moral hazards of personifying "the state," of divorcing "the state" from its historical and social particulars. That abstraction is morally hazardous because it ignores the fact that states everywhere are governed by individuals who are responsible for their actions. And it is intellectually hazardous because it glances over a number of distinctions between states—distinctions that are crucial to any meaningful reflections about politics and art.

There are countries in which writers know that if their art appears to threaten the political fortunes of their rulers, they may be silenced, imprisoned, even killed. Equally tragic, there are countries in which writers choose to aid the apparatus of repression.

By contrast, there are other countries—and I'm proud to say that the United States is one of them—where writers can speak, write, and publish without political hindrance. Their freedom to criticize the state is the true measure of their independence. To me, the vindication of free societies is the outspokenness, even the obstreperousness, and the self-evident vitality of the artists and intellectuals of the free nations—indeed, in the presence of many of you here and in the very existence of this organization.

So there is a difference. It would be ironic if intellectual freedom were appreciated only in countries where it didn't exist, and taken for granted, or even deprecated, in the countries where it thrives. Freedom is what we are here to talk about, freedom of thought, of expression, freedom from official censorship or private intimidation.

To those who speculate that creativity forged in the crucible of totalitarianism is greater than that in politically free but culturally commercialized societies, I say the answer always is individual freedom. And serious people know the difference between freedom and its absence. To declare one's alienation without distinction is to abdicate judgment, analysis, differentiation, wisdom. It is to risk marginality and estrangement from the roots of traditional and community life that nourish the creative imagination. It can be a recipe for irrelevance.

Freedom is real, and it works. In fact, one of the most powerful trends in the world favors freedom. In recent speeches, and in Moscow and Geneva, I have spoken on the reality that the industrial age is coming to an end. In some places, it is over. The economy of the future will be based more and more on information technologies. And the creative flow of information requires freedom—freedom of thought and communication. Ideology has nothing to do with this; it is just a fact of life.

The societies that will succeed in these years to come will be those that let ideas, people, and capital resources move freely, that encourage entrepreneurship and experiment. Regimes that try to stifle the new information technologies may find themselves falling behind economically, and if they permit them, they risk losing their monopoly control over information and ideas. They probably won't have a choice. It is impossible to stop technological change by political fiat.

It is the democratic societies that have grasped the plain fact that the source of economic vitality is individual creativity and not the state. Countries where the flow of information is intrinsic to the political system and its principles will have the advantage.

Democratic societies understand that cultural vitality springs from individual creativity and not from the state. But information is one thing; knowledge is another. Data and wisdom are not the same.

Emerson said that the scholar is our society's "delegated intellect. In the right state he is man thinking," said Emerson. To me, intellect joined with imagination and creativity is achieved in the situation of "man writing." This means books: novels, poetry, plays, criticism, essays.

In the computer age, reading and writing will not become obsolete, as many have so facilely asserted. In this era of other arts—film, dance, painting, music—there is no escaping the reality that our culture is built upon, and relies upon, the written word. As Jorge Luis Borges has said, "Books will never disappear. It is impossible for it to happen. Of all mankind's diverse tools, undoubtedly the most astonishing are his books. If books were to disappear history would disappear. So would men," he said.

Indeed, the awesome power of the writer resides in the fact that it takes only paper and pencil to do it. No apparatus, consensus, or license is required. Traditional Chinese tales tell of the village papercatcher, the one designated to go about gathering up any stray scrap of paper with writing on it that might be blown along the alleys by the wind—not for the purpose of cleaning up litter, but because writing was precious, and one single piece of paper might be found to contain an enlightening thought which, however fleeting, must not be lost.

That is why, to me, the horror at the core of George Orwell's *1984* is the suggestion that a tyranny might someday arise that could deprive the individual even of the simplest tools of pen and paper. And that is why I am proud to represent an Administration that more than any in this century is committed in philosophy and in fact to reducing the intrusion of government into the lives, minds, and livelihood of the individual.

And I would like to say, in that connection, particularly since the McCarran-Walter Act and its administration have been raised so forcefully at the beginning of this session, to make a comment about that, a considered comment.

The United States is the most open society in the world. Of course, we are not perfect, and I know that some of your members have been particularly aggravated by problems some writers have had in obtaining visas as a result of the McCarran-Walter Act of 1952.

This Administration is committed, and I am personally committed, to protecting free expression of all political ideas. We agree with PEN's charter when it states that: "Literature, national though it be in origin, knows no frontiers." In fact, we would apply this principle to all forms of expression. America's dedication to the principle is unsurpassed in the world today.

I've taken very seriously my Department's role in reviewing proposed visa denials that could affect free expression. It has never been the approved policy of the United States to deny visas merely because the applicant wants to say that he disapproves of the United States or one of its policies.

I realize that errors may be made from time to time, particularly in the acts of administration. But we have learned over the years how to build protections into the decisionmaking process to ensure that the value of free expression is given due weight. The fact is that in the course of this Administration a significant change in policy has occurred. When a writer or artist seeks a visa for the purpose of speaking or lecturing or performing in the United States, the administration of the Act now involves the strong presumption against denying access for foreign policy reasons. No denial is ever based on a person's abstract beliefs.

I want to make it clear, however, that we will deny personal access to people who aim to undermine our system through their actions, who are likely to engage in proscribed intelligence activities, or who raise funds or otherwise assist our enemies. We are careful in reaching such a conclusion about any writer or other artist, irrespective of his or her relative fame. But occasionally we do so conclude. While those judgments are made by human beings and are, therefore, fallible, they are made in good faith and consistent with established policies concerning our national interests; but we will never deny physical access to anyone merely because of the beliefs he or she intends to espouse.

I think this Administration's policies and protective procedures are now working well. And this gathering is only one of many recent testaments to our commitment to maintain the free marketplace of ideas.

I also agree with your Congress' catalogue when it says that:

> The minimum contract between the state and the citizen is for the maintenance of order: To provide for the common defense and diplomacy, to administer justice, to look to the equality of opportunity and the distribution of income, and to manage a sound currency.

That's about it, in my view. Governments around the world should be criticized in direct proportion to the extent to which they go beyond those functions. So I put it to you that we have more in common than you think.

Let us remember today those writers who exist in states where the typewriter or mimeograph are regarded as dangerous weapons, where writers have no independent right to publish, and where a free press has no free access. Let us work to support the solitary writer in a suppressive society. Let us take heart that many governments and their censors have found that it is not so easy to stop all the writers, every last solitary individual with a pen and paper or typewriter and friends who will smuggle out what he or she writes.

The writer will be the last to be stifled. The writer will always be with us, testing the limits and expanding the horizons of his society.

I am optimistic about the future. As the world gets smaller, the importance of freedom only increases. The yearning for freedom is the most powerful political force all across the planet. You are among its champions. You can be proud of what you have done for that cause.

And don't be so surprised by the fact that Ronald Reagan and I are on your side.

[1]Press release 6 of Jan. 14, 1986. ■

Secretary's Interview on "Face the Nation"

Secretary Shultz was interviewed on CBS-TV's "Face the Nation" on January 12, 1986, by Lesley Stahl, CBS News.[1]

Q. There are reports now that investigators in Europe believe that the terrorists who perpetrated the bombings in Rome and Vienna did not come from training camps in Libya, but came from camps in the Syrian-controlled Bekaa Valley, and then came through Syria into Europe. Are there second thoughts within our government about just exactly how much Libya is to blame for this latest terrorist act?

A. No. Libya is clearly supporting terrorism in general. Libya has provided financial support—we know that—to the terrorists groups, particularly the "Abu Nidal group," which is the group that perpetrated this last catastrophe. The passports being carried by some of those who were engaged were passports that the Libyans confiscated from some Tunisians, so they had to come from Libya. Now, that doesn't mean that everything that was done was connected with Libya, but surely there is a very definite Libyan connection with this—and a whole pattern—of terrorist activity. That's why we're concentrating on Libya.

Q. Now, what about Syrian involvement? Just how much is that government responsible?

A. Syria's picture is a rather different one. I would remind you that Syria has long been on our terrorist list, but Syria's behavior toward all of these things is rather different from Libya's.

Q. In what sense? How is it different?

A. In their public attitudes, and beyond that we are working with Syria on a number of fronts in a constructive way.

Q. There are people who find it peculiar, though, that if there is some evidence linking Syria, why isn't our government willing to speak out? Are we afraid for the lives of our hostages in Lebanon? Is that part of this?

A. We have spoken out, and as I said, Syria is on the terrorist list of the few countries that we feel are doing more to support terrorism than they should.

Q. Mr. Oakley, who is the head of the terrorism task force within the State Department—

A. Yes, and doing an outstanding job.

Q. —has said that it is possible that you could impose the same kind of sanctions against Syria as you did against Libya. Is that a serious possibility in this situation?

A. There is no plan or thought about that. Of course anything is possible, but it depends not on us. It depends on what other countries do, and we believe it's—I hope that Syria will not do things that will make that necessary, and I—my guess is they won't.

Q. Have you ruled out the—any link in this case, in this specific case? I mean, what about the fact that they may have in this latest incident?

A. Been in the Bekaa Valley and gone through Damascus, and to what extent, of course, the—that involved the Syrian authorities, we're not able to say.

Q. You're not able to say. Which raises a question about our whole intelligence capability in all of these acts of terrorism. There is deep concern that we have not been able to pinpoint exactly who these groups are, where they are, where Mr. Abu Nidal is at any one moment. What is our government doing to improve our intelligence capability in the Middle East?

A. Of course it's true we don't know everything, but we know a lot, and we know more than we used to, and our capability has been improving, not only our capability but the capability of others around the world, and our ability to interact with them in a determined and constructive way. The President mentioned at his news conference last Tuesday that there'd been in the last 14 months, 126 terrorist acts that didn't happen. Why? Because of our intelligence and the intelligence of others and our collaborative patterns. So I agree with you that we need to do more, a lot more, but at the same time we shouldn't get that helpless feeling that we don't know anything that's going on and we can't do anything about it. We can, and we have, and we need to do a lot more.

Q. But you never—you threaten to strike back constantly, which, because you do so much and never do strike back, are beginning to leave an impression of empty threats, crying wolf, and this apparently is for a lack of good intelligence, to be able to pinpoint exactly where the terrorists are; isn't that true?

A. This is an attack in the Vienna and Rome airports that happened, so it wasn't possible to interdict it and stop it, but I told you of 126 times when it didn't happen, more or less.

Q. No, I'm talking about retaliation.

A. So there is progress.

Q. What about retaliation, though? If you can't pinpoint where these people are being trained, where they come from, where they go back to, where the people who mastermind it are, isn't that evidence of poor intelligence work?

A. We want to know more, obviously, and my opinion is that we need to raise the cost to those who perpetrate terrorist acts by making them pay a price, not just an economic price, so they'll have to think more carefully about it. We also, obviously, have to think about other consequences to others who may be innocent victims in case of any military action.

Q. When President Reagan spoke to European journalists earlier this week, he left an impression that the reason the Americans were withdrawn from Libya is that he—was because you want to clear the decks for a military strike. Is he trying to leave that impression, that either a military strike is coming or that the very next incident will definitely provoke a strong military response from this government?

A. We have—the President has said, and he has instructed me and others, that we will have nothing whatever to say about what we may or may not have in mind.

Q. But he left that impression.

A. I will have nothing to say.

Q. You are sending the number two man at the State Department, Mr. Whitehead, to Europe to urge our allies to join us in our economic sanctions. My question is—they've already said no. They've publicly said no. They've rejected us. Why are we going back in again to face almost certain rejection all over again and leave an impression in the world that we are almost totally isolated in this situation?

A. I think the picture that you just painted is not right. I believe that people are more and more conscious of the terrorist threat, not only in this country but in Europe and elsewhere in the world. There is really no argument about Libya and Qadhafi's involvement in it. Nobody's arguing that they're not involved. They may argue particulars in a—in this case as you did, but you didn't even argue that Qadhafi and Libya, are they involved in terrorism.

Q. I didn't argue at all, sir.

A. Everybody knows that. So that has become more and more apparent to people, and I think that we have taken the position that the right thing to do is to disengage from them entirely, and we are doing it, and we are pointing out to others what is going on and the consequences. They can see. After all, these acts take place much more in Europe than they do here.

So, we will go around and we will highlight this to people, and people have been responding. I think the Canadian response was an interesting one. The Italian decision to stop selling arms is an interesting one. So I don't think it's a snap-of-the-fingers-type thing; it's a consciousness raising and long-term effort that we're involved in.

Q. There are those who believe that this whole spate of terrorist acts going on right now are designed to subvert the peace process in the Middle East, and that the aim in fact is to get us, the United States, involved in a military action in the Middle East that will then destroy the peace process, and that's what the goal is, and that it would be wise for us never to take military action because then we would be playing into the hands of the

terrorists in the end anyway. What's your response?

A. I think you're absolutely right, or those you're quoting are right, that the people who are perpetrating the terrorism are opposed to peace. Peace means that the countries in the Middle East need to sit down with Israel and make peace, and it's very interesting that—what happens when a Sadat comes forward? What happens when King Hussein does the very constructive and bold things that he's done? Immediately the people who say they are worried about the Palestinian cause try to murder those people or terrorize the Jordanian Airlines and things of that kind. So they are not for peace. They are not really for the Palestinian cause. The Palestinians need a better break. They have gotten a raw deal, and they need a peace process, and you're not going to get it through this violence.

Q. But my question to you was really about the retaliation in a military fashion by the United States, which we've been told time and again you favored, and that you were the major supporter of going in and fighting back in this particular case, and my question is, wouldn't we then really be playing into the hands of these people who want to subvert the peace process?

A. I think when you put down somebody like Qadhafi and the Libyan support for terrorism, you are raising, not lowering, the chances for peace.

Q. Even though it's what they appear to want, they want us—

A. What they want is to destroy chances for peace. They are not for peace. They are not for a peace process in the Middle East. They're against it, and it's an irony that they put themselves forward as advocating the Palestinian cause, because what they're doing is directly opposed to anything constructive for that cause.

Q. What is the Soviet role in all of this, in your opinion? Where do they stand? Who are they supporting? What do they want?

A. The Soviets—you'll have to ask them their question of what—what do they want.

Q. Can't you give us your analysis? You're our Secretary of State.

A. They are supporting Syria. They are sending weapons to Libya. They have made many statements in connection with this latest series of events that I regard as very unhelpful. They have tried to portray us as parlaying this into a major confrontation when we—

Q. Have you been in touch with them?

A. —have to recognize that the immediate cause of all this is not something we did, but terrorism in the Vienna and Rome airports. We've got to keep our eye on what really this is about.

Q. Has the President been in touch with Mr. Gorbachev over this and what—

A. The Soviets know full well our point of view.

Q. But what has their response been? Do you feel that they're making the situation worse at this point or not?

A. You can read their response in the papers.

Q. Mr. Treiki, the Foreign Minister, says that Arab countries are going to start taking money out of American banks because of the freezing of the Libyan assets. Is there any evidence of that? Have we been in touch with these Arab countries to discourage it? What is that situation?

A. There is no evidence of that, and any step to affect in any way assets of a country here is taken with great, great, deep reluctance. Now, notice what was done was to freeze these assets, not to confiscate them, freeze them. While they're frozen they accumulate interest [if] that image is possible, and they are there as a kind of insurance policy against what may be done with American assets in Libya.

Q. Are we supporting the opposition groups to Mr. Qadhafi? Are we giving them money and any other kind of support?

A. I don't make any comments on things like that at all, except to say that, obviously, we think the Qadhafi regime is doing very bad things from everybody's point of view, from ours, from the Europeans', from the other Arabs' point of view, from the standpoint of the Palestinians, and he ought to stop or get out of the way.

Q. Would you be encouraging, would you like to encourage some group to go in and overthrow his regime? Are we?

A. This is not a subject that I'm commenting on at all, but I'm just saying what I think of his regime.

Q. It's been reported, as you well know, that we are.

A. I don't comment on everything that's reported.

Q. We have run out of time, but I must ask you a final question. The former national security adviser Zbigniew Brzezinski believes that you're running for President. Are you running for President? Would you like to be President of the United States?

A. I am not running for President.

Q. Would you like to be President of the United States?

A. I have been very close to several Presidents and I know what a tough job they have. They're welcome to it. I have enough to do right now myself.

Q. There's another report that you would like to be President of the World Bank. Are you planning—

A. That's also wrong.

Q. —to leave your job at the State Department any time soon?

A. No. I have no such plan.

[1]Press release 5 of January 13, 1986. ■

News Conference of January 9

Secretary Shultz held a news conference at the Department of State on January 9, 1986.[1]

Q. Given the Europeans' spotty record and your own forceful assertions about the evils of terrorism, how come the United States hasn't used force now to deal with what has been going on?

A. The President has taken the steps for the moment that he feels are appropriate.

We have done a wide variety of things about terrorism over a considerable period of time, and the steps taken yesterday and the day before are the latest in a long series. Unfortunately, it's likely to continue because terrorism is a problem that is very much with us. The United States is very firmly opposed to it, and we will take the actions necessary to bring it to an end.

Q. Do you think terrorists, who apparently speak a different language from civilized man, are in fear of U.S. force considering that in several instances now, what the United States has done, essentially, is to take economic reprisals?

A. We have used military force on one occasion. We have directly ourselves, or in one way or another indirectly, taken part in quite a large number of instances where potential terrorist acts have been stopped.

We are prepared to use the measures that will be effective and are necessary. Force is not always the best means, but it may be necessary on occasion.

Q. I'm curious to know where your recent enthusiasm for economic sanctions springs from. Do you think the Nicaraguan sanctions have been effective in changing their behavior? It was you, I recall, who used to be opposed to economic sanctions as a rule, a course of policy for the United States.

A. I think that the actions taken with respect to Nicaragua and with respect to Libya are by way of saying that the United States feels that in these two countries, for different reasons in some respects but parallel reasons in others, they represent countries that we don't want to have anything to do with.

We think they are involved in actions that are antithetical to civilized norms in the world generally and in their neighborhood. And so what we're doing is withdrawing the benefits of United States contact with them and making a statement to everybody about how we feel about those countries.

Now, as far as the effectiveness of the economic sanctions by themselves are concerned, undoubtedly they have some effect. But no one contends that these actions by themselves are likely to have a decisive effect.

Insofar as Libya is concerned, I think you have had distributed to you the rather lengthy pattern of gradually escalating economic sanctions against Libya, and I think by this time we're pretty much at the end of the road. All of the things that one can think of, economically, have pretty much been done now.

We have taken these actions carefully so that they represent a statement of the United States view. We haven't either in the case of Nicaragua or Libya put them forward in a manner in which we try to force on others our view. But we do believe, in the case of Libya—and Nicaragua, for that matter—that other countries should take a good look—a good hard look—at the behavior of these countries and ask themselves, don't they want to act the same way we are?

I agree with you that we haven't had a lot of success in persuading people to that view. But just because others are not prepared to do the right thing is not any reason why the United States shouldn't do the right thing. We should do the right thing here. And as we do, and as the force of this gradually accumulates, I believe that others will gradually come around to our viewpoint.

Q. Why the narrow focus on Libya when our own intelligence community has singled out Iran, for example, as a country that trains terrorists, a country that has taken American lives over the past several years in places like Lebanon? Why the lashing out on this one subject and not tackling the others?

A. Libya is a country that has been, is, and no doubt will continue to be involved in terrorist activities. They give safe haven. They give financial support. They have arms and explosives stored in their embassies; they pass them out. They are involved in terrorist activities, and we are making a statement to that effect.

Insofar as Iran is concerned, we are as concerned anywhere about terrorist activities. We are talking about Libya in this instance. We have very little trade with Iran. There is no blanket sanction, as in the case of Libya, as a result of the Algiers accord in which we were obligated to withdraw all those sanctions, as you remember; and there is a court proceeding going on in The Hague having to do with that.

Q. How do you account for the fact that the countries most affected seem to be the countries least capable of going along with some of these sanctions and perhaps the most willing to step in where American businesses will step out, such as the European allies?

A. The Europeans have the largest relationship with Libya.

Your question seems a little—I can't sort of follow the logic of it altogether. But the Europeans have substantial relationships with the Libyans—they have assets there; they have people there; they have substantial economic and trade flows—which means that if they were to adopt the point of view that we do, then the opportunity to be effective with respect to Qadhafi and cut off the resources that he uses to support terrorism would be much improved. So we will keep trying to persuade them that that would be a good idea.

To date, we haven't made much headway, although I think that there will be a reluctance to move in to the roles that the United States is leaving.

I might say that we plan to send Deputy Secretary John Whitehead on a trip through some European capitals next week, and he will be there on a mission of explaining our point of view and trying to be as persuasive as he can. And he's a pretty persuasive guy.

Q. On what basis do you believe that this reluctance, as you described it, which includes Chancellor Kohl of West Germany saying a flat no, will change?

A. What people have to observe is that here is Qadhafi; he is harboring terrorists; he is providing them financial support; he is providing them a certain kind of infrastructure. So he is involved. He is a terrorist.

You have to keep asking yourself, when you see pictures of the mayhem in the Rome airport or the Vienna airport, if you want to deal with somebody who

is involved in that. The President has come to the conclusion that the answer to that is no. And if it costs us a little bit initially, so be it, but we don't want to deal with him.

I think the Europeans are going to have to look at that question very hard in their own interests. Europe is experiencing, unfortunately, quite a rash of terrorist acts, not all associated with Qadhafi, but he's undoubtedly behind a fair share. So how do you come to grips with this?

Obviously, you come to grips by law enforcement methods of various kinds which people are using increasingly effectively. But you also must come to grips by a more active kind of defense. You have to identify where this is coming from.

As [Italian] Prime Minister Craxi said, and the President quoted him, you have to identify the states that are willing to harbor these people, and I think the implication—and peoples' thinking is moving. It's not static; it's dynamic. You have to say to yourself, well, if you identify the state, then what? I think that there is going to be an increasing feeling that there's got to be an answer to that.

Q. It seems somewhat ironic to have quoted Craxi, who continues to say that he's not convinced that there is enough of a link between the attacks in Rome and Vienna and Qadhafi, and the Europeans are using this—are saying this.

Are you convinced there is a big enough link, and how will you convince them more about it?

A. I'm convinced—no doubt whatever of Qadhafi's involvement in terrorist activity. And I must say from all of the reports that I've had from our European friends and the information that flows in, nobody is really quarreling with that. That's acknowledged.

Now, you can ask yourself, precisely what did he have to do with precisely some incident. And as it happens, in the case of these airport massacres, there is a precise connection in the form of these passports.

The reason I quote Prime Minister Craxi is that the Italians have been very good in getting after terrorism. They have a strong program, and I admire it. I think it's interesting that Prime Minister Craxi said, "We have to identify the states," and once you take that step, well, then you have to identify the states. After you've identified them, it's bound to lead you to some conclusions.

Q. About 1 week ago the spokesmen here and at the White House said that several options were under consideration, including the military one, in response to the terrorist attacks.

Could you at least give us some feeling on why a military response was not decided upon within the Administration? Was it because of the number of Americans there, a fear of losing planes, or what?

A. We're not making any comments whatever on military options or other things of that nature.

Q. Qadhafi said today, he said he pledged to help fight terrorism. What's your reaction to that? Is that what you're looking for from him?

A. We're looking for people to stop associating themselves with terrorism. This rhetoric doesn't get us anywhere. He has done a broad array of things that have been identified in the white paper that you have, over a long period of time, and the nice thing would be to see an end to any more entries on that list. So it's behavior that we're looking for.

Q. If I could ask you a question about the larger impact of this on the peace process in the Middle East. Mohammed Abbas is quoted in the *Irish Times* today as saying, "The American economic sanctions against Libya mean the United States has declared war against the Palestinian people."

Are you concerned at all about efforts by Mr. Abbas and others to exploit this and about the deterrent effect that incidents of this kind will have or may have on King Hussein and others in terms of reducing their willingness, their eagerness, their courage in moving forward in the peace process?

A. The United States, over a long period of time, has been doing and trying to do as much as we possibly can for the Palestinian people. The Palestinian people are a deprived people. They are a very capable people.

I happen to know many of them. I used to, in my private life, have working relationships with them. I admire them, and they deserve a better fate than they have.

We have tried in various ways to help move toward that end. We have said that there are legitimate rights of the Palestinian people. We have been trying to put forward, with some success gradually, a quality-of-life program addressed to the needs of the Palestinian people.

I think that one of the major arguments for the peace process—there are others—but one of the major arguments is that it will help to bring stability and some meaning to the lives of the Palestinian people, so we are very concerned about the Palestinian people.

Now, you have to ask yourself, why is it that when King Hussein starts the kind of constructive efforts that he has been making over the past year—and his efforts have been very bold and constructive—that immediately these people who profess to be for the Palestinians start taking shots at Jordanian airlines and assassinating a Jordanian diplomat? What is the message?

The message is that they don't want to see a peace process. So those who are in favor of a legitimate peace process in the Middle East which will try to bring about the servicing of the legitimate rights of the Palestinian people should be against this kind of terrorism.

The violence and terrorism in the Middle East has not achieved anything for the Palestinian people. The only thing that can really get anywhere is a negotiated solution. The states involved have to be ready to sit down with Israel and negotiate out their differences; and that's what we're for, that's what we have been struggling for decades, and that's what we would dearly love to see happen.

Q. You have said that we're pretty much at the end of the road on economic leverage that we could bring to bear against the Qadhafi regime.

A. Directly by us.

Q. By us. You've also said—

A. We've tried to persuade others to weigh in.

Q. Excuse me, sir. You've also said that it's expected that he will continue supporting terrorism.

A. I hope he doesn't.

Q. It leaves—

A. I hope he doesn't. I hope what he says he delivers on, but I'm just giving you a guess.

Q. Since the chances, the prospects, of persuading important numbers of European traders to go along with us are not rated high by anybody, even in this Administration, it leaves us with the impression—the implication that next time you're looking at very harsh options. Is that

the impression you wish to leave us with?

A. I'm not leaving any—I'm not making any comment.

Q. What will our attitude be toward Americans who do not leave Libya? Will they be regarded as potential hostages that inhibit future military actions, or if they don't leave, will we take the position that they have in effect given up their sort of rights of protection as Americans?

A. Americans are our concern under any circumstances. However, this Executive order, legally issued under the emergency act, makes it a violation of U.S. law to engage in transactions, including the kind of transactions that you have to engage in just to conduct your life anywhere. So American citizens who stay there will violate our law.

Now, there undoubtedly are cases of people who are married to Libyans or who are Libyans who've gone—Americans who've gone back there, or things of that kind, who are very special cases, and the Treasury has the ability in the regulations to gear itself to those humanitarian cases, if necessary. But we think that the Americans ought to leave, and the President said that very directly, and they violate the law when they stay.

Q. Will we ever reduce the American presence to the point where our military retaliation will not be prohibited? Do you foresee that?

A. I'm not going to comment on military matters at all, and I'll just leave it there.

Q. I'd like to ask you in another area, please, have you and Mr. Shevardnadze agreed yet on a date for the followup meeting for you to have to begin the process for the next summit, and can you tell us something about the progress that's been made toward setting a date for the summit?

A. We've had quite a lot of discussion of these matters and others with the Soviets—a rather active dialogue. I had a meeting yesterday with Ambassador Dobrynin. There haven't been any dates set. We've discussed various possible times for a meeting of the President and the General Secretary, and nobody has said firmly, "No, this," "It's got to be this," or anything of that kind. We're exploring it, and we'll work it out.

In terms of Mr. Shevardnadze, we also have not set a date, but that's not as though it's a major issue. He's been doing some traveling. He'll be in Japan next week seeing Mr. Abe, who's here, and they have their Central Committee meeting toward the end of February, which apparently is consuming a lot of their time. But this is moving along very well, and the various meetings on different arms control issues, on bilateral matters, on regional issues, are gradually falling into place, and I think the followon is going along pretty well.

Q. Would you not expect to see Mr. Shevardnadze, then, until after the Party Congress?

A. I would expect that would be right. Yes.

Q. Did you discuss the Libyan situation with Ambassador Dobrynin, and what were his throughts on that?

A. I have on a number of occasions made it clear to representatives of the Soviet Union what our point of view is, why we are so upset about Qadhafi, and given them full information on his activities.

Q. Did you get any support from Ambassador Dobrynin on it or any sympathy?

A. I'm not going to discuss—you'll have to ask him about his reactions, and we read about what the Soviet Union is saying. And to say that in some manner we are trying to heat up the situation is most ironic. It is the massacres in Vienna and Rome that have heated up the situation, and Qadhafi's support for them.

Q. Are you considering any sanctions against any country who supports Abu Nidal, like Syria? And, secondly, what happens now to—

A. Any country that supports what?

Q. Abu Nidal, and especially Syria, you know, has offices and camps for Abu Nidal. Secondly, what happened to the peace momentum after the rapprochement between Syria and Jordan?

A. There are lots of things going on. Some positive, some not so positive. We're working with that situation. Of course, we would always welcome a constructive Syrian role in the peace process, and the U.S. position has always been that Resolutions 242 and 338 cover all the territories. And I have heard Israelis say on many occasions they're prepared to engage in a bilateral discussion with Syria. But I'm not saying that anything I've heard about Syrian comments amount to a suggestion that that might happen.

But, at any rate, it's a little hard to read just what all this means for the peace process, and we're trying to puzzle it through and trying to keep it on the track for the very reasons that I was talking about earlier. It's stability and peace in the Middle East, it's the interests of the Palestinian people, let alone the security of the Israelis, that we work for here.

As far as Abu Nidal is concerned, he's a rather elusive figure, as we know, and moves around, and we do have Syria on the terrorist list, in part for that reason.

Q. Concerning Abu Nidal, the question—what about the remarks that were made in *The Washington Post* that General Sharon of Israel has two of his men in the Abu Nidal organization, and that General Sharon might have had a role in ordering the terrorist attacks in Vienna and Rome in order to cut—as part of an effort to cut a deal with the Soviets and take the Pollard affair off the front pages?

A. You'll have to ask *The Washington Post.* I don't know about that story. [Laughter]

Q. Assistant Secretary Crocker has been in southern Africa talking to the Angolans, and he's shortly to go to South Africa. It's generally perceived to be the last chance for some movement on some negotiated withdrawal of the Cubans on some timetable or other before the United States starts effective public support to some of the factions in Angola. Can you bring us up to date whether any progress has been made toward a negotiated movement in Angola, and do you feel that it's sort of the end of the line for that trend of policy?

A. I don't know where this "last chance" lingo came from, although I have heard it and seen it used. There's never, so to speak, a "last chance" in something like this. It's clear that in the end if we're going to have peace and stability in southern Africa, it's got to come about through negotiations among key people involved. Whether you're talking about negotiations among racial groups in South Africa, whether you're talking about negotiations between South Africa and Mozambique or Angola or Botswana or whatever, that is the way in which these things are going to be resolved.

Now, there has been more interest in some of the proposals we've put forward recently, and Chet Crocker has been exploring them, and I don't expect

any sort of major breakthrough. On the other hand, I think there have been some interesting developments, but not of a breakthrough sort. But we will continue working at it and trying to bring about the kind of negotiation that will get the foreign forces out of Angola and Namibia made independent in accordance with the U.N. resolution—what is it?

Q. 435.

A. U.N. Resolution 435, I think it is. [Laughter] Showing off.

Q. On that same subject, though, there are those who say provision of U.S. aid to UNITA would scrap any chance the United States has of being an honest broker and whether we continued to try for negotiation. It would make it almost impossible. In fact the President of Angola said today he doesn't understand if the suggestion of aid is pressure on Angola or a declaration of war. Where does that leave us, if that's our next step?

A. I think that negotiations—I now speak as a generalization—take place in an interplay with cards that you hold, with power, with the ability to have some command in a situation. And the necessity that the Angolans feel to pay some attention to Savimbi is a result of the fact that he has some power; and in our judgment is standing up to the Soviet/Cuban-sponsored and supported regime, we think that we're on Savimbi's side on that.

Now at the same time we're quite prepared to see some sort of negotiated outcome, and I don't really see any contradiction.

Q. Wouldn't a similar boycott imposed on Libya by the European allies push the Libyans to become more of a Soviet base in northern Africa?

A. They get a pretty fair flow of supplies from the Soviet Union now and provide hard currency in doing so. That conceivably might happen, but I think that if there were a real European movement, it would have a major impact, and a dramatic impact. But I'm not saying that that's about to happen. I certainly would like to see it happen.

Q. When you were in Bucharest, you made an arrangement with the Romanians to follow up on certain areas of specific human rights in Romania.

A. Yes. That's right.

Q. Has there been any progress on this issue at all since then?

A. This is something we set up with the Ambassador there, and I don't have anything right in my mind that I can report to you on it.

Q. Has the Marcos Administration in the Philippines made arrangements to guarantee free and fair elections? And, if not, what is the next thing the United States can do about that?

A. We have been very much supporting the idea that elections must be free and fair and trying to grow that culture, so to speak, around the world, including in the Philippines. And insofar as measures to ensure it are concerned, I think there has been an observer group identified which will help to monitor that, and there's a great deal of interest in the United States in providing observation on that election, including by members of our Congress. I hope that that will turn out to be possible.

Q. Are American companies and banks going along with the new Libyan restraints?

A. Yes.

Q. Nobody trying to sneak by or get under the wire?

A. I don't think so. Well, who knows, if somebody's trying—I don't know what "getting under the wire" means. There's a February 1 time designed to give people a chance to disentangle themselves, and so presumably they're doing that. That will no doubt involve a certain amount of transactions, and I don't regard that as trying to slip under any kind of a wire.

Q. Will you authorize a reward for Abu Nidal's capture?

A. This is a question we're considering. No decision has been made on that, but I might say in this connection that there's a very interesting buildup of legislation, of, you might say, the emergence more and more of a web of law, a rule of law, approach to terrorism, which I welcome.

One of the elements in it is authorization by the Congress to offer rewards for information leading to the arrest and so on. There are others. We have things we should do ourselves. We have an extradition treaty, for example, in which, with respect to Great Britain and we think with respect to other democratic countries, we should remove the so-called "political exception" from our willingness to extradite people so that people accused of murder in Great Britain will not be excused on so-called "political grounds," and so on.

And I think there is developing more and more consciousness of how we can use the rule of law as well as the many other measures that we're taking—intelligence measures, defensive measures, and so on—in this fight against terrorism. It is an all-out fight, and it has to be waged on all fronts, including the legal front.

Soviet Arms Proposal

PRESIDENT'S STATEMENT, JAN. 15, 1986[1]

In 1983 at the Japanese Diet, I called for the total abolition of nuclear weapons. Since that time, the United States has put forward a series of proposals to achieve this goal through radical reductions in strategic weapons. As early as 1981, I set forth a specific proposal for the elimination of all long-range intermediate nuclear missiles. At the Geneva arms control talks in November, we made yet another proposal designed to bring us closer to the goal of zero nuclear weapons. Now the Soviet Union has responded with a proposal which builds on some of the elements we had previously set forth.

I welcome the Soviets' latest response and hope that it represents a helpful further step in the process. We, together with our allies, will give careful study to General Secretary Gorbachev's suggestions. Many elements contained in the response are unchanged from previous Soviet positions and continue to cause us serious concern. There are others that at first glance may be constructive.

The American delegation in Geneva has instructions to implement the agreement reached at the Geneva summit to seek early progress in achieving radical reductions in offensive nuclear weapons, including an interim agreement on intermediate-range nuclear forces. If the position outlined by General Secretary Gorbachev advances this objective, it would prove to be a constructive step.

WHITE HOUSE STATEMENT, JAN. 16, 1986[1]

The Soviet response is another step in what we hope will be an increasingly positive process of give-and-take. We will, together with our allies, give it careful study, keeping in mind our basic objectives. Many elements of the Soviet proposal appear unchanged and cause us concern. Others, at first glance, appear constructive. We also have proposals on the table that we hope the Soviets will respond to. We look forward to exploring both sides' proposals at the negotiating table in Geneva.

We welcome the Soviet Union's response and its support for the goal of the elimination of nuclear weapons, a goal toward which we have long been committed. We hope the details of the Soviet proposal will prove to represent a helpful step in the arms reduction process and the implementation of the joint statement's call for early progress.

At first glance many elements in the new Soviet proposal appear unchanged from their previous proposals and cause us concern, for example, the continued linkage of reductions to a ban on "space-strike arms." We believe strategic defenses can make a significant contribution to stability in a world free from nuclear weapons.

In other areas there may be some constructive steps, for example, the Soviet statement addressed verification measures, including on-site inspection. This offer, of course, needs to be translated into specifics for it to be properly evaluated.

Other parts of the Soviet offer also require more concrete detail, and we hope Soviet negotiators will explain their proposals promptly and fully in the proper negotiating forums.

We wish to emphasize that Geneva is the proper place for detailed explorations of both U.S. and Soviet proposals on nuclear and space arms. The Soviets mentioned ideas regarding progress in other arms control fields, such as MBFR [mutual and balanced force reductions], chemical weapons, and CDE [Conference on Confidence- and Security-Building Measures and Disarmament in Europe]. We hope they will explain their ideas fully in those negotiations as well.

The United States tabled new proposals in the nuclear and space talks (NST) at the end of the last round, and we expect a further Soviet response to those proposals.

Our goal remains equitable, verifiable, and stabilizing agreements. We will evaluate the Soviet proposals in that light.

Nuclear and Space Arms Talks Resume

PRESIDENT'S STATEMENT, JAN. 15, 1986[1]

Tomorrow marks the opening of the fourth round of the nuclear and space arms talks. These negotiations are devoted to seeking ways to reduce the U.S. and Soviet arsenals of nuclear weapons and simultaneously to strengthen strategic stability. I have no higher priority than to achieve agreements which would strengthen America's security and that of our allies by establishing a more stable strategic balance at radically reduced levels of weaponry. And it is my hope that we can one day eliminate them altogether.

The upcoming session represents an important opportunity to give new momentum to arms negotiations. Building upon the fresh start in our relationship that General Secretary Gorbachev and I made at our meetings in Geneva, it is my hope that we can see the general agreement on principles that we reached in Geneva translated into real progress at the negotiations.

General Secretary Gorbachev and I made a commitment to accelerate Soviet-American arms reduction negotiations where there is common ground. Specifically, we agreed to the principle of 50% reductions, appropriately applied, in nuclear offensive arsenals and to seek an interim agreement on limiting intermediate-range missile systems. We hope that during this new round of talks progress can be made toward achieving these mutually beneficial objectives.

During the previous round of the negotiations, the Soviet Union made counterproposals to the concrete American arms reduction positions. After careful study, we found the Soviet counterproposals to have some positive elements, but also to be seriously one-sided in a number of key areas. To move the negotiations forward, the United States made a fresh offer. Our offer encompassed a proposal to cut in half the offensive nuclear arsenals of both sides in an appropriate and equitable way. The U.S. proposal takes account of expressed Soviet concerns and

builds on the common elements in our respective positions. It seeks deep cuts, no first-strike advantage, continuing defensive research—because defense is much safer than offense—and no cheating. Our proposal is fair, balanced, and, if accepted, would result in the most dramatic cuts in offensive arms ever achieved.

The new U.S. offer is not a take-it-or-leave-it proposition. I have instructed our negotiators to press ahead in laying out the details of our position and in seeking and expanding common ground. Our objective remains an agreement for 50% reductions, appropriately applied, in the strategic nuclear arsenals of both the United States and Soviet Union and for enhanced stability by reducing the capability to conduct a first strike. With respect to intermediate-range nuclear forces, our objective remains the eventual elimination of the entire category of LRINF [longer range intermediate-range nuclear forces] missile systems, but we are prepared to work out an interim agreement based on the principle of equality which limits LRINF missiles. In the defense and space forum, we will continue to seek to expand our dialogue with the Soviets concerning the offense-defense relationship. We will also push for Soviet agreement to our new proposals for reciprocal visits to laboratories engaged in strategic defense research.

U.S. negotiators are ready for tough but honest bargaining. The challenge ahead is formidable, but they have the flexibility to explore any promising avenues for agreement. As we have said before, we are more interested in results than in methods of reaching them. If the Soviets approach this round in a similar spirit, the prospects for progress will be greatly increased.

Our two countries have it within our power to make 1986 a year of genuine peace and progress in arms control. Fair, equitable, and verifiable reductions of the weapons of massive destruction will serve Soviet and American interests and that of all humanity. It is a noble goal and an awesome responsibility. I wish our negotiators good luck, and Godspeed.

Geneva Arms Control Talks: Round IV

by Kenneth L. Adelman

Address before the National Press Club on January 14, 1986. Mr. Adelman is Director of the Arms Control and Disarmament Agency.

I am delighted to be here at the National Press Club this morning to have the opportunity to speak with you about the upcoming round of arms talks in Geneva.

Arms control, as you know, is a field in which public officials are continually asked to make predictions. Needless to say, our predictions are not always on the mark. I recall Churchill's response to a question on the most desirable qualification in a young man seeking office. "It is," he said, "the ability to foretell what is going to happen tomorrow, next week, next month, and next year. And to have the ability afterwards to explain why it didn't happen."

Nonetheless, I will try this morning to foretell, as concretely as I can, where we might see movement in the arms negotiations and, more importantly, what influences might operate either to facilitate or impede such movement.

Prospects for Progress

Surely we are in a better position today for real progress in arms control than we've been in years. This improved situation for arms control—and the current improvement in our relations with the Soviets overall—have occurred because of, and not in spite of, the President's resolution in arms control and national security policies over the past 5 years.

Basically, I see the coming round in Geneva—round IV—as a round of opportunity—one in which the Soviet negotiators should buckle down to the real work of arms control and implement what was agreed to at the summit, namely, that progress be made as quickly as possible where common ground exists between the United States and the Soviet Union. This was agreed at the summit to be 50% cuts in strategic arms and an interim agreement on intermediate-range nuclear weapons. In round IV, we seek to learn the Soviets' reaction to our new ideas, presented in each of the three areas of the talks during the final days of the previous round. And our negotiators will be elaborating on these November 1 proposals. Furthermore, they look forward to real give-and-take on the basis of these proposals.

The ball is in their court. The Soviets owe us a complete response. They owe it to everyone to get serious about making progress in arms control. They've been skirting around the central issues too long already.

I would note that the recent summit meeting delved into many key issues besides arms control. That is as it should be. It is important to remember that nuclear weapons are not the only things that divide us from the Soviet Union.

We desire progress in arms control. But we also wish to see progress in the regional conflicts in which the Soviets have a hand. We wish to see progress, however halting or inadequate it may prove to be, toward freedom for the Soviet people and for the captive peoples of the East bloc. These are not superficial concerns. They go to the very heart of the American-Soviet relationship.

The U.S.-Soviet Relationship

If we have been compelled to live with a competition in weapons in this century, it arises from the Soviet habit, even compulsion, of stirring the world's troubled waters. It is precisely because the Soviet Union has set itself as the main force opposing freedom around the world. The nuclear weapons that we have been forced to acquire over the years are the symptoms of this conflict, the inevitable response to this threat.

It is in this sense that President Reagan stated at the close of the recent summit, "The real report card on Geneva will not come in for months or even years, but we know the questions that must be answered." These questions are:

- Will we join together in sharply reducing offensive nuclear arms and moving to non-nuclear defensive systems to make this a safer world?
- Will we join together to help bring about a peaceful resolution of conflicts in Asia, Africa, and Central America so that the peoples there can freely determine their own destiny without outside interference?
- Will the cause of liberty be advanced, and will the treaties and agreements signed—past and future—be fulfilled?

To mute our concerns about these conflicts we have with the Soviet Union would be both a moral and a tactical error. It would be a moral error because it would undermine the very principles we stand for, our very reasons for being as a nation. It would be a tactical error because it would reveal us in negotiation to be irresolute and weak. And, as I've said, we're in a good position on arms control today precisely because of our past firmness.

Besides, it is a simple historical fact that Americans have always seen progress in arms control as part of an effort to improve the broad sweep of Soviet-American relations, as part of a broad movement toward reducing the level of aggression in the world as a whole. When the SALT II [strategic arms limitation talks] Treaty failed to gain Senate ratification in 1979, it was in large measure because a number of Senators had reservations about the treaty provisions; but the Carter Administration finally withdrew the treaty in response to the Soviet invasion of Afghanistan—that is, in response to a regional conflict.

The Strategic Defense Initiative (SDI)

In addition to expressing our concerns about regional conflicts and about human rights, the President took the opportunity at the summit to set forth in detail his vision of a future free from the shadow of nuclear apocalypse. Since the dawn of the nuclear age, we have taken two paths to deal with "the nuclear problem"—deterrence through offensive strength and arms control through negotiations. Despite our unilateral efforts to maintain deterrence and attempts to negotiate a stable nuclear balance at lower levels, the Soviets have shown a lack of restraint in both offensive and defensive programs and a generally unconstructive approach to arms negotiations. These Soviet actions, if not countered or corrected, will undermine deterrence.

While still—like his predecessors—pursuing the two paths of deterrence and arms control, President Reagan has added a third path. This President is the first to create hope, through SDI, of a future in which our security rests not upon the threat of nuclear retaliation but, rather, on the ability to defend against potential attack. If our research yields positive results, it offers the possibility of reversing the dangerous military trend by moving to a more stable basis for deterrence and providing new and compelling incentives to the Soviet Union to negotiate deep cuts in nuclear arsenals. If a new strategy based on effective defenses proves feasible, then our security, for the first time in the nuclear era, would not be held hostage to the threat of nuclear devastation, Soviet rationality, or the uncertain outcome of arms control talks.

If successful, we would hope that the Soviets would travel with us from a world dominated by weapons of mass destruction to a world secured by the technologies of defense. Even in the short run, SDI holds out the promise of improving deterrence by removing the capacity of the Soviets to benefit militarily from a first strike—something that we have long tried to do through arms control and, so far, failed.

Avoiding Miscalculation

Still, a legitimate question remains: what is the purpose of this kind of summit exchange? What good does it do to have President Reagan setting forth his positions and Mr. Gorbachev setting forth another set of positions, if the two leaders fundamentally disagree, as they did and as they do?

The usual answer is that such discussions improve the atmosphere—and this is not altogether wrong or useless. Clearly, there are some atmospheres that are more conducive to productive negotiations and others that are less so. But atmosphere is not substance. We must be on guard against that error to which democracies have long been subject: the error of mistaking atmosphere for substance. It is worth remembering that the atmosphere immediately following Neville Chamberlain's Munich meeting with Hitler in 1938 seemed very propitious; a more disastrous agreement was, however, never concluded.

Atmosphere is important, but quite secondary. Moreover, it is transitory: atmosphere comes and goes. What is more critical is the matter of miscalculation. One of the paramount tasks of diplomacy is to avoid miscalculation or, at least, to minimize the role played by miscalculation in world affairs. That was one key purpose of the Geneva meeting.

There are two kinds of miscalculation to be avoided. The first is a miscalculation of our intentions. For 40 years we have been assuring the Soviet Union of the peacefulness of our intentions, and I think there are many people who would argue that the Soviets have understood our basic attitude all along. But it never hurts to reaffirm what, for us, is a matter of principle and a fact of life.

Mr. Gorbachev expressed the concern that the Strategic Defense Initiative may be offensive in character, and President Reagan assured him that this was palpably not the case. As proof of our good faith, the President elaborated our "open laboratories" proposal—an initiative that would permit scientists of both countries to visit the laboratories where research on strategic defense is being conducted, to see with their own eyes that such research is defensive. This initiative, we feel, offers a kernel of trust around which a cooperative transition to a more defensive world might crystallize. We will have more to say about the proposal—and some interesting ideas here—in the coming weeks in Geneva.

The second, more important form of miscalculation to be avoided is miscalculation of our strength and our resolve. In this respect, the summit gave Mr. Gorbachev the opportunity to gauge the intensity of the President's conviction that Soviet aggression around the world will not pay and to perceive the intensity of the President's commitment to the Strategic Defense Initiative. The latter point has vast consequences for arms control.

Until recently, the Soviets have taken the position that no arms agreement would be possible unless the United States were unilaterally to abandon its research in strategic defenses. Indeed, they go so far as to deny that they are themselves engaged in such research, though proof to the contrary is unmistakable. So confident have they been in this tactic that, for months after the United States tabled its proposals on intermediate-range arms in Geneva, the Soviets did not ever bother to table their own proposals. Indeed, they were hardly negotiating at the conference table—they were too busy negotiating in the headlines.

It would seem that this Soviet position was based on the assumption—or at least the hope—that we might be prevailed upon to abandon *our* SDI—that, at bottom, we were not all that serious about strategic defense research. This, I think it is fair to say, is a bad miscalculation—a miscalculation that the

Geneva meeting may have moved to dispel. Real progress will not be possible until the Soviets recognize that their sweeping and unverifiable demand for an end to U.S. research on strategic defense has not the slightest chance of being met. That's a fact. The sooner the Soviets grasp it, the sooner we can move out on arms control.

The Current Negotiations

There are signs—small signs, tentative signs—that this may already be happening, though we still have a long way to go. Nonetheless, at the summit conference, Mr. Gorbachev did seem to imply, in a new departure from the old Soviet position, that a new arms agreement might permit some U.S. intermediate-range systems to remain in Europe. He also suggested that an agreement on intermediate-range forces might be possible without direct linkage to space and strategic armaments. This constitutes progress, for it means that an agreement on intermediate-range missiles is no longer held hostage by the Soviets to an unverifiable ban on strategic defense research.

Now the same should apply to the START [strategic arms reduction talks] negotiations on long-range strategic systems—that these issues, too, can be considered on their own merits. Such would constitute a major step in the upcoming round IV and be a major move to open real progress. We hope the Soviets will move to such a position.

The Soviets have also said, again for the first time over the past months, that they accept our basic principle of deep cuts—beginning with 50% reductions, appropriately applied, in nuclear forces. This new departure comes with a twist; for there is a major discrepancy here between the headline message of public relations and the fine print of actual negotiations.

As anyone who has looked closely at the current Soviet proposals is aware, they are absurdly one-sided. They include as "strategic" a number of intermediate-range systems on our side, while excluding over 2,000 obviously comparable systems on the Soviet side. Thus, the new Soviet proposal includes all U.S. nuclear systems deployed to protect our allies in Europe and excludes all Soviet systems to threaten our allies—both in Europe and Asia. In particular, the Soviets' proposal attempts to include our so-called forward-based systems in Europe. This is a retrogressive step, which takes us back to 1970, when the Soviets tried to include "forward-based systems" in the SALT I talks.

Progress in SALT I, as the Soviets were well aware, hinged on moving beyond this one-sided position. To return now to the opening negotiating positions of 1970 tends to make mockery of the notion of "progress" in arms control, of the notion that we are in a position to build on past achievements. So there has been a large dose of propaganda and a correspondingly large dose of retrogression in recent Soviet proposals.

But the Soviets have made unreasonable demands before, and they have eventually abandoned them—once it became clear that such proposals have no chance of being met.

Take INF [intermediate-range nuclear forces], for example. In 1977, the Soviet Union began to deploy, unprovoked, a new generation of powerful intermediate-range missiles in Europe—the SS-20s. In 1979, NATO attempted to meet this threat with a "dual-track" decision to try to negotiate a new arms agreement and, if necessary, to deploy American Pershing and cruise missiles in response. While the NATO nations were debating this proposal, the Soviets said that if the dual-track decision were adopted, they would simply refuse to negotiate. The dual-track decision was adopted, and by June 1980, the Soviets had reversed themselves and had come to the negotiating table. In 1983, when the first American missiles were deployed in Europe, the Soviets left the table and declared they would never return so long as the missiles remained in Europe. Well, the missiles are in Europe, and they are back negotiating, even coming up with a proposal enabling us to keep some INF systems deployed in Europe.

Despite enormous pressures, we held firm on INF, insisting upon agreements that respected the needs of both sides. Indeed, arms control agreements must be good for each side or they are good for nothing. In the process, we proved the bond among NATO countries to be far stronger than many skeptics supposed. We also brought the Soviet Union back to the bargaining table. There is little doubt that the improvement in relations now is a reward for our resolution then.

CDE Negotiations Resume

PRESIDENT'S STATEMENT, JAN. 21, 1986[1]

I met today with Ambassador Robert L. Barry, head of the U.S. delegation to the Stockholm Conference on Security and Confidence-Building Measures and Disarmament in Europe (CDE), which resumes on January 28, 1986. I expressed to Ambassador Barry my satisfaction with the progress made during the last round of the Stockholm conference and my belief that an accord with important implications for the overall East-West relationship can be achieved there this year.

At our meeting in Geneva in November, Soviet General Secretary Gorbachev and I stated the political commitment of the United States and the Soviet Union to work with others for a successful conclusion to the Stockholm conference. I have instructed the U.S. delegation to pursue concrete results at the negotiating table in Stockholm.

Such an agreement, in keeping with the mandate for the conference, must be meaningful in military terms; it must give reassurance to all states that the military activities in Europe are routine and nonthreatening. The agreement must be verifiable and go well beyond the limited confidence-building measures agreed to in Helsinki over 10 years ago.

If the Stockholm conference is successful—and the United States will do its part to ensure that it will be—it can help to lower the barriers which now divide Europe artificially East from West, thereby making the threat or use of force less likely.

The Stockholm conference, moreover, can contribute to security in the larger sense, that which encompasses political, economic, cultural, and humanitarian matters—human rights—as well as strictly military matters. The attainment of this broader concept of security is the fundamental objective of the United States. I am confident that our delegation in Stockholm will advance these objectives in the months ahead.

[1]Text from White House press release. ■

Much of our current task in negotiations is to persuade the Soviets that their more one-sided and unreasonable proposals have no chance of being met. More than that, we must persuade them that they have nothing to gain by sticking to one-sided and unreasonable proposals, that they will not be rewarded in the West for taking such positions.

One form of reward is press and media coverage. If the Soviets know that they gain a page one story in the West and a spot on network news by advancing a completely unreasonable and one-sided position, they will be sorely tempted to do so. If, on the other hand, they understand that such propaganda maneuvers will be relegated to page 13, then the incentive to put such propagandistic proposals forward is weakened.

There is one other pitfall we must avoid—the perennial folly of assuming that unilateral concessions and restraints on our part will inspire reciprocal restraints on the Soviet side. This approach to arms control has a very bad record—the examples are too numerous to cite here. Unilateral cancellations on our part result in unilateral advantages on their part. Our capacity to assure our national security and to succeed on arms control is contingent upon, and underwritten by, our strength and resolve and by our ability to convey these to the Soviet leadership. Remove the threat of American force modernization, remove the advance of America's ability to deter and to seek new means of deterrence, and you have removed part of our safety and our incentive for arms control. If we show a lack of resolve, vacillation, and an unwillingness to stand firm on these key measures of will, the Soviets will not need bilateral arms control. They will be able to sit back and watch us unilaterally disarm ourselves. For they take such cancellations not as a sign of good will but as a sign of lack of will.

This is not a pleasant truth. It is not as pleasing as the quasi-Ghandian notion that our example of self-restraint will inspire corresponding self-restraint in Soviet leaders; but it is a fact of life. And what I say applies quite directly to the ASAT [antisatellite systems] testing ban now enforced by Congress. Such bans have the effect simply of removing the incentive for negotiation of shrinking the realm in which the writ of arms control may run. They are bad for genuine arms control.

Verification and Soviet Treaty Violations

There is one final concern I wish to touch on, and that is the issue of verification and Soviet treaty violations. This continues to be a perplexing and frustrating topic. It is one of those curious questions in life on which a great many people seem somehow to suspend their common sense. Imaginative energies have been expended over the past several years in the service of exculpating Soviet violations of arms control treaties and commitments. Some of the arguments we hear are a testimony to the abiding role of absurdity in human life. As George Orwell once said, some things are so absurd only an intellectual could have thought of them.

We hear that we should not concern ourselves with the violations because they are not comprehensive. That is to say, we should not be concerned because, as yet, the Soviets have failed to violate *every* provision of the treaties. It is a statistical fact that only a tiny percentage of people in this country cheat on their income tax. It is also a fact that even these people seldom cheat on every provision of the tax code. But does anyone seriously suppose the government could forgo audits and penalties for income tax evasion—even of those who only evade a few provisions of the code—without a total breakdown of the system? Why should we have a lower standard of compliance in an area vital to our national security than we do in our own tax system?

We also hear that the arms control violations are not "serious." How serious do they have to be? The Soviets have built a new large phased-array radar in Siberia with a location and orientation explicitly forbidden by the ABM [Anti-Ballistic Missile] Treaty. Hundreds of hours were expended negotiating this treaty provision. Violation

MBFR Negotiations Resume

DEPARTMENT STATEMENT, JAN. 30, 1986[1]

Today in Vienna, members of NATO and the Warsaw Pact resume their efforts to negotiate reductions and limitations of conventional forces in central Europe. These discussions, known as the mutual and balanced force reduction (MBFR) talks, hold more promise of progress than at any previous time in their 12-year history. Early last month, the United States and its NATO allies presented a major new initiative aimed at breaking the decade-long deadlock in those talks.

The NATO proposal accepts the general framework of the February 1985 model proposed by the Soviet Union and its allies for a time-limited, first-stage agreement. It also sets aside the long-standing NATO requirement that the sides agree on the size of present troop levels before treaty signature, which the Soviets have long claimed to be the major barrier to agreement. These important moves are consistent with the Geneva summit declaration of the importance the United States attaches to progress in the Vienna negotiations.

As we have stated, we are prepared to begin reducing 5,000 U.S. and 11,500 Soviet ground troops in the central European reductions area as soon as a first-phase agreement is reached. NATO has proposed a commitment by both alliances not to increase total troop levels in the MBFR reductions area for 3 years following the initial reductions. We hope this will be only the first step in reducing tensions between East and West in Europe, the world's most heavily armed frontier.

It is important, however, to stress that such reductions and limitations should only take place on the basis of mutual trust resulting from an effective verification regime. A package of fair, effective, and reciprocal verification measures is thus an integral part of our new proposal. These measures are essential to monitor compliance with the terms of an agreement.

With this in mind, the United States, together with our NATO allies, will continue to actively seek every avenue of possible agreement to a significant and verifiable accord. If the East can match us in flexibility and goodwill, then the basis for an agreement is possible.

[1]Made available to news correspondents by Department spokesman Bernard Kalb.

of this provision strikes at the heart of the ABM Treaty. The Soviets have tested and are now deploying a second new ballistic missile in violation of SALT II. What is SALT II's primary function other than to limit missiles? How serious do the violations have to be? Must we have a total debacle, must we have a total disaster on our hands, before anyone is roused to act? The fact is that violations of arms control treaties are likely to begin in small ways, just as festering wounds begin as small inflammations. Do we neglect to treat such wounds until there is evidence of gangrene—for fear that the antiseptic will sting?

The basic point is this. The Soviets, as good Marxist-Leninists, respect treaties only so long as they reflect the real relations of power in the world. Violations are a sign of declining respect—the surest sign we have that the arms control process is weakening, that it is losing out to more aggressive impulses. It is imperative, for the sake of arms control, that we make it clear to the Soviets that a record of strict and literal compliance is essential to continuation of the arms control process. If our message is to get through to Soviet leaders, it must have public support.

Conclusion

Arms control is never easy; it is never a risk-free business, especially for a democracy. One reason it is difficult is that it demands contradictory qualities: it demands that we keep realism and tough-mindedness alive amid hope. I sometimes think that nothing has proved so fatal to the arms control enterprise over the years as its moments of success—for precisely at such moments we are inclined to forget the safeguards, the caution, and the resolve necessary both to obtain and to preserve success.

At the present moment, we will be tempted to yield to optimism. But let us never forget that the preservation of optimism demands that we not be overcome by it, that we keep our wits about us, that in this new atmosphere of seeming amity, we keep alive the awareness of our principles and our strengths. ■

U.S.-Japan Joint Report on Sectoral Discussions

Secretary of State Shultz and Foreign Minister Abe met on January 10, 1986, in Washington, D.C., and reviewed progress in the market-oriented, sector-selective (MOSS) discussions held by the United States and Japan during the past year. These discussions, launched pursuant to a meeting between President Reagan and Prime Minister Nakasone in January of last year, have involved an intensive and comprehensive effort to identify and remove impediments to market access in four sectors—telecommunications, medical equipment and pharmaceuticals, electronics, and forest products.

The Secretary and the Foreign Minister agreed that important progress has been achieved as a result of the MOSS discussions. Under MOSS a number of positive changes have been made in conditions of market access in Japan. These should create new market opportunities for American and other foreign firms. Further progress should be achieved through continued discussion in the MOSS framework.

In calling attention to the achievements of MOSS during the past year, Secretary Shultz and Minister Abe expressed the expectation that the private sectors in both countries will take maximum advantage of the expected improvements in market access. They reaffirm that the intent of these discussions is to facilitate an increase in Japan's manufactured imports by achieving unimpeded access for the United States and other foreign countries in these sectors. An increase in Japanese imports in the MOSS sectors will be the important test of our accomplishments through mutual effort.

MOSS is part of a broad joint effort to address various bilateral trade issues—sectoral, nonsectoral, and structural. MOSS discussions during the past year have reflected the close relationship between the United States and Japan. The ability to work together to foster free and expanding trade is an essential element in our common effort against protectionism.

The Secretary and the Minister agreed that MOSS is a valuable framework for resolving sectoral issues on a cooperative basis and that the process will, accordingly, be continued. The Secretary and the Minister agreed that the MOSS plenary should continue to meet as appropriate under the chairmanship of the Under Secretary of State for Economic Affairs and the Deputy Minister of Foreign Affairs to coordinate overall followup and to oversee work in new MOSS sectors, where mutually agreed. It was further agreed that each of the sector groups will continue to meet as appropriate at a high level to review implementation of the agreed solutions, to review the experience of foreign firms with the new rules and procedures that have been agreed upon, to assess sales efforts and results, and to address for resolution all issues related to their sectors. The role of business practices will be an important issue for ongoing examination in the followup process. ■

Protecting Prosperity From Protectionism

by W. Allen Wallis

Address before the Economic Policy Council of the United Nations Association on January 17, 1986. Mr. Wallis is Under Secretary for Economic Affairs.

Two months ago marked the 100th anniversary of one of the greatest economists, Frank Knight, who for more than 40 years was a professor of economics at the University of Chicago. He was, in fact, "the fountainhead of the 'Chicago school' of economics." To mark that centenary, Herbert Stein published in *The AEI Economist* a selection of Knight's writings.

Although Stein described these quotations as "outside the field of economic theory," two of them make an appropriate introduction to my remarks on international economics.

The first is "Frank Knight's first law of talk." It is patterned after Gresham's law of currencies, propounded in the 16th century, and says that "cheaper talk drives out of circulation that which is less cheap."

The second quotation from Frank Knight is something he said in questioning whether it is worthwhile to try to teach economics—which is what he did throughout his long life. "What point is there in propagating sound economic principles," he asked, "if the electorate is set to have the country run on the principle that the objective in trade is to get rid of as much as possible and get as little as possible in return?"

About the time that Frank Knight was born, a century ago, Henry George, a San Francisco economist, pointed out that a protective tariff and a naval blockade are alike, in that both seek to prevent trade. The difference is that a blockade harms our enemies by obstructing their trade, while a protective tariff harms our own people by obstructing their trade. Eighty years ago, Ambrose Bierce, another San Franciscan, threw a different light on protective tariffs when he said that they protect businessmen against the greed of consumers.

Today's proponents of protection make different claims. They say, first and foremost, that protection can save jobs for American workers. They assert that protection is necessary to maintain the American standard of living—to stave off the low wages that they say would be necessary for our industries to compete.

They see protection as the key to preventing the "deindustrialization" of America. Protection, according to its supporters, could bring an end to our trade deficit and raise the revenue necessary to balance the Federal budget at the expense of foreigners who would pay the import duties. Some claim that we need protectionist legislation as a bargaining chip to obtain free access to foreign markets for our own exports.

Common Economic Fallacies

No matter how alluring these claims may be, they are fallacies—cheap talk which, too often, drives out sound ideas. I ask you to examine with me half-a-dozen of the fallacies.

Fallacy number 1 is that when we import, we export jobs; that we would have more jobs if we were to reduce our imports. During the past 3 years, we have experienced record trade deficits but we have added about 9 million jobs, and our unemployment rate has fallen by more than a third. Europe, on the other hand, is far more protectionist than we, but it has experienced economic stagnation for more than a decade. Total employment there is virtually the same now as it was 10 years ago; and since the labor force has grown, unemployment has grown. The combination of the protectionist common agricultural policy, various restrictive trading arrangements for industrial goods, and a wide variety of protections for special purposes—for geographic regions against plant closings or relocations, for employees against layoffs, for existing suppliers against innovations—all of these make Europe a less open market than America.

Has this protection helped Europe? No, of course not; just the opposite. Protection has contributed to economic rigidities in Europe which, in turn, are a major cause of its dismal economic performance.

Our imports are large because our economy is strong. Our trade deficit would be lower if our economy were not so strong and if it were not such an attractive place to invest, but we would be worse off.

Fallacy number 2 is that foreigners bear the cost of protection because it is their goods which are kept out of our market. Each job regarded as saved in a protected industry entails a high and continuing cost to the rest of us. For example, the Council of Economic Advisers estimated last summer that the protection proposed for the U.S. shoe industry, which the President rejected, would have saved some 30,000 jobs. But the average cost per job saved—a cost which American consumers would have paid in the form of higher prices for both domestic and imported shoes—would have been about $50,000 per year. The average employee in our shoe industry, who earns about $14,000 per year, would have seen little of this money. Some of the money would have appeared on the bottom line of protected firms' income statements, but much would have gone to foreign producers in the form of higher prices.

Another example: between 1981 and March 1985, Japanese automobile producers restricted their exports to this country. (They still do, but at a higher level.) The International Trade Commission has estimated that these restrictions saved 44,000 jobs in the domestic automobile industry, but they cost American consumers $16 billion during the 4 years. In other words, each job saved in the U.S. industry cost Americans about $90,000 per year. The Japanese automobile companies enjoyed record profits during that period, mostly from elevating their prices in America. If the companies had gotten together and agreed to gouge Americans that way, our antitrust division would have gone after them with a vengeance—as it should have.

Protection does not affect total employment. It simply shifts employment from more efficient industries to less efficient industries, thus reducing our national income.

Fallacy number 3 is that imports are causing the "deindustrialization" of America and creating a "hamburger economy." The fact is that there is no "deindustrialization" of America. Manufacturing contributes just about the same fraction of our total output now that it has for at least 30 years—just under one quarter. It is true that

the fraction of total employment accounted for by manufacturing has declined; it is only about half what it was a generation ago. The change in the relationship between employment and output reflects productivity gains, a major achievement of U.S. manufacturers. As for a "hamburger economy," service workers include doctors, nurses, lawyers, engineers, architects, teachers, programmers, journalists, lobbyists, and probably most of us in this room.

Some industries, to be sure, are declining. Steel is one. The decline of the steel industry is attributable, but only in part, to competition from abroad. However, the United States now consumes little more steel than it did 20 years ago, and our steel industry uses only half as many workers. A basic problem faced by our steel industry is that the resources used to produce a ton of steel can produce other products in our economy that are worth more than are the alternative products that can be produced in some other countries with the resources they use for a ton of steel.

It is comparative advantage, not absolute advantage, that influences international trade. If steel costs three times as much as another commodity in the United States, but only twice as much in another country, it will pay us to buy steel from the other country, and it will pay them to buy the other commodity from us. It is the fact that comparative costs differ from one country to another that makes international trade mutually beneficial, regardless of absolute costs.

Comparative costs change. Permitting changes in comparative costs to be reflected, through market forces, in changes in our imports and exports has kept the U.S. economy internationally competitive and permitted us to grow more rapidly than those nations which have attempted to frustrate the workings of the market.

Fallacy number 4 is that high wages make us noncompetitive internationally. The usual argument linking wages to noncompetitiveness compares our hourly wage rates to those abroad. Such a comparison ignores the productivity of American workers, which, overall, is among the highest in the world. We cannot have a comparative advantage in the production of all goods, so we cannot be competitive internationally in everything. For several decades, however, the United States has been the world's largest exporter, and our exports have been trending upward at a faster rate than the rest of our GNP [gross national product]. The fact that we are competitive internationally in many sectors is one of the reasons our wages are as high as they are.

Fallacy number 5 is that protection can eliminate the deficits in our trade and current accounts. In recent years, the U.S. economy has abounded in investment opportunities, but investment opportunities in most other countries have been less than here. As a result, there is a substantial flow of foreign capital into the United States, and there has been a great reduction in the outflow, resulting in a large increase in net inflow.

Since accounts must balance, the surplus in our flow of capital necessarily is accompanied by a deficit in our flow of goods and services. This deficit will diminish if, and only if, the net inflow of capital diminishes. That could come about through better economic policies abroad that improve the relative attractiveness of investment opportunities abroad. It could come about through deterioration of investment opportunities here. It could come about also by increased saving here or decreased saving abroad. But the deficit will not be affected by trade policies, except indirectly if they alter the relation between total investment—foreign and domestic—and domestic saving.

Government spending absorbs a substantial portion of our income that could be saved and made available for investment. As you know, the Administration is working with the Congress to reduce government spending and, thereby, reduce the government's absorption of our national income. Getting our fiscal house in order would be a useful step toward reducing our trade and current-account deficits, just as establishing a better climate for growth and investment abroad would be a useful step by our major trading partners. (I commend to your attention the editorial in today's *Wall Street Journal*, entitled "Lecture to the Europeans"—which is, in fact, a lecture to the Japanese, too.)

The deficits in current accounts are rooted in U.S. and foreign economic conditions, and they will change only as those conditions change, not as trade policy changes.

Fallacy number 6 is that by imposing new tariffs, we can generate revenues which will make a substantial contribution to balancing our Federal budget. Earlier this year, the press reported the results of a study of this question by a leading economic forecasting firm. (The study itself was not made public.) That firm ran a simulation of its model of the U.S. economy assuming a temporary 20-percentage-point tariff surcharge applied to all U.S. imports in 1986, to be phased out by the end of 1988. The press reported that the duty would raise $80 billion in new revenue during 1986—and that foreigners would pay half of it.

We were interested in these results and asked our economists to examine the analysis. We discovered that the study assumed that purchasers of imports will not reduce their purchases when prices rise substantially and that, despite the publicity that would precede the passage of such legislation, buyers of foreign goods would neither stock up before the temporary duty took effect nor draw down their inventories before it ended. Finally, the analysis assumed that our trading partners would not retaliate.

The State Department is a client of the same forecasting firm; so we asked for a set of simulations of the effect of a 20-percentage-point import surcharge on the same model of the U.S. economy, but using more plausible assumptions. The new results show that the tariff surcharge would raise much less revenue; that our exports would fall; that GNP growth would be reduced; and that U.S. inflation, unemployment, and interest rates would rise. In time, weakness in the U.S. economy would cause the budget deficit to widen further. With this kind of economic modelling, "you pays your money and you takes your choice"—of assumptions, hence, of conclusions.

National Security Concerns

Protection is occasionally justified on national security grounds. (In fact, those who cannot make a case on other grounds often try national security, but a few of those cases remind me of Samuel Johnson's 18th-century definition of patriotism as "the last refuge of scoundrels.") Today, our national security depends on maintaining a technological edge over potential adversaries. We need to foster a climate conducive to innovation at home and to maintain

access to the technological innovations of others. Protectionism breeds stagnation and, even in such critical industries as semiconductors, it is likely to be inimical to national security. Our defense equipment must be the best that can be made, not just the best that can be 100% American.

The President's Trade Program

Enough on the negatives, even though the list of fallacies is anything but complete. Let me turn to President Reagan's trade program, which deals with the same issues in a positive and constructive manner.

The President has pursued and, recently, has reaffirmed vigorously, a program that will keep our country strong and competitive while, at the same time, addressing the trade problems caused by rapid change and the strong dollar.

First, and most important, the President has directed the Special Trade Representative to negotiate with our trading partners to strengthen the rules of the General Agreement on Tariffs and Trade (GATT), under which international trade is conducted. Recently, at a meeting of the GATT in Geneva, the United States gained the agreement of other countries to accelerate preparations for what is known as a new round of multilateral trade negotiations. Our five most important objectives in this new round are:

- Improved access to other countries' markets for services;
- Better protection of our rights in intellectual property—patents, copyrights, trademarks, designs, programs, music, movies, and so forth;
- Increased discipline over the use of subsidies, particularly in agriculture;
- Tighter rules governing actions to safeguard troubled industries; and
- A more effective procedure for settling disputes.

Second, the President has notified Congress that we will explore the advantages that might be gained from a free trade area with Canada, which is our largest trading partner.

Third, the Secretary of State is accelerating negotiations to open markets in Japan, which is our largest overseas customer. Last January, in a meeting with President Reagan, Prime Minister Nakasone took the initiative in suggesting these negotiations. They are unique, in that both sides have the same set of instructions: to identify and remove impediments to access to Japan's market. Despite widespread skepticism at the start, these negotiations have already yielded important changes in Japanese practices, regulations, and laws and have resulted in large sales that, a year ago, would have been impossible. We have made major progress in opening Japan's markets to imports of telecommunications equipment, forest products, medical equipment, pharmaceuticals, and electronics and in liberalizing its financial markets.

We have made significant progress also in opening up Japanese markets for transportation services. Three new U.S. air carriers will be authorized between the United States and Japan. On the maritime side, we have managed to open a significant crack in the market for carriage of tobacco. Formerly, all shipments of U.S. tobacco to Japan were carried on Japanese ships. Just last Friday, one of the largest Japanese automobile companies announced that some of its cars for the United States will be shipped in a U.S. flag vessel.

Much of the Japanese economy, notwithstanding its popular image, is inefficient. There are numerous depressed industries, the financial system does not channel savings effectively into productive domestic uses, and much of the distribution system is primitive. The government there is actively considering measures that would reduce Japan's trade surplus by providing incentives to invest more of its savings at home.

Fourth, the Administration is combating restrictive practices in both aviation and ocean shipping. During the last 5 years, many problems relating to conduct of business have been eliminated or minimized for air carriers, and restrictive cargo allocation schemes that some countries have sought to impose on their maritime trade with the United States have been thwarted.

Fifth, the President has begun, for the first time, to use his authority to initiate investigations of trade-distorting practices of foreign countries, instead of waiting for American businesses to initiate them. Investigations underway concern Korean barriers to foreign insurance companies, Brazilian restrictions on computer imports, Korean violations of intellectual property rights, and Japanese restrictions on imported tobacco. Trade actions, by themselves, as I said earlier, cannot correct our trade deficit—that requires fundamental changes in our economy and in the economies of our main trading partners—but trade actions can increase efficiency and raise the national incomes of ourselves and our trading partners.

Sixth, the President authorized the Secretary of the Treasury to meet with key finance ministers in September in New York to seek agreement on ways other countries could improve their economic performance and strengthen their currencies. These nations are beginning to remove regulations, rigidities, and tax disincentives that hinder growth in their economies. Many European leaders have told the President that they want to learn from our experience.

Seventh, the United States must do its share to restore better balance in the world economy, and the President is committed to reducing excessive government spending. Congress has enacted legislation that improves the prospects for achieving a balanced budget by 1990. This will enhance our competitive position by releasing resources that can be used more productively in the private sector.

The President and the Administration have, in fact, been emphasizing these points ever since they took office 5 years ago. The President has expounded them during each of the four economic summits of industrialized countries that he has attended. At last May's summit in Bonn, there was broad agreement on strategies to achieve these objectives. The pace of change, however, has been slow, and the pressure to take counterproductive protectionist action has intensified.

Taken as a whole, the President's program will help to keep our economy tough, resilient, and growing. This will assure that the economy will be able to support the defense effort needed to protect ourselves and our friends and allies. It will provide the stimulus to innovation needed to maintain a technological edge over our adversaries. Open markets and competition will help to keep us strong.

The President's program will open new opportunities for mutually beneficial trade. As we expand into new markets, we will exploit the gains to be had from an international division of

labor based on comparative advantage. In this way, open markets and competition will make us richer.

Finally, the President's program will minimize the Federal Government's interference with commerce. The government does not need to tell producers what they can make or how to make it, and it does not need to tell consumers what they can buy and how to use it. (It does too much of that already.) By restraining the scope and the size of government, the program will allow our citizens to make their own decisions on economic issues. Open markets and competition will keep us free and prosperous.

Conclusion

To conclude: prosperity and protection are inconsistent; we will not let the fallacies of protectionism delude us. The American people have expressed their desire for less government in each of the last three presidential elections. On the domestic front, the President's tax program, the refreshing breezes of deregulation, and the determination to beat inflation have all contributed to a remarkably strong and balanced economy.

We are determined to do the same on the international front. We will not try to retreat into a "Fortress America." We are in an interdependent world, and government regulation of trade is no better internationally than it is domestically. Protection is government intervention in international markets. Prosperity is our goal; but, make no mistake about it, protection is its enemy. ■

Libyan Sanctions

PRESIDENT REAGAN'S OPENING STATEMENT, JAN. 7, 1986[1]

On December 27th, terrorists, as we know, attacked Rome and Vienna international airports. It was the latest in a series of atrocities which have shocked the conscience of the world.

It's clear that the responsibility for these latest attacks lies squarely with the terrorist known as Abu Nidal and his organization. The number of his victims increased by 19, among them 5 Americans including Natasha Simpson, an 11-year-old girl. Many others from around the world were wounded. And we shall make every effort to bring Abu Nidal and other terrorists to justice.

But these murderers could not carry out their crimes without the sanctuary and support provided by regimes such as Col. Qadhafi's in Libya. Qadhafi's longstanding involvement in terrorism is well-documented, and there's irrefutable evidence of his role in these attacks. The Rome and Vienna murders are only the latest in a series of brutal terrorist acts committed with Qadhafi's backing.

Qadhafi and other Libyan officials have publicly admitted that the Libyan Government has abetted and supported the notorious Abu Nidal terrorist group which was directly responsible for the Rome and Vienna attacks. Qadhafi called them "heroic actions," and I call them criminal outrages by an outlaw regime.

By providing material support to terrorist groups which attack U.S. citizens, Libya has engaged in armed aggression against the United States under established principles of international law, just as if he had used its own armed forces.

We've urged repeatedly that the world community act decisively and in concert to exact from Qadhafi a high price for his support and encouragement of terrorism. The United States has already taken a series of steps to curtail most direct trade between our two countries while encouraging our friends to do likewise. Terrorists, and those who harbor them, must be denied sympathy, safe haven, and support.

In light of this latest evidence of Libya's growing role in international terrorism, it is clear that steps taken so far have not been sufficient. Tougher, more comprehensive measures are required by the international community. Accordingly, I signed today an Executive order stating that the policies and actions of the Government of Libya constitute a threat to the national security and foreign policy of the United States.

Congress has been notified of my decision. Under the authority vested in me by the Constitution and the laws of the United States, I've taken measures to end virtually all direct economic activities between the United States or U.S. nationals and Libya. These measures, some of which take effect immediately and others no later than February 1, impose a total ban on direct import and export trade with Libya, except for humanitarian purposes. They prohibit commercial contracts and other transactions with Libya, including travel-related activities other than those needed for journalism or to carry out this order. I call on all Americans in Libya to leave immediately. Those who violate these orders should know that they will be subject to appropriate penalties upon their return to the United States. Let the Government of Libya understand that it is fully responsible for the welfare of those Americans still in Libya, and that Libya will be held accountable for any attempt to harm them or restrict their freedom to depart.

Our differences are not with the people of Libya, but with Col. Qadhafi and his regime. We've taken these steps after much reflection and in full awareness of the economic consequences which the United States stands to incur as a result. Civilized nations cannot continue to tolerate in the name of material gain and self-interest the murder of innocents. Qadhafi deserves to be treated as a pariah in the world community. We call on our friends in Western Europe and elsewhere to join with us in isolating him. Americans will not understand other nations moving into Libya to take commercial advantage of our departure. We will consult with all our key allies to pursue the goal of broader cooperation.

Italy's Prime Minister Craxi, in whose country one of the recent attacks occurred, properly emphasized the necessity not only of coping with terrorists but identifying "those states that

guarantee terrorist protection and the possibility to arm and organize themselves to carry out their bloody raids." Qadhafi's Libya is such a nation, and we call upon other nations to join us in denying it the normal economic and diplomatic privileges of the civilized world.

If these steps do not end Qadhafi's terrorism, I promise you that further steps will be taken.

LETTER TO THE CONGRESS, JAN. 7, 1986[2]

Dear Mr. Speaker:
(Dear Mr. President:)

Pursuant to section 204(b) of the International Emergency Economic Powers Act, 50 U.S.C. section 1703, section 505 of the International Security and Development Cooperation Act of 1985, and section 301 of the National Emergencies Act, 50 U.S.C. section 1631, I hereby report that I have exercised my statutory authority to declare a national emergency and to:

- prohibit purchases and imports from and exports to Libya;
- ban U.S.-Libya maritime and aviation relations;
- ban trade in services relating to projects in Libya;
- ban credits or loans or the transfer of anything of value to Libya or its nationals, except their property held prior to the effective date of this order or transactions allowed by regulations providing for norma' activities by Libyans lawfully in the United States; and
- prohibit transactions relating to travel by Americans to or in Libya, other than for commercial activities permitted until February 1, 1986, or those necessary for prompt departure from Libya or for journalistic travel.

These prohibitions are subject to regulation by the Secretary of the Treasury. Certain of the prohibitions in the order will apply as of 12:01 a.m. Eastern Standard Time, February 1, 1986. The remainder of the prohibitions of the order will become effective immediately.

I am enclosing a copy of the Executive order that I have issued making this declaration and exercising these authorities.

I have authorized these steps in response to the emergency situation created by international terrorism, in this instance the actions and policies of the Government of Libya. Its use and support of terrorism against the United States, other countries, and innocent persons violate international law and minimum standards of human behavior. These Libyan actions and policies constitute a threat to the security of the United States as well as the international community. Our Nation's security includes the security of its citizens and their right freely to go about their lives at home and abroad. Libyan use of and support for terrorism also constitute a threat to the vital foreign policy interests of the United States and of all other states dedicated to international peace and security.

Since Libya was officially designated under U.S. law in 1979 as a country that has repeatedly supported acts of international terrorism, the United States has taken a number of steps in response to hostile Libyan policies and actions. We have denied licenses for exports that may contribute to Libya's military potential or enhancing its ability to support acts of international terrorism. We have denied export of most national security controlled items; of goods or technical data which could contribute directly to the Ras Lanuf petro-chemical complex; of aircraft, large off-road vehicles and parts with a high risk of diversion by Libya for military activities; and for oil and gas technology and equipment not available from third-country sources. On the import side, we have banned Libyan petroleum and, since November 1985, Libyan refined petroleum products. We have stopped Libyans from coming to the United States for aviation maintenance, flight operations or nuclear related studies. We have taken measures to limit the expansion of Libyan UN Mission facilities. We have also repeatedly called upon corporations to withdraw American citizens from Libya, for their safety, and we have restricted the use of U.S. passports for travel there. All these measures have not deterred Libya from its use and support of terrorism. Moreover, approximately 1500 Americans remain in Libya.

The Congress of the United States has repeatedly deplored the Qadhafi regime's use of and support for international terror. Recently it did so by enacting section 504 of the International Security and Development Act of 1985. Moreover, I have determined that Libya falls within the terms of another statute directed by the Congress against those countries that support terrorism against civil aviation, section 1114 of the Federal Aviation Act of 1958, as amended.

The United States reaffirms its call to Libya and all nations supporting terrorism to turn away from that policy. The United States also calls upon other nations to join with us in isolating the terrorists and their supporters. We must demonstrate by firm political and economic sanctions that the international community considers such actions intolerable, that states that engage in such actions cannot expect to be accepted members of the international community.

Failure to call Libya into account for its policy places the civilized world at the mercy of terrorism. This has necessitated the steps I have taken today. The terrible tragedies of Vienna and Rome demonstrate that no nation can be immune, that each nation must bear its fair share of the vital effort against the politics of terror. I call upon every nation to do so now.

Sincerely,

RONALD REAGAN

EXECUTIVE ORDER 12543, JAN. 7, 1986[3]

Prohibiting Trade and Certain Transactions Involving Libya

By the authority vested in me as President by the Constitution and laws of the United States of America, including the International Emergency Economic Powers Act (50 U.S.C. 1701 *et seq.*), the National Emergencies Act (50 U.S.C. 1601 *et seq.*), sections 504 and 505 of the International Security and Development Cooperation Act of 1985 (Public Law 99-83), section 1114 of the Federal Aviation Act of 1958, as amended (49 U.S.C. 1514), and section 301 of title 3 of the United States Code,

I, RONALD REAGAN, President of the United States of America, find that the policies and actions of the Government of Libya constitute an unusual and extraordinary threat to the national security and foreign policy of the United States and hereby declare a national emergency to deal with that threat.

I hereby order:

Section 1. The following are prohibited, except to the extent provided in regulations which may hereafter be issued pursuant to this Order:

(a) The import into the United States of any goods or services of Libyan origin, other than publications and materials imported for news publications or news broadcast dissemination;

(b) The export to Libya of any goods, technology (including technical data or other information) or services from the United States, except publications and donations of articles intended to relieve human suffering, such as food, clothing, medicine and medical supplies intended strictly for medical purposes;

(c) Any transaction by a United States person relating to transportation to or from Libya; the provision of transportation to or from the United States by any Libyan person

or any vessel or aircraft of Libyan registration; or the sale in the United States by any person holding authority under the Federal Aviation Act of any transportation by air which includes any stop in Libya;

(d) The purchase by any United States person of goods for export from Libya to any country;

(e) The performance by any United States person of any contract in support of an industrial or other commercial or governmental project in Libya;

(f) The grant or extension of credits or loans by any United States person to the Government of Libya, its instrumentalities and controlled entities;

(g) Any transaction by a United States person relating to travel by any United States citizen or permanent resident alien to Libya, or to activities by any such person within Libya, after the date of this Order, other than transactions necessary to effect such person's departure from Libya, to perform acts permitted until February 1, 1986, by Section 3 of this Order, or travel for journalistic activity by persons regularly employed in such capacity by a newsgathering organization; and

(h) Any transaction by any United States person which evades or avoids, or has the purpose of evading or avoiding, any of the prohibitions set forth in this Order.

For purposes of this Order, the term "United States person" means any United States citizen, permanent resident alien, juridical person organized under the laws of the United States or any person in the United States.

Sec. 2. In light of the prohibition in Section 1(a) of this Order, section 251 of the Trade Expansion Act of 1962, as amended (19 U.S.C. 1881), and section 126 of the Trade Act of 1974, as amended (19 U.S.C. 2136) will have no effect with respect to Libya.

Sec. 3. This Order is effective immediately, except that the prohibitions set forth in Section 1(a), (b), (c), (d) and (e) shall apply as of 12:01 a.m. Eastern Standard Time, February 1, 1986.

Sec. 4. The Secretary of the Treasury, in consultation with the Secretary of State, is hereby authorized to take such actions, including the promulgation of rules and regulations, as may be necessary to carry out the purposes of this Order. Such actions may include prohibiting or regulating payments or transfers of any property or any transactions involving the transfer of anything of economic value by any United States person to the Government of Libya, its instrumentalities and controlled entities, or to any Libyan national or entity owned or controlled, directly or indirectly, by Libya or Libyan nationals. The Secretary may redelegate any of these functions to other officers and agencies of the Federal government. All agencies of the United States government are directed to take all appropriate measures within their authority to carry out the provisions of this Order, including the suspension or termination of licenses or other authorizations in effect as of the date of this Order.

This Order shall be transmitted to the Congress and published in the *Federal Register*.

RONALD REAGAN

WHITE HOUSE STATEMENT, JAN. 8, 1986[3]

The United States today will begin consulting with allies and other friendly nations in Europe and the Middle East to encourage cooperation in imposing economic and political sanctions on the Qadhafi regime and Libya. We will monitor the effects of our actions to decide what additional steps may be needed to isolate Qadhafi politically and economically and to bring an end to worldwide terrorism. Cooperation of our allies and friends is critical if we're to exact a high cost to Qadhafi.

Europe has borne the brunt of Qadhafi's latest outrages. European leaders surely recognize that there is a strong and increasing public sentiment for firm action against those who support terrorism. Many Arab States have suffered also from terrorism. Arab leaders are well aware of Qadhafi's uncivilized behavior, and he is a threat to them, as well. Europe and the Middle East countries have lost more than $1 billion in tourism alone. Airport workers in Rome have gone on strike to protest this situation. All countries are spending millions in increasing security. The cost in lives and property is enormous, and this will surely increase if terrorist acts continue.

But the cost of rampant and spreading terrorism is a price free nations cannot and will not pay. In our consultations, the United States will make it clear our position is that all nations must act in concert if we are to halt terrorism. It is essential that we make Qadhafi and others pay a premium if they continue their attempts to terrorize the world. Many actions will be taken, and we will hold in abeyance any further decisions that we make. The United States will continue to reserve the right to act in an appropriate manner in our own self-defense. All available measures will remain under consideration to bring terrorists to justice. We want to convince Qadhafi that terrorism will not be cost-free, nor will it be without consequence. Should Qadhafi continue his involvement in international terrorism, we're fully prepared to take additional measures.

EXECUTIVE ORDER 12544, JAN. 8, 1986[3]

Blocking Libyan Government Property in the United States or Held by U.S. Persons

By the authority vested in me as President by the Constitution and laws of the United States, including the International Emergency Economic Powers Act (50 U.S.C. 1701 *et seq.*), the National Emergencies Act (50 U.S.C. 1601 *et seq.*) and section 301 of title 3 of the United States Code, in order to take steps with respect to Libya additional to those set forth in Executive Order No. 12543 of January 7, 1986, to deal with the threat to the national security and foreign policy of the United States referred to in that Order,

I, RONALD REAGAN, President of the United States, hereby order blocked all property and interests in property of the Government of Libya, its agencies, instrumentalities and controlled entities and the Central Bank of Libya that are in the United States, that hereafter come within the United States or that are or hereafter come within the possession or control of U.S. persons, including overseas branches of U.S. persons.

The Secretary of the Treasury, in consultation with the Secretary of State, is authorized to employ all powers granted to me by the International Emergency Economic Powers Act, 50 U.S.C. 1701 *et seq.*, to carry out the provisions of this Order.

This Order is effective immediately and shall be transmitted to the Congress and published in the *Federal Register*.

RONALD REAGAN

LETTER TO THE CONGRESS, JAN. 9, 1986[2]

Pursuant to section 204(b) of the International Emergency Economic Powers Act, 50 U.S.C. 1703, and section 301 of the National Emergencies Act, 50 U.S.C. 1631, I hereby report that on January 8, 1986, I signed Executive Order No. 12544 blocking all property and property interests of the Government of

Libya and the Central Bank of Libya that are in or come within either the United States or the possession or control of United States persons, including overseas branches of United States juridical persons. In this Order, I have authorized the Secretary of the Treasury, in consultation with the Secretary of State, to employ powers granted to me by the International Emergency Economic Powers Act to carry out this direction.

A copy of this Executive Order is enclosed. The Order took effect upon signature.

This Order does not apply to the property of Libyan citizens or entities not controlled by the Government of Libya. Moreover, the Order does not confiscate property of the Government of Libya. Such property will continue to belong to the Libyan Government, and financial assets held in U.S. banks and their branches overseas will continue to earn a commercial rate of interest as appropriate.

I have taken these further steps pursuant to the national emergency I declared in Executive Order No. 12543 on January 7, 1986. My reasons for taking these actions are set forth in my letter to you of January 7, 1986, reporting the measures taken in that Order. Based on a continuing assessment of the situation, the steps taken became necessary to carry out the purposes of that Order. They are not intended to deprive the Government of Libya of property but rather are to help assure the orderly management of the dissolution of the United States economic ties with Libya and to protect against the possibility of unlawful Libyan actions which adversely affect American interests.

Sincerely,

RONALD REAGAN

Review of Developments in the Middle East

by Richard W. Murphy

Statement before the Subcommittee on Europe and the Middle East of the House Foreign Affairs Committee on January 28, 1986. Ambassador Murphy is Assistant Secretary for Near Eastern and South Asian Affairs.[1]

It is a pleasure to be here again, to have another opportunity to discuss with you recent developments in the Middle East. In particular, I want to bring you up to date on the peace process and our policy toward Libya, on developments in Lebanon and South Yemen, and on the Iran-Iraq war.

We face continuing problems in the area for which there are no easy solutions. They are not intractable, but they are certainly among the more complicated and difficult issues in American foreign policy. They affect U.S. interests in the region and the lives and well-being of our friends and allies. Given the volatile nature of these problems, we must pay close attention to them, minimizing damage to our interests and those of our allies.

Peace Process

In recent days I have discussed at length with [Israeli] Prime Minister Peres and [Jordanian] King Hussein the outstanding issues we must resolve before the opening of direct negotiations between Jordan and Israel. I am pleased to be able to report to you that during the course of those meetings in London and The Hague progress was made toward our shared goal of achieving direct negotiations between the parties.

This subcommittee has followed closely the unfolding of our efforts over the past year. Upon returning from consultations with the parties in the Middle East, on several occasions I have discussed with you the status of the peace process. Six months ago, the central issues were still very much undefined. Since then, we have made steady progress to clear the underbrush and reveal the critical obstacles blocking our path.

Two months ago, our efforts began to focus on two primary issues—an international conference and Palestinian representation. But at that time, we still addressed these issues in general terms. Today, I have a different message. We made clear progress during this last set of talks. The exchanges among the parties reached a new level of detail and specifics on key issues in a way we had not seen until now.

I will not pretend that the parties have resolved their differences. As this subcommittee recalls, I have long counseled against expecting a dramatic breakthrough. Finding ways to bridge differences is no small challenge; untangling the whole knot will require additional effort, ingenuity, and political courage. I continue to believe, however, that this can be accomplished. Most importantly, the leaders share this opinion. Prime Minister Peres and King Hussein remain firmly committed to the shared objective of reaching the bargaining table. Both were encouraged by the incremental achievements made during the recent talks. Both believe we are moving in the right direction by addressing in a serious way specific questions about the arrangements for and participation in these negotiations and in what we have called its international framework.

To achieve real progress we are confronting tough questions: we are addressing seriously the compelling, difficult, but fundamental question of Palestinian representation. We have often said that the Palestinians must be represented at every stage of the process. The nature of that representation gets to the heart of the credibility of the process and, thus, to the acceptability of its results by the Palestinian community. Syria, too, has much to gain from, and has an important role to play in achieving, a lasting peace in the region. For this reason, all parties have let it be known that Syria is welcome to participate in the process.

Time is not always an ally of reason in the Middle East. I am concerned—and I know that King Hussein and Prime Minister Peres are as well—that further protracted delay will have the effect of reversing the momentum toward direct negotiations. We have, therefore, made clear to both leaders that we are prepared to intensify our efforts to assist them in achieving that objective.

Arms Sales

There is no doubt that congressional support for the proposed Jordan arms package would have a positive influence on:

- Our efforts to sustain peace process momentum;
- Arab states' confidence in the United States as a reliable security partner; and
- Jordan's self-defense capabilities.

The Administration proposal for Jordanian arms is, of course, still pending. Since our last open session, Congress approved legislation providing that no Letters of Agreement for advanced

arms to Jordan would be valid prior to March 1, "unless direct and meaningful peace negotiations between Israel and Jordan are underway." When the President signed that legislation, we recognized that it was a compromise designed to avoid an adverse vote on the proposal while sensitive discussions between peace process parties were in progress. We appreciate congressional efforts to work with us so that we might accomplish our shared objective of direct negotiations. The Administration intends to abide by the conditions of the compromise. The Secretary and President have made it clear that we are not going to engage in any sleight of hand.

I am sure we all agree that the central issue is how we may best enhance the prospects for direct negotiations. The Administration asks your help in avoiding a disruption at this delicate stage in the process.

I would like to again emphasize that our security assistance programs in the region remain an important part of U.S. policy. The programs enable us to strengthen friendly moderate states, enabling them to defend themselves, which, in turn, contributes to the protection of our own interests in the region. We have no plans to notify the Congress of major new systems for any country, although we are continuing to process requests for follow-on support and upgrades of present systems in several states, including Israel, Egypt, and Saudi Arabia.

As I have stressed before, the Administration has an important security relationship with Saudi Arabia, the maintenance of which directly supports our interest in the free flow of oil and the stability of the Arabian Peninsula. This relationship, and the deterrence created by a strong Saudi defense, has been a major factor in keeping the Iran-Iraq war from spreading across the gulf. Our security relationship with Saudi Arabia—the cornerstone of our bilateral relations—has enabled us to work closely with Saudi Arabia in addressing events such as the continuing strife in Lebanon and the gulf war. We have carefully avoided viewing all Middle East issues through the prism of the peace process. We believe a strong and ongoing defense relationship with Saudi Arabia enhances prospects for regional peace and stability quite apart from the Arab-Israeli dispute.

By failing to address Saudi Arabia's legitimate defense requirements, we weaken this important relationship, detract from Saudi Arabia's ability to defend itself, and reduce Saudi confidence in the value of continued cooperation with the United States on regional peace and security issues. At the same time, we forfeit to suppliers less mindful of the security concerns of Israel sales of military equipment worth billions of dollars and thousands of high-technology jobs.

Israeli-Egyptian Relations

A sound Israeli-Egyptian relationship is key to our regional security policy and the essential building block for broader Middle East peace. In recent months, the two sides, with our participation, have been engaged in an effort to resolve the Taba border dispute and other issues—including the absence of Egypt's Ambassador from Tel Aviv—that have eroded mutual confidence. In this context, the Israeli Cabinet decided on January 13 to permit resolution of Taba through arbitration—a step that could clear the way for accelerated progress. Much work remains to be done, but the outlook for improved ties between these vital peace partners is brighter than it has been for some time.

Libya

The Qadhafi regime has a long record of overt and covert aggression against its neighbors and of support for international terrorism. Following the December 27 attacks on the Rome and Vienna airports by the Abu Nidal group and the clear evidence of Libyan involvement, the President decided to take rigorous, but measured and focused, steps to underscore our opposition to Qadhafi's policies in support of terrorism and to induce Qadhafi to change his policies. President Reagan banned direct trade with Libya on January 7 and on January 8 froze Libyan governmental assets in this country and in branches of U.S. financial institutions abroad.

There are three underlying messages of our policy toward Libya.

First, the United States made the unambiguous statement that we will not continue to do business with a person who has placed himself far outside the boundaries of civilized conduct.

Second, the measures announced by President Reagan make the point that Qadhafi's continued support for terrorism carries a cost for Libya. Last year, the United States was Libya's third largest export partner. American companies lifted almost half of Libya's oil production. We do not contend that our measures, taken by themselves, will do irreparable harm to Qadhafi. However, they will, over the short term, cause important dislocations in the Libyan economy.

Third, the steps we have taken to date are not the most severe actions that could be levied against Qadhafi. In light of the heinous nature of terrorist acts, these are modest measures. If Libyan aid to terrorists continues, however, the United States has the option of imposing a range of more severe actions. The steps that we have taken may not be our final response, but we sincerely hope additional efforts will not prove necessary.

Deputy Secretary Whitehead just returned from a visit to nine allied capitals where he conveyed our deep concern at the threat that terrorism represents in the world. We do not expect our allies to duplicate our actions but, rather, to examine additional measures appropriate in each individual situation. We are grateful for the position taken by several of our friends, such as the Governments of Canada and Norway, who assured us that they will not fill in behind American individuals and companies that are leaving Libya. Italy, which traditionally does a great deal of business with Libya and which has suffered more than its share at the hands of terrorists, demonstrated political courage in announcing the cessation of all arms sales to Libya. While the Deputy Secretary found occasional differences over tactics among our allies, we are encouraged by the broad commitment to close, effective action in the fight against terrorism.

It is still too early for me to give you a precise readout on the effect of our measures against Libya. I can say that our determination to respond to his support of terrorism has induced Qadhafi and other nations to focus more directly on the dangers posed by his policies.

Qadhafi has responded to our actions by threats and posturing, including the promise to train any Arab who wishes to become a terrorist in support of the Palestinian cause. He relishes the role of chief defender of that cause. Our efforts and those of our Arab friends to pursue the path of a just and durable negotiated settlement are abhorrent to him. We will prove him wrong.

Qadhafi has attempted to garner support from his fellow Arabs. He managed to obtain a resolution and a

declaration critical of our economic sanctions from the Organization of the Islamic Conference ministerial meeting in Fez, but most Arab governments publicly deplore acts of terrorism and privately encourage us to take measures to deal effectively with terrorists. For too many years Qadhafi has directed violence against his Arab brothers. His invasion of Chad; plots to destabilize Egypt, Sudan, and Tunisia; and attempts to assassinate Egyptian officials have won him few friends.

Lebanon

We have been following the situation in Lebanon closely and with concern as discussions over the tripartite accord continue. The United States remains fully committed to Lebanon's sovereignty, independence, and territorial integrity. It is our firm conviction that there is no military solution to the political problems of that troubled country. We have supported, and continue to support, a dialogue among the various factions in an effort to reach a genuine consensus on Lebanon's political future. Any solution, if it is to be viable, will require broad support in all communities.

All Lebanese lose from continuing violence. Abandoning the political dialogue at this stage undercuts the efforts that have been made toward strengthening the political process. There is no substitute for dialogue. We have repeatedly urged the parties to focus on the dialogue essential to the establishment of a political consensus.

For these reasons, I want to remind the subcommittee of the importance of the UN Interim Force in Lebanon (UNIFIL). UNIFIL has played a constructive role in helping to provide stability in southern Lebanon and, thereby, contributes to the security of the Lebanese-Israeli border. Dissolution of the force will create a power vacuum in its current area of operations which may trigger serious fighting and give free rein to radical groups. Once dissolved, UNIFIL would be extremely difficult to recreate. For these reasons, the Administration opposed congressional action to reduce by $21.6 million our fiscal year 1986 contribution to UNIFIL.

In addition to UNIFIL, the United States also supports the several other international organizations which play key roles in stabilizing the highly volatile Middle East situation—organizations that merit our continued support. They include the UN Disengagement Observer Force on the Golan Heights, the Multinational Force and Observers in the Sinai, and the UN Truce Supervisory Organization. We provide men and/or money for these operations, either directly or through our contributions to the United Nations. The tragic plane crash in Newfoundland before Christmas reminded all of us of the quiet but very successful role the Multinational Force and Observers has played in the Sinai in ensuring that the Israeli-Egyptian peace treaty is carried out. We honor these young men and women who gave their lives on a mission to bring peace to the Middle East.

Iran-Iraq War

The Iran-Iraq war continues to consume the national energies and resources of both countries. It is now well into its sixth year, and there are no signs that it is nearing an end. Indeed, Iran has been making intense efforts over the past several weeks to position itself for yet another major offensive against the defensive positions the Iraqis have established well within Iraq's recognized borders. Several governments and regional, Islamic, and nonaligned organizations as well as the United Nations have offered to facilitate discussions with the two belligerents in an effort to end the war. Over the past 3 years, Iraq has been willing to engage in such discussions in various prospective fora, while Iran has declined to participate except under conditions which are unacceptable to Iraq.

Our policy has not changed since the last time we met. The United States is neutral in the conflict, and we are not considering changing that policy. We have a firm policy of not supplying war-making materiel to either Iran or Iraq. We are in active contact with all potential mediators and have encouraged them to keep up their efforts, despite the repeated rebuffs they have experienced. We profoundly hope that, perhaps after the next round of fighting which may take place at any time, both parties will be amenable to such discussions. In the meantime, the war drains both nations of their young men, their financial resources, and their national energies at the same time that it wreaks havoc on civilians on both sides of the border.

Because Iran has stubbornly refused to agree to discuss the end of the war except on terms which are clearly unacceptable to the Iraqi side, we have chosen to exercise what limited influence we have to deny Iran additional armaments. To that end, we have encouraged governments with whom we have close relations to forgo the economic benefit of significant arms trade with Iran. We have had substantial, if incomplete, success in this effort.

The use of chemical warfare has continued, and there is recent disturbing information that both sides may be prepared to use it in upcoming battles. We have spoken out against the Iraqi use of chemical warfare, and we continue to encourage both sides to forswear its use. As the war effort is sustained, it also creates conditions and circumstances which are dangerous and explosive. That the war might spread to neutral countries in the gulf continues to be of concern to the United States. The recently energized Iranian policy of boarding and searching, and sometimes seizing, "contraband" on neutral shipping is also worrisome because of its potential for miscalculation and violence.

Persian Gulf
Freedom of Navigation

In this connection, the American President Lines' ship *President Taylor* was boarded briefly by the Iranian Navy on January 12 while it was in international waters outside Iran's war zone. There is a basis in international law for ship searches by belligerents. At the same time, we consider the Iranian policy to be one of the significant negative consequences created by the Iran-Iraq war. The dangerous conflict between Iran and Iraq now continues because of Iran's intransigent refusal to participate in a negotiated solution. We have stated our deep concern about this incident because of the danger of misunderstandings, overstepping of rights and norms, and even violence which is inherent in all ship search incidents.

South Yemen

The situation in the People's Democratic Republic of Yemen (P.D.R.Y.) remains unclear. Members of the ruling party congress declared on January 25 that the Prime Minister (previously in Moscow) was made deputy head of state, provisionally holding the powers of head of state. We understand that this new regime has not been established by a necessary quorum of the P.D.R.Y. Central Committee. No government has yet acknowledged the legitimacy of the new formulation. The

U.S. Government has no relations with P.D.R.Y. and has no intention of recognizing or dealing with the rebels. However, we are concerned that the Soviet Union, by its increasingly evident support for the rebels in Aden and Prime Minister Attas, appears to be taking sides on behalf of one faction in the still unresolved internal political struggle in South Yemen.

As far as we can tell, supporters of President Ali Nasir Muhammad continue to battle supporters of the coup, and the fighting is apparently extending into the hinterland. The genesis of the coup is also unclear. The opponents of the President appear to be hard-line Marxists opposed to President Ali Nasir's policies of ending his country's support for insurgents in Oman and North Yemen. However, we assume there is a strong dose of pure political opportunism. Additionally, fighting is apparently breaking down along tribal lines as well as ideological ones.

The Soviets have maintained a significant presence in the P.D.R.Y. for many years. They have been active in helping arrange for the evacuation of foreigners and have maintained an official stance of noninvolvement while sponsoring talks aimed at reconciling the warring factions. However, even prior to the new rebel formulation recently announced, there have been some indications of seemingly direct Soviet involvement in aid of the rebels. For example, there have been reports from refugees in Djibouti of Soviets helping to direct fire for the rebels or in unloading ammunition. We cannot confirm these stories. There have also been prorebel statements made in Moscow by Yemeni leaders who were outside the country when the coup attempt began and have since gone to Moscow. Soviet statements have been veering increasingly toward support of the coup leaders. The Soviets officially state that they are against outside intervention. We hope that they mean it.

We are concerned that the outcome not reinvigorate threats to Oman and North Yemen which could be profoundly destabilizing on the Arabian Peninsula. The loss of life has reportedly been high, and we hope that the struggle will be resolved quickly in a way that will promote stability in the country and the region as a whole.

[1]The complete transcript of the hearings will be published by the committee and will be available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. ■

U.S.-Japan Salmon Talks

The United States and Japan have been engaged in negotiations to resolve the problem of Japanese fishermen catching U.S. salmon on the high seas. The salmon migrate great distances in the ocean before returning to Alaskan rivers where they spawn. Both nations recognize that the International North Pacific Fisheries Commission (INPFC) protects most North American-origin salmon stocks. However, since 1984 scientific studies have indicated that the Japanese fleet intercepts significant numbers of salmon of North American-origin in those areas where the Japanese fish for salmon on the high seas. These interceptions have a significant impact on the United States, particularly on small communities of western Alaska. Therefore, the purpose of these negotiations is to reduce significantly those interceptions.

However, the United States and Japan to date have been unable to agree on what measures should be taken by Japanese fishermen to reduce their catches of North American-origin salmon, which U.S. scientists estimate to number approximately 1 million per year. Six negotiating sessions have been held during the course of the past year in an effort to resolve this question. The United States is disappointed that very little progress has been made in these negotiations.

The United States recognizes that most of the salmon caught on the high seas by Japanese fishermen are not of North American origin and does not propose to eliminate the Japanese fishery for salmon of Asian origin. Japan has been asked not to fish at times and in areas where substantial numbers of U.S. salmon are taken. The United States is willing to allow Japanese fishermen to continue to fish inside the U.S. 200-nautical-mile exclusive economic zone. Also the United States is prepared to reconsider the extent of the areas proposed to be closed to Japanese vessels if subsequent scientific evidence indicates that substantial numbers of U.S. salmon would not be saved by moving the Japanese fishery further west.

The United States does not believe that this proposal would have a seriously disruptive impact on Japanese fishermen. On the other hand, a substantial savings of U.S. fish would be of considerable benefit to the economically depressed Alaskan communities which are heavily dependent for food and subsistence on the salmon which return to U.S. rivers.

The United States particularly is disappointed in the unwillingness of Japan to demonstrate flexibility on this issue in light of the close cooperation which exists between the U.S. and Japanese fishing industries. The Japanese fishing industry has been making an important contribution to the development of the U.S. fishing industry, in return for which Japanese fishermen have received substantial allocations of U.S. groundfish, such as Alaskan pollock. If the salmon issue is resolved, Japan could expect to receive about 500,000 metric tons of bottomfish in 1986. However, it will be very difficult to release this amount unless the salmon issue is resolved.

The United States believes it is in the interest of both countries to be flexible in the salmon negotiations and is hopeful that the matter can be resolved in the near future in an equitable manner that takes into account the fishing interests of both countries.

Press release 13 of Jan. 16, 1986. ■

International Family Planning

by M. Peter McPherson

Address before the American Enterprise Institute on November 25, 1985. Mr. McPherson is Administrator of the Agency for International Development (AID).

Starting about 20 years ago, there began to be a growing awareness of the high rates of population growth in many developing countries of the world. Indeed, rates of population growth in many poor countries today are as high as 3% or 4% a year. This contrasts with much slower growth rates in developing countries only a few decades ago. The recent and unprecendented growth rates are a consequence of lower mortality without corresponding reductions in fertility. Donor agencies can be proud of the role they have played in significantly improving the standards of health in developing countries.

I am sure in this room there is a variety of viewpoints on the subject of population growth. Some believe current high rates of growth constitute a global crisis; others are equally convinced that there is no cause for alarm. For some time there has been an active debate surrounding these differences. The question has centered on the relationship between population growth and economic growth and on abortion.

This debate has been characterized by strongly held and often polarized convictions. But the debate has usually failed to take into account a most important set of reasons for family planning programs. Specifically, there has been little attention to the interests of families and individuals. This is unfortunate since the availability or lack of family planning services is of enormous consequence to some families and individuals. These family and individual interests fall into three categories:

- The desire of couples to determine the size and spacing of their family;
- Mother and child survival; and
- Reduction of abortion.

The Right of the Family To Choose

The right of the family to choose the number and spacing of their children was strongly reaffirmed by international consensus at the International Conference on Population in Mexico City in 1984. Governments should not dictate the number of children couples can have. However, family planning services should be encouraged so that people really do have the option, if they desire, of fewer children.

Families make decisions in their own interest based upon their social and economic and religious situation. Change, including urbanization and lower child mortality, has created a new situation for millions of families throughout the developing world. Once, most families wanted and needed more children to contribute to the family's agricultural production and to ensure that enough children survived to care for their parents in their old age. Fifty percent or more of the populations of many developing countries are now urban, and there is even a very strong urban trend in Africa. Moreover, many children who would have died formerly now live because of improved health services. Accordingly, the world is simply very different for many families, and they need and want fewer children.

Also, many families feel they can do more for each of their children—for example, provide a better education—if they have a smaller family. In many areas of the developing world, couples are having eight or nine or more children. When the financial and emotional resources of these families are divided among the children, the frequent result is that the children are undernourished and there is little money for education and health care for each child. Family planning services would give these couples the opportunity, which many currently do not have, of concentrating the resources of the family on fewer children. We can debate the impact of population growth on economic growth in a country, but there is no question that many families feel they can do more for each child if they have fewer children.

Fewer children are an option which American families take for granted. I suspect that most of us here are pleased that we have, and our children will have, available the information and services so that we can decide the size and spacing of our own families. We must remember that these services are not available to millions of families in the Third World. The unfulfilled desire of Third World families to have fewer children is not just Western speculation. Surveys show a large number of women who would like to space births or limit their family size but cannot because no services are available. The percent of such women is highest where few services are available—it is 67% in Bangladesh where only 13% of couples use contraceptives; 22% in Costa Rica where 65% of couples are currently using contraceptives.[1] A carefully monitored project in Matlab Thana in Bangladesh demonstrated that when high in quality family planning services were made available to poor villagers on a voluntary basis, contraceptive prevalence increased from 6.9% to 35%.[2]

Health and Survival of Mothers and Children

The health and survival of mothers and children provides a second important reason for family planning. We know that one of the most serious consequences of women having many children in quick succession is that more children and mothers die. Studies of child mortality conducted in 26 countries have confirmed that a child born within 2 years of an earlier birth is twice as likely to die as a child born after an interval of 2 or more years. Also, the older child is more likely to die if there is another child born within 2 years.[3] It is estimated that spacing all births at least 2 years apart would reduce the deaths of children under 4 years by 21%.[4]

Maternal health is also affected by the number and spacing of children and the age of the mother. As many as 200,000 maternal deaths per year are attributed to too many pregnancies, too early or too late in the reproductive period.[5]

These are dramatic statistics that family planning saves lives: it is a critical component of mother and child survival. The Administration, with strong congressional support, has launched a strong health component of our foreign aid program, focused particularly on interventions to save children—for example, immunizations and oral rehydration therapy. It makes sense to encourage a life-saving family planning service as part of our health efforts.

Reduction of Abortion

A third reason for family planning is the reduction of abortion. When couples want fewer children and family planning services are not accessible, abortion is often resorted to. This is true whether or not it is legal. It is estimated that more than 25 million abortions occur in developing countries each year, compared with 113 million births.[6] Evidence from some Latin American and Asian countries indicates that as many as one out of three women have had an abortion. Many of these abortions would be prevented if family planning services were available. The Mexican Social Security Administration estimates that it has prevented 360,000 abortions since family planning services began in 1972.[7] In Chile, the number of women seeking help in hospitals for complications from illegal abortions declined substantially after 1965 when modern family planning services began to become widely available.[8]

Based solely on these three family and individual needs—i.e., the families' desire to determine the number and spacing of children; mother and child survival; and reduction of abortion—I believe assistance to family planning programs is necessary.

Economic Growth and Development

Next, I would like to discuss the relationship between economic growth and population growth. This relationship has been the center of recent controversy. The debate has tended to be characterized by two extremes.

Some have argued that rapid population growth rates are a worldwide crisis and a primary reason why more progress has not been made in the Third World. The crisis perception of population growth has been tempered in the minds of some—though not all—because of declining birth rates in several countries and the recognition that human resources and technological innovation provide a key response to the needs of a growing population.

Unfortunately, a careful study of the data does not fully clarify the relationship between population growth and economic growth. For one thing, it is difficult to separate out population growth rates from all other factors affecting economic growth. Nevertheless, it appears that a number of countries with sustained economic growth in recent decades also had widespread and effective family planning services and reduced population growth rates. The Pacific Rim, for instance—Korea, Taiwan, Singapore, Hong Kong, and others—comes to mind. It is not clear how much of the population growth reductions in these economies came because of economic growth or, on the other hand, what contribution the reduced population growth rates made to economic growth. In any case, in the Pacific Rim the availability of family planning services, moderate population growth rates, and sustained economic growth tend to go hand in hand.

In contrast, there are a number of countries where there are high population growth rates and slow economic growth. The situation in Africa is especially noteworthy. In many countries there has been a negative per capita growth for a sustained period and very high population growth rates.

Let me review the arguments of those who say that very high population growth rates reduce economic growth in some countries. They argue that a poor nation with too high a population growth rate cannot make the investment in education, health, and so forth, because of the ever-growing wave of new children. Some also argue that population growth rates can have a negative impact on the degradation of the land.

The other side contends that nations, over time, are able to adjust to the pressures of more people; indeed, that the pressure may be a very important stimulus to innovation and growth. It seems to me that those taking the position that nations can adjust must assume a degree of political flexibility. They may underestimate, for example, the tribal conflicts, the urban exploitation of a rural majority of many African countries, and famines. Also, those who assume that all nations can adjust may not be realistic in judging the ability of fairly primitive societies to obtain technological innovation. In short, the situation may be so severe that reasonable adjustments will not occur in a timely fashion and countries just sink deeper into poverty.

Let's talk about economic development for a moment. I think that some components are clearly needed to obtain economic growth—components about which there is a growing consensus.

The first component is sound market—oriented economic policies, without which the economic and social aspirations of countries cannot be achieved. There also are several other components which countries usually need to meet to achieve sustained growth. Among the most important is human resource development—for example, education and training. (Nobel Prize winner Dr. Theodore Shultz has documented the role of human resources in economic growth.) Another critical component is technology. Without the Green Revolution technology, India might well still have terrible famines rather than being more or less self-sufficient in grain production. It is no coincidence that Africa, with its low economic growth, has a very high rate of illiteracy and needs a Green Revolution of its own.

I would like to note that AID has worked hard for the last 5 years to promote sound economic policies and is spending substantial money on both training and research in the Third World.

Yes, sound economic policies and various development efforts are critical to economic growth. However, as suggested above, family planning has been part of successful packages in some key countries in recent years. Based upon that, I feel that sound economic and population policies are mutually supportive components of a country's plans for economic growth. This was the position taken by the Administration in Mexico City, and it remains our position.

As I have stated above, I think that we should support strong family planning programs in the interests of families and individuals. I think that these interests alone justify the program even if there were no impact on economic growth. The impact of population growth on economic growth is debatable. But almost no one argues that family planning hurts economic growth, and it is rare, indeed, to hear it argued that very rapid population growth contributes to economic growth.

In any case, I think the above observations about Asia and Africa make family planning a common sense bet for economic growth. I know that the computers do not give a clear answer, but, as I travel around the world and feel and see Lagos, Mexico City, and Dhaka, I am willing to go with the bet.

Support for Family Planning

In fiscal year 1985, AID spent $290 million (2.5% of our total economic assistance budget) on international family planning assistance. This is up from the $190 million which was spent in 1981. This Administration has always asked Congress for as much or more for family planning as we did the year before. There should be no doubt as to our commitment to this effort. I believe that this is money well spent. Even with such a small portion of our total budget, we have provided millions of families with the ability to achieve their own family goals.

Now let me turn to the issue of abortion. This Administration has been consistent in its opposition to abortion as a method of family planning and its strong support for the availability of voluntary family planning services. AID's goal has been to administer fairly and with common sense this two-prong policy. We have been in the political crossfire. Neither pro-life groups nor family planning groups fully trusted the other, and AID has been caught in the middle. Nevertheless, it is my view that we have faithfully carried out both policies in the best way possible. We have applied our antiabortion and pro-family planning positions to the particular circumstances of our program. You can count on our continuing to pursue our two-prong policy. I sincerely invite pro-life groups to carefully review how effective we have been in opposing abortion. I also ask that pro-family planning groups note that the Reagan Administration has always asked Congress for as much or more money for family planning as we have asked the year before. This is a program which has not been cut by the Administration, and that truly is saying something in these times of budgetary stringency.

Conclusion

I have not discussed the political stability of friendly countries and the impact that population growth rates may have on such countries. Obviously, all of our friends have not been models of sound economic policies, and the adjustment process may be costly to them and us.

In closing, I want to reiterate the important impact which voluntary family planning services have upon developing countries. For the family, the ability to determine freely and responsibly the number and spacing of one's own children is basic. For a mother, the ability to space or limit her pregnancies may mean the difference between illness and health, between life and death. For children to be reasonably spaced may mean the chance of adequate nutrition or even the chance to survive at all. For the family, fewer, well-spaced pregnancies may mean the chance for educational opportunities for all children. For parents, it may mean control over their own decisions. It may also mean the avoidance of the tragic abortion which is often the last resort of desperate parents. For a father and mother coping with poverty and the disintegration of traditional support systems, it may mean a lessening of strains on the family structure. For these reasons alone, international family planning programs should be supported.

Finally, we believe that experiences in Asia and Africa have something to say about family planning and economic growth. Accordingly, we see family planning and economic policies as mutually supportive components of economic growth.

Soviet Influence on Afghan Youth

The following paper was prepared by Paul Trottier, intelligence research specialist for South Asia of the Bureau of Intelligence and Research.

A major impediment to Soviet influence over Afghan youth is the inability of the Soviets and the Democratic Republic of Afghanistan (DRA) to govern more than a fraction of the country. Despite control of Kabul, the capital and largest city, the overwhelming majority of the population lives outside the government's control. Even in areas under Soviet and regime authority, Soviet/Afghan regime influence appears to be minimal.

The Soviets have adopted a long-term approach to pacifying Afghanistan, with the goal of making it a pro-Soviet state. Educating and influencing Afghan youth are important elements of this approach. The Soviets pursue this policy by reducing illiteracy, disseminating propaganda, and attempting to gain widespread acceptance for Marxist ideology, the Kabul regime, and Soviet hegemony. At the very least, they hope to develop a small pro-Soviet cadre that ultimately can succeed to the leadership of the DRA.

The Soviets thus far have made little progress—primarily because most Afghans reject any form of outside domination and hold religious beliefs that view communism as evil. However, a small cadre of pro-Soviet youth may have emerged in Kabul, particularly among those recruited into KHAD (the secret police). This cadre is a useful Soviet foothold and, if expanded, could become an important factor in the long-term effort to transform Afghanistan. But only if the Soviets consolidate control over much more of the country can they hope to gain widespread support among Afghan youth for Marxist ideology and the Kabul regime.

Background

The Soviet Union has attempted to exercise influence over Afghanistan by intimidating and indoctrinating the Afghan people and by gradually molding Afghan economic, political, and social life along Soviet lines. Measures designed to promote these aims have included land reform, government control of agriculture, eradication of illiteracy, revision of the school curriculum to reflect Marxist objectives, and imposition of a Soviet-style judicial system.

Because of widespread opposition to their policies in Afghanistan, the Soviets do not rely entirely on military pressure. Changes that the Afghans might consider antagonistic to their religion and way of life—such as land reform and the introduction of non-Islamic education, government, and legal systems—are now carried out gradually. The current regime, led by Babrak Karmal and dominated by his Parcham faction of the People's Democratic Party of Afghanistan (PDPA), has tried to appear pragmatic, Islamic, and consistent with Afghan tradition. This approach, heavily influenced and probably directed by the Soviets, differs greatly from that of Hafizullah Amin, the Marxist ruler deposed in 1979. Amin's radical "reforms" served as a major spur to the insurgency.

Soviet methods in Afghanistan resemble those used to overcome the *basmachi* rebellions that lasted from 1917 until the 1930s in what today is Soviet Central Asia. (Soviet Central Asia and parts of Afghanistan both contain Tajik, Turkmen, and Uzbek ethnic groups.) In Central Asia, Moscow fought against many small guerrilla groups who perceived a Soviet threat to their traditional lifestyles. Poorly organized and plagued by internecine fighting, the Central Asian resistance gradually collapsed. The Soviets apparently hope that divide-and-rule tactics, the gradual introduction of Soviet institutions, and a proclaimed tolerance for Islam eventually will produce a similar result with the Afghan resistance (self-described as *mujahidin* or "holy warriors"), referred to in the Soviet press as *basmachi* ("bandits").

Education of Afghans in the Soviet Union

Education and training programs instituted for Afghans in the U.S.S.R. during the mid-1950s involved only a few hundred students and varied considerably in size and purpose. Since the communist takeover, the number of students annually educated in the U.S.S.R. has grown to the thousands.

The Soviets probably have several reasons for educating Afghans in the U.S.S.R. First, it allows for greater ideological influence. Second, the Soviets may believe that, with gradual familiarity and exposure to a higher standard of living, the students will begin to like the Soviet way of life. However, there is little evidence to indicate that the Soviets

are any more successful at indoctrinating Afghan youth than they have been with those from other countries.

Number of Afghans Studying in the U.S.S.R.

According to the best available estimates, at least 25,000 Afghans have been sent to the U.S.S.R. since the mid-1950s for formal, postsecondary technical or academic training. The actual number may be double these minimum figures, still a relatively small number considering the total population is estimated at nearly 15 million.

From the late 1950s through most of the 1970s, full-time education for Afghans in the U.S.S.R. generally was limited to military training. By 1978, about 700 Afghans were enrolled in postsecondary academic studies in the U.S.S.R. Under the communists, this number probably increased to more than 4,000 in 1979 and may exceed 15,000 today. With the possible exception of Vietnam, there are now more students from Afghanistan in the U.S.S.R. than from any other country.

In addition, about 2,000 military trainees and thousands of younger Afghans are sent to the U.S.S.R. annually. In the past, most of the children remained only for short periods of time in the summer. In late 1984, however, the DRA announced plans to send several thousand children to the U.S.S.R. for extended periods of training and indoctrination. They were to remain in the Soviet Union for 10 years or longer; however, intense family resistance may eventually force the DRA to shorten the stay.

Location of Training

According to Kabul press reports in January 1985, Afghan students were enrolled in 66 educational institutions at 24 different locations. Most students reportedly are in Moscow, Tashkent, Kiev, Baku, and a number of other cities, primarily in the Asian republics. Military training occurs at Soviet military camps and bases. Some students are sent to other Warsaw Pact countries.

Content of Training/Schooling

Training in the U.S.S.R. varies greatly depending on the student's age and purpose of the instruction. Elementary and secondary pupils learn essentially what Soviet students do. College-age youths study in many fields, including medicine, engineering, and law. Still others may receive specialized counterinsurgency training.

Mujahidin leader Abdul Haq claimed in 1984 that over the previous 6 months his men had captured about 20 child soldiers between 8 and 15 years of age who had been trained in the Soviet Union. Such training probably occurs on a limited basis for the purpose of infiltrating resistance groups.

Students Returning to Afghanistan

Although Afghan students return from the Soviet Union with technical, operational, or administrative skills, they differ in terms of ideological commitment to the U.S.S.R.

Many Afghans appear to be antagonistic toward the Soviets because of the great cultural differences between the two countries. Many perceive the Soviets to be immoral and godless. Most Afghans are shocked by the sexual equality promoted by the Soviet media and the widespread consumption of alcohol in the Soviet Union.

Some students reportedly resent the Soviet Union because of the hostility Soviet citizens display toward them, even in areas of ethnic affinity in Soviet Central Asia. This hostility may be due to prejudice, particularly in non-Muslim areas of the U.S.S.R., or to a feeling that the students somehow were responsible for the death and injury of Soviet soldiers in Afghanistan.

Returnees usually are not assigned to positions in Afghanistan that would help spread communist influence. They are evidently reluctant to go to the countryside and smaller cities where the Soviets lack control and where assassinations of regime workers are commonplace. Instead, most graduating students live in Kabul, where some work for the Interior Ministry or KHAD. Some choose to remain unemployed in Kabul rather than accept an assignment outside the capital.

Changes in Afghanistan Under Marxist Rule

Police and Military Service

KHAD, an acronym for State Information Services, is the Afghan secret police. Its activities are closely monitored and probably directed by the Soviet KGB.

The Soviets have enjoyed some success in developing a youth cadre within KHAD. Identified by their distinctive modern dress, these young opportunists have become widely unpopular because they are perceived as young toughs carrying out Moscow's orders. Once affiliated with KHAD, these youths are considered suspect by the *mujahidin* and consequently cannot defect as can other Afghans, including those from the military.

Admission of males to postsecondary schools inside Afghanistan is contingent upon service with the military (currently 3 years), enrollment at the DRA military or police academies (currently 3 years), party work, or membership in KHAD. These entrance requirements are sometimes waived for those who study in the U.S.S.R. or other bloc countries or who have family connections to the party. But it is unheard of for a male to receive a diploma for secondary or university studies unless he completes military service, belongs to the PDPA or KHAD, or is related to someone with party connections.

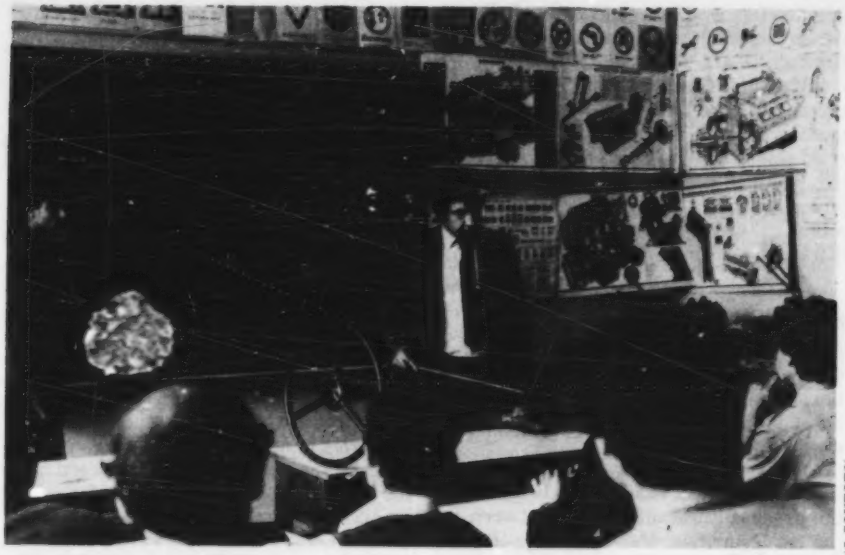
Military Training

Prior to the communist takeover in 1978, the Soviets had trained several thousand Afghan military officers and provided military assistance. Since then, the Soviets have substantially deepened their commitment.

In keeping with the Soviet emphasis on indoctrination, every Afghan soldier must attend weekly political education sessions. Initial Soviet military training reportedly focuses on military-patriotic themes to prepare the students morally, politically, and psychologically for the "defense of the Fatherland." The Karmal regime and Soviet advisers have copied these themes and incorporated them into Afghan training programs. However, many troops are illiterate, and others are not interested in political education.

Religion

Because of severe domestic opposition to Amin's attempts to eliminate Islamic pedagogy, the Karmal regime uses a twofold approach in the relatively small number of schools under Soviet control. In public schools the study of communist ideology is promoted at the expense of Islam. Some Islamic teaching is permitted so long as it excludes negative references to the state, the party, or socialist ideology, but scientific socialism and dialectical materialism classes have largely replaced Islamic studies. Class time devoted to Islam has been reduced.



(© SOVFOTO)

Class taught in Russian at the Soviet-built Kabul Polytechnic Institute.

Although mosque schools continue to teach Islam much as before, the Soviets monitor and censor antigovernment activities.

Despite the regime's attempts to portray itself as a defender of Islam, trumpeting such moves as mosque renovation and the creation of a Ministry of Islamic Affairs, most Afghans consider the DRA to be anti-Islamic. Although the open denunciation of Islam that existed under Amin's rule is avoided, courses in ideology often contain implied criticism.

Day Care

The Soviets recently have focused on influencing very young Afghans, starting with preschool or nursery-age children, although efforts to date have not been well-organized or sustained.

Karmal's wife is president of the *Watan* nurseries (state-run orphanages), which the DRA claims house 4,000–6,000 children. The actual number may be only a few hundred. According to the *Kabul New Times*, these nurseries exist in the cities of Kabul, Qandahar, Jalalabad, Herat, Mazar-e-Sharif, Sheberghan, Lashkar-Gah, and Farah. The regime states that they educate and care for children whose parents have died in the Afghan war, particularly orphans of party members or military personnel. Many children sent to the U.S.S.R. for extended training have come from the *Watan* nursery system.

Formal Education

Conditions. Afghanistan's educational system has never been extensive. The system met the needs of only a fraction of the people before the communist takeover in 1978. More than 90% of the Afghan population was illiterate, and less than 20% of Afghan youth had access to schools. More than 80% of those enrolled attended primary schools that lacked adequately trained teachers and such basic materials as pencils and paper. Because much of Afghanistan's population lives in rural areas that have been only marginally associated with the government in Kabul, the few village schools were operated by local mullahs who did little more than teach young boys recitations from the Koran and other religious lessons. Few girls received any instruction.

Before the communist takeover, secondary schools accounted for barely 4% of the total school enrollment. Of those fortunate enough to graduate, only 1% gained university admission. Nevertheless, Afghanistan had improved its schools. The number of schools rapidly increased during the decade prior to the April 1978 communist revolution, and a team from Columbia University was helping to implement a new curriculum.

Since the communist takeover, however, 30% of Afghan teachers reportedly have fled the country or have been executed or imprisoned. The immediate need for teachers has diminished largely because of the destruction or abandonment of most schools. The number of elementary and secondary schools probably has dropped more than 95%.

In addition to the Soviet-aided Polytechnic Institute, Afghanistan has two universities: Kabul University and Nangarhar University (in Jalalabad). Since the Soviet invasion, military conscription, emigration, imprisonment, political purges, and the resistance movement have cut sharply into the ranks of male students and teachers at Kabul University. Student enrollment reportedly has dropped by more than half.

Student Body. Before 1980, the vast majority of the students were men, as is common in Muslim countries. Today, most students are women because many eligible men have fled the country, joined the resistance, or been conscripted. Almost all of the few remaining male students are in the military, KHAD, or the People's Democratic Party of Afghanistan.

Although a higher percentage of students in secondary and higher education today are women, the total number of females in school may well be less than before the communist takeover—mainly because of the reduced number of schools. For example, about 30 women (all nursing students) and apparently no men were enrolled at Nangarhar University in the fall of 1983, down from an enrollment of about 400 before the communist takeover.

Curriculum. Shortly after the April Revolution in 1978, the communist regime instituted a "new educational system." Afghan officials, in cooperation with Soviet advisers, developed a curriculum designed to promote Marxist-Leninist ideology and the Soviet way of life.

After Soviet advisers were installed in the Ministry of Education, the Ministry reduced the term of primary and secondary schooling from 12 to 10 years, bringing it into conformity with the Soviet educational system. Moveover, educational authorities altered almost one-third of the curriculum to reflect the new pro-Soviet and communist orientation. In primary and secondary schools, about 8 hours of the 30-hour school week are spent on courses developed or modified since the communist takeover. These courses usually consist of 3 hours of scientific socialism, 3 hours of dialectical materialism, and 2 hours of the modern history of Afghanistan. Russian is now mandatory; English, French,

German, and other Western languages generally have been phased out.

All cultural and technical cooperation with Western nations—including substantial educational programs conducted by the United States, France, and West Germany—was terminated in early 1985.

The history curriculum, as taught in government schools, describes the Soviet invasion as military assistance that helped save the 1978 revolution and guarantee the country's social, economic, and political progress. The PDPA and the Karmal regime are glorified, and Afghan history is depicted as a struggle against imperialism. Islamic studies have been reduced from about 6 hours to 1 hour per week.

Courses now taught in all college departments include "Principles of Marxism-Leninism," "Political Economy," "Dialectical and Historical Materialism," and "History of the Party."

Textbooks and Materials. Soviet officials have revised Afghan textbooks to reflect pro-Soviet and pro-communist attitudes. Since 1978, Afghan school and university textbooks have been printed in the Soviet Union or in Afghanistan under the direction of Soviet technical and editorial advisers. Most are now published in Tashkent or Baku. Some are slightly modified versions of Soviet texts, with praise for Karmal replacing praise of Lenin.

Afghan bookstores, which supply schools and other organizations, feature Soviet books. Emphasis appears to be placed on children's books, with inexpensive, well-printed, colorful works such as "Tales About Lenin" in abundant supply.

Staff. Soviet teachers, instructors, and advisers play key roles in Afghan education. Throughout the Afghan Government—including the Ministry of Education to which Moscow assigned advisers in 1978—Soviets approve all important policies and help design and implement new curricula. For example, a Soviet Uzbek is said to head the recently created Uzbek Department in the Afghan Ministry of Education.

The Soviets reportedly control the teacher training programs and seminars, including one funded by the UN Development Program (UNDP). The UNDP's teacher training project, which will end in 1986, finances eight Soviet teacher-trainers in Kabul and is coordinated by a Soviet citizens.

Although the Soviets may try to use UNICEF programs to improve the DRA's image, UNICEF has sought to minimize this. It has done so by concentrating on child survival activities (especially oral rehydration therapy and immunization) and by limiting its educational activities to equipping and training personnel for kindergartens, day care centers, and mainly the first two grades of a small number of primary schools. UNICEF has carefully designed the content of health education and other primary education courses so as to be apolitical. Finally, in line with a UN General Assembly resolution, UNICEF has for several years limited its activities strictly to Kabul.

Although the 1978 UNICEF Executive Board approved a program budget of $19.7 million for the period 1978–82, the activities actually realized fell far short of targets following the Soviet invasion and the funds still have not been spent. UNICEF reported to the 1985 Executive Board that with its present reduced target levels it will be able to operate through 1986 and perhaps 1987 on the basis of its original 1978 authorization.

The United States and other Western donor nations have argued successfully for restricting the size of the UNICEF and UNDP programs largely because the Soviets seek to use them to further their influence in education.

The regime has initiated ideological training programs to correct what Karmal has called the serious deficiencies in the training of teachers for social sciences and military-patriotic instruction. In 1981, the regime established a teacher training institute within the Ministry of Education to better implement the new Soviet-inspired educational program. Some Afghan teachers are, however, trained in Tashkent—the capital of Soviet Uzbekistan.

Teachers are required to attend special seminars on how to encourage youth to build a new society and enhance their political knowledge. Teacher manuals specify detailed classroom plans that leave little room for individual initiative. Although in practice schools vary in terms of class content, these training courses promote extreme uniformity: on a given day at a given hour in all schools, all teachers in a given grade are expected to do exactly the same thing, with the course prescribed in detail.

Many Soviets were needed to supplement the pool of Afghan teachers and intellectuals, whose ranks had been decimated by emigration and purges during the first years of the communist government. As many as one-third, or several hundred, current teachers and administrators may be Soviet or bloc nationals; most of the rest are poorly qualified Afghan party members. Many Afghans probably are reluctant to teach, especially in rural areas where regime control is limited.

Most Soviet teachers are Russians. Soviet Central Asians, especially Tajiks (who speak a dialect of Dari, the traditional language of educated Afghans) and Uzbeks, also are useful teacher sources.

School children in Kabul.

Soviet influence is most pervasive in higher education, especially at Kabul University. Perhaps four-fifths of the faculty at Kabul University in 1979 have been replaced by Soviet and regime supporters. Since 1981, the regime has permitted engineering students to enroll only at Kabul Polytechnic Institute, which was built and supplied by the Soviets. By 1985 the regime had closed Kabul University's School of Engineering, which had been constructed with U.S. aid, supplied with U.S. textbooks and materials, and taught by U.S.-trained faculty.

Soviets also teach and advise at technical and professional schools. An Afghan-Soviet agreement, signed in mid-1985, specified that 90 Soviet teachers will be sent to Afghanistan to organize training at 10 technical colleges to be built with Soviet aid.

Soviet advisers and professors dominate Afghan pedagogical conferences. Of 66 papers presented at a conference of the Kabul State Medical Institute in Kabul in 1985, for example, 48 had one or more Soviet authors, usually listed with Afghan co-authors. At the first two scientific and methodological conferences held at the Kabul Pedagogical Academy in 1980 and 1981, 57 of 88 papers presented were written by Soviet specialists attached to the Academy, Kabul University, and the Central Committee's Academy of Sciences.

New Educational Programs and Schools. The Karmal regime has initiated educational programs targeting Afghan youth in day-care centers, nurseries, and kindergartens, primarily in Kabul, many of them built since the communist takeover.

Although the regime has made 5 years of primary education compulsory, many parents choose not to enroll their children. In most parts of the country the regime has little power to force parents to send their children to school. Even in Kabul, probably fewer than half of the eligible students are enrolled.

The Soviets helped construct several technical schools, including the automotive technical school in Kabul, and the mining and oil technical school in Mazar-e-Sharif, spending more than 3 million rubles equipping these facilities between 1978 and 1985.

In 1980, the Soviets established the State Institute of Medicine in Kabul, amalgamating the medical school at the University. The Institute works closely with the Tajik State Medical Institute in the U.S.S.R., which provides refresher courses and postgraduate training, lecturers, textbooks, and materials.

Literacy Program

The literacy campaign launched by the Marxist regime in April 1978 has achieved little. Although the DRA claims that 515,000 pupils attended literacy courses in 1980, 550,000 in 1981, and 632,500 in 1982, and that more than 1 million people had become literate under the aegis of the People's Democratic Party of Afghanistan, there is no evidence of a major increase in the literacy rate, which probably remains below 10%. The courses consist mainly of propaganda and slogans.

The actual number of students enrolled also is much less than the DRA claims. The total number may be little more than 2,000, the majority of them women and elderly civil servants. Improvement in their ability to read and write has been limited.

Widespread illiteracy severely restricts Soviet/DRA efforts to indoctrinate the Afghan people via the printed word. The regime now relies more on radio and television for indoctrination.

Language

In areas under their military control, the Soviets have been substituting Russian for Western languages. Prior to the Soviet invasion, books written in English, French, or German were commonplace in bookstores throughout Kabul; today most available literature was published in the Soviet Union in Russian and Dari or another Afghan language. In April 1982 Russian was made a required subject in all primary and secondary schools; English, French, and German classes generally have been phased out.

To a limited extent, the Soviets have pursued a policy of linguistic fragmentation and encouragement of cultural isolation among the various Afghan ethnic groups in order to increase Soviet/DRA control. Moscow also promoted ethnic divisiveness among the Central Asian *basmachi* in the 1920s. The U.S.S.R. has been unable to implement this policy as vigorously in Afghanistan because of Soviet/DRA inability to control more than a fraction of the country and perhaps because of the adverse effect the policy would have on the PDPA, which is factionalized partly along ethnic lines.

In areas under their control, the Soviets have created separate cultural institutions for ethnic minorities. Language centers have been started for Baluch and Turcoman groups. Cultural departments have been established at Kabul University for the Pushtuns, Hazaras, Uzbeks, Baluch, and Turcomans.

Newspapers published in regional languages were introduced after the 1978 communist takeover. Examples include *Yulduz* (The Star) in Uzbek, *Kurach* (Combat) in Turcoman, and *Tong* (Dawn) in Baluchi, all begun around 1980. Fewer copies of these newspapers are published today, possibly because the Soviets realize that only a small number of Afghans are literate.

The National Fatherland Front

The National Fatherland Front is a regime-sponsored organization whose educational programs promote party goals and Marxist-Leninist themes. The front encompasses the Democratic Youth Organization of Afghanistan (DYOA), the Democratic Women's Organization of Afghanistan (DWOA), trade unions, and associations for writers, artists, and other groups. The regime attempts to gain acceptance from children in the first to sixth grades by organizing school clubs, pageants, and rallies that promote the party and communism. For children aged 10–15, the Pioneers' Organization of Afghanistan was created in 1980 under the auspices of the DYOA.

The DRA actively recruits men 15 years and older for the DYOA, but its efforts have been largely ineffectual. The DYOA reportedly recruits for local militias and then channels the recruits into indoctrination programs. It also attempts to reinforce discipline and propagate communist ideology in the Afghan military. These efforts, too, have been unsuccessful, as evidenced by poor discipline and widespread disloyalty in, and defections from, the Afghan military.

Mass Media

Soviet and Afghan radio and television broadcasts contain propaganda aimed at Afghan youth. Most Afghans evidently listen primarily to radio music and ignore or distrust the propaganda messages that are interspersed with the entertainment. For news, many listen to the BBC, *Radio Pakistan*, or Voice of America, which the Soviets have tried unsuccessfully to jam.

Status of Women

The Karmal regime prides itself on a policy of educating women and promoting equality with men, claiming to improve the status that women had prior to 1978.

In regime-held areas, women do enroll in literacy courses and can receive education and work in all the major professions. Although some women are sent to the Soviet Union for academic training, the large majority of those sent are men.

Under President Mohammad Daoud (1973–78), women advanced to high positions in the government, including cabinet seats. The smaller number of women in such positions today may be at least partly explained by the security risks to anyone serving in highly visible and/or important government positions. However, more women now work in the government or participate in politics (via party membership) at the middle and lower levels. Women also receive relatively higher salaries now than they did before the communist takeover. Female participation in the military is limited to non-combat-related duties.

Mujahidin Efforts To Counter Soviet/DRA Influences

The Afghan resistance has begun educational instruction in areas beyond Soviet control in order to lessen the disruption of the war on education. The resistance operates a number of small schools in the countryside. These schools promote the Islamic faith and Afghan independence while opposing communist ideology and Soviet occupation. Mosque schools located throughout the country also reinforce Islamic belief and practice.

The alliance of seven Afghan resistance parties in Peshawar is planning large-scale education projects for Afghans both within Afghanistan and Pakistan. Final plans will likely include developing a central educational staff, supporting primary and secondary education where possible, providing educational assistance to freedom fighters and others whose education has been interrupted, and strengthening scholarship opportunities in Pakistan and other countries.

Prospects

Thus far, among the few Afghan youth who have completed study in Soviet/DRA-sponsored schools, whether in Afghanistan or in the Soviet Union, there is no evidence of widespread support for communist ideology and control. Most appear ambivalent toward communism. Many parents have refused to allow their children to be indoctrinated, particularly if they believe the children may be isolated from the family or taught anti-Islamic ideas.

Over the long term, the Soviets may be able to develop a small, loyal cadre of supporters, provided the political and military situation remains roughly as it is today. This cadre probably will include the offspring of DRA regime leaders, those who benefit financially and politically from the current regime, orphans educated in the U.S.S.R., and young opportunists recruited into KHAD. Alone, they will be insufficient to maintain the regime or broaden its support.

The majority of Afghan youth are unlikely to adhere to Soviet ideology or support the Karmal regime in the foreseeable future because of traditional Afghan rejection of any outside domination and religious beliefs that shun Soviet culture and ideology. Should the Soviets gain control over most of the country and begin a systematic indoctrination of the population, they could gain more converts. To gain widespread support, however, would require more than a generation of concerted effort.■

UN General Assembly Adopts Resolution on Terrorism

**RESOLUTION 40/61,
DEC. 9, 1985[1]**

Measures to prevent international terrorism which endangers or takes innocent human lives or jeopardizes fundamental freedoms and study of the underlying causes of those forms of terrorism and acts of violence which lie in misery, frustration, grievance and despair and which cause some people to sacrifice human lives including their own, in an attempt to effect radical changes

The General Assembly,

Recalling its resolutions 3034 (XXVII) of 18 December 1972, 31/102 of 15 December 1976, 32/147 of 16 December 1977, 34/145 of 17 December 1979, 36/109 of 10 December 1981 and 38/130 of 19 December 1983,

Recalling also the Declaration on Principles of International Law concerning Friendly Relations and Co-operation among States in accordance with the Charter of the United Nations, the Declaration on the Strengthening of International Security, the Definition of Aggression and relevant instruments on international humanitarian law applicable in armed conflict,

Further recalling the existing international conventions relating to various aspects of the problem of international terrorism, *inter alia*, the Convention of Offences and Certain Other Acts Committed on Board Aircraft, signed at Tokyo on 14 September 1963, the Convention for the Suppression of Unlawful Seizure of Aircraft, signed at The Hague on 16 December 1970, the Convention for the Suppression of Unlawful Acts against the Safety of Civil Aviation, signed at Montreal on 23 September 1971, the Convention on the Prevention and Punishment of Crimes against Internationally Protected Persons, including Diplomatic Agents, concluded at New York on 14 December 1973 and the International Convention against the Taking of Hostages, concluded at New York on 17 December 1979,

Deeply concerned about the world-wide escalation of acts of terrorism in all its forms, which endanger or take innocent human lives, jeopardize fundamental freedoms and seriously impair the dignity of human beings,

Taking note of the deep concern and condemnation of all acts of international terrorism expressed by the Security Council and the Secretary-General,

Convinced of the importance of expanding and improving international co-operation among States, on a bilateral and multilateral basis, which will contribute to the elimination of acts of international terrorism and their underlying causes and to the prevention and elimination of this criminal scourge,

Reaffirming the principle of self-determination of peoples as enshrined in the Charter of the United Nations,

Reaffirming also the inalienable right to self-determination and independence of all peoples under colonial and racist regimes and other forms of alien domination, and upholding the legitimacy of their struggle, in particular the struggle of national liberation movements, in accordance with the purposes and principles of the Charter and of the Declaration on Principles of International Law concerning Friendly Relations and Co-operation among States in accordance with the Charter of the United Nations,

Mindful of the necessity of maintaining and safeguarding the basic rights of the individual in accordance with the relevant international human rights instruments and generally accepted international standards,

Convinced of the importance of the observance by States of their obligations under the relevant international conventions to ensure that appropriate law enforcement measures are taken in connection with the offences addressed in those conventions,

Expressing its concern that in recent years terrorism has taken on forms that have an increasingly deleterious effect on international relations, which may jeopardize the very territorial integrity and security of States,

Taking note of the report of the Secretary-General (A/40/445 and Add.1-2),

1. *Unequivocally condemns*, as criminal, all acts, methods and practices of terrorism wherever and by whomever committed, including those which jeopardize friendly relations among States and their security;

2. *Deeply deplores* the loss of innocent human lives which results from such acts of terrorism;

3. *Further deplores* the pernicious impact of acts of international terrorism on relations of co-operation among States, including co-operation for development;

4. *Appeals* to all States that have not yet done so to consider becoming party to the existing international conventions relating to various aspects of international terrorism;

5. *Invites* all States to take all appropriate measures at the national level with a view to the speedy and final elimination of the problem of international terrorism, such as the harmonization of domestic legislation with existing international conventions, the fulfilment of assumed international obligations, and the prevention of the preparation and organization in their respective territories of acts directed against other States;

6. *Calls upon* all States to fulfil their obligations under international law to refrain from organizing, instigating, assisting or participating in terrorist acts in other States, or acquiescing in activities within their territory directed towards the commission of such acts;

7. *Urges* all States not to allow any circumstances to obstruct the application of appropriate law enforcement measures provided for in the relevant conventions to which they are party to persons who commit acts of international terrorism covered by those conventions;

8. *Further urges* all States to co-operate with one another more closely, especially through the exchange of relevant information concerning the prevention and combating of terrorism, apprehension and prosecution or extradition of the perpetrators of such acts, the conclusion of special treaties and/or the incorporation into appropriate bilateral treaties of special clauses, in particular regarding the extradition or prosecution of terrorists;

9. *Urges* all States, unilaterally and in co-operation with other States, as well as relevant United Nations organs, to contribute to the progressive elimination of the causes underlying international terrorism and to pay special attention to all situations, including, *inter alia*, colonialism, racism and situations involving mass and flagrant violations of human rights and fundamental freedoms and those involving alien occupation, that may give rise to international terrorism and may endanger international peace and security;

10. *Calls upon* all States to observe and implement the recommendations of the *Ad Hoc* Committee on International Terrorism contained in its report to the General Assembly at its thirty-fourth session;

11. *Calls upon* all States to take all appropriate measures as recommended by the International Civil Aviation Organization and as set forth in relevent international conventions to prevent terrorist attacks against civil aviation transport and other forms of public transport;

12. *Encourages* the International Civil Aviation Organization to continue its efforts aimed at promoting universal acceptance of and strict compliance with the international air security conventions;

13. *Requests* the International Maritime Organization to study the problem of terrorism aboard or against ships with a view to making recommendations on appropriate measures;

14. *Requests* the Secretary-General to follow up, as appropriate, the implementation of the present resolution and to submit a report to the General Assembly at its forty-second session;

15. *Decides* to include the item in the provisional agenda of its forty-second session.

[1]Adopted without a roll-call vote. ■

UN Security Council Adopts Resolution on Hostage-Taking

SECURITY COUNCIL RESOLUTION 579, DEC. 18, 1985[1]

The Security Council,

Deeply disturbed at the prevalence of incidents of hostage-taking and abduction, several of which are of protracted duration and have included loss of life,

Considering that the taking of hostages and abductions are offenses of grave concern to the international community, having severe adverse consequences for the rights of the victims and for the promotion of friendly relations and co-operation among States,

Recalling the statement of 9 October 1985 by the President of the Security Council resolutely condemning all acts of terrorism, including hostage-taking (S/17554),

Recalling also resolution 40/61 of 9 December 1985 of the General Assembly,

Bearing in mind the International Convention against the Taking of Hostages adopted on 17 December 1979, the Convention on the Prevention and Punishment of Crimes against Internationally Protected Persons Including Diplomatic Agents adopted on 14 December 1973, the Convention for the Suppression of Unlawful Acts against the Safety of Civil Aviation adopted on 23 September 1971, the Convention for the Suppression of Unlawful Seizure of Aircraft adopted on 16 December 1970, and other relevant conventions,

1. *Condemns unequivocally* all acts of hostage-taking and abduction;

2. *Calls for* the immediate safe release of all hostages and abducted persons wherever and by whomever they are being held;

3. *Affirms* the obligation of all States in whose territory hostages or abducted persons are held urgently to take all appropriate measures to secure their safe release and to prevent the commission of acts of hostage-taking and abduction in the future;

4. *Appeals* to all States that have not yet done so to consider the possibility of becoming parties to the International Convention against the Taking of Hostages adopted on 17 December 1979, the Convention on the Prevention and Punishment of Crimes against Internationally Protected Persons Including Diplomatic Agents adopted on 14 December 1973, the Convention for the Suppression of Unlawful Acts against the Safety of Civil Aviation adopted on 23 September 1971, the Convention for the Suppression of Unlawful Seizure of Aircraft adopted on 16 December 1970, and other relevant conventions;

5. *Urges* the further development of international co-operation among States in devising and adopting effective measures which are in accordance with the rules of international law to facilitate the prevention, prosecution and punishment of all acts of hostage-taking and abduction as manifestations of international terrorism.

AMBASSADOR WALTERS' STATEMENT, SECURITY COUNCIL, DEC. 18, 1985[2]

We are extremely pleased that the Security Council has unanimously gone on record in condemning all acts of hostage-taking. This is a historic step, almost without precedent in the entire 40 years of the United Nations. This resolution reflects positively on the UN organization; it is an act in which all member states can take pride. It is a fitting climax to this important 40th anniversary year of the United Nations.

By condemning unequivocally all acts of hostage-taking, the Security Council has clearly stated the world community's abhorrence of such criminal acts. We can only hope that all states, all parties, that have any influence over groups now holding hostages will take to heart today's clear and unanimous message and work for the immediate and safe release of all hostages, wherever and by whomever held.

We also hope that this Security Council resolution bodes well for improved cooperation between and among states, an essential condition for combating terrorism. Only by concerted worldwide action can we hope to put an end to the repugnant practice of hostage-taking. It is clear from the resolution that no "cause," no "excuses," can justify such threats to human rights and human lives.

My government fully supports the Security Council's call for all states to consider, promptly and favorably, becoming parties to the International Convention Against the Taking of Hostages and other related international conventions. The United States will continue its efforts to have the world community adopt additional effective measures to protect the innocent lives of all people. As recent history has so sadly proven, international terrorism knows no boundaries.

Today's resolution reinforces the October 9 Security Council statement on terrorism and the December 9 General Assembly resolution condemning all acts of terrorism. Together, these texts place the entire United Nations firmly on record against all terrorist crimes. While we cannot expect the lunatic fringe to desist from such acts, we do expect all law-abiding states to take all practicable measures to prevent terrorism and to prosecute and punish all terrorists, wherever they are, in the spirit of these clear statements by the United Nations.

The United States is proud of its leadership role in today's action by the Security Council. It could not have been done without the broad support of all Security Council members which represent every sector of the globe. I thank my colleagues on the Council for the essential role they played with us in accomplishing this historic act. And let me pay special tribute to Congressman Dante Fascell, Chairman of the House Foreign Affairs Committee, and Congressman Daniel Mica, Chairman of the Subcommittee on International Operations and member of the U.S. delegation to the 40th General Assembly, for their strong initiatives in the U.S. Congress and in meetings here at UN headquarters toward this end. We look forward to concrete actions by all states to put into effect the resolution adopted today.

DEPARTMENT STATEMENT, DEC. 18, 1985[3]

We are pleased that the UN Security Council today unanimously passed a resolution condemning all acts of hostage-taking. This is a historic step.

This resolution on terrorism is an important call for the immediate and safe release of all hostages and abducted persons. It is an important reinforcement of the December 9 UN General Assembly resolution condemning terrorism as criminal acts and the October

9 Security Council statement on terrorism. Together we believe these UN resolutions are an important demonstration of the changing climate regarding terrorism, a message to terrorists that the world increasingly regards hostage-taking and other forms of terrorism as criminal acts which should not be supported.

Today's resolution, which the United States initiated, also underscores the international unity of views that the hostages should be released and an expression of support for the families as well as the hostages themselves whomever they may be. We continue to work toward the release of all hostages, particularly the Americans. The proposal for this Security Council resolution, in part, developed from suggestions and discussions with certain hostage families. The Administration will continue to give the matter of hostages highest priority.

---

[1]Adopted unanimously.

Situation in Nicaragua

by Vernon A. Walters

Statement made in a UN General Assembly plenary session on November 22, 1985. Ambassador Walters is U.S. Permanent Representative to the United Nations.[1]

The United States is vitally interested in peace and stability in Central America. Central American countries are our neighbors. Central America is a critical testing ground for whether the future will belong to the advocates of peaceful change and democracy or to revolutionary violence and totalitarianism.

Earlier this year, the people of El Salvador held elections for the fourth time in only 3 years. Just 3 weeks ago, Guatemala voted in free and fair elections to determine which among 14 competing political parties should govern that nation. The process will be completed in a runoff election next month. This Sunday the people of Honduras will exercise this same right of political self-determination. And early next year, the oldest democracy in Latin America—Costa Rica—will demonstrate its continuing commitment to democratic ideals and practices.

In contrast Nicaragua on October 15 officially suspended the most basic civil liberties, including freedom of expression, freedom of the press, the right of assembly, the right to trial, freedom from arbitrary imprisonment, the right to organize labor unions and to strike and the right to *habeas corpus*. The subsequent reinstatement of the rights to trial and to *habeas corpus* did not alter the thrust of this action. Speaking before this Assembly, and in a November 11 statement in Managua as well, President Ortega sought to blame the imposition of that emergency upon my government because we provide humanitarian aid to the Nicaraguan democratic resistance. Few found this explanation convincing. These include the more than 120,000 Nicaraguans who have fled this regime to a safer place abroad.

This unhappy juxtaposition of trends tells much of the story of what has happened since this body last met to consider the situation in Central America. On the one hand, we see a continuing process of transition to and consolidation of democratic government in El Salvador, Honduras, and Guatemala as well as a proud democratic tradition in Costa Rica. On the other hand, we are witnessing a continuing process of transition to and consolidation of totalitarian government in Nicaragua.

From the beginning, the Sandinistas wanted "a complete break" from the concept of Western democracy. They sought to stage elections to appeal to the Western democracies, to appear correlative and akin to democratic systems in countries whose original support for the revolution was waning. Yet the Sandinistas prevented the large majority of their opposition from actively participating in those elections. This was presaged on August 25, 1981, when Comandante Humberto Ortega, the Minister of Defense, said, "Marxism-Leninism is the scientific doctrine that guides our revolution." Marxism-Leninism does not envisage power/sharing with any other group.

The root source of conflict in Nicaragua is the political repression of this would-be totalitarian regime, which desires to contaminate its neighbors. As Sandinista repression has grown and become institutionalized with the aid of totalitarian advisers, popular opposition of every kind has increased. That is what the conflict in Nicaragua is about. No amount of Sandinista talk about so-called counterrevolutionaries can obscure it.

And yet hopes for peace die hard. The surest hope of peace in situations of conflict is to be found in dialogue. Dialogue means talks between governments and the groups that oppose them to establish conditions in which citizens determine their form of government in an atmosphere free of coercion. This approach can work. The history of the last 5 years in the Western Hemisphere demonstrates that free elections are the only means by which those in power can achieve the moral authority and legitimacy to justify their rule. We are encouraged that more than 90% of Latin America now lives and prospers under a democratic system of government.

The Sandinista Government of Nicaragua, however, approaches democratic national reconciliation with a most curious perspective, as though it were an outside conspiracy to undermine peace in the region. As Nicaraguan Foreign Minister D'Escoto told the press here in New York last month, "The subject of reconciliation is a new element of obstruction introduced by the Reagan Administration...." And according to Nicaragua's Vice President Sergio Ramirez, "We will never hold a dialogue with the counterrevolutionaries because not even Contadora has proposed it."

We have news for the Government of Nicaragua. National reconciliation through dialogue and elections is a fundamental principle of the Contadora process and has been from the start. It was explicitly accepted by all five Central American states, including Nicaragua, in the September 1983 Document of Objectives. All three drafts of a Contadora agreement, including the draft which Nicaragua said it would accept—as long as no changes were made—contain a section entitled: "Commitments With Regard to National Reconciliation." These commitments oblige states experiencing insurgencies to create mechanisms for dialogue with opposition groups. These drafts also provide that the commitments of the parties "are of a legal nature and are, therefore, binding." Let us recall that on June 23, 1979, the Organization of American States (OAS) unanimously removed diplomatic recognition from the

Somoza regime and conferred it on the Sandinistas and genuine democrats. This diplomatic recognition was conditioned on the implementation of democracy. The Sandinistas accepted this condition.

The Government of Nicaragua does not oppose national reconciliation in other countries. A year ago last month, Daniel Ortega publicly stated: "Another evidence [of the peoples' desire for peace] is the dialogue taking place in El Salvador. This dialogue was proposed many years ago by the Salvadoran revolutionaries and has been supported by the Nicaraguan Government." However, when the Sandinistas are asked to accept dialogue in their own country, they reject it as a foreign conspiracy.

Efforts Toward Dialogue

Let us recall that both the civil opposition and the democratic resistance have made concrete offers. Last February 22, when Nicaragua was proclaiming its intention to hold a national dialogue, the civil opposition set forth the conditions under which such a national dialogue should be conducted. These included the lifting of the state of emergency, freedom of expression, a general amnesty and pardon for political crimes, restoration of constitutional guarantees and the right of *habeas corpus*, guarantees of the safety of members of the resistance movement who participate in the dialogue, and the implementation of these measures under the supervision of guarantor governments. Faced with this specific proposal, the Sandinistas' enthusiasm for national dialogue quickly waned. They said no more about it for months.

On March 1st, representatives of the Nicaraguan resistance proposed that the Catholic Church in Nicaragua mediate a national dialogue. This proposal contemplated a cease-fire. Although the resistance had been unable to participate in the elections of November 1984, this proposal accepted Daniel Ortega as President until such time as the Nicaraguan people decided to confirm or deny his authority through a plebiscite.

The other major element of the proposal was to confer authority on the Nicaraguan Episcopal Conference to establish a definitive agenda for talks. This would be done through mutual agreement among the parties concerned. On March 22, the Nicaraguan Episcopal Conference reiterated its previously expressed support for a national dialogue and declared its willingness to act as mediator. The Sandinistas immediately rejected this offer. No counteroffer was made. They have repeatedly rejected dialogue since then.

On April 4th, my own government undertook an initiative to keep the possibility of dialogue alive. A key feature was the offer to refrain from providing military assistance to the democratic resistance if the Sandinistas accepted the March 1st offer. Over the course of the summer and fall, the United States further sought to encourage national reconciliation by relating our willingness to resume bilateral talks with the Sandinistas if and when they undertook an internal dialogue.

On October 29th in Washington, U.S. Ambassador at Large and special envoy to Latin America Harry Shlaudeman again reiterated to Nicaraguan Ambassador to the United States Carlos Tunnermann that we would resume bilateral talks if the Sandinistas accepted the March 1 offer of the Nicaraguan resistance. Incidentally, that offer, which was signed in San Jose, Costa Rica, does not contain as a precondition the dissolution of the National Assembly, as the Sandinistas had suggested. Ambassador Shlaudeman made clear that progress in the internal dialogue would lead to progress on bilateral issues. Ambassador Tunnermann responded on October 31st that the March offer was totally unacceptable.

U.S. Efforts

We often hear in this forum criticism that military solutions are being sought for social, economic, and political problems. The record shows, however, that the United States has consistently backed social, economic, and political reforms in Central America. For example, our economic aid to the region for 1985 was $976 million. In contrast, security assistance was only $212 million. In other words, the United States spends four times as much on economic and social assistance to the Central American region as it does on military assistance.

Secretary Shultz has said that our strategy proceeds from an analysis that recognizes, in fact emphasizes, that there are legitimate social, economic, and political grievances in many parts of the region. Our conclusion is that we face two related challenges: to help alleviate longstanding political, economic, and social problems and to help counter a communist strategy which seeks to aggravate and exploit these problems and so seize power by force of arms.

President Reagan has said [April 27, 1983]: "In response to decades of inequity and indifference, we will support democracy, reform, and human freedom .... In response to the challenge of world recession and, in the case of El Salvador, to the unrelenting campaign of economic sabotage by the guerrillas, we will support economic development .... In response to the military challenge from Cuba and Nicaragua—to their deliberate use of force to spread tyranny—we will support the security of the region's threatened nations .... We will support dialogue and negotiations—both among the countries of the region and within each country."

Let me underscore President Reagan's point. While the United States is actively promoting the economic development of Central America by its assistance and policies, other forces are attempting to destroy the economic base essential for development and progress. For example, on July 8, 1985, the *International Herald Tribune* reported that the senior military commander of the Salvadoran guerrillas, Mr. Joaquin Villalobos "outlined what he said was the new guerrilla strategy of a war of attrition ... a campaign of sabotage, assassination and ambushes, backed by the increased use of mines and booby traps. The strategy, Mr. Villalobos said, is to ... bleed the economy to the point of collapse ...."

Often overlooked in the debate over U.S. policy toward Nicaragua is one fundamentally important fact. The Sandinistas began to intervene in El Salvador, Honduras, and Costa Rica within a year of seizing power in July 1979 and they have actively continued that aggression ever since. At the same time, Nicaragua tries to sustain its carefully fostered image as an innocent and aggrieved victim of unprovoked aggression, by denying that it has ever engaged in armed subversion within neighboring countries. The facts, however, show Nicaragua's solemn denials to be untrue.

By the same token, the Sandinistas charge that the defensive reactions of the United States, including support for the democratic resistance, constitute aggression against Nicaragua. This charge, of course, stands the facts on their head. It is Nicaragua, and not the United States and its friends, that committed the aggression leading directly to the reactions about which the Sandinistas now complain.

We often hear that the East-West conflict has produced the Central American crisis. But let us face facts: The ac-

tions of the Sandinistas bear the responsibility for the crisis.

The Sandinistas have supported insurgent forces tied to Cuba and the Soviet Union. The Sandinistas are today host to some 8,000 Soviet-bloc and Cuban personnel, including about 3,500 military and security personnel. The Sandinistas, with Soviet and Cuban support, have built the most powerful military forces in the region.

The Soviets and their allies have been shipping weapons to Nicaragua since the early days of the Sandinista government. We estimate that Soviet-bloc arms shipments to the Sandinista government have totaled more than $500 million. These shipments have included some 340 tanks and armored vehicles, 70 long-range howitzers and rocket launchers, and 30 helicopters, including a half dozen fast, heavily armed attack helicopters. This flow continues. Even now an increase in arms shipments to the Nicaraguan Government is apparently underway.

The first Soviet-made armor arrived in Nicaragua in 1981, shortly after the 200,000-man militia buildup was announced but about a year before the development of significant internal Sandinista opposition. The mainstays of this armored force are some 110 Soviet-made T-55 medium tanks. None of Nicaragua's neighbors has tanks with the T-55's firepower. The Sandinistas also have received in the past year alone nearly 30 PT-76 light tanks. The river-crossing capabilities of these tanks vastly enhance their usefulness.

Is it merely coincidental that new arms shipments are increasing just as the Sandinista government launches its latest campaign to intimidate its citizens and crush all opposition? You don't have to be a sophisticated political observer to realize that the presence of tanks tends to inhibit popular dissent. Why are those tanks there? They represent the peculiar contribution to humanity by the totalitarian political regimes of the world.

The Contadora Process

I hope the General Assembly will support the continuation of the Contadora process for a peaceful settlement of the regional crisis. The Contadora mediation effort, in our view, offers the best hope to achieve peace in Central America. We will continue to give it our full support. As President Reagan has said, we wish to bring about "the simultaneous implementation of all Contadora objectives with effective verification."

The Contadora process has encountered serious obstacles in the last year. Why? First, Nicaragua's violation of the right of asylum earlier this year created a dispute with Costa Rica that prevented meetings from being held. In June, just as the Contadora meeting convened, Nicaragua's insistence on a radical change in agenda caused negotiations to be suspended for 4 months. Concern within the Latin American community that this action had put Contadora in jeopardy led to the creation in July of a support group formed by Argentina, Brazil, Peru, and Uruguay. My government welcomed the formation of that group and believes it has been and can continue to be a helpful influence.

In September, in response to proposals put forward jointly by Costa Rica, Honduras, and El Salvador, the countries participating in the Contadora process agreed to reconvene negotiations in an effort to reach final agreement. Less than a week after talks resumed, however, the Sandinista government suspended civil liberties. It had been agreed in September that incidents in the region would neither condition participation in nor be subjects of discussion within Contadora. The democratic Central American states, true to their pledge, have not raised Nicaragua's suspension of civil liberties in Contadora councils. Yet can anyone pretend that the suspension of civil liberties in Nicaragua is not an obstacle to a Contadora agreement? When President Ortega says, as he did on November 11, that Nicaragua accepts draft treaty language on national reconciliation but rejects dialogue with the democratic resistance, how can we conclude that the Sandinistas are serious in their approach to the negotiations?

The Sandinistas have demanded that the internal insurgency in Nicaragua must be ended as a precondition to a Contadora agreement. Their allegation is that they cannot accept the obligations of such an agreement when they face so-called outside aggression. They ignore the reality that any Contadora treaty would entail no more than an agreement to negotiate arms and troop reduction. Their demand is thus exposed as a subterfuge obscuring the Sandinista's refusal to take the one step that might lead to an end to the insurgency. That step is, of course, to participate in internal dialogue.

My government has made clear repeatedly, in public and in private, that we will abide by any agreement the Central Americans reach. In light of this position, the Sandinista demand that agreement with the United States must precede a Contadora agreement can only be seen as an effort to thwart the Contadora process and waste nearly 3 years of effort. The Sandinista demand is an attempt to portray the complex issue of peace in Central America as merely a dispute with the United States. In reality, what is occurring in Central America is a conflict between the Sandinistas and their neighbors as well as repression by the Sandinistas of their fellow Nicaraguans.

On a somewhat more optimistic note, I should like to record my government's satisfaction that in Luxembourg on November 12 the European Economic Community and the Central American states concluded an economic assistance agreement. My government has long favored increased economic assistance to the Central American region. We ourselves are providing additional funds to Central American regional institutions, such as the Central American Bank for Economic Integration. I should also like to note that, with respect to Nicaragua, every proposal that the United States has made during the last 4 years has included a strong economic component. Most recently, the President's initiative on regional conflicts, presented to this body October 24, contemplates substantial economic assistance once progress is made toward resolution of internal conflicts in Nicaragua.

I should also like to note our satisfaction at the political communique issued in Luxembourg. That communique, in which Nicaragua joined, endorsed the Contadora process and expressed hope for a speedy and successful conclusion of negotiations. It called for full respect for civil liberties, for national reconciliation, and for democratic pluralist political and social systems. The resolution this body will seek to adopt should do no less. Let us hope that this commitment will be fulfilled.

At the conclusion of this debate on Central America, I hope that the General Assembly will support the continuation of the Contadora process. Once again, we remain firm in our conviction that the Contadora process represents both the proper forum and the best hope to achieve peace in Central America.

---

[1]USUN press release 168. ■

Situation in Cambodia

Statement by Ambassador Vernon A. Walters, U.S. Permanent Representative to the United Nations, in a UN General Assembly plenary session on November 5, 1985, and the text of the General Assembly resolution adopted that day.

AMBASSADOR WALTERS' STATEMENT, NOV. 5, 1985[1]

In the month just ended, the United Nations marked its 40th anniversary. This year has also marked the 40th anniversary of the end of the Second World War. Out of the carnage of global war came the lesson, painfully learned, that one nation's aggression against another, even the smallest, undermines the security of each and every one of us. In establishing the United Nations, the world sought to apply that lesson to prevent future aggression by ensuring the sovereignty, independence, and territorial integrity of every nation. It is a lesson which we must never forget.

The language of the UN Charter states:

> We the peoples of the United Nations determined to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind. . . .

The Socialist Republic of Vietnam joined the United Nations in 1977. In so doing, Vietnam accepted that declaration and the obligation not to use force or the threat of force against the territorial integrity or political independence of any state. The great powers may depend on their own strength to ensure their security, but for the majority of nations, the shared obligations to oppose aggression enshrined in the Charter of the United Nations represent an important element in their national security. Those ideals and obligations represent the world's conscience, our hope for a world free from aggression and the danger of war. They also stand to remind us of the horrors of war they are meant to prevent.

I fear that our memories grow dimmer, and the lessons so painfully learned 40 years ago are in danger of being lost. Vietnam's leaders paused only a year after subscribing to the Charter of this organization before invading their neighbor, Cambodia. Vietnam has now installed in Phnom Penh a puppet regime of its own creation. In so doing, Vietnam has isolated itself from the peaceful aspirations of the great majority of the world community.

Today, the Cambodian people face the prospect of cultural genocide and the extinction of their national identity at the hands of their more powerful neighbor. In their weakness and despair, they look to the world community and the United Nations. His Royal Highness Samdech Norodom Sihanouk, in his address in this chamber 1 month ago, referred to the United Nations as "the last recourse in the ocean of suffering and humiliation on which [the Khmer people] have been tossed for so many years."

Six times in 6 years, this General Assembly has given voice to that conscience, calling on Vietnam to withdraw its illegal expeditionary force and to restore to the Khmer people their right to seek their own destiny under a freely chosen government without outside interference. The overwhelming margins which have supported the General Assembly's call for withdrawal of foreign forces reflect the concern of the great majority of the world's nations at the continuing tragedy in Cambodia. In the face of this, Vietnam, aided and abetted by the U.S.S.R., continues its illegal occupation of Cambodia and flouts the will of the international community. It is more essential than ever that the international community continues to speak out forcefully on the issue of Cambodia, as we are preparing to do in considering the resolution before us.

Inside Cambodia today, the oppression of the Khmer people goes on unchecked. The rule of Vietnamese "advisers" has suppressed Cambodian self-determination. All major decisions are made by these proconsuls, and any Cambodian official who voices disagreement with such decisions risks imprisonment. Vietnam proclaims that a "special relationship" exists among the three countries formerly joined as French Indochina. Khmer people have been imprisoned for denying this special relationship or "Indochinese solidarity." Vietnamese language and history are now taught in Cambodian schools. A former official of Vietnam's client regime reported that a Cambodian history text has not been authorized by the Vietnamese because it does not reflect the new "solidarity."

The regime installed in Phnom Penh by Hanoi clearly does not represent the Cambodian people, and Hanoi's pretensions that it does so have been repeatedly rejected by the people of Cambodia and by its neighbors. The UN General Assembly has so decisively rejected the claim of Vietnam's client to the Cambodian seat that in recent years even Vietnam has not seen fit to mount an active challenge. The Phnom Penh regime is maintained in power solely by the force of 10 Vietnamese divisions, and its "independence" is nothing more than a thin veil for Vietnamese colonization and exploitation.

Not satisfied with controlling the government in Cambodia, Vietnam now seeks to remake the country in its own image. To further this process, hundreds of thousands of Vietnamese nationals have been allowed to settle in Cambodia, taking over rich farmland and dominating fishing in Cambodia's great lake, the Tonle Sap. The Khmer people are expected to feed these newcomers and to assist them in the colonization of Cambodia. Despite the strained economic conditions in Cambodia, rice and fish are being exported to Vietnam or requisitioned to feed Hanoi's army of occupation. Vietnam has also conscripted scores of thousands of Cambodian civilians for forced labor on military projects in remote areas near the Thai-Cambodian border. These civilians are used to clear mine fields and construct bases and defensive works for Vietnamese forces. Many have reportedly been killed or maimed by fighting and mines. Thousands more have contracted severe forms of malaria which, as a result, have now spread to areas of Cambodia which were previously relatively malaria-free.

The Lawyers Committee for Human Rights has reported that "human rights violations have been widespread and flagrant, [including] arbitrary arrest, brutal torture, and indefinite detention under degrading conditions, at times resulting in death." The report goes on to note that torture is frequently carried out or supervised by Vietnamese "advisers." Hundreds of Cambodians are imprisoned without formal charges or a trial on the suspicion that they support the resistance. They, like growing numbers of Cambodians, oppose Vietnam's continued presence in their country.

Vietnam's growing oppression of the Cambodian people has further strengthened the appeal of the nationalist organizations led by His Royal Highness Prince Norodom Sihanouk and former Prime Minister Son Sann. Vietnam has claimed that it remains in Cambodia to

prevent the return of the Khmer Rouge. This claim masks the true intent of Hanoi, which is to present the world with the false choice of supporting its puppet regime or the Khmer Rouge, while ignoring the democratic forces seeking to allow the Cambodian people to rule themselves.

The growing strength of the anti-Vietnamese resistance forces and the support given them by the Cambodian people demonstrate the unwillingness of the Khmer people to accept a regime established on the bayonets of a foreign army. The United States welcomes the presence in this debate of Prince Sihanouk and Son Sann. They and the organizations they lead are the true embodiment of Khmer nationalism and of the hopes of Cambodians for a future which is dominated neither by the Khmer Rouge nor the Vietnamese.

Hanoi must by now realize that the world will not accept its aggression against Cambodia any more than the Khmer people will accept Vietnamese colonization. Vietnam seeks to persuade the world that it genuinely wants a peaceful settlement in Cambodia and that progress has been made toward such a solution. The United States and the rest of the world would like to believe that Vietnam's professions of peaceful intentions are true. Past history, however, refutes in the most damning way the credibility of Vietnam's professions of peaceful intentions.

Genuine Vietnamese willingness to negotiate a settlement in Cambodia would be a welcome development, above all, for the Cambodian people. In August Hanoi announced that its forces would withdraw from Cambodia by 1990, perhaps earlier if there is a political settlement. But this announcement represents not Vietnam's recognition of the need for a settlement, but a Vietnamese calculation that its army can impose a military solution on Cambodia within 5 years. Hanoi's version of a political settlement remains one which legitimizes its client regime and secures that regime against the threat from the Cambodian resistance and the Cambodian people.

Such Vietnamese "peace offensives," however, are nothing new to this body. One year ago, the Foreign Minister of the Socialist Republic of Vietnam addressed the General Assembly on behalf of his government. In his remarks, he claimed to perceive a growing consensus for a political solution in Cambodia and a recognition by others of Vietnam's peaceful intentions. He dismissed the resistance forces as insignificant and called for a political settlement based on elections and "peacekeeping activities." No sooner had the Foreign Minister returned to Hanoi than the Vietnamese Army in Cambodia began the most intense offensive since its original invasion 7 years ago. Two divisions were transferred from Vietnam to assist in the offensive. Civilian camps and military bases alike were indiscriminately shelled by Vietnamese forces, then overrun by infantry assaults backed by tanks.

As a result of these attacks, 225,000 Khmer civilians were forced to abandon what few possessions they had and flee across the border. Assistance to them remains an international responsibility. The United States will continue its support for this program and for the Secretary General's Special Representative for Humanitarian Assistance to the Kampuchean People, Dr. Tatsuro Kunugi. The staffs of the UN High Commissioner for Refugees (UNHCR) and other specialized UN agencies, the International Committee of the Red Cross (ICRC), and the various voluntary organizations deserve our respect and continued support for their untiring work in providing emergency food and medical care to the displaced Cambodian people, often under dangerous conditions caused by Vietnamese attacks. The United States also extends its appreciation to the Royal Thai Government for its aid to the Khmer people, particularly during the fighting.

It is, however, not enough for the international community simply to care for the victims of Hanoi's aggression against the Khmer people. The international community must continue its efforts to find a solution to the problem of Cambodia and restore to the Cambodian people control over their destiny. In 1981 the UN-sponsored International Conference in Kampuchea outlined the four essential elements of any settlement:

- A cease-fire and withdrawal of all foreign forces in the shortest time possible under the supervision and verification of a UN peacekeeping force/observer group;
- Arrangements to ensure that armed factions will not be able to prevent or disrupt the holding of free elections and will respect the results of the free elections;
- Appropriate measures for the maintenance of law and order until the establishment of a new government; and
- The holding of free elections under UN supervision.

Those remain the principles on which a durable solution must be based. The members of the Association of South East Asian Nations (ASEAN) are to be highly commended for their continuing efforts to achieve such a solution. Since 1981 the ASEAN countries have repeatly made proposals designed to move toward a settlement which would respect Vietnam's legitimate security concerns. The most important of these was their "appeal for Kampuchean independence" in 1983. Unfortunately, Hanoi has not responded to these reasonable proposals. At their July 1985 ministerial, the ASEAN Foreign Ministers called for indirect talks between the coalition of Khmer resistance forces led by Prince Sihanouk and a Vietnamese delegation which could include representatives of the Heng Samrin faction. Such talks would be directed toward the outline of a settlement based on four elements: withdrawal of foreign forces; national reconciliation; UN supervision and control; and UN-supervised elections. The United States endorses this proposal by the ASEAN countries which, like the many reasonable proposals put forth by ASEAN in the past 6 years, seeks to achieve a settlement which preserves Vietnam's legitimate security interests. If Hanoi is in the slightest degree serious about a political settlement, then it should accept ASEAN's proposal. That proposal stands as a test of the credibility of Vietnam's intentions in Cambodia. The United States also welcomes the constructive efforts of the Secretary General to bring about a solution and notes his trip to the region this past January.

The United States firmly believes that the parties to the conflict in Cambodia—Vietnam and the Khmer people—must come together to seek a solution. President Reagan, in his address to the General Assembly October 24, included Cambodia among the regional conflicts where the United States is prepared to play an active role in achieving a settlement. ASEAN has proposed a valuable framework for negotiations among the warring parties. Once these negotiations have made progress, and a dialogue among those directly involved in Cambodia has begun, the United States would discuss with the U.S.S.R. ways we can contribute to that progress. The United States would also be prepared to respond with

its traditional generosity to the reconstruction of Cambodia's economy. The United States hopes that the Soviet Union will use its influence to move Vietnam toward a political settlement in Cambodia.

Sooner or later, even Vietnam's leaders must come to the realization that a political solution in Cambodia is the only way of the dead-end confrontation into which they have led their country. War in Cambodia, confrontation with China, isolation from the rest of Southeast Asia and its vibrant economies have cost the Vietnamese people dearly and deprived them of the fruits of peace. Trapped in poverty and oppression, thousands continue to risk their lives to flee in small boats. Countless thousands are imprisoned under the pretense of reeducation. Vietnam has turned to the Soviet Union to support the costs of its military adventures and the world's third largest standing army. Massive Soviet aid meets Hanoi's military needs but cannot meet the needs of the Vietnamese people. Moscow has traded on its aid to increase the Soviet military presence in Vietnam, underlining the falsehood of Vietnam's claim to be a nonaligned nation.

In time, the determined resistance of the Cambodian people will convince Hanoi's leaders that they cannot subjugate the Khmer people. We hope that realization will lead to a settlement of the Cambodia problem acceptable to the Cambodian people. Such a settlement would also end Vietnam's international isolation, restore Vietnam's freedom of action, and permit Vietnam to turn to the task of building its own disastrous economy and loosening its stranglehold on its own people.

No Vietnamese generation has known peace in 40 years. The country has installed itself in war. Surely, it is time for peace.

The United States looks forward to that day and, in the meanwhile, offers its full support to the efforts of the Secretary General and his representatives, to the ASEAN countries, and, above all, to the people of Cambodia in their struggle.

Why has the resolution on Cambodia presented by the ASEAN states passed by an overwhelming majority every year since it was first proposed in 1979? Because our action here sends a signal to the people of Cambodia—a signal that the international community has not forgotten their cause, their nationhood. In the face of the travails, the hardships, the atrocities the Cambodian people have endured, this is the least that we can do on their behalf.

GENERAL ASSEMBLY RESOLUTION 40/7, NOV. 5, 1985[2]

The General Assembly,

Recalling its resolution 34/22 of 14 November 1979, 35/6 of 22 October 1980, 36/5 of 21 October 1981, 37/6 of 28 October 1982, 38/3 of 27 October 1983 and 39/5 of 30 October 1984,

Recalling further the Declaration on Kampuchea and resolution 1 (I) adopted by the International Conference on Kampuchea, which offer the negotiating framework for a comprehensive political settlement of the Kampuchean problem,

Taking note of the report of the Secretary-General on the implementation of General Assembly resolution 39/5,

Deploring that foreign armed intervention and occupation continue and that foreign forces have not been withdrawn from Kampuchea, thus causing continuing hostilities in that country and seriously threatening international peace and security,

Noting the continued and effective struggle waged against foreign occupation by the Coalition with Samdech Norodom Sihanouk as President of Democratic Kampuchea,

Taking note of Economic and Social Council decision 1985/155 of 30 May 1985 on the right of peoples to self-determination and its application to people under colonial or alien domination or foreign occupation,

Greatly disturbed that the continued fighting and instability in Kampuchea have forced an additional large number of Kampucheans to flee to the Thai-Kampuchean border in search of food and safety,

Recognizing that the assistance extended by the international community has continued to reduce the food shortages and health problems of the Kampuchean people,

Emphasizing that it is the inalienable right of the Kampuchean people who have sought refuge in neighbouring countries to return safely to their homeland,

Emphasizing further that no effective solution to the humanitarian problems can be achieved without a comprehensive political settlement of the Kampuchean conflict,

Seriously concerned about reported demographic changes being imposed in Kampuchea by foreign occupation forces,

Convinced that, to bring about lasting peace in South-East Asia and reduce the threat to international peace and security, there is an urgent need for the international community to find a comprehensive political solution to the Kampuchean problem that will provide for the withdrawal of all foreign forces and ensure respect for the sovereignty, independence, territorial integrity and neutral and non-aligned status of Kampuchea, as well as the right of the Kampuchean people to self-determination free from outside interference,

Reiterating its conviction that, after the comprehensive political settlement of the Kampuchean question through peaceful means, the countries of the South-East Asian region can pursue efforts to establish a zone of peace, freedom and neutrality in South-East Asia so as to lessen international tensions and to achieve lasting peace in the region,

Reaffirming the need for all states to adhere strictly to the principles of the Charter of the United Nations, which call for respect for the national independence, sovereignty and territorial integrity of all States, non-intervention and non-interference in the internal affairs of States, non-recourse to the threat or use of force and peaceful settlement of disputes,

1. *Reaffirms* its resolutions 34/22, 35/6, 36/5, 37/6, 38/3 and 39/5 and calls for their full implementation;

2. *Reiterates its conviction* that the withdrawal of all foreign forces from Kampuchea, the restoration and preservation of its independence, sovereignty and territorial integrity, the right of the Kampuchean people to determine their own destiny and the commitment by all States to non-interference and non-intervention in the internal affairs of Kampuchea are the principal components of any just and lasting resolution of the Kampuchean problem;

3. *Takes note with appreciation* of the report of the *Ad Hoc* Committee of the International Conference on Kampuchea and requests that the Committee continue its work, pending the reconvening of the Conference;

4. *Authorizes* the *Ad Hoc* Committee to convene when necessary and to carry out the tasks entrusted to it in its mandate;

5. *Reaffirms* its decision to reconvene the Conference at an appropriate time, in accordance with Conference resolution 1 (I);

6. *Renews its appeal* to all States of South-East Asia and others concerned to attend future sessions of the Conference;

7. *Requests* the Conference to report to the General Assembly on its future sessions;

8. *Requests* the Secretary-General to continue to consult with and assist the Conference and the *Ad Hoc* Committee and to provide them on a regular basis with the necessary facilities to carry out their functions;

9. *Expresses its appreciation once again* to the Secretary-General for taking appropriate steps in following the situation closely and requests him to continue to do so and to exercise his good offices in order to contribute to a comprehensive political settlement;

10. *Expresses its deep appreciation once again* to donor countries, the United Nations and its agencies and other national and international humanitarian organizations that have rendered relief assistance to the Kampuchean people, and appeals to them to continue to provide emergency assistance to those Kampucheans who are still in need, especially along the Thai-Kampuchean border and in the holding centres in Thailand;

11. *Reiterates its deep appreciation* to the Secretary-General for his efforts in coordinating humanitarian relief assistance and in monitoring its distribution, and requests him to intensify such efforts as are necessary;

12. *Urges* the countries of South-East Asia, once a comprehensive political solution to the Kampuchean conflict is achieved, to exert renewed efforts to establish a zone of peace, freedom and neutrality in South-East Asia;

13. *Reiterates the hope* that, following a comprehensive political solution, an intergovernmental committee will be established to consider a programme of assistance to Kampuchea for the reconstruction of its economy and for the economic and social development of all States in the region;

14. *Requests* the Secretary-General to report to the General Assembly at its forty-first session on the implementation of the present resolution;

15. *Decides* to include in the provisional agenda of its forty-first session the item entitled "The situation in Kampuchea."

UN Adopts Resolution to Ban Chemical Weapons

Following are a statement by Ambassador Donald S. Lowitz, U.S. representative to the Conference on Disarmament, in Committee I on November 7, 1985, and the text of UN General Assembly adopted on December 12.

AMBASSADOR LOWITZ'S STATEMENT, NOV. 7, 1985[1]

In the opening statement of the U.S. delegation on October 25, the urgent questions of the use and spread of chemical weapons were briefly addressed. Today I want to return to these important issues and to introduce a draft resolution under agenda item 63, "Chemical and bacteriological (biological) weapons." This resolution calls for important actions to solve these problems permanently. It was submitted on November 6 under the sponsorship of Australia, Belgium, Canada, Colombia, Costa Rica, Denmark, Ecuador, Federal Republic of Germany, France, Greece, Italy, Japan, Kenya, the Netherlands, New Zealand, Norway, Portugal, Sierra Leone, Sweden, Thailand, the United Kingdom, and the United States and is numbered A/C.1/40/L.31.

Last year the General Assembly voted by a large majority to condemn any and all use of chemical weapons and any other actions in contravention of existing relevant international accords. It is disturbing that since that time at least one new case of the employment of these weapons, in violation of the Geneva protocol of 1925, has been confirmed. It is important, therefore, that this body again place on record its convictions both that the task of putting a stop to the use of chemical weapons is urgent and that strict observance of existing international instruments and obligations in this field is required.

It is disquieting, indeed, that chemical weapons capabilities are spreading to the arsenals of additional states, for this means that the existing international barriers to the use of chemical and biological weapons are in danger of being further eroded. It means that the likelihood of the use of chemical weapons in situations of conflict is increasing. And it may make the task of concluding a comprehensive ban on chemical weapons more complicated and difficult. As Secretary of State Shultz stated in his remarks before the U.S. National Academy of Sciences on March 6: "The sad fact is that a half century of widely accepted international restraint on the use or development of chemical weapons is in danger of breaking down."

The number of states possessing chemical weapons has grown from about five in 1963 to 15 or more today. And other states are also seeking to acquire chemical weapons. This disturbing trend is clearly an urgent matter for the entire international community. The United States welcomes the expressions of concern on the part of other states about the spread of chemical weapons. The General Assembly should join in recording its concern over this unfortunate development.

The resolution which we have introduced would, moreover, record the continuing and strong support of the General Assembly for efforts to strengthen existing agreements respecting biological and chemical weapons.

We hope that this resolution will attract even broader support than was the case last year, not the least because there is today a wider appreciation of the dangerous trends I have cited and of the necessity, therefore, of accelerating the pace of work in the Conference on Disarmament. The United States strongly supports the negotiations in the CD to conclude a comprehensive ban on chemical weapons. It believes that a comprehensive, effective, and verifiable ban on chemical weapons is the best way to put an end—once and for all—to the threat of the further use and spread of these weapons.

The Geneva protocol and the Biological and Toxin Weapons Convention are of great importance, but we know from bitter experience that they have not been sufficient to remove the threat to international stability that is posed by chemical weapons. They have not completely eliminated the threat of more terror—terror like that experienced by the million gas casualties in the First World War.

The specter of chemical weapons use continues to haunt states in both developed and developing regions; it continues to menace people, both military and civilian. Unlike nuclear weapons, which require sophisticated manufacturing operations and delivery systems, chemical weapons are relatively cheap and easy to acquire and, therefore, pose a special threat to developing countries. It is, indeed, in such countries that chemical weapons have been used.

We should do all in our power to reverse these present dangerous trends and to promote the swiftest possible progress toward more effective international restraints. The force of our common opinion voiced in this forum can make an impact on these efforts. Let us make that impact as strong as possible.

UN GENERAL ASSEMBLY RESOLUTION 40/92C, DEC. 12, 1985[2]

The General Assembly,

Reaffirming the urgent necessity of strict observance by all States of the principles and objectives of the Protocol for the Prohibition of the Use in War of Asphyxiating, Poisonous or Other Gases, and of Bacteriological Methods of Warfare, signed at Geneva on 17 June 1925, and of the adherence by all States to the Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on Their Destruction, signed in London, Moscow and Washington, on 10 April 1972,

Noting with concern reports that chemical weapons have been used, as well as indications of their emergence in an increasing number of national arsenals,

Expressing concern over the increasing risk that chemical weapons may be resorted to again,

Noting international efforts to strengthen relevant international prohibitions, including efforts to develop appropriate fact-finding mechanisms,

Recalling its resolution 39/65A of 12 December 1984 on chemical and bacteriological (biological) weapons,

Rededicating its efforts to protect mankind from chemical and biological warfare,

1. *Reaffirms* the need for strict observance of existing international obligations regarding prohibitions on chemical and biological weapons and condemns all actions that contravene those obligations;

2. *Welcomes* the ongoing efforts to ensure the most effective prohibitions possible on chemical and biological weapons;

3. *Urges* the Conference on Disarmament to accelerate its negotiations on a multilateral convention on the complete and effective prohibition of the development, production and stockpiling of chemical weapons and on their destruction;

4. *Calls upon* all States, pending the conclusion of such a comprehensive ban, to cooperate in efforts to prevent the use of chemical weapons.

IMO and Maritime Security

by Richard D. Kauzlarich

Statement before the Subcommittee on Merchant Marine of the House Merchant Marine and Fisheries Committee on October 22, 1985. Mr. Kauzlarich is Deputy Assistant Secretary for International Organization Affairs.[1]

It is a pleasure to appear before you today on this important item. I am accompanied by Michael G. Kozak, Deputy Legal Adviser, and Parker Borg, Principal Deputy Director of the Office for Counter-Terrorism and Emergency Planning. We welcome the opportunity to be here and comment on the status of international maritime security. These hearings are particularly timely in view of the brutal murder of an American citizen, Mr. Leon Klinghoffer, by terrorists, while being held hostage aboard the Italian cruise ship *Achille Lauro* earlier this month.

The *Achille Lauro* incident was part of an alarming pattern of increasing terrorism directed against innocent victims held hostage by extremist groups. There is a high degree of international concern over such terrorism, and hostage-taking in particular. At the time of the *Achille Lauro* incident the UN Security Council unanimously condemned, "... this unjustifiable and criminal hijacking as well as other acts of terrorism, including hostage-taking." The Secretary General of the United Nations, Perez de Cuellar, has spoken out repeatedly against hijacking and hostage-taking and publicly expressed his revulsion on learning of the murder of Mr. Klinghoffer.

There is a growing chorus of international condemnation of these terrorist actions.

- The Seventh UN Congress on the Prevention of Crime and the Treatment of Offenders, meeting in Milan, Italy, August 26–September 6, adopted a strongly worded resolution calling on all states to strengthen antiterrorist cooperation. This resolution was cosponsored by the United States and obtained broad support.
- The World Tourism Organization, meeting in Sofia, Bulgaria, September 17–26, expressed its deep concern over the number of violent attacks perpetrated this year upon innocent travelers and the travel industry, and urged member states to take additional steps to ensure the safety of international travel and the security of all kinds of travelers. The United States played a key role in achieving consensus adoption of this resolution.
- The 40th session of the UN General Assembly, now in session, is considering a detailed and comprehensive resolution condemning international terrorism. We are hopeful the General Assembly will pass a solid text underscoring the international community's condemnation of terrorism and calling for specific action.

Resolutions and expressions of sentiment, of course, are not in themselves an answer to the problem of terrorism. They are nonetheless significant as indications of the changing international climate and the growing alarm in the international community over terrorism and hostage-taking. They can be important elements in pressing national governments to implement national and international legal commitments to punish such criminal acts.

The Prevention and Punishment of Terrorist Acts

The prevention and punishment of acts on international terrorism is one of our highest priorities. We have long recognized, however, that an effective response to terrorism requires, in the final analysis, cooperation on an international scale. In this respect, the United States has historically taken the lead in calling upon the world community to devise effective mechanisms for coping with terrorism and bringing its perpetrators to justice.

Speaking generally, these mechanisms fall into two categories: those directed toward the apprehension and punishment of terrorists, and those directed toward measures designed to prevent terrorists from acting. Into the first category would fall multilateral instruments such as:

- The 1963 Tokyo Convention on Offenses and Certain Other Acts Committed on Board Aircraft,
- The 1970 Hague Convention for the Suppression of Unlawful Seizure of Aircraft (Hijacking),
- The 1971 Montreal Convention for the Suppression of Unlawful Acts Against the Safety of Civil Aviation,
- The 1973 Convention on the Prevention and Punishment of Crimes Against Internationally Protected Persons Including Diplomatic Agents, and
- The 1979 Convention Against the Taking of Hostages.

At the heart of these conventions is the requirement that a state party either submit for prosecution under its own legal system or extradite individuals alleged to have committed offenses falling within their scope. The applicability of one or more of these conventions depends on the facts surrounding a particular act or acts of terrorism. Their effectiveness in turn depends on securing adherence to them by as many states as possible, and observance of their obligations by those states that have become party. The United States has continued to act vigorously on both fronts.

While there is no such convention directed at maritime terrorism *per se*, existing international law provides a substantial basis for responding to instances of maritime terrorism. Piracy as

an international crime, for example, has historical precedents of ancient origin. The importance of customary international law on the subject was reinforced by the inclusion of specific language concerning piracy in the 1958 Convention on the High Seas and recently reaffirmed in the 1982 Law of the Sea Convention. We believe that this existing body of law provides substantial authority to take action against vessel hijackings that occur on the high seas, and to try and punish those responsible. And, as noted above, maritime incidents that may not clearly fall within the internationally accepted definition of "piracy" may nevertheless fall within some other category of proscribed acts, such as hostage-taking. For example, the *Achille Lauro* incident was one to which the 1979 hostage convention is directly relevant.

Let me now turn to the prevention side. There is nothing in the maritime area that compares to what exists for international civil aviation. This in part reflects the fact that terrorist acts at sea, such as the *Achille Lauro* incident, are relatively infrequent and world attention has been focused almost exclusively on aviation security. There is no maritime counterpart to the ICAO [International Civil Aviation Organization] standards and recommended practices on airport and aircraft security. We are exploring whether such standards and recommended practices are feasible for ports and ships, but it is important to remember that maritime security raises complex problems that are significantly different from those surrounding aviation security. Indeed, it is difficult to suggest standards until we have determined what currently is being done, and what must be done both domestically and internationally, to secure both ports and ships.

The IMO Function

The International Maritime Organization (IMO) is almost the maritime counterpart to ICAO, but the IMO lacks the regulatory function inherent to ICAO. The IMO was established as a specialized agency of the United Nations in 1958. The organization, which is located in London, has nearly universal membership, with 127 full members and one associate member. Its main objective is to facilitate cooperation among governments on technical matters affecting international shipping, in order to achieve the highest practicable standards of maritime safety and efficiency of navigation. The organization has a special responsibility for safety at sea, and for the protection of the marine environment through prevention of pollution of the sea caused by ships and other craft. The IMO also deals with legal matters connected with international shipping, with the facilitation of international maritime traffic, and is responsible for providing technical assistance in maritime matters to developing countries. The IMO assembly, which consists of the full membership, meets every 2 years to approve broad policy for the organization and decide on the work program and budget. A 32-member council, of which the United States is a member, acts for the organization between assembly sessions.

Presently, the IMO convention does not provide a basis for the IMO to establish binding standards and recommended practices. Article 1(a) of the IMO convention states that the IMO should "provide machinery for cooperation among Governments in the field of governmental regulation and practices relating to technical matters of all kinds affecting shipping engaged in international trade; to encourage the general adoption of the highest practicable standards in matters concerning maritime safety, efficiency of navigation and the prevention of control of marine pollution from ships; and to deal with legal matters related to the purposes set out in this Article." Article 2 states that "the functions of the organization shall be consultative and advisory." The IMO has not hitherto considered questions of port security or access to ships while at port to fall within the purview of the convention. Yet, the IMO has dealt with, and continues to deal with, acts of piracy and armed robbery against ships at sea. In 1983 the IMO assembly adopted resolution A.545(13), entitled Measures to Prevent Acts of Piracy and Armed Robbery Against Ships. In June 1985, the council adopted a decision calling on all appropriate parties to take steps to improve rescue-at-sea procedures. The IMO is working with governments, other concerned international organizations, and shipping interests at the present time to implement these actions by the assembly and council and to strengthen antipiracy and rescue-at-sea programs.

Security at Sea

The question of security within territorial waters and while at port has thus far been treated as a matter of national, not international, regulation. We are now surveying existing regulations and practices worldwide to counter terrorism at sea. We are also gathering information on whether other governments are considering changing their procedures in light of the *Achille Lauro* incident and their attitudes toward existing international arrangements. Responses to our preliminary inquiry suggest that there is interest worldwide in improving security measures for passenger vessels, and that most countries consider their domestic authority sufficient to deal with terrorism in their own ports and territorial waters. We have no indication at this time that other governments advocate the creation of multilateral mechanisms in addition to those already in force. I should note, however, that for the United States to exercise effective leadership in maritime security, we have to make certain that our own port security sets international standards, as does our airport security.

Nevertheless, the Department is exploring the question of what international initiatives may be appropriate, either in a multilateral or bilateral context. We will use the opportunity of the IMO assembly, which meets November 11-22, to discuss international measures with individuals from the IMO secretariat and member states. We also want to discuss possible initiatives with the maritime industry, port operators and other U.S. Government agencies. In other words, we have considerable work before us to decide what more we can do to blunt the distressing new spread of international terrorism.

[1]The complete transcript of the hearings will be published by the committee and will be available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. ■

Visit of Ecuador's President

(White House photo by Pete Souza)

President Leon Febres-Cordero Ribadeneyra of the Republic of Ecuador made a state visit to the United States January 12–18, 1986. While in Washington, D.C., January 12–16, he met with President Reagan and other government officials.

Following are remarks made by President Reagan and President Febres-Cordero at the arrival ceremony on January 14.[1]

President Reagan

It gives me great pleasure to welcome you as friends of the United States and as friends of human freedom.

Ecuador's return to elected government in 1979 was one of the first waves of a rising tide of liberty witnessed throughout the hemisphere. President Febres-Cordero, we have watched with admiration as you and your government have strived to come to grips with the serious threats to Ecuador's economic, political, and social well-being. You are an articulate champion of free enterprise and those democratic ideals that are close to the hearts of the American people.

All those who love liberty are impressed with your courage and responsibility in attacking not just the symptoms but the underlying causes of misery, poverty, and unemployment. By protecting your country's good name and creditworthiness, by avoiding simplistic solutions and quick fixes, by unleashing the economy, building forces of the marketplace, you are leading your country to a better tomorrow.

Your uncompromising faith in political freedom is consistent with your support of economic freedom. We applaud your efforts to bolster the democratic institutions of your country. We also applaud your moves to encourage private sector growth and invigorate your economy. The United States stands by your side, and we will continue to do all we can to help.

When I say the United States stands with you, that is especially true when it comes to your determination to defeat the twin menace of international terrorism and narcotics trafficking. You've put yourself on the line against these vile and insidious forces. Your courage and integrity and that of your people have not gone unnoticed here. Drug traffickers and terrorists are the enemies of all decent people, and the United States is proud to be your ally in this brave struggle.

In a speech to your countrymen, you advised your citizens to "stand up when it is a matter of defending honor and freedom." That is exactly what Ecuador, under your leadership, has been doing. Few countries in the hemisphere have made the tough public stand against dictatorship, left and right, as has Ecuador. As you have pointed out on several occasions, democracy and the protection of human rights is the surest way to peace as well as freedom. It is no mere coincidence that those few nations controlled by oppressive communist regimes can be tied to so much of the turmoil and bloodshed that is plaguing this hemisphere. It should surprise no one that the rifles used to take over a court building and murder judges in a democratic nation can be traced to a country controlled by those who don't believe in freedom, human rights, or democracy. Democracies can no longer afford to ignore this unfortunate fact of life.

Your voice, Mr. President, is doing much to alert the freedom-loving people of this hemisphere to this continuing danger. The path of democracy, peace, and free enterprise is often difficult; but with courage, moderation, and wholehearted commitment, you're leading your people down that path. In doing so, you are not only building a stronger Ecuador, but you're contributing to a more peaceful and secure hemisphere. The dream of freedom and opportunity is the property of no one country. It is the birthright of every American, and that means every person from the North Slope of Alaska to the tip of Tierra del Fuego. We are all Americans.

And today we are proud to welcome you, President Febres-Cordero, as the leader of free people, as a man with a deep and abiding conviction, and as a statesman we respect and admire.

President Febres-Cordero

It is a great satisfaction to be received on this state visit by you, Mr. President, and by your wife. It is always a pleasure for a President of Ecuador to visit the United States. The long tradition of friendship between our peoples and the identification with the same democratic principles makes the return of an Ecuadorian chief of state to this great country not only enjoyable but also stimulating.

The fact that the United States of America and the rest of our continent share the same historic goals is not a recent phenomenon. It began with simultaneous battles to obtain political independence, and it continues today with the present defense of democracy, of liberty, and of individual rights—a defense which has meant a long series of shared efforts.

During moments of particular anguish in international relations, from that era of a struggle to claim the value and use of the American wealth from commercial monopolies until the tremendous confrontation of the Second World War, our peoples have been united, and our governments have enjoyed very strong cooperation. This historical path becomes especially important when a government in the United States headed by you coincides with an Ecuadorian Government headed by me, both working toward common goals: to vigorously restore to our peoples the pride of belonging to their respective countries; to revitalize economies that have suffered setbacks; to return to the individual and groups the right to carry out initiatives without the need for bureaucratic interference, with the understanding that the state exists to serve the individual, not to be served by the individual.

The cooperation between our peoples and governments, and international cooperation in general, are indispensable to confront the problems the world is experiencing. The goal of that remarkable man of our times, His Holiness John Paul II, of making 1986 the year of peace requires us to adopt important attitudes. Peace must come from the fact that between human beings there exists the willingness to cooperate and that hope grows within every human being. Peace must be based on the concept of justice, law, and harmony. Peace, unfortunately, nowadays has great enemies. The savagery of terrorism, which in its evil, neither respects nor distinguishes among people, places, or circumstances. Its ally, drug trafficking, corrupts and destroys physical and moral integrity. Governments, which consider that man is at the center of creation and that man is the main act of history, should cooperate to combat these crimes against humanity.

Peace has also another enemy: the agents of war, the ideological motivators of aggression, which contribute to the unjustifiable arms buildup. It will only be possible to have true and enduring peace in our world when, through the willingness of all men, a disarmament process may start in the world.

My country is a country with a pacific tradition. Neither violence nor the abuses of power that affect certain parts of the world have ever taken root in our land. We practice a democratic system which we seek to expand and to perfect, since we believe that it allows for the best social organization. It is only by prevalence of democratic regimes that stem from the sovereign will of our people that our continent and the whole world will be able to enjoy a true and enduring peace.

We are careful of service of the standards of human rights generated by national and international laws. There is no conflict, we believe, between respecting those rights and exercising a serene but determined authority. To use power to guarantee to the 9 million Ecuadorians who have the right to work, to be educated, to live fully is an imperative which coincides perfectly with the fight against lawlessness. Above all that lawlessness, which in its cruelest form—terrorism—undermines society with the greatest savagery and cruelty. In no way does it deny criminals the protection provided to them by the law, but neither does it allow them to go unpunished for their crimes.

Ecuador has met its international obligations in an effort which has been widely recognized by the international press and the world financial community. We have successfully rescheduled our foreign debt. We have regained our prestige as a serious country, which we have gained after many years of fruitful and responsible economic relationships with all countries of the world. We have been able to recover our economy, as all indicators clearly show. We have achieved this through a reasonable application of sound economic policies: letting the market play its fair role and allowing for the free initiative to flourish. We have promoted harmony between labor and capital within the observance of law and order. We have not at any time neglected—and it keeps being our main concern—these social policies. Those are the final objectives of our action. It is undoubtedly the well-being of our people what we are looking for with all our energies. Social welfare, within the framework of justice is the most appropriate soil for peace to flourish. Without peace and the well-being of all our peoples, the stability of this whole hemisphere is a danger.

In order to achieve social well-being, we require the solidarity and cooperation from those who are capable of working together with us, from those who have the capacity to assist us. We have to demonstrate to the world that there is no need of despotism, that there is no need of collectivism, to mitigate our people's sufferings. We wish to prove that with liberty and free initiatives it is indeed possible to reach standards of living which are adequate to the human being.

I am sure that this visit, which originated from your generous hospitality and that of the people of your country, will bring our two nations closer in strengthening their common ideals, and at the same time it gives my wife and me the opportunity to reaffirm our sincere friendship for you and your esteemed wife.

Secretary Meets With United Nicaraguan Opposition Leaders

(Department of State photo by Robert Kaiser)

From left to right: Arturo Cruz, Alphonso Robelo, Secretary Shultz, Adolfo Calero, and Assistant Secretary Abrams.

SECRETARY'S STATEMENT, JAN. 28, 1986[1]

I met this afternoon with Arturo Cruz, Adolfo Calero, and Alfonso Robelo who were kind enough to formally present me with a copy of the United Nicaraguan Opposition's (UNO) statement of principles and objectives released in Caracas January 22.

This document is of major significance to all of us who are concerned with progress toward democracy in Central America. It represents a program for democratic reform in Nicaragua, the only one of the five countries in Central America whose people do not enjoy the benefit of a government freely chosen in fair elections.

In contrast to the democratically elected administration of President Duarte in El Salvador and the recently inaugurated civilian governments of President Cerezo in Guatemala and of President Azcona in Honduras, and in further contrast to the free elections which will take place this weekend in the long established democracy of Costa Rica, Nicaragua continues under a severely repressive communist regime with no legitimate claim to a popular mandate.

The democratic forces represented by the United Nicaraguan Opposition offer hope that Nicaragua too will join the strong movement in the region toward democracy. We are delighted to see the publication of this detailed statement setting forth the kind of government the United Nicaraguan Opposition aspires to see implemented in Nicaragua. It emphasizes the rule of law and healthy respect for human rights. In short, it is a program very much in keeping with the democratic trend in the rest of the region, a trend which the Government of the United States strongly supports.

An End to Tyranny in Latin America

by Elliott Abrams

Address before the Americas Society in New York City on December 9, 1985. Mr. Abrams is Assistant Secretary for Inter-American Affairs.

Yesterday the people of Guatemala chose a president in open and competitive elections, the first democratically elected leader in almost a generation. What is the significance of that event? For Guatemalans the answer is obvious: for the *campesino*, the craftsman, the school teacher and the landowner, the labor leader and the businessman, and, after years of bloodshed, the Indian communities, it means a voice; it means hope for the expansion and protection of liberty; it means progress toward a better way of life.

But the importance of that election goes beyond the borders of Guatemala. It is part of something much larger. This hemisphere is in the midst of an astonishing transformation. For most of the 1960s and 1970s, tyranny ruled in many countries. Today, people throughout Latin America are demanding an end to arbitrary and illegitimate government. They are seeking control of their own destinies—and they are winning almost everywhere. Six years ago, less than one-third of the population of Latin America and the Caribbean lived in democratic societies. Today, over 90% have either attained or are on the road to self-government. Guatemala has now joined Argentina, Uruguay, Brazil, Peru, El Salvador, Honduras, and others who have once again chosen a democratic course.

What we are witnessing is the building and strengthening of a genuine democratic community in the Western Hemisphere. No longer are elections in this part of the world rare or isolated events. Elections are now part of a broad movement toward democracy, a movement that is strengthened and reinforced each time a new election is held. When the people of Guatemala, or Honduras, or Brazil go to the polls, they advance the cause of freedom not only in their own country but throughout the hemisphere. Peoples everywhere in the Americas understand that the fate of their freedom is closely tied to the fate of freedom elsewhere in the region; and that the survival and success of their democratic government rests on cooperation and mutual support among democratic leaders and peoples everywhere.

We in the United States must also recognize and understand this new reality in Latin America, for it is transforming our relations with other nations in this hemisphere.

It is clear that we who live in this hemisphere face a series of problems affecting, directly or indirectly, all of us: economic disarray and large debt burdens; the increasingly powerful and lethal alliance of terrorists and narcotics smugglers; the vestiges of rightwing authoritarianism; and communist subversion supported by the Soviet Union, Cuba, and Nicaragua.

All of these can undermine what we have achieved in this hemisphere, unless the United States joins with its democratic neighbors in common battle and provides the support and leadership that are required.

The U.S. Role

But what exactly should our role be? What must the United States do to strengthen this emerging democratic community and also defend our vital interests and our ideals?

A week ago, I met with foreign ministers from throughout Latin America at the OAS [Organization of American States] General Assembly in Cartagena. Two themes dominated those discussions. One was the desire of Latin governments to find "Latin American" solutions to the economic, political, and security problems they face. The other theme was the keen desire of Latin governments for the active participation of the United States on issues from economic assistance to narcotics control to counterterrorism to the prevention of communist expansion. You will note the paradox. I certainly did, and I came away from these meetings with a clearer sense of the difficulties of leadership and the inevitable tension between sovereignty and interdependence.

The truth is, the foreign ministers were right on both counts. The solutions to most of the problems that confront the nations of Latin America *do* ultimately lie with the peoples and the governments of those nations, not with the United States. Sustained economic growth, for instance, will not take hold in Latin America through any action by the United States. Only domestic economic policies that encourage savings and investment, productivity, and entrepreneurship can have any lasting effect. The same is true on other pressing issues. Only eradication and interdiction at the source can secure victory against the drug dealers. Only strong and effective counterterrorism policies by local governments can reduce the threat to innocent lives. Only the will to resist by the people themselves can ultimately prevent the spread of totalitarianism.

Yet few would deny—especially in Latin America and the Caribbean—that the United States has an essential role to play on all these issues. So let us ask again, what is that American role? What should our relationship be toward this newly forming democratic community?

Today, as I have said, the challenge to the United States is to provide leadership within a community of sovereign, democratic nations that need our help on many fundamental issues but do not wish, any more than we do, that our community should operate according to American dictates.

Consider the pattern of relations that has developed between the United States and the democratic community of Western Europe over the past four decades. The nations that comprise the Atlantic alliance are no less diverse than Latin America—in size, in culture, in both economic and military strength. And as you well know, disagreements among the allies abound on all important issues.

Yet the United States *is* a leader in the Atlantic community. The nations of Western Europe depend on us for deterrence against the Soviet Union. But we have not tried to use sheer power to enforce compliance with our wishes. When we disagree, we work hard to persuade others, and sometimes we fail. In the end, despite all the diversity and disagreement, no one disputes the reality and the necessity of close ties among our democratic nations.

Our relationship with our European allies has withstood many tests in its four decades of existence, and it is enormously supple. It is not the creation of any one party or leader, nor does any one crisis among the members undo it. For the alliance embodies the allegiance of all the peoples in it to ideals which do not change over time.

U.S. relations with Latin America and the Caribbean have a very different history. This cannot be because of a lack of economic interdependence, nor is it out of a lack of common cultural background. Are we so close to the

Norwegians, so different from the Venezuelans or the Jamaicans?

I would submit that our relations with Latin America and the Caribbean have been, in a sense, underdeveloped in comparison to those with Western Europe largely because the nations in our hemisphere have so often lived under colonial or tyrannical domination. For, in fact, close and lasting relations with a nondemocratic government are not, and cannot be, easy for us. The better the relations we have with such a government, the more we risk poor relations with a resentful people governed by men they did not choose. The closer we approach cooperation with the military, the more we may antagonize the civil society. The more we seek their cooperation on international issues, the more that support can taint the very purposes we seek to serve.

In truth, our ability to cooperate with the nations of this hemisphere is transformed by this wave of democratization. We can seek the closest possible ties, and offer the closest possible support, because we are dealing with governments that represent the people. We cannot be accused of favoritism, or militarism, or domination if we deal with elected presidents or prime ministers with the legitimacy to decide, for their part, what relationship with us their people wish.

Legitimate, sovereign, democratic governments provide an opportunity—not only to build new levels of friendship and cooperation but more: they allow us to explore issues on which there can be American leadership without American domination. A people living under colonial or tyrannical rule can often see close ties between its government and ours as inimical to its long-term desire to be free and can easily view an American leadership role with special resentment, as a form of domination based on sheer power. A free people can choose when they wish to see us take a lead, and when they wish us to refrain. Dominance based on power is not leadership, and it simply will not work in a democratic community.

The Debt Problem

What can relations look like in an era where democracy permits close cooperation? Let us take first the example of the debt problem.

My discussions at the OAS General Assembly in Cartagena revealed no diminution of concern about this issue; what has changed is that it is no longer a source of confrontation. It is no longer Latin American and Caribbean nations against us, but rather all of us thinking and planning together to address this critical issue.

This change is the product, of course, of the Baker plan [Program for Sustained Growth] in which we presented our thoughts about the complementary roles we must all play in coping with debt problems. But what produced the Baker plan? In no small part, the urgings of Latin American democratic leaders that they needed our help, lest democracy itself be threatened by economic decline.

Over the past year the leaders of democratic governments have told us that austerity was becoming increasingly difficult to bear. They spoke on behalf of their people, and so the legitimacy of their pleas was beyond question. Also beyond question was our responsibility to take a central role in approaching debt questions.

If the United States is for the survival of democracy, then we must also be especially concerned about economic growth in democratic countries. It is ironic that the revitalization of democracy in much of Latin America today was hastened by the inability of nondemocratic governments to deal with growing poverty and falling standards of living brought on largely by the international recession of the early 1980s.

If the new democracies are to survive, they must meet these problems head on. And we must help them. Poverty erodes the spirit and destroys the people's faith in their government. Over time, economic stagnation and decline can undermine even the most legitimate democratic systems if they fail to find an answer. It is thus directly in our interests to work with Latin American governments to build a more prosperous future for all our peoples.

And that is the effort we are now leading as we work to put the Baker plan into practice to cope with the problems of debt and the need for growth in the countries of this hemisphere.

Narcoterrorism

This blend of leadership and regional cooperation has taken hold in other areas, as well.

We are seeing increasing solidarity in the fight against terrorists and international narcotics traffickers. The key countries in Latin America and the Caribbean recognize the enormous threat posed by the *narcotraficantes*, not only to the health and well-being of their peoples, and ours, but also the health of their democracies. The deadly alliance of drug dealers and terrorist groups such as the M-19 in Colombia has become painfully clear. It's quite a racket. The terrorists provide protection to the drug dealers, and the drug dealers give the terrorists a share of the profits. Drugs, arms, and dollars are the currency in which they do their lethal trading.

These outlaws must be stopped, and democratic leaders like Colombia's President Betancur have shown their firm determination to do what is necessary to stop them.

Assistant Secretary for Inter-American Affairs

Elliott Abrams was born in New York City on January 24, 1948. His degrees include a B.A. from Harvard College (1969), an M.Sc.Econ. in International Relations from the London School of Economics (1970), and a J.S. from Harvard Law School (1973).

Mr. Abrams is an attorney who has practiced in New York and Washington, D.C. He spent 4 years working for the U.S. Senate: as Assistant Counsel to the Senate Permanent Subcommittee on Investigations (1975), Special Counsel to Senator Henry M. Jackson (1975-76), Special Counsel to Senator Daniel P. Moynihan (1977), and Chief of Staff for Senator Moynihan (January 1978–May 1979).

Mr. Abrams is the author of numerous essays and book reviews which have appeared in *Commentary*, *The Public Interest*, *The American Spectator*, *Policy Review*, and other journals.

Mr. Abrams has served in the State Department since 1981. He was Assistant Secretary for International Organization Affairs (January–December 1981) and Assistant Secretary for Human Rights and Humanitarian Affairs (December 1981–July 1985). Mr. Abrams was sworn in as Assistant Secretary for Inter-American Affairs on July 17, 1985. ■

But U.S. assistance and leadership in the war against narcotics and terrorism are also absolutely essential. We have resources that the countries of Latin America and the Caribbean lack. We provide training and equipment to antinarcotics units. We share information and methods. We provide funds to support narcotics crop eradication and to enhance the capacity to prevent and deter terrorist attacks.

Latin governments don't want us to do their job for them, but they do want to do the job, and they need our help. With regional cooperation and U.S. leadership, we will make great strides—because the overarching goal for all of us is the same. Assistance, training, and political and diplomatic support are more easily provided, and accepted, when the larger cause is the defense of democracy.

Communist Subversion and Aggression

If the need for U.S. involvement in the hemisphere is clear on such issues as narcoterrorism and debt, it should be equally clear on the issue of communist subversion and aggression. The threat to democracy in our hemisphere comes not only from economic and social problems, not only from military rule, and not only from drugs; it also comes from guerrilla war and terrorism spurred by Cuba and the Soviet Union, and now Nicaragua as well.

- For more than 5 years, the Cubans and the Sandinistas have been supplying weapons to guerrillas and terrorists in El Salvador, Honduras, and Costa Rica.
- For 5 years, the pace of arms shipments to Nicaragua from the Soviet Union and the Eastern bloc has been growing.
- Two months ago, M-19 terrorists, armed in part with weapons provided by the Sandinistas, attacked the Palace of Justice in Bogota, and intelligence sources reveal a broader pattern of support by the Sandinistas for terrorists in the hemisphere. Indeed, Managua is now an international gathering place for terrorists from all around the globe.
- Libya has begun to show its face in the Caribbean, yet another source of support for violent, antidemocratic groups.
- Last week, while OAS foreign ministers were meeting in Cartagena, while Secretary Shultz was meeting with the Contadora group, and while the peoples of Guatemala and Honduras were preparing for elections, a Soviet helicopter gunship was shot down by the democratic resistance fighters in Nicaragua. That helicopter, as you know, was flown by a Cuban pilot and copilot. This was just one of many instances where Cubans armed with Soviet-supplied weaponry have had a hand in fighting alongside Sandinista soldiers.

If Cuban troops can go into combat—for example, piloting Soviet helicopter gunships—in Nicaragua, why not in El Salvador, or in South America, or in a future struggle on a Caribbean island?

When Cuban favorites proved unable to cope with local resistance groups in Africa, the Cubans went in to help run the army and keep a Marxist regime in power. So it is in Nicaragua. Where next?

This threat and this reality are coming to be understood in Latin America and in the Caribbean. While Sandinista suppression is now widely known and despised, the Cuban role in Nicaragua and the Nicaraguan role in supporting terrorism throughout the hemisphere are not yet widely recognized. But the facts are there, and they are being learned.

Of course, this crisis presents us all with a novel challenge. Many Latins see U.S. intervention as the historic enemy of democracy in Latin America and see any U.S. security role—even that of support for the freedom fighters in Nicaragua—as such an intervention. But more and more Latin leaders also appreciate that Sandinista behavior today is simply unacceptable and threatens the new democratic surge in the hemisphere.

The democracies of Latin America—those in Central America, in the Contadora group, and the Lima group supporting Contadora—have a special responsibility. We seek to work with them to find a regional solution to the conflict. Nicaragua's opposition to a Contadora treaty will not dissuade us, nor will the new suspension of Contadora for several months. We will use this time to increase our consultations with the Latin American democracies, and we will increase our diplomatic activities in the search for peace.

For, in the first instance, Latin American democrats should protect Latin American democracy. They must be more concerned with their own future than with suspicions about our past. But, at such a moment, it is no act of hemispheric solidarity to desert the forces of freedom in Nicaragua. On the contrary, if we truly believe in the spread of democracy in the hemisphere, we cannot make Nicaragua an exception any more than we should—or have—made El Salvador or Guatemala or Chile an exception.

When the Soviets intervene in this hemisphere and arm the Sandinistas with sophisticated new war materiel, and tanks, and gunships, and when the Cubans and Bulgarians and East Germans and the rest of the usual Soviet team take over, can it be a mark of respect for Latin democracy to look the other way?

Just as our democratic allies in Europe know that Soviet and Soviet-sponsored aggression and subversion are massive challenges that require not only their reaction but our assistance, so I believe this conclusion will spread in Latin America, as it spread in the eastern Caribbean.

Meanwhile, the world's strongest democracy must be prepared to use its strength to support democracy where it already exists and where it is struggling to take root. No one else can assume that responsibility, and no one else is going to stand up for U.S. interests unless we ourselves are willing, able, and determined to do so. The fact is, other countries in the hemisphere want to support democracy in Nicaragua. But what they want to know first is whether the United States can stay the course.

It is up to us to keep the pressure on the Sandinistas by supporting the democratic resistance, by providing the assistance the freedom fighters need to defend themselves against Soviet weapons and Cuban troops

What should give us a sense of optimism in facing this challenge is precisely the degree to which the Sandinistas not only bring in foreign elements to this hemisphere but, in today's Latin America, *are* a foreign element. For today's Latin America and Caribbean are the world's center of democratic growth. We face enormous problems in all the areas I have noted today, but we have enormous assets with which to confront them. The material resources are extraordinary—the skills, the wealth, the experience, the technology.

But more striking still is our newest strength—the solidarity of democratic leaders and nations and the determination to protect our freedom and that of our neighbors.

We in the New World have a common past and many shared interests. Now we have in democracy a stronger tie than ever before. Let us hope we can nurture it, as it nurtures us. ■

U.S. Support for Transition to Democracy in Chile

by Elliott Abrams

Prepared statement before the Subcommittee on International Development Institutions and Finance of the House Banking, Finance, and Urban Affairs Committee on December 5, 1985. Mr. Abrams is Assistant Secretary for Inter-American Affairs.[1]

It is a pleasure and a privilege for me to appear before you today in response to your invitation to discuss U.S. policy toward Chile as it applies to U.S. votes in international financial institutions regarding loans to Chile.

Before turning to your specific interests, I would like to say a little about the policy framework in which we operate when considering these issues for Chile.

U.S. Policy

U.S. Government policy toward Chile is straightforward and unequivocal: We support a transition to democracy. This reflects our strong preference for democratic governments in general and the centrality of democracy and economic development to our policy in Latin America. We believe that the most effective means to pursue many varied interests in Chile—including regional security, curbing narcotics trafficking, promoting trade and cooperation on international issues, and fostering human rights—is to encourage the restoration of democracy. We believe this can happen on terms that are worked out by Chileans themselves, and which are satisfactory to the large majority of Chileans who want a stable democratic society, where human rights are protected.

We would like to see Chile participate very soon in the surge toward democracy which has been sweeping the hemisphere. We also know that we cannot impose on Chileans when and how this will occur. But we can help them to make it happen sooner by implementing a prudent foreign policy which actively pursues all possible ways of encouraging dialogue and moderation, which at the same time avoids actions on our part that exacerbate tensions in Chile.

While the vast majority of Chileans want to return to democratic government, there is considerable difference of opinion within Chile over the timing and procedure concerning a transition to democracy.

Chilean Government leaders say they are committed to a transition to a genuine democracy, and we will continue to press them to carry out their commitment. We consider it reasonable to expect to see tangible evidence of steady movement toward a transition to civilian rule. Such expectations represent neither interference in Chile's affairs, nor a policy of passive acceptance of military rule. A broad consensus in the country must be developed as a necessary foundation on which to build stable democratic institutions.

We have spoken out publicly numerous times in support of these objectives. Earlier this year President Reagan made public his concern over what he termed entrenched military rule in Chile. We have also conveyed our concerns in private conversations with Chilean Government representatives. The Government of Chile knows our views regarding the need for a transition to democracy.

The National Accord

In recent months a development took place with positive implications for Chile's transition. In late August representatives of a diverse group of democratic political parties, encouraged by the Catholic Church and many other leaders, came together to endorse a new, pragmatic set of proposals on a transition to democracy. The result was an agreement known as the National Accord, which has since gained the support of labor unions, professional associations and many prominent Chileans. The Chilean Government has recognized certain positive elements in the accord, but has yet to respond positively to the offer of dialogue implicit in the accord's proposals.

The accord represents a major advance in the process of dialogue and reconciliation that Cardinal Fresno [Juan Francisco Fresno Larrain] and many other Chilean leaders have encouraged. It is also a useful departure point for further progress toward developing a broad-based consensus on a peaceful and orderly transition to democracy in Chile. We have welcomed the accord, have publicly called upon leaders in Chile to respond constructively to this development, and are following the situation closely to see how the government and opposition proceed. We hope that all Chileans concerned about the future of democracy in their country will look past elements of disagreement and build on the positive elements they see in the accord.

I have emphasized our support for democracy because this is central to the decisions we make on specific issues concerning Chile. Other important elements include our general concern for eliminating human rights abuses wherever they occur, and our desire to support sound economic policies which promote economic growth, take into account market realities, and encourage responsible management of debt. Precisely because full respect for human rights is not apparent in Chile, efforts to encourage a transition to democracy take on greater importance. We believe the best guarantee that human rights will be carefully protected is provided by the establishment of representative and responsive democratic institutions.

Lifting the State of Siege

The human rights situation in Chile still causes serious concern, although certain positive changes have occurred since June, when a state of siege was lifted, leaving in effect less severe restrictions on constitutional protections under a state of emergency. The differences are particularly noteworthy in areas of freedom of expression and judicial review of government actions.

Removal of the state of siege limited somewhat the government's powers to enforce prior censorship and has brought significant improvements in the area of freedom of the press. Although the government is still empowered with broad authority to suspend constitutional guarantees under the state of emergency, since June that authority generally has been exercised with restraint. In fact, there is now a relatively open debate in the Chilean media over the National Accord. The President of the opposition Democratic Alliance, Gabriel Valdes, in September expressed his views on the accord in a speech broadcast over a national radio network. Two weeks ago Valdes addressed a protest rally in Santiago which attracted tens of thousands of Chileans demonstrating peacefully in support of democracy in the largest outdoor meeting held in Chile since 1973. It is

noteworthy that the government permitted the purchase of radio and television time to advertise the gathering. However, the government later denied the Democratic Alliance permission to hold a similar demonstration in the southern Chilean city of Puerto Montt. Moreover, restrictions on the media, especially television, continue to hamper fully open dialogue, as does the threat of prosecution should the government find certain published views or political activity objectionable.

Lifting the state of siege also restored judicial review of certain executive actions under the transitory provisions of the 1980 constitution. Furthermore, in recent months Chilean courts have demonstrated some independence and diligence by investigating several important cases of human rights violations potentially involving members of the security forces. As a result of a court investigation into a number of kidnappings and the murder in March of three members of the Chilean Communist Party, a judge ordered the detention of seven *carabineros*, including two colonels. This prosecution provoked a sweeping shakeup in this police organization and the resignation of the *carabinero* commander, also a junta member. Such investigations suggest that over time Chile's judicial system could bring about significant improvements in the human rights situation provided the courts are permitted to operate independently and exercise full authority.

Another positive change was the announcement by Chilean Foreign Minister Jaime del Valle that the Chilean Government intends this year to cooperate fully with United Nations Special Rapporteur for Human Rights in Chile Fernando Volio, the former Costa Rican Foreign Minister. For the first time since the UN established the office of the special rapporteur for Chile in 1979, the Chilean Government has agreed to permit the rapporteur to visit Chile. Government authorities have provided assurances that Volio will be free to conduct this visit as he wishes. In addition, they have indicated that the Chilean Government is prepared to adopt the recommendations contained in Volio's preliminary report. We hope that the government adopts all the recommendations of the special rapporteur and sees to their prompt and full implementation.

Implementation of these recommendations could produce a positive impact on other elements in the human rights situation that cause serious concern. Although judicial review of government actions is greater now than before June, the government retains the ability to act in certain matters without judicial review, and has continued a policy of sending some of its critics and opponents into internal exile by administrative decree. While we welcomed the decision in September of the Chilean Government to allow 500 more Chilean exiles to return, we hope the government will work to resolve the situations of the several thousand Chileans who are still barred from returning. The media has been allowed greater freedom of action but political freedoms and civil liberties are severely limited under the states of exception that remain in force. The government has promulgated one of the political transition laws provided for by the 1980 constitution, regarding an electoral tribunal, but no progress has occurred toward legalizing political parties, passing an electoral law or reestablishment of electoral registers.

Extremist Violence Continues

Violence from many sources continues to plague Chile. Antigovernment terrorism continued even under the state of siege. Court cases such as that affecting the *carabineros* represent an advance but are also evidence of the persistence of abuses by security forces. The frequency of terrorism and other violent acts has made progress on all human rights issues much more difficult.

Incidents of violence have occurred in conjunction with antigovernment protests, in which circumstances are often unclear and responsibility for specific acts difficult to determine. Hundreds of people have been detained, although in most cases only briefly, in connection with political protests this fall. Protests at the beginning of September this year left 10 dead. Five people were killed in November demonstrations called for in part to protest the detention of six labor and neighborhood organization leaders charged with responsibility for the September protests.

Reliable reports of torture and mistreatment of those detained by the authorities continue to be received by human rights organizations. Since June there has been an increase in charges by human rights groups and government opponents of temporary kidnappings, beatings, and torture by unidentified persons. Churches have been bombed or attacked with gunfire, priests and lay workers physically threatened or attacked. Responsibility for these attacks and threats is difficult to place, but some appear to be the work of a rightwing terrorist group called Chilean Anti-Communist Action. Human rights groups charge that Chilean intelligence or security forces are involved. Identification and swift prosecution of those responsible is the most effective answer to such allegations.

During the same period, the Communist Party-linked Manuel Rodriguez Patriotic Front (FPMR) has continued its program of violence, including a car bombing against the consular section of the U.S. Embassy in July, which killed a bystander. The FPMR and other terrorist organizations have carried out and taken credit for hundreds of violent acts over the past year, mainly bombings, which have resulted in the deaths of civilians as well as members of the security forces. Five civilians, a Navy officer, a uniformed policeman, and a plainclothes detective were killed in recent terrorist attacks.

Regardless of source or political orientation, extremist violence can only deepen the divisions within the country and impede an orderly transition process.

IFI Loans to Chile

We take human rights considerations into account in determining how the U.S. votes on loans by international financial institutions (IFIs) to a given country. Our standard practice is to consider each proposed IFI bank loan for Chile or any other country on a case-by-case basis. We then determine the U.S. position on the basis of all relevant factors, including economic, human rights, and statutory criteria. Interagency review mechanisms exist to ensure that both human rights and economic policy considerations are carefully factored in during the decisionmaking process. An interagency working group on human rights and foreign assistance, cochaired by the Human Rights and Humanitarian Affairs Bureau and the Economic and Business Affairs Bureau at the State Department, meets regularly to review all upcoming loans in the IFIs. To consider financial and economic policy factors, the Treasury Department chairs a comparable interagency working group on multilateral assistance.

During the Reagan Administration the United States has generally, but not always, voted in favor of IFI loans to Chile. For example, in December 1983 the U.S. executive director in the Inter-American Development Bank (IDB) op-

posed a loan for mining investment in Chile on the basis that the mining firms could have borne the debt service costs instead of receiving an equity infusion from the government. Last winter and spring we abstained on three loans to Chile following a careful review of all relevant considerations, including the restrictions in effect at that time under the state of siege.

On June 18, after the Chilean Government had lifted the state of siege restrictions, the U.S. executive director at the World Bank voted in favor of a $55 million investment loan for a methanol project in which the U.S. firm Signal Corporation is participating. Since then, again following the careful interagency review I have described, the U.S. executive directors in the IDB and the World Bank have voted in favor of other loans to Chile including a $250 million World Bank structural adjustment loan key to Chile's economic recovery efforts. We will decide future votes also on a case-by-case basis, using the aforementioned review mechanisms and criteria.

Chile's Precarious Economic Situation

IFI loans are important to Chile, where the economic situation remains precarious. Since 1970 Chile has suffered the worst decline in its terms of trade of any country in Latin America. With the worldwide drop in commodity prices, Chile's export earnings have fallen dramatically. In 1984 Chile's export earnings were over $1 billion below where they had been in 1980.

The economy's overwhelming dependence on copper, compounded by one of the region's highest per capita levels of external debt, has not allowed Chile to benefit as much as might be expected from its generally good performance in applying responsible stabilization policies, an area in which Chile has one of the best records in the hemisphere. In 1982 and 1983 the Chilean economy declined by a cumulative 15%. Despite expansion of 6% in 1983, unemployment remains high, at about 14%, with another 9% of the workforce dependent for survival on low-wage government make-work programs.

A $2 billion financial adjustment program negotiated this summer with commercial banks, the IMF [International Monetary Fund] and the World Bank, in conjunction with a restructuring of foreign debt with private banks and some official creditors, may produce a modest growth that could ease some of the pain of necessary economic adjustment. Presently foreign banks are providing final commitments for $785 million in new commercial bank credits in 1985–86, which complement a separate $300 million commercial bank loan partially guaranteed by the World Bank. An IMF agreement which took effect in August provides 750 million special drawing rights, and helps to assure foreign lenders that Chile will continue to follow rational macroeconomic policies to allow orderly servicing of a foreign debt of nearly $19 billion.

The World Bank structural adjustment loan provides another means of monitoring Chilean economic performance over the next few years, further improving the prospects for continued sound economic policy and greater economic improvement. The Chilean Government's free-market oriented policies have helped eliminate some of the traditional rigidities in the Chilean economy and have helped to establish a base for effective implementation of this loan.

In light of the precarious economic situation in Chile and the additional suffering that another downturn would impose on the Chilean people, we believe it is important to continue to support Chilean economic policies that seek continued adjustment in conjunction with growth of the private sector and responsible debt management.

Bringing about changes for the better in Chile's human rights performance is central to our policy toward Chile. Under present circumstances, denying the people of Chile international financial resources would deepen the country's problems, exacerbate social and political tensions, and weaken the process of reconciliation being actively promoted by the Catholic Church and other responsible sectors of Chilean society. We believe that it is important for those favoring Chile's return to democracy to encourage this fragile process of national reconciliation to take root. That will require moderation and flexibility on the part of those concerned, including Chile's friends abroad. Our actions are most helpful to the degree that we support the flexible resolution of the deep-seated differences in Chile, without reinforcing the positions of those who argue that differences are irreconciliable, or without in turn contributing to creation of new divisions.

[1]The complete transcript of the hearings will be published by the committee and will be available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. ■

January 1986

The following are some of the significant official U.S. foreign policy actions and statements during the month that are not reported elsewhere in this periodical.

January 2–4
A team of U.S. technical experts from the Joint Casualty Resolution Center and the Central Identification Laboratory visits Laos for a preliminary survey of the site where a U.S. Air Force AC–130 crashed during the war in Indochina. Based on results of the survey, the U.S. will present a proposal for a joint excavation of the site to recover the remains of the crewmembers missing from the crash.

January 3–14
Assistant Secretary Crocker visits Egypt (Jan. 3–5) for consultations with Egyptian officials on a broad range of African issues, including the Horn of Africa as well as southern Africa. On January 6, he visits the Sudan as part of continuing exchanges on security and other bilateral issues.

On January 8–9, Assistant Secretary Crocker heads a U.S. delegation meeting in Luanda, Angola, to continue negotiations on southern Africa and the implementation of SC Resolution 435 regarding the independence of Namibia.

On January 12–14, he meets with South African officials in Johannesburg and Capetown to discuss regional issues.

January 6
U.S. and Vietnamese delegations meet in Hanoi to discuss POW/MIA issues. Assistant Secretary of Defense Armitage heads the U.S. delegation, which includes Assistant Secretary Wolfowitz.

January 10
Secretary Shultz meets with Japanese Foreign Minister Abe for discussions on bilateral issues, particularly trade matters.

January 15–24
Deputy Secretary Whitehead travels to Canada (Jan. 15), the U.K. (Jan. 16), Italy (Jan. 17), Turkey (Jan. 18), Greece (Jan. 19–20), the F.R.G. (Jan. 20–21), France (Jan. 22), Belgium (Jan. 23), and the Netherlands (Jan. 23–24) to explain to senior host government officials the threat posed by state-supported international terrorism and steps to take in response to that threat, including U.S. measures against Libya as announced by President Reagan on January 7.

January 19–23
Ambassador Shlaudeman visits Panama, Colombia, Venezuela, Costa Rica, and El Salvador to meet with Contadora group members for discussions regarding ways the U.S. can contribute to their renewed peace initiative put forward on January 12 in Carabelleda, Venezuela.

January 22
President Reagan meets with Japanese Finance Minister Takeshita to discuss U.S.-Japan economic and trade issues.

January 24
Deputy Assistant Secretary Wisner meets with Angolan Minister of Foreign Trade Ismael Gaspar Martins in support of U.S. efforts to achieve negotiated settlements to the region's conflicts.

January 25
U.S.-Japan negotiators sign an "agreed minute" affirming the succession of United Airlines to Pan American's full rights under an aviation agreement, to become effective on February 11, 1986. ■

Current Actions

MULTILATERAL

Agriculture
International plant protection convention. Done at Rome Dec. 6, 1951. Entered into force Apr. 3, 1952; for the U.S. Aug. 18, 1972. TIAS 7465.
Adherence deposited: Algeria, Oct. 1, 1985.

Aviation, Civil
Convention on the international recognition of rights in aircraft. Done at Geneva June 19, 1948. Entered into force Sept. 17, 1953. TIAS 2847.
Accessions deposited: Grenada, Aug. 28, 1985; Uruguay, Aug. 21, 1985.
Ratification deposited: Portugal, Dec. 12, 1985.

Convention on offenses and certain other acts committed on board aircraft. Done at Tokyo Sept. 14, 1963. Entered into force Dec. 4, 1969. TIAS 6768.
Accession deposited: Antigua and Barbuda, July 19, 1985.

Commodities—Common Fund
Agreement establishing the Common Fund for Commodities, with schedules. Done at Geneva, June 27, 1980.[1]
Ratifications deposited: Djibouti, Nov. 25, 1985; Yemen (Sanaa), Jan. 14, 1986.

Consular Relations
Vienna convention on consular relations. Entered into force Mar. 19, 1967; for the U.S. Dec. 24, 1969. TIAS 6820.

Optional protocol to the Vienna convention on consular relations concerning the compulsory settlement of disputes. Entered into force Mar. 19, 1967; for the U.S. Dec. 24, 1969. TIAS 6820.
Accessions deposited: Netherlands, Dec. 17, 1985.

Customs
Customs convention on the international transport of goods under cover of TIR carnets, with annexes. Done at Geneva Nov. 14, 1975. Entered into force Mar. 20, 1978; for the U.S. Mar. 18, 1982.
Accession deposited: Jordan, Dec. 24, 1985.

Investment Disputes
Convention on the settlement of investment disputes between states and nationals of other states. Done at Washington Mar. 18, 1965. Entered into force Oct. 14, 1966. TIAS 6090.
Signature and ratification deposited: Ecuador, Jan. 15, 1986.

Jute
International agreement on jute and jute products, 1982, with annexes. Done at Geneva Oct. 1, 1982. Entered into force provisionally Jan. 9, 1984.
Notification of provisional application: Poland, Nov. 20, 1985.

Maritime Matters
International convention on maritime search and rescue, 1979, with annex. Done at Hamburg Apr. 27, 1979. Entered into force June 22, 1985.
Accession deposited: Pakistan, Nov. 11, 1985.
Ratification deposited: Turkey, Nov. 21, 1985.

Narcotic Drugs
Protocol amending the single convention on narcotic drugs, 1961. Done at Geneva Mar. 25, 1972. Entered into force Aug. 8, 1975. TIAS 8118.
Ratification deposited: Venezuela, Dec. 4, 1985.

Nuclear Material—Physical Protection
Convention on the physical protection of nuclear material, with annexes. Done at Vienna Oct. 26, 1979.[1]
Ratification deposited: Brazil, Oct. 17, 1985.

Nuclear Weapons—Nonproliferation
Treaty on the nonproliferation of nuclear weapons. Done at Washington, London, and Moscow July 1, 1968. Entered into force Mar. 5, 1970. TIAS 6839.
Accession deposited: Democratic People's Republic of Korea, Dec. 12, 1985.

Patents—Microorganisms
Budapest treaty on the international recognition of the deposit of microorganisms for the purposes of patent procedure, with regulations. Done at Budapest Apr. 28, 1977. Entered into force Aug. 19, 1980. TIAS 9768.
Ratification deposited: Norway, Oct. 1, 1985.

Postal
General regulations of the Universal Postal Union, with final protocol and annex, and the universal postal convention with final protocol and detailed regulations. Done at Rio de Janeiro Oct. 26, 1979. Entered into force July 1, 1981; except for Article 124 of the general regulations which became effective Jan. 1, 1981. TIAS 9972.
Ratifications deposited: New Zealand, Oct. 4, 1985; Saudi Arabia, Aug. 14, 1985.

Prisoner Transfer
Convention on the transfer of sentenced persons. Done at Strasbourg Mar. 21, 1983. Entered into force July 1, 1985.
Ratifications deposited: Canada, May 13, 1985; U.K., Apr. 30, 1985.[2]

Space
Treaty on principles governing the activities of states in the exploration and use of outer space, including the moon and other celestial bodies. Done at Washington, London, and Moscow Jan. 27, 1967. Entered into force Oct. 10, 1967. TIAS 6437.
Accession deposited: Bangladesh, Jan. 17, 1986.

Sugar
International sugar agreement, 1984, with annexes. Done at Geneva July 5, 1984. Entered into force provisionally Jan. 1, 1985; definitively Apr. 4, 1985.[3]
Accession deposited: New Zealand, Dec. 30, 1985.

Telecommunications
International telecommunication convention, with annexes and protocols. Done at Nairobi Nov. 6, 1982. Entered into force Jan. 1, 1984; definitively for the U.S. Jan. 7, 1986.
Senate advice and consent to ratification: Dec. 16, 1985.
Ratification signed by the President: Dec. 26, 1985.
Ratification deposited: Jan. 10, 1986.
Accessions deposited: Albania, Nov. 2, 1984; Bahrain, Jan. 13, 1984; Bolivia, Jan. 30, 1984; Brunei, Nov. 19, 1984; Chad, Dec. 12, 1984; Haiti, Sept. 27, 1984; Honduras, Sept. 11, 1985; Democratic People's Republic of Korea, Jan. 9, 1984; Laos, Aug. 8, 1984; Malta, Apr. 11, 1984; Mauritius, July 24, 1985; Namibia, Jan. 25, 1984; Sao Tome and Principe, Feb. 6, 1984; Sierra Leone, Sept. 2, 1985; South Africa, Nov. 14, 1984; Trinidad and Tobago, Oct. 1, 1984.
Ratifications deposited: Afghanistan, Oct. 26, 1984; Australia, Jan. 12, 1984; Canada, Oct. 11, 1983; China, Aug. 19, 1985; Colombia, Sept. 19, 1985; Czechoslovakia, Mar. 5, 1985; Denmark, Mar. 14, 1985; Egypt, Sept. 16, 1985; El Salvador, Mar. 28, 1985; Ethiopia,

July 3, 1984; France, Oct. 1, 1984; German Democratic Republic, Oct. 12, 1984; Greece, May 15, 1985; Israel, July 19, 1984; Japan, July 12, 1984; Jordan, Mar. 14, 1984; Liechtenstein, Apr. 1, 1985; Luxembourg, Nov. 1, 1984; Malawi, Maldives, Apr. 1, 1985; Mexico, Mar. 15, 1984; Netherlands, Aug. 31, 1984; Niger, Feb. 6, 1984; Papua New Guinea, Jan. 25, 1984; Qatar, May 2, 1985; Senegal, Nov. 13, 1984; Somalia, June 25, 1984; Suriname, Jan. 7, 1985; Swaziland, May 23, 1985; Sweden, Oct. 3, 1985; Switzerland, Apr. 1, 1985; U.K., Nov. 15, 1984; Uruguay, Sept. 24, 1984.
Supersedes the Malaga-Torremolinos convention of Oct. 25, 1973 (TIAS 8572).

Radio regulations, with appendices and final protocol. Done at Geneva Dec. 6, 1979. Entered into force Jan. 1, 1982; definitively for the U.S. Oct. 17, 1983.
Ratification deposited: Colombia, Sept. 19, 1985.

Terrorism
International convention against the taking of hostages. Done at New York Dec. 17, 1979. Entered into force June 3, 1983; for the U.S. Jan. 6, 1985.
Ratification deposited: Canada, Dec. 4, 1985.

Timber
International tropical timber agreement, 1983, with annexes. Done at Geneva Nov. 18, 1983. Entered into force provisionally Apr. 1, 1985; for the U.S. Apr. 26, 1985.
Accession deposited: Papua New Guinea, Nov. 27, 1985.
Ratification deposited: Cameroon, Nov. 19, 1985.

UNIDO
Constitution of the UN Industrial Development Organization, with annexes. Done at Vienna Apr. 8, 1979. Entered into force June 21, 1985.
Accessions deposited: Qatar, Dec. 9, 1985; Saint Christopher-Nevis, Dec. 11, 1985.

Women
Convention on the elimination of all forms of discrimination against women. Adopted at New York Dec. 18, 1979. Entered into force Sept. 3, 1981.[4]
Accessions deposited: Ireland, Dec. 23, 1985; Turkey, Dec. 20, 1985.
Ratification deposited: Ghana, Jan. 2, 1986.

BILATERAL

Australia
Agreement amending and extending the agreement of Oct. 16, 1968 (TIAS 6589), as extended, relating to scientific and technical cooperation. Effected by exchange of notes at Washington Oct. 15, 1985 and Jan. 13, 1986. Entered into force Jan. 13, 1986; effective Oct. 16, 1985.

Bolivia
Agreement supplementing the agreement of Sept. 23, 1955, as supplemented (TIAS 3408, 5548), relating to investment guarantees under Section 413(b)(4) of the Mutual Security Act of 1954, as amended. Effected by exchange of notes at La Paz Dec. 19, 1985. Entered into force Dec. 19, 1985.

Brazil
Agreement concerning trade in certain steel products, with arrangement and related letter. Effected by exchange of letters at Washington Feb. 26, 1985. Entered into force Feb. 26, 1985; effective Oct. 1, 1984.

Canada
Agreement amending the agreement of Mar. 2 and 16, 1984, for cooperation in severe (nuclear) accident research. Signed at Ottawa and Washington Aug. 29 and Nov. 27, 1985. Entered into force Nov. 7, 1985.

China
Agreement relating to reciprocal facilitation of visa issuance. Effected by exchange of notes at Beijing Dec. 2, 1985. Entered into force Jan. 2, 1986.

Colombia
Agreement amending the agreement of July 1 and Aug. 11, 1982, as amended (TIAS 10543) relating to trade in cotton, wool, and manmade fiber textiles and textile products. Effected by exchange of notes at Washington Dec. 10, 1985. Entered into force Dec. 10, 1985.

Memorandum of agreement on the exchange of service personnel between the U.S. Navy and Colombian Navy. Signed at Bogota and Washington Mar. 8 and Apr. 30, 1985. Entered into force Apr. 30, 1985.

Costa Rica
Agreement for the sales of agricultural commodities. Signed at San Jose Nov. 29, 1985.
Entered into force: Jan. 2, 1986.

Finland
Protocol extending the memorandum of understanding of Nov. 6, 1980 (TIAS 9932), for cooperation in energy research and development. Signed at Helsinki Jan. 3, 1986. Entered into force Jan. 3, 1986; effective Nov. 6, 1985.

France
Amendment modifying the agreement of July 27, 1961 (TIAS 4867) for cooperation in the operation of atomic weapons systems for mutual defense purposes. Signed at Paris July 22, 1985.
Entered into force: Jan. 13, 1986.

Federal Republic of Germany
Agreement with respect to the transfer of certain works of art seized at the end of World War II, with annex. Effected by exchange of notes at Washington Jan. 28, 1986. Entered into force Jan. 28, 1986.

Greece
General security of military information agreement, with annex on industrial security procedures. Signed at Athens Jan. 7, 1986. Entered into force Jan. 7, 1986.

Agreement relating to financial arrangements for the furnishing of certain supplies and services to naval vessels. Effected by exchange of notes at Athens Jan. 18–19, 1957. Entered into force Apr. 19, 1957. TIAS 3750.
Terminated: May 18, 1984.

Guatemala
Agreement relating to trade in certain cotton textiles, with annexes. Effected by exchange of notes at Guatemala Aug. 23 and Oct. 25, 1985. Entered into force Oct. 25, 1985; effective Jan. 1, 1985.

Guinea
Agreement for the sale of agricultural commodities. Signed at Conakry Jan. 3, 1986. Entered into force Jan. 3, 1986.

Italy
Memorandum of understanding concerning energy research and development cooperation, with table and annex. Signed at Rome Dec. 5, 1985. Entered into force Dec. 5, 1985.

Treaty on mutual assistance in criminal matters, with memorandum of understanding. Signed at Rome Nov. 9, 1982.
Ratifications exchanged: Nov. 13, 1985.
Entered into force: Nov. 13, 1985.[5]

Japan
Technical exchange arrangement in the field of nuclear regulatory matters and nuclear safety research. Signed at Tokyo and Washington Dec. 28 and 31, 1985. Entered into force Dec. 31, 1985.

Agreement extending the joint determination of Oct. 30, 1981, as extended (TIAS 10294), for reprocessing of special nuclear material of U.S. origin. Effected by exchange of notes at Tokyo Dec. 20, 1985. Entered into force Dec. 20, 1985.

Korea
Agreement relating to eligibility for U.S. military assistance and training pursuant to the International Security Assistance and Arms Export Control Act of 1976. Effected by exchange of notes at Seoul Feb. 14 and 25, 1977. Entered into force Feb. 25, 1977.

Malaysia
Agreement amending agreement of July 1 and 11, 1985, as amended, relating to trade in

cotton, wool, and manmade fiber textiles and textile products. Effected by exchange of note at Kuala Lumpur Dec. 12 and 19, 1985; entered into force Dec. 19, 1985.

Mexico
Agreement amending and extending agreement of Feb. 26, 1979, as amended and extended (TIAS 9419, 10324), relating to trade in cotton, wool, and manmade fiber textiles and textile products. Effected by exchange of notes at Washington Dec. 30–31, 1985. Entered into force Dec. 31, 1985.

Agreement amending the agreement of Mar. 29, 1983, (TIAS 10675) relating to additional cooperative arrangements to curb the illegal traffic in narcotics. Effected by exchange of letters at Mexico Nov. 25 and 29, 1985. Entered into force Nov. 29, 1985.

Agreement amending the agreement of June 2, 1977, (TIAS 8952) relating to additional cooperative arrangements to curb the illegal traffic in narcotics. Effected by exchange of letters at Mexico Nov. 29 and Dec. 2, 1985. Entered into force Dec. 2, 1985.

Mozambique
Agreement concerning the provision of training related to defense articles under the U.S. International Military Education and Training (IMET) program. Effected by exchange of notes at Maputo Nov. 7, 1984, and Apr. 12, 1985. Entered into force Apr. 12, 1985.

OECD
Cooperative arrangement with the Nuclear Energy Agency of OECD in the field of nuclear data and computer programs. Signed at Paris Dec. 16, 1985. Entered into force Dec. 16, 1985.

Poland
Agreement concerning fisheries off the coasts of the U.S., with annexes and agreed minutes. Signed at Washington Aug. 1, 1985. Entered into force: Jan. 1, 1986.

Portugal
Technical agreement in implementation of the defense agreement of Sept. 6, 1951, as amended (TIAS 3087, 3950, 7254, 10050), with annexes and related notes. Signed at Lisbon May 18, 1984.
Entered into force: Dec. 23, 1985.

Agreement concerning trade in certain steel products, with arrangement. Effected by exchange of letters at Washington Nov. 29, 1985. Entered into force Nov. 29, 1985; effective Oct. 1, 1984.

Senegal
Agreement extending the agreement of Jan. 30 and Feb. 5, 1981, as amended and extended (TIAS 10088, 10325), regarding the establishment and operation of a space vehicle tracking and communication facility in connection with the space shuttle. Effected by exchange of notes at Dakar Sept. 26 and Dec. 27, 1985. Entered into force Dec. 27, 1985.

Seychelles
Agreement amending the agreement of June 29, 1976, as amended (TIAS 8385, 10173), relating to the establishment, operation and maintenance of a tracking and telemetry facility on the island of Mahe. Effected by exchange of notes at Victoria Nov. 5, 1985. Entered into force Nov. 21, 1985.

Singapore
Agreement amending the agreement of Aug. 21, 1981, as amended, relating to trade in cotton, wool, and manmade fiber textiles and textile products. Effected by exchange of notes at Washington Nov. 26 and Dec. 13, 1985. Entered into force Dec. 13, 1985.

Agreement extending agreement of Aug. 21, 1981, as amended, relating to trade in cotton, wool, and manmade fiber textiles and textile products. Effected by exchange of notes at Singapore Dec. 17 and 23, 1985. Entered into force Dec. 23, 1985.

South Africa
Agreement concerning exports to the U.S. of certain textiles and textile products. Effected by exchange of notes at Washington Nov. 21–22, 1985. Entered into force Nov. 22, 1985; effective Sept. 1, 1985.

Tunisia
Memorandum of understanding for cooperation in the field of military medicine. Signed at Tunis Aug. 14, 1985. Entered into force Aug. 14, 1985.

United Kingdom
Memorandum of understanding concerning the exchange of medical cadets between the Royal Navy and the Uniformed Services University of the Health Sciences. Signed at Washington and London Mar. 25 and Oct. 7, 1985. Entered into force Oct. 7, 1985.

Memorandum of understanding relating to the principles governing cooperation in research and development, production, procurement, and logistic support of defense equipment, with annexes. Signed at London and Washington Dec. 18 and 30, 1985. Entered into force Dec. 30, 1985.

Agreement in the field of decommissioning nuclear facilities, with appendix. Signed at Washington Mar. 1 1985. Entered into force Mar. 1, 1985.

UN (Vienna)
Agreement to permit the exchange of third-party messages between amateur stations of the U.S. and amateur station 4UiVIC of the Vienna International Amateur Radio Club. Effected by exchange of letters at Vienna Nov. 21 and Dec. 3, 1985. Entered into force Jan. 2, 1986.

Uruguay
Agreement amending the agreement of Dec. 30, 1983, and Jan. 23, 1984, concerning exports of certain textile products. Effected by exchange of notes at Washington Nov. 21 and Dec. 13, 1985. Entered into force Dec. 13, 1985.

Venezuela
Agreement amending the agreement of Apr. 10, 1980, (TIAS 10652) on agricultural cooperation. Effected by exchange of notes at Caracas June 25, Nov. 8, and Dec. 11, 1985. Entered into force Dec. 11, 1985.

Agreement governing cooperation in mapping, charting, and geodesy. Signed at Washigton and Caracas June 18 and Nov. 26, 1985. Entered into force Nov. 26, 1985.

Zaire
Agreement regarding the consolidation and rescheduling of certain debts owed to, guaranteed by, or insured by the U.S. Government and its agencies, with annexes. Signed at Kinshasa Dec. 3, 1985. Entered into force Jan. 9, 1986.

MEMORANDUM FOR
THE SECRETARY OF STATE
THE SECRETARY OF DEFENSE
THE SECRETARY OF THE TREASURY
THE SECRETARY OF COMMERCE
THE SECRETARY OF AGRICULTURE
THE DIRECTOR OF CENTRAL INTELLIGENCE
THE ASSISTANT TO THE PRESIDENT FOR NATIONAL SECURITY AFFAIRS
THE ACTING ARCHIVIST OF THE UNITED STATES
THE PUBLIC PRINTER

SUBJECT: Timely Publication of the *Foreign Relations Series*

The documentary publication *Foreign Relations of the United States* has presented the official record of American diplomacy since the presidency of Abraham Lincoln. This orderly and timely publication of the official diplomatic record is extremely important. The accurate understanding of the history of American diplomacy is necessary not only for our own citizens but also for our allies and adversaries abroad. And, while the continued public disclosure of diplomatic negotiations and undertaking must be balanced carefully against the needs of national security and the expectation of confidentiality in the diplomatic process, the historic record when published should be as complete as possible. The documentary publication series, *Foreign Relations*, is the proper vehicle for systematic official disclosure of the major documentation regarding American foreign policy in its proper historical context.

I therefore direct that the authoritative foreign affairs record be gathered and appropriately published thirty years after the event in a manner fully consistent with other directives on the release and publication of official information. In particular I ask that the Secretary of State take necessary measures to ensure the publication by 1990 of the foreign affairs volumes through 1960. The published record should reflect the activities of those federal agencies with responsibilities for the conduct of relations with foreign governments and international organizations.

To assist in this important task, I ask that each of you direct your agencies and staffs to cooperate with the Department of State in the collection, declassification review, and publication of these volumes. You should assure all proper access to authoritative historical records to appropriately cleared official Department of State historians and that the declassificaton review for publication is accorded the necessary priority to achieve this 30-year publication timeframe.

I ask the Department of State to oversee the convening of periodic meetings of appropriate interagency representatives to review and improve cooperative procedures and plans to meet this 30-year publication timeframe. In addition, I direct that the Department of State make an annual status report on the progress made toward this goal.

RONALD REAGAN ■

Documents on Germany Released

On January 31, 1986, the Department of State released the publication *Documents on Germany, 1944–1985*. It is a revised edition of a standard reference work first published in 1959, and presents an authoritative record of major statements of U.S. policy toward Germany since World War II. The volume provides an overview of the development of the German question and the Berlin issue together with the issue of European security in the post World War II era, and the evolution of relations between the Federal Republic of Germany and the German Democratic Republic.

The record begins with wartime allied planning for the occupation of Germany and division of the defeated enemy state into zones of occupation. The documents then trace the breakdown of four-power cooperation which culminated in the Berlin blockade of 1948–1949. Inability of the Western democracies to reach accord with the Soviet Union on German occupation prompted the United States, the United Kingdom, and France to unify their three zones of occupation and turn increasing responsibility for their own economic and political affairs to democratically elected representatives of the German people in these zones. This process reached its culmination with the issuance of a constitution (Basic Law) and establishment of the Federal Republic of Germany in 1949. The Soviet Union responded by establishing and recognizing a German Democratic Republic in its zone of occupation.

Throughout the 1950s the great powers offered proposals for the reunification of Germany and the conclusion of a German peace treaty. The West insisted on free elections and on the right of a reunified Germany to decide its own international alignments. The East pressed for a neutral Germany and a European security conference. The Western allies continued to reduce their political controls over the Federal Republic of Germany and looked to a rearmed West Germany that could assume its essential role in the defense of Western Europe. Finally, on October 23, 1954, the Western allies formally ended the occupation regime, and simultaneously the Federal Republic signed the protocol for admission to the North Atlantic Treaty Organization. The Soviet bloc responded by creating the Warsaw Pact, which included East Germany among its member states.

In the last 1950s, the center of East-West tensions shifted to conflict over the status of Berlin. Although both East and West continued to offer proposals for the reunification of Germany, no progress was made in resolving the issue. The volume documents the series of crises over Berlin fomented by the Soviet Union between 1958 and 1963 in an effort to force the West to renounce its rights over that city and recognize the German Democratic Republic.

In the mid-1960s, the Federal Republic of Germany began actively to seek to improve its relations with the Soviet Union and its eastern neighbors: Poland, Czechoslovakia, and the German Democratic Republic. West Germany's *Ostpolitik* and parallel negotiations among the four powers led, on September 3, 1971, to the Quadripartite Agreement on Berlin, which effectively ended great power differences over the city and ushered in a new era of negotiations among the states of central Europe. These developments also laid the groundwork for the convening of a European security conference.

During the last 15 years the West German Government and its allies have engaged in a series of undertakings aimed at lessening tensions in central Europe and mitigating the consequences of the continued division of Germany. These include: the signing of the Quadripartite Agreement and the accompanying accords between the two Germanies; the conclusion of a basic treaty between East and West Germany in 1972; the admission of both states to the United Nations in 1973; the establishment of diplomatic relations between West Germany and a number of its former enemies in 1973–1974, and between the United States and the German Democratic Republic in 1974; and the origins of the Conference on Security and Cooperation in Europe in 1975. The documentation underlines the United States' continuing commitment to the security and independence of West Berlin and the close economic, political, and defense ties which exist between the United States and the Federal Republic of Germany. The volume concludes with statements by Presidents Reagan and von Weizsaecker marking the 40th anniversary of the end of World War II.

The revised edition of *Documents on Germany* was prepared in the Office of the Historian, Bureau of Public Affairs, Department of State. The volume contains 1,418 pages of documentation. Thirty-two new documents were added to the material presented in the 1971 volume. An additional 140 documents cover the story from 1971 through 1985. Four new maps have been added. Copies of this book, which has been published only in soft cover (Department of State Publication No. 9446; GPO Stock No. 044-000-02062-9), may be purchased for $24.00 from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Checks or money orders should be made payable to the Superintendent of Documents.

Press release 18 of January 31, 1986. ■

The DEPARTMENT OF STATE BULLETIN, published by the Office of Public Communication in the Bureau of Public Affairs, is the official record of U.S. foreign policy. Its purpose is to provide the public, the Congress, and government agencies with information on developments in U.S. foreign relations and the work of the Department of State and the Foreign Service.

The BULLETIN's contents include major addresses and news conferences of the President and the Secretary of State; statements made before congressional committees by the Secretary and other senior State Department officials; selected press releases issued by the White House, the Department, and the U.S. Mission to the United Nations; and treaties and other agreements to which the United States is or may become a party. Special features, articles, and other supportive material (such as maps, charts, photographs, and graphs) are published frequently to provide additional information on current issues but should not necessarily be interpreted as official U.S. policy statements.

Sub-Saharan Africa and the United States (Part 1)

Introduction

Sub-Saharan Africa[1] is the ancestral home of millions of Americans and, according to anthropological theory, the cradle of mankind—the birthplace of Homo sapiens. Perhaps the earliest development of settled agriculture began in Africa on the banks of the lower Nile, making possible the great advances in technology and the arts of ancient Egypt.

From at least the first millennium B.C. onward, elements of Egyptian, Phoenician, Greek, Roman, and Arab culture spread southward into Africa through conquest, trade, and the dissemination of Christianity and Islam. Trade in slaves, gold, copper, salt, spices, and many other items flourished both by sea and, following the introduction of camels in about the 3d century A.D., across the Sahara. Evidence of the extent of this trade can be found in the presence of Chinese porcelain and other oriental wares at archaeological sites in Africa.

Access to the cultural exchange of the Mediterranean basin was impeded by the vast expanse of desert, causing the peoples of sub-Saharan Africa to develop cultures distinctly their own. Several great empires with large cultural centers emerged but were later destroyed by war or declined following changes in global trade patterns. Although European traders had frequented the African coast since the late 15th century, knowledge of these empires remained limited until the era of African exploration and colonization in the late 18th and 19th centuries.

By the early 20th century, most of Africa had fallen under colonial domination. In sub-Saharan Africa, only Liberia and Ethiopia remained independent. In the decades after World War II, however, the peoples of Africa increasingly rejected foreign rule and demanded for themselves the fundamental freedoms for which they had fought in support of the Allied powers. By the mid-1960s, most African countries had achieved independence. Only Namibia remained in a colonial status in 1985.

There are now 46 independent countries in sub-Saharan Africa and the nearby islands, and negotiations on Namibia's independence are underway. Together with the countries of North Africa, these states play a significant role in the world community through the Organization of African Unity (OAU). But the process of forging cohesive national identities within boundaries drawn by European powers and among more than 1,000 ethnic groups is difficult; since independence, Africa has experienced considerable political upheaval.

It is important to understand sub-Saharan Africa's potential, strengths, and problems because they present opportunities and challenges that no world power can ignore. For the United States, Africa represents:

- The political force of the world's largest regional bloc;
- A rich source of natural resources;
- The ancestral home of 25 million Americans;
- A growing market for American exports;
- An opportunity to demonstrate, through private enterprise and government-to-government aid, that democratic institutions and individual initiative provide a better solution to the problems of the Third World than do totalitarianism and economic regimentation; and
- Possibilities for our adversaries to exploit regional tensions and foster insecurity through the indiscriminate provision of arms and support for violent solutions to local conflicts.

This Discussion Paper is designed to update information on developments in sub-Saharan Africa and to provide a basis for understanding U.S. policy toward this vital region of the world.

Information in this two-part article is intended to provide background for study and discussion; it is not designed to be read as a formal statement of U.S. policy, except where the material is specifically described as such. The publication summarizes currently available information and raises relevant questions (some of which admittedly may be unanswerable) as an aid to public discussion of important issues in U.S. foreign policy.

Regional Profile

Geography

The Continent of Africa covers 11,635,000 square miles—nearly one-fifth of the world's total land surface and equal to the combined area of the United States, Western Europe, and India. The sub-Saharan portion of the continent is 9,312,375 square miles—more than three times the size of the continental United States. The African Continent stretches 5,000 miles from north to south and 4,600 miles from east to west. Its 18,900-mile coastline is washed by the Atlantic and Indian Oceans and the Mediterranean and Red Seas.

In addition to the continent itself, a number of island countries also are included in "Africa." With the exception of the Canary Islands and Reunion, all are identified with sub-Saharan Africa. These include Madagascar, Cape Verde, Comoros, Seychelles, Equatorial Guinea, Sao Tome and Principe, and Mauritius. The islands of Zanzibar and Pemba are part of the United Republic of Tanzania.

Topography

The African Continent consists of a series of level or slightly undulating plateaus that fall away from a central area of high formations to low-lying coastal zones averaging only 20 miles in width. Many of these plateaus lie at altitudes anywhere from 3,000 to 9,000 feet in eastern and southern Africa, while in the north and west most of the land is between 500 and 1,000 feet above sea level.

Massive geologic changes in the plateaus have produced ridges that are among the most conspicuous features of the African landscape: the Great Rift Valley of East Africa, one of the deepest fractures in the earth's crust; Mt. Kilimanjaro (19,565 feet above sea level) and Mt. Kenya (17,058 feet) in East Africa are higher than any peak in the European Alps. These changes also produced Lake Chad in Central Africa; the lakes of East Africa, including Africa's largest, Lake Victoria; and the continent's four major rivers: the Nile (4,000 miles long), the Zaire (3,000 miles), the Niger (2,600 miles), and the Zambezi (1,650 miles).

The continent contains the world's largest desert, the Sahara; regions of heavy rainfall and lush forest vegetation; and, between desert and rain forest, broad savanna grasslands and woodlands. Nearly one-half of Africa's total area is desert, while 40% is partly forested grasslands and 10%, dense forests and thickets.

Climate

Four-fifths of Africa lie in the tropics and have either a tropical or subtropical climate. Temperate climates are found in the north close to the Mediterranean, along the southern and southwestern areas of the Cape of Good Hope, and on the higher parts of the inland plateaus. Air temperatures vary from hot in most parts of the continent to cold in the deserts (at night), on the plateaus, and in the mountains, where some peaks are permanently snowcapped.

Africa is divided into distinct climatic belts. The one bounded by the 5° line on either side of the Equator has a year-long hot-and-rainy climate, with some areas receiving more than 200 inches of rain annually. From 5° - 15° on each side of the Equator, the climate is warm, with heavy rains during part of the year. Deserts predominate in areas 15°–30° from the Equator, and temperatures range from very hot to very cold. Accumulated rainfall in these areas is less than 10 inches annually, and sometimes no measurable rainfall occurs for years. More than 30° from the Equator, mild, rainy winters and warm, dry summers prevail.

Africa's varied climate has affected vegetation, river conditions, and the incidence of disease; it also has influenced settlement patterns. Africans sought out fertile lands, water, and areas suitable for grazing. Europeans settled near the coasts on the cool eastern and southern plateaus and in the temperate regions of northern and southern Africa. Modern cities, often former centers of colonial administration and trade, usually are located in these areas.

History

Anthropological research and excavation in eastern Africa support the theory of the African origin of the human race. Remains of a forerunner of modern Homo sapiens, Australopithecus, and of other creatures with hominoid characteristics, such as Homo erectus and Homo habilis, have been unearthed in various parts of the continent. Some remains may be more than 2.5 million years old. Evidence of the evolution of primitive people throughout the Paleolithic Age (1 million-16,000 years B.C.) has been discovered, including remains of Neanderthal man dating to about 40,000 B.C. Some scholars believe that midway through this age groups of these African peoples migrated to other continents. Traces of humankind's continued development through the Mesolithic, Neolithic, Bronze, and Iron Ages also have been found in several African regions.

Three main physical types evolved in Africa: Negroid, Bushmanoid, and Pygmoid. Of these groups, the Negroid became dominant, learning first to hunt and forage, later to domesticate animals, and finally to plant crops. Between 1000 B.C. and 1000 A.D., a Negroid group (known by the linguistic classification of Niger-Congo and Kordofanian or Nigritic) exerted control over much of southern Africa, with a major subgroup, the Bantu, nearly eliminating the Pygmoid and Bushmanoid people in the process. Caucasoid peoples from the Mediterranean area first migrated to northeast Africa near the end of the Paleolithic period, and subsequent migrations to northeast and northern Africa occurred in the centuries preceding and following Christ. During the 7th to 10th centuries, bedouin Arabs spread Islamic influence across north Africa, while from the 10th to the 18th centuries, other Muslims continued to settle in eastern Africa from the Horn southward to Zimbabwe.

Sophisticated societies developed in early days. The Kush Kingdom (700 B.C.-200 A.D.) formed in the area of present-day Sudan. The Axum Empire, established by 350 A.D., comprised much of modern Ethiopia. For more than 1,000 years, ancient African kingdoms—such as Ghana, Kanem-Bornu, Mali, Songhai, and the Hausa states—developed primarily in the savanna lands. The kingdoms of Kongo and Lunda may have been founded as early as the 14th century, while the city-states of the Guinea Coast—Ife, Benin, Yoruba—date at least to the 15th century. These states were highly organized and engaged in long-distance trade in salt, gold, cattle, horses, and ivory.

In the early 15th century, Portuguese explorers began a gradual buildup of African trade relations with Europe and the Americas, leading eventually to Christian missionary contact with Africa. During the 16th and 17th centuries, the Dutch, British, French, Spanish, and Arabs increased their trade with Africa. During this period, Europeans established trading posts and maritime stations on the Atlantic and Indian Ocean coasts but rarely traveled to the interior of the continent. Slaves became an important commodity, although trade in slaves had existed for centuries. Reliable figures concerning the extent of the slave trade are not available; estimates of the number of people sold into slavery during the 15th-19th centuries range from 10 million to 50 million.

Copyright material has been deleted, not available for Microfiche Edition.

Colonial Era

Missionaries, traders, and adventurers penetrated the heart of the continent in the 19th century. These were the years

of such explorers as Mungo Park, Savorgnan de Brazza, Rene Caille, H.M. Stanley, Sir Richard Burton, and David Livingstone. They were followed, especially after 1880, by government officials engaged in extending colonial domains.

Once the dimensions of Africa's inner geography and resources were known, colonization proceeded rapidly. Although only a small part of the African Continent was under foreign rule before 1880, all but 2 of the present 46 independent countries of sub-Saharan Africa were under European control by 1900. The two exceptions were Liberia, established by freed American slaves in the 1840s, and the ancient Empire of Ethiopia. The remainder of Africa was controlled by France, Great Britain, Portugal, Belgium, Spain, Germany, and Italy. During the next half century, Europeans settled in various areas of the continent, traded, extracted minerals, and established governments reflecting the different policies and institutions of the colonial powers.

Postindependence Period

Many factors helped to create a climate in which most of the European-ruled colonies in Africa eventually became independent. These included the participation of Africans in World Wars I and II; the growth of African nationalist movements; the Atlantic Charter of 1941 proclaiming the right of all peoples to choose the form of government under which they would live; and changing European economic and political concerns with respect to the efficacy and burdens of empire.

The wave of African independence began in 1957. Led by Nkrumah of the Gold Coast (Ghana), Houphouet-Boigny of the Ivory Coast, and Sekou Toure of French Guinea (Guinea), a host of sub-Saharan countries in rapid succession broke ties with their colonial rulers. Occasionally, the changeover was accompanied by violence, as in Zaire, Mozambique, Angola, and Zimbabwe. Since 1957, 42 nations have joined the four previously independent countries of Ethiopia, Liberia, Sudan, and South Africa. South Africa became an independent union with Dominion status within the British Commonwealth in 1910, and Sudan separated from Egypt and the United Kingdom in 1956. Namibia, under de facto South African control, remains the region's only dependent territory; efforts are underway to move from violence to negotiation toward Namibian independence.

Africa's political evolution during the past two decades has been tumultuous, with nearly two-thirds of the countries undergoing nonconstitutional changes in government. Although more than half of the nations are led by military leaders or committees, some have now returned to constitutional civilian rule. Despite political trauma in many countries, examples exist of relative tranquility and stable leadership.

Secession attempts have threatened some nations. Eritrea has been seeking independence since 1962, when Ethiopia assumed direct control and terminated Eritrea's federated status. Shaba (formerly Katanga) unsuccessfully attempted to secede from Zaire (Belgian Congo) when it became independent in 1960, and Biafra from Nigeria in 1967. Cultural and religious differences have led to periodic civil wars in Sudan and Chad. Warfare also has erupted between states. Somalia and Ethiopia have been fighting intermittently over possession of the Ogaden region. Tanzania invaded Uganda in 1979 to oust the barbaric government of Idi Amin and to retaliate for Ugandan attacks on its territory. Libya forcibly annexed a portion of northern Chad in 1980–81 and pushed further south in 1983, halting only after regional and international pressures were applied. Nigeria and Cameroon also have had tense relations over poorly defined borders.

People

Africa's estimated population is more than 400 million, 85% of whom live south of the Sahara. If the current growth rate of about 3% continues, the continent's population may reach 800 million by the year 2000—an increasing concern of many African governments.

Because of the vastness of the continent, population density is less than half that of the United States—about 30 persons per square mile. However, people are dispersed unevenly throughout the region. Large expanses of desert and mountains are virtually uninhabited. On the other hand, good climate, fertile land, navigable rivers, safe ports, and demographic movements have created several areas with a population density as high as 500 persons per square mile. Sub-Saharan Africa's most populated areas are:

- The lands bordering the Gulf of Guinea in West Africa, particularly Nigeria and the southern parts of Ghana, Benin, and Togo;
- The Nile Valley in northern Sudan;
- The East African highlands, particularly the plateaus of Ethiopia, Kenya, eastern Zaire, Rwanda, Burundi, and Tanzania; and
- The eastern and southern coasts and interior High Veld of South Africa.

Most Africans still live in small, rural groups. However, opportunities for a better standard of living have led to increased migration to cities, which are confronted with problems of overcrowding, unemployment, and insufficient municipal services. Among cities with more than 1 million inhabitants are: Kinshasa, Zaire; Lagos and Ibadan, Nigeria; Johannesburg and Cape Town, South Africa; Abidjan, Ivory Coast; Addis Ababa, Ethiopia; and Accra, Ghana.

Tremendous diversity exists among the people of sub-Saharan Africa. This diversity stems from a variety of causes—the infusion of elements from outside the African Continent, migration to new areas in search of better livelihood, rivalries that produced factions and subdivisions, and tendencies to organize into small, close-knit groups for

protection and mutual support. Over thousands of years, this process has produced more than 1,000 ethnic divisions.

Languages

The complexity of African society is graphically demonstrated by the number of languages. Of more than 800 languages, fewer than 10 are spoken by more than 1 million people. Most languages are native to groups of less than 100,000.

Of the numerous linguistic authorities, the classifications of Joseph Greenberg represent a contemporary consensus (see Bibliography). His listing of categories and map on this page show the general geographic location of groups.[1] In the brief text that follows, references in parentheses are alternate names used by George Murdock, another eminent scholar.

The largest language family is the Niger-Congo and Kordofanian (Nigritic), of which the Bantu sublanguage group is the most important. Speakers of this family of languages are descendants of the earliest people on the continent and still occupy much of sub-Saharan Africa. The Afroasiatic (Hamitic)—including Semitic-, Berber-, and Cushitic-speaking people—stem from the early Caucasoids and live primarily in north and northeast Africa. The Sudanic can be found in a region stretching along the lower Nile and westward through the area known as the Sahel. The Bushmen and Hottentot peoples of southern Africa speak Khoisan or "click" languages. Some languages, such as Swahili and Hausa, serve as *linguae francae* between widely divergent groups, especially in trade.

Copyright material has been deleted, not available for Microfiche Edition.

Ethnolinguistic Groups

The diversity of ethnic groupings, which reflect original racial strains and often bear names similar to the languages they speak, is illustrated on the map. This map includes a portion of the names of well-known ethnic linguistic or tribal groups. Their inclusion does not necessarily reflect their relative importance, nor is their location on the map definitive.

Scattered throughout the continent are about 5 million people of predominantly European descent, most of them concentrated in southern Africa. There are also nearly 1 million people of Asian (principally Indian or Pakistani) origin in Africa.

Religion

Religion traditionally has played an important role in African culture. There are many indigenous religions, but most recognize a supreme being who created all things, gave the world its order, and infused it with energy. Many African religions attribute conscious life to nature and natural objects, which has led some scholars to use the term "animist" to refer to traditional African religions. Traditional religions, however, have been slowly giving way to Christianity and Islam as life in the African interior becomes less isolated.

Christianity was spread principally by European missionaries after the 16th century. With the advent of independence, the foreign missionary effort gradually has been replaced by African clergy. Today, some 95 million Christians live in Africa.

Islam swept across North Africa in the 7th century and then expanded southward. The Sahelian countries are predominantly Muslim, as are the northwest coastal areas of sub-Saharan Africa. With 125 million adherents, Islam is Africa's largest religion.

Ethnolinguistic Groups

Groups selected show diversity, not relative importance.

This Kongo (Congo) oath-taking figure represented a power figure whose importance derived from the special qualities that the Bakongo assigned to dogs. When activated by the driving in of a nail, the dog figure was presumed to hunt malevolent spirits in the night. The large number of nails it contains is testimony to the confidence of the Bakongo in its force.

Culture

The cultural richness of Africa is shown in four major forms: art, music, dance, and literature. All uniquely interpret traditional African values: religious beliefs; veneration of the deceased; respect for nature; and the importance of childbearing, the family, and the community and its leaders. The arts express reverence for the past, teach social roles and responsibilities, and encourage the assimilation of traditional beliefs.

Thanks to energetic collectors, from early colonial explorers to modern curators and tourists, sculpture is the best known African art form. Most recent sculptures are of wood, but museums maintain collections from Nigeria of terra-cotta Nok statues from the second and third centuries B.C. as well as ancient Benin and Ife bronzes. Other forms of traditional graphic or plastic arts include rock paintings, decorative metalwork, basketry, and jewelry.

Traditional dances reveal much of African lore and legend, philosophy, and belief. They may celebrate past glories and triumphs, mark contemporary events and rites of passage, or make supplication for a good harvest or the security of the community. Folk dances vary markedly throughout the continent, usually involving group efforts with participants massed in circles or lines.

Drums are most often identified with African music. For thousands of years, however, Africans also have played wind, string, and other percussion instruments, obtaining subtle and complex expressions from relatively simple devices. Although much of the music has served as accompaniment for dancing, soloists and ensembles perform on many other occasions. The rhythmic patterns of African music have influenced music outside the continent, most notably American jazz.

A rich oral tradition has existed in Africa for centuries. Experts estimate that more than 250,000 myths, legends, and folk tales flourish in sub-Saharan Africa. Timbuktu had a written tradition before the 16th century. In the 18th century other literary traditions developed in Ethiopia and later in languages reflecting Arabic influence, such as Hausa in West Africa and Swahili in the east. In the past 80 years, published works on this subject have included such landmarks as Blaise Cendrars' *Anthology Negre,* Leopold Senghor's "Necritae" poetry, H.I.E. Dhlomo's *Valley of the Thousand Hills,* Chinua Achebe's *Things Fall Apart,* and Thomas Mofolo's *Chaka.*

Political Processes

Political institutions and processes vary greatly in sub-Saharan Africa. There are federations, constitutional monarchies, military oligarchies and autocracies, republics with democratic parliaments, unicameral and bicameral houses, fully elected and partly appointed legislatures, and single and multiparty systems. Most governments are strongly authoritarian, either single party or military based.

When independence was achieved, the first order of business was to survive, and survival required the building of authority rather than its limitation as in democratic countries. Authority could not be achieved with a multiparty system. Julius Nyerere, former President of Tanzania and one of the original group of African independence leaders, rationalized that the single party system is more democratic, "providing it is identified with the nation as a whole," since "the people can have more opportunity to exercise a real choice than where you have two or more parties, each representing only a section of the community." Party loyalties and discipline, he maintained, limited freedom of expression and of choice. Unfortunately, "democratic" single party systems largely failed to create the authority necessary to govern. As a result, most became, in fact, no-party, authoritarian regimes.

The various forms of government in the subcontinent also reflect the heritage of colonial administrative and political institutions as well as indigenous historical and social backgrounds. Ethiopia's former constitutional monarchy, for example, was deeply rooted in the country's centuries-old royal history. Nigeria's attempt at American-style federalism, on the other hand, represented an effort to maintain unity in one of Africa's largest states by accommodating its ethnic, cultural, and historical differences in a decentralized system. Africa's ethnolinguistic groupings were characterized by strongly developed traditional structures, which often crossed political boundaries superimposed by colonial powers with little or no regard for linguistic or cultural similarities. Despite the impact of modernization in urban areas, traditional ethnic loyalties remain strong and have impeded the development of national consciousness. Opposition often has been based on ethnolinguistic and regional special interests.

African states probably will continue to experience change in governmental form and process as they experiment with ways to organize political power effectively and to devise a durable basis for citizen participation in the political system.

Economy

Africa's natural wealth is vast but unevenly distributed. The continent is a major exporter of minerals—such as diamonds, cobalt, gold, and petroleum—and of agricultural commodities—such as coffee, cocoa, and tea. Some countries—Gabon, Guinea, Liberia, Mauritania, Nigeria, Zaire, Zambia, and South Africa—have large mineral reserves. Yet other countries, such as those in the Sahel region, lack access to the coasts as well as natural resources. These contrasting circumstances have been accentuated by varied colonial and cultural heritages and postindependence theories of economic development.

Despite its natural wealth, Africa as a whole faces an unprecedented economic crisis. Falling per capita food production, severe drought, world recession, mounting debt burdens, and mistaken government policies have seriously affected development pros-

pects. Widespread famine has accompanied the current drought; some 36 countries recently have been affected by abnormal food shortages. Untold thousands of Africans have perished, and an estimated 30 million urgently require food, medical care, and shelter if they are to survive. Even before the drought, more than 20% of Africa's population consumed less than the minimum number of calories needed to sustain good health. Child mortality in sub-Saharan Africa is double the rate of all developing countries.

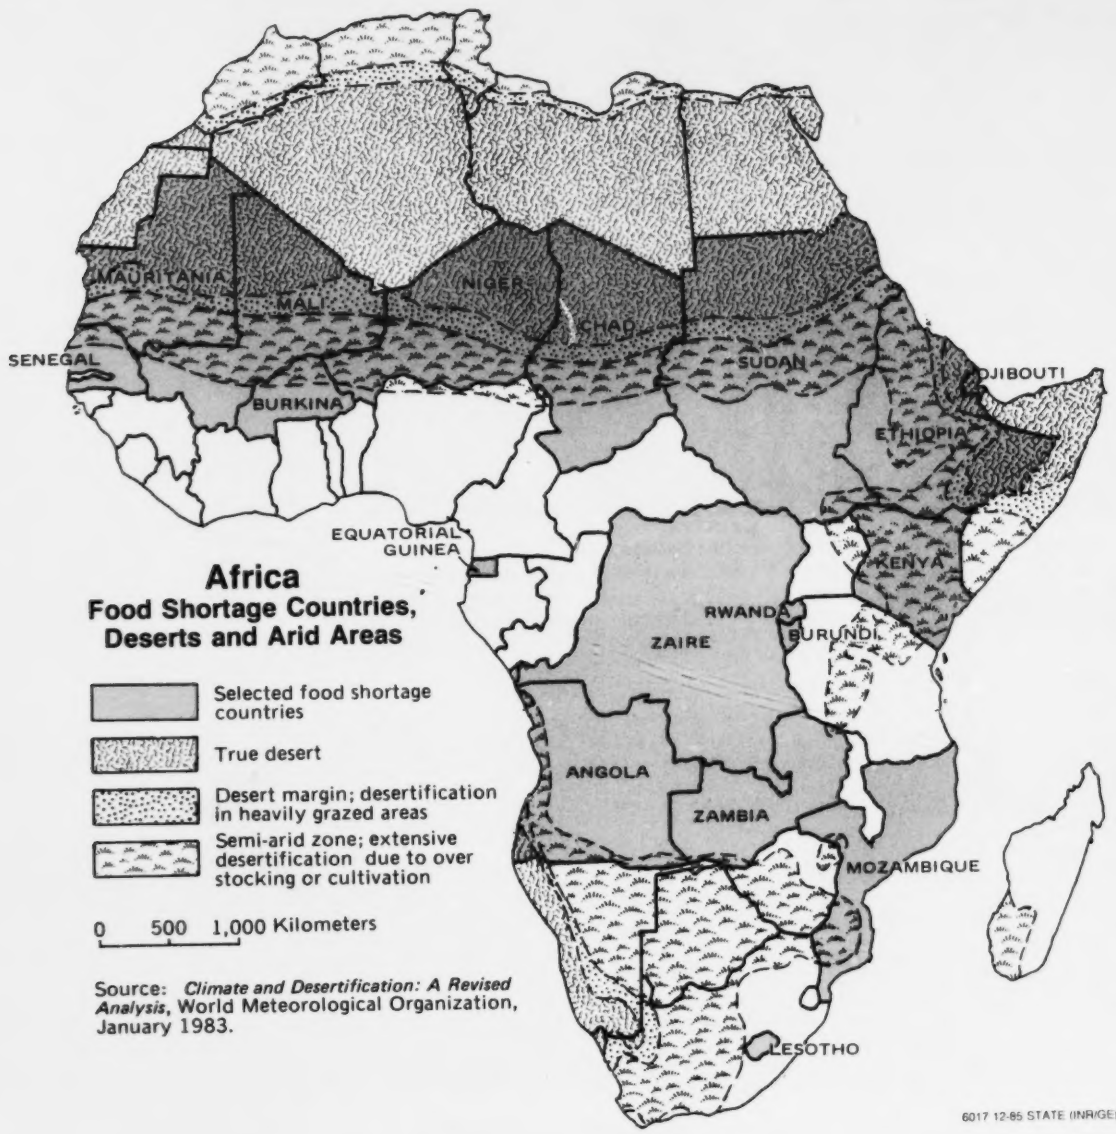
Famine and the Decline in Agricultural Productivity

Although little can be done to eliminate drought, which occurs periodically in Africa, much can be done to avoid famine. Drought has been transformed into famine by high population growth rates and the decline in farm output. Famine, in turn, has been aggravated by mistaken national policies and armed conflict.

Africa is the only region in the world in which per capita food production has fallen during the past two decades. African dependence on outside food sources is growing at an alarming pace, and commercial imports of grain have risen at an annual rate of 9% over the past 20 years. Africa normally imports more than 10 million tons of cereals, excluding current emergency needs; if trends continue, this deficit will increase markedly. Per capita gross domestic product declined by 3%–4% per year from 1981 to 1983—attributable largely to the decline in agriculture, the primary component of most African economies.

Drought victims in Ethiopia.

(United Nations)



Africa has serious agricultural constraints—insufficient rainfall, fragile soils, a variety of microclimates, high soil temperatures, extreme seasonability, and unique insect pests. Farmers have been shortening the fallow periods for their fields, which has led to decreased yields and increased soil erosion. Overuse of forests for firewood and intensive grazing also have contributed to erosion. High population growth rates have stretched most African nations to the production limits of their traditional agricultures.

Nonetheless, Africa does have the potential to produce sufficient food for its increasing population and thereby reduce its vulnerability to future droughts. This potential depends greatly upon the ability of African governments to implement effective national policies that support small farmers and encourage the use of modern technology.

Debt Problems

During the 1960s, African governments benefited from high commodity prices and generous foreign aid. Government revenue was supplemented by borrowing from private commercial banks. With the onset of world recession in the 1970s, however, the prices of African commodities plummeted while the cost of imports remained high. Drought and declining agricultural productivity led to increasing commercial imports of basic foodstuffs.

As African economies declined, their governments turned increasingly to borrowing. From 1972 to 1982, medium- and long-term debt increased by an annual average rate of 22%. Debt service ratios (the relationship between debt payments due and exports of goods and services) worsened as well, with ratios of from 30% to 80% or more prevailing in some countries. Most African nations now have major debt problems. In the international forums where public and private debts are rescheduled, the majority of 1984 reschedulings were for African countries.

Inefficient Government Policies

Africa's economic problems are closely linked to the inefficient use of its resources. Two decades after independence, African leaders are confronted with difficult choices and overwhelming economic obstacles that would try the patience and administrative capacity of more experienced governments elsewhere in the world. These leaders often discourage farm production by adopting politically expedient tax and pricing policies that have favored politically influential urban populations and have disadvantaged farmers, whose output has declined accordingly. They have created large bureaucracies, ignored the private sector, promoted state-run industries that do not produce or produce only at very high cost, maintained overvalued currencies that discourage exports and lead to balance-of-payments crises, and allowed physical infrastructure to deteriorate.

Increasingly, however, African governments are recognizing errors in past policies, and changes are occurring throughout the continent. In the last several years, attitudes have shifted dramatically on such issues as exchange rates, on measures to rehabilitate infrastructure and export industries, on reducing government regulation and bureaucracy, and on assuring that farmers are rewarded through pricing and marketing reform.

Aid donor countries and international institutions are beginning to realize that some of their practices also have contributed unwittingly to inefficient use of resources. However well intentioned, donors have insisted on imposing their own requirements on recipients that have caused administrative problems and strained the absorptive capacity of African nations—for example, 50 donors have contributed to 188 projects in Malawi, 61 donors to 321 projects in Lesotho, and 69 donors to 614 projects in Zambia. Furthermore, aid donors sometimes have subsidized inefficient state enterprises and supported the creation of elaborate government projects that could not be maintained without continued foreign assistance. Nonetheless, foreign assistance has accomplished much in Africa. Notably, several major diseases have been eradicated, and physical infrastructure has been created to market crops and minerals. Foreign donors also helped to establish the first universities and technical training centers on the continent.

Multilateral Organizations

United Nations. Sub-Saharan African nations play an important role in international and regional organizations. They regard the United Nations as the major forum for presenting their views and as a useful arena for advancing foreign policy objectives. Because each country, large or small, has one vote in the UN General Assembly, and because all 46 independent sub-Saharan states are UN members, Africa represents nearly one-third of the Assembly's 159 votes. When taking a common stance, African states thus can have significant, sometimes crucial, influence on many issues in the Assembly and other UN bodies. The African members have been particularly concerned about issues involving colonialism, North-South economic issues, dependent peoples, and human rights. Members of the Organization of African Unity (OAU) have been prime movers in General Assembly and Security Council resolutions dealing with southern African problems. Occasionally, however, many have been reluctant to take controversial positions involving other African states, preferring to deal with such issues within the OAU or in other African forums.

Just as African nations participate actively in the General Assembly and Security Council, UN specialized agencies and other organizations have been deeply involved in Africa. Among these are the UN Conference on Trade and Development (UNCTAD); the International Bank for Reconstruction and Development (IBRD); the International Development Association (IDA); the International Finance Corporation (IFC); the International Monetary Fund (IMF); the World Health Organization (WHO); the International Labor Organization (ILO); the UN Children's Fund (UNICEF); the Food and Agriculture Organization (FAO); the UN High Commissioner for Refugees (UNHCR); and the UN Educational, Scientific and Cultural Organization (UNESCO). Many of these bodies participate in the UN Development Program (UNDP), which allocates a major portion of its resources to sub-Saharan Africa.

Organization of African Unity. The Organization of African Unity is the most prominent and encompassing organization on the African Continent. Founded in May 1963, it includes all independent African states except the Republic of South Africa and Morocco. South Africa never belonged to the organization, and Morocco withdrew in 1985 because of the admission of the Saharoui Arab Democratic Republic (Polisario). Headquartered in Addis Ababa, the OAU has both political and economic responsibilities. The organization has no enforcement powers over its members and OAU resolutions are advisory rather than binding, although individual OAU member states historically have been reluctant in other international forums to depart from OAU positions adopted by resolution. An important OAU function is to obtain an African consensus on questions of interest at the United Nations, where the OAU maintains a permanent office.

The preamble of the OAU Charter reaffirms the principles of the United Nations and its Universal Declaration of Human Rights. It also pledges to support the aspirations of the African peoples and to foster African political and economic development. Signatories agree to coordinate and harmonize their general policies in order to promote African progress and unity, to defend the sovereignty and territorial integrity of member states, and to eradicate colonialism from Africa. Signatories agree to adhere to the principles of noninterference in one another's affairs, the peaceful settlement of disputes, the condemnation of political assassination or subversive activity against neighboring states, respect for existing boundaries, the liberation of remaining dependent areas, and nonalignment with respect to non-African blocs.

OAU Members

Algeria, Angola, Benin, Botswana, Burkina, Burundi, Cameroon, Cape Verde, Central African Republic, Chad, Comoros, Congo, Djibouti, Egypt, Equatorial Guinea, Ethiopia, Gabon, The Gambia, Ghana, Guinea, Guinea-Bissau, Ivory Coast, Kenya, Lesotho, Liberia, Libya, Madagascar, Malawi, Mali, Mauritania, Mauritius, Mozambique, Niger, Nigeria, Rwanda, Sao Tome and Principe, Senegal, Seychelles, Sierra Leone, Somalia, Sudan, Swaziland, Tanzania, Togo, Tunisia, Uganda, Western Sahara (Saharoui Arab Democratic Republic), Zaire, Zambia, Zimbabwe.

The work of the OAU is carried on through four principal institutions—the Assembly of Heads of State and Government; the Council of Ministers; the General Secretariat; and the Commission of Mediation, Conciliation, and Arbitration. Specialized and ad hoc commissions deal with a variety of activities of common interest and attempt to instill a spirit of cooperation among member states.

Annual OAU summits endeavor to deal with current crises, often involving African interstate relations. Debates sometimes avoid confrontation on the tough issues and differences that divide nations, but they can be acrimonious. The OAU has attempted to limit external intervention in African problems and to assist in such issues as the use of mercenaries in Zaire, the Biafran rebellion, disputes between Ethiopia and Somalia and between Algeria and Morocco, the transition to independence in Angola, the status of the Western Sahara, self-determination issues in southern Africa, and human rights. In 1981 the OAU established its first joint military force to help keep peace during the civil war in Chad. Nigeria, Senegal, and Zaire contributed troops to the peacekeeping force during its 6 months in Chad.

A 1982 executive decision by the OAU Secretary General to seat the Polisario—a self-styled liberation movement fighting for the independence of the Western Sahara—was strongly opposed by Morocco and many African states. However, because the organization was increasingly paralyzed due to the controversy over this one issue, the Polisario finally was allowed to take its seat at the November 1984 OAU summit. Morocco withdrew from the OAU as a result.

Economic Commission for Africa. The Economic Commission for Africa (ECA), a UN regional body in which all independent African states, except South Africa, are represented, was established in 1958 for the promotion and planning of African economic and social development through cooperative and regional action. The ECA performs extensive research and served as a catalyst in the creation of the African Development Institute and the African Development Bank. It maintains and endeavors to strengthen economic ties with other countries of the world. The headquarters of the ECA Secretariat is in Addis Ababa, Ethiopia.

African Development Bank and Fund. The purpose of the African Development Bank and Fund, headquartered in Abidjan, is to contribute to its members' economic and social development. The Bank and Fund finance investment projects and development programs. After the Bank opened membership to nonregional countries, the United States joined in 1983, becoming the largest nonregional donor, with an annual commitment of $18 million in paid-in capital and $54 million in callable capital. It has increased its contribution to the Fund, the Bank's soft loan window, by $50 - $75 million annually. The United States remains the largest donor, providing 15.4% of the total Fund replenishment.

Lome Convention. The Lome III Convention was signed in Lome, Togo, in December 1984; it continues the special economic relations between the European Economic Community (EEC) and 67 nations of the African, Caribbean and Pacific (ACP) Group of States. The new convention replaces Lome II, which expired in February 1985. Lome I was signed in 1975. The 5-year accord provides ACP countries with trade preferences, industrial cooperation, and $6.3 billion in economic assistance, including the STABEX program, which helps to maintain stable export earnings for certain ACP commodities. Although similar to its predecessor conventions, Lome III adds provisions on private investment, fisheries, cultural coordination, and refugee aid.

ACP Group. The African, Caribbean and Pacific Group of States was convened originally to negotiate the Lome Convention with the EEC. Founded as a permanent organization in July 1975, the ACP Group aims to represent its members' views concerning the Lome Convention. It also tries to develop closer trade, economic, and cultural relations among ACP states and to promote effective interregional cooperation. ACP headquarters is in Brussels.

Economic Community of West African States. The Economic Community of West African States (ECOWAS) has 16 members, including nearly all the Francophone, Anglophone, and Lusophone countries of the West African region from Mauritania to Nigeria. Its objective is to create a common market in which internal trade barriers will be eliminated. The Community promotes free movement of people, services, and capital; harmonization of agricultural policies; joint development of economic and industrial policies; and elimination of disparities in levels of development. Community headquarters is in Lagos, Nigeria.

Inter-African Coffee Organization. The Inter-African Coffee Organization (ICAO) was founded in 1960 and now has 15 members. Its objective is to adopt a unified policy on coffee marketing. The organization facilitates contacts among member countries, coffee buyers, and the International Coffee Organization. It is headquartered in Abidjan, Ivory Coast.

West African Rice Development Association. The West African Rice Development Association (WARDA) has 14 members. Its purpose is to work cooperatively in the research, growing, and marketing of rice. It lobbies for increased quotas on the world market. WARDA's headquarters is located in Monrovia, Liberia.

[1]Although the generic term "Africa" frequently is used throughout this publication, and some data pertain to the entire continent, attention is focused on sub-Saharan Africa and the off-shore island states, which together include the majority of countries and of the continent's population. Within the Department of State, the Bureau of African Affairs is responsible for the conduct of relations with this region. Relations with North Africa are conducted through the Department's Bureau of Near Eastern and South Asian Affairs. ■

Part 2, discussing U.S. relations with sub-Saharan Africa and including data tables and a bibliography, will be published in the May 1986 issue of the *Bulletin*.

Strengthening American Security

President Reagan's televised address to the nation on February 26, 1986.[1]

My fellow Americans, I want to speak to you this evening about my highest duty as President—to preserve peace and defend these United States.

But before I do, let me take a moment to speak about the situation in the Philippines. We've just seen a stirring demonstration of what men and women committed to democratic ideas can achieve. The remarkable people of those 7,000 islands joined together with faith in the same principles on which America was founded—that men and women have the right to freely choose their own destiny. Despite a flawed election, the Filipino people were understood. They carried their message peacefully, and they were heard across their country and across the world.

We salute the remarkable restraint shown by both sides to prevent bloodshed during these last tense days. Our hearts and hands are with President Aquino and her new government as they set out to meet the challenges ahead. Today, the Filipino people celebrate the triumph of democracy, and the world celebrates with them.

One cannot sit in this office reviewing intelligence on the military threat we face, making decisions from arms control to Libya to the Philippines, without having that concern for America's security weigh constantly on your mind. We know that peace is the condition under which mankind was meant to flourish. Yet, peace does not exist of its own will. It depends on us—on our courage to build it and guard it and pass it on to future generations. George Washington's words may seem hard and cold today, but history has proven him right again and again: "To be prepared for war," he said, "is one of the most effective means of preserving peace." Well, to those who think strength provokes conflict, Will Rogers had his own answer. He said of the world heavyweight champion of his day: "I've never seen anyone insult Jack Dempsey."

Rebuilding U.S. Strength

The past 5 years have shown that American strength is once again a sheltering arm for freedom in a dangerous world. Strength is the most persuasive argument we have to convince our adversaries to negotiate seriously and to cease bullying other nations. But tonight the security program that you and I launched to restore America's strength is in jeopardy—threatened by those who would quit before the job is done. Any slackening now would invite the very dangers America must avoid—and could fatally compromise our negotiating position. Our adversaries, the Soviets, we know from painful experience, respect only nations that negotiate from a position of strength. American power is the indispensable element of a peaceful world—it is America's last, best hope of negotiating real reductions in nuclear arms. Just as we are sitting down at the bargaining table with the Soviet Union, let's not throw America's trump card away.

We need to remember where America was 5 years ago. We need to recall the atmosphere of that time—the anxiety that events were out of control, that the West was in decline, that our enemies were on the march. It was not just the Iranian hostage crisis or the Soviet invasion of Afghanistan, but the fear, felt by many of our friends, that America could not, or would not, keep her commitments. Pakistan, the country most threatened by the Afghan invasion, ridiculed the first offer of American aid as "peanuts." Other nations were saying that it was dangerous—deadly dangerous—to be a friend of the United States.

It was not just years of declining defense spending but a crisis in recruitment and retention and the outright cancellation of programs vital to our security. The Pentagon horror stories at the time were about ships that couldn't sail, planes that couldn't fly for lack of spare parts, and army divisions unprepared to fight.

And it was not just a one-sided arms agreement that made it easy for one side to cheat, but a treaty that actually permitted increases in nuclear arsenals. Even supporters of SALT II [strategic arms limitation talks] were demoralized, saying, well, the Soviets just won't agree to anything better. And when President Carter had to abandon the treaty because Senate leaders of his own party wouldn't support it, the United States was left without a national strategy for control of nuclear weapons.

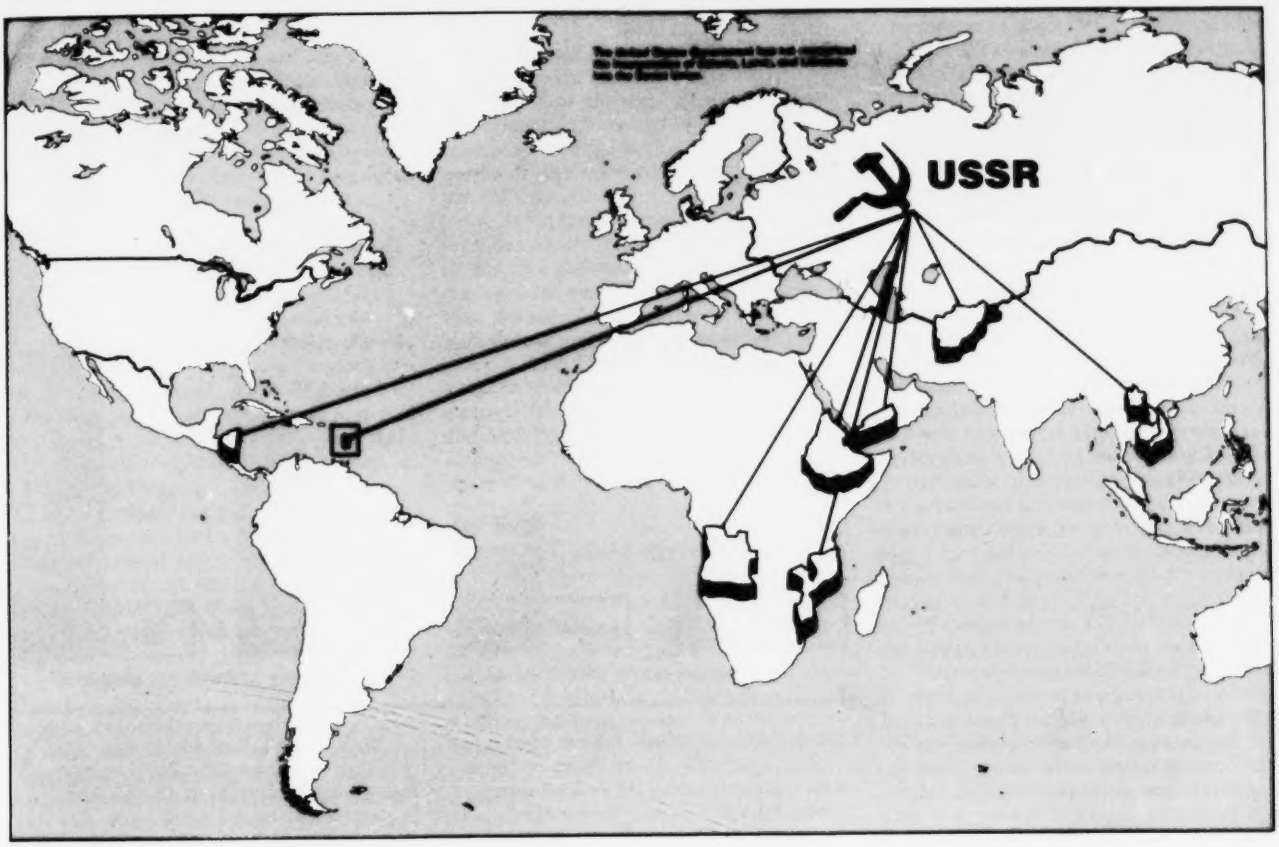
We knew immediate changes had to be made. So here's what we did: we set out to show that the long string of governments falling under communist domination was going to end; and we're doing it.

In the 1970s, one strategic country after another fell under the domination of the Soviet Union. The fall of Laos, Cambodia, and South Vietnam gave the Soviet Union a strategic position on the South China Sea. The invasion of Afghanistan cut nearly in half Soviet flying time to the Persian Gulf. Communist takeovers in South Yemen and Ethiopia put the Soviets astride the Red Sea, entryway to the Suez Canal. Pro-Soviet regimes in Mozambique and Angola strengthened the Soviet position in southern Africa. And finally, Grenada and Nicaragua gave Moscow two new beachheads right on the doorstep of the United States.

In these last 5 years, not one square inch of territory has been lost, and Grenada has been set free.

When we arrived in 1981, guerrillas in El Salvador had launched what they called their "final offensive" to make that nation the second communist state on the mainland of North America. Many people said the situation was hopeless; they refused to help. We didn't agree; we did help. And, today, those guerrillas are in retreat. El Salvador is a democracy, and freedom fighters are challenging communist regimes in Nicaragua, Afghanistan, Angola, Cambodia, and Ethiopia.

We set out to show that the Western alliance could meet its security needs, despite Soviet intimidation. And we're doing it. Many said that to try to counter the Soviet SS-20 missiles would split NATO because Europe no longer believed in defending itself. Well, that was nonsense. Today, Pershing and



cruise missile deployments are on schedule, and our allies support the decision.

We set out to reverse the decline in morale in our Armed Forces. And we're doing it. Pride in our Armed Forces has been restored. More qualified men and women want to join—and remain in—the military. In 1980, about half of our Army's recruits were high school graduates; last year, 91% had high school diplomas.

Our Armed Forces may be smaller in size than in the 1950s, but they're some of the finest young people this country has ever produced. And as long as I'm President, they'll get the quality equipment they need to carry out their mission.

We set out to narrow the growing gaps in our strategic deterrent. And we're beginning to do that. Our modernization program—the MX, the Trident submarine, the B-1 and Stealth bombers—represents the first significant improvement in America's strategic deterrent in 20 years.

Those who speak so often about the so-called arms race ignore a central fact: in the decade before 1981, the Soviets were the only ones racing.

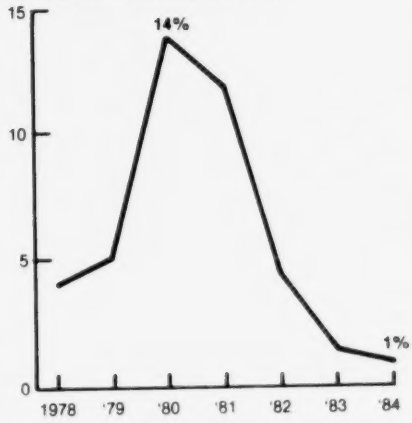
During my 1980 campaign, I called Federal waste and fraud a national scandal. We knew we could never rebuild America's strength without first controlling the exploding cost of defense programs. And we're doing it.

When we took office in 1981, costs had been escalating at an annual rate of 14%. Then we began our reforms. And in the last 2 years, cost increases have fallen to less than 1%.

We've made huge savings. Each F-18 fighter costs nearly $4 million less today than in 1981. One of our air-to-air missiles costs barely half as much.

Getting control of the defense bureaucracy is no small task. Each year the Defense Department signs hundreds of thousands of contracts. So, yes, a horror story will sometimes turn up despite our best efforts. That's why we appointed the first Inspector General in the history of the Defense Department—and virtually every case of fraud or abuse has been uncovered by our Defense Department, our Inspector General. Secretary Weinberger should be praised, not pilloried, for cleaning the skeletons out of the closet. As for those few who have cheated taxpayers or have swindled our Armed Forces with faulty equipment, they are thieves stealing from the arsenal of democracy—and they will be prosecuted to the fullest extent of the law.

Weapons Cost Growth (%)



Finally, we've set out to reduce the danger of nuclear war. Here, too, we're achieving what some said couldn't be done. We've put forth a plan for deep reductions in nuclear systems; we're

pushing forward our highly promising Strategic Defense Initiative (SDI)—a security shield that may one day protect us and our allies from nuclear attack, whether launched by deliberate calculation, freak accident, or the isolated impulse of a madman. Isn't it better to use our talents and technology to build systems that destroy missiles, not people?

Our message has gotten through. The Soviets used to contend that real reductions in nuclear missiles were out of the question. Now, they say they accept the idea. Well, we shall see. Just this week, our negotiators presented a new plan for the elimination of intermediate-range nuclear missiles, and we're pressing the Soviets for cuts in other offensive forces as well. One thing is certain: if the Soviets truly want fair and verifiable agreements that reduce nuclear forces, we will have those agreements.

The Defense Debate

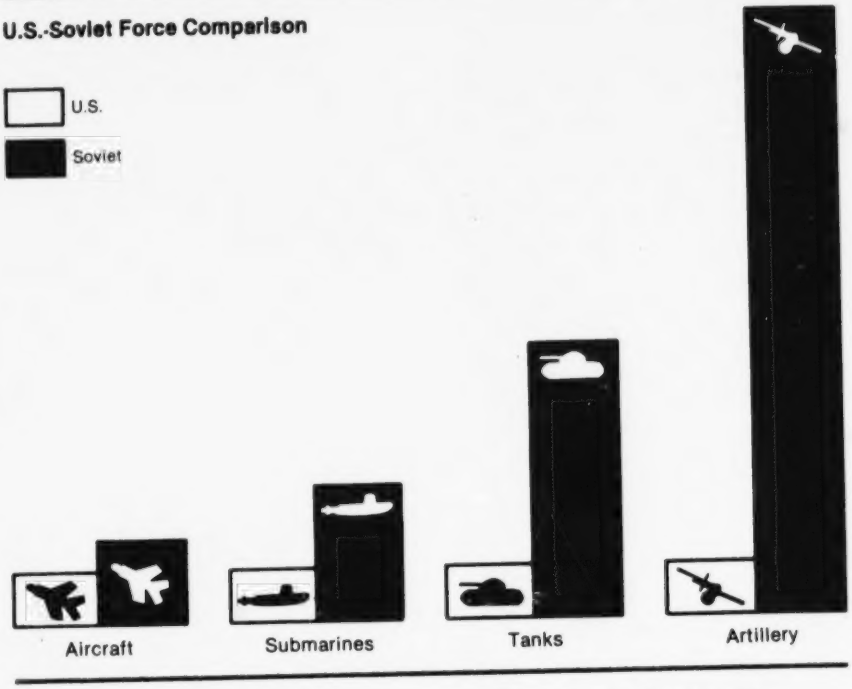
Our defense problems 5 years ago were immense, and drastic action was required. Even my predecessor in this office recognized that and projected sizable increases in defense spending—and I'm proud of what we've done. Now, the biggest increases in defense spending are behind us. And that's why, last summer, I agreed with Congress to freeze defense funding for 1 year, and after that to resume a modest 3% annual growth. Frankly, I hesitated to reach this agreement on a freeze because we still have far too much to do. But I thought that congressional support for steady increases over several years was a step forward.

But this didn't happen. Instead of a freeze, there was a sharp cut—a cut of over 5%. And some are now saying that we need to chop another $20, $30, or even $50 billion out of national defense.

This is reckless, dangerous, and wrong. It's backsliding of the most irresponsible kind, and you need to know about it. You, after all, paid the bill for all we've accomplished these past 5 years. But we still have a way to go. Millions of Americans actually believe that we are now superior to the Soviet Union in military power. Well, I'm sorry, but if our country's going to have a useful debate on national security, we have to get beyond the drumbeat of propaganda and get the facts on the table.

Over the next few months, you'll be hearing this debate. I'd like you to keep in mind the two simple reasons not to cut defense now. One, it's not cheap. Two, it's not safe. If we listen to those who would abandon our defense program, we will not only jeopardize negotiations with the Soviet Union—we may put peace itself at risk.

U.S.-Soviet Force Comparison



I said it wouldn't be cheap to cut. How can cutting not be cheap? Well, simple. We tried that in the 1970s, and the result was waste, enormous waste—hundreds of millions of dollars lost because the cost of each plane and tank and ship went up, often way up. The old shoppers' adage proved true—they are cheaper by the dozen.

Arbitrary cuts only bring phony savings, but there's a more important reason not to abandon our defense program. It's not safe. Almost 25 years ago, when John Kennedy occupied this office during the Cuban missile crisis, he commanded the greatest military power on earth. Today, we Americans must live with a dangerous new reality. Year-in and year-out, at the expense of its own people, the Soviet leadership has been making a relentless effort to gain military superiority over the United States. Between 1970 and 1985 alone, the Soviets invested $500 billion more than the United States in defense—and built nearly three times as many strategic missiles. As a consequence of their enormous weapons investment, major military imbalances still exist between our two countries.

Today, the Soviet Union has deployed over one-and-a-half times as many combat aircraft as the United States, over two-and-a-half times as many submarines, over five times as many tanks, and over 11 times as many artillery pieces.

We have begun to close some of these gaps, but if we're to regain our margins of safety, more must be done. Where the Soviets once relied on numbers alone, they now strive for both quantity and quality. We anticipate that over the next 5 years, they will deploy on the order of 40 nuclear submarines, 500 new ballistic missiles, and 18,000 modern tanks. My 5-year defense budget maintains our commitment to America's rebuilding program. And I'm grateful that Secretary Weinberger is here to fight for that program with all the determination and ability he has shown in the past.

But my budget does not call for matching these Soviet increases. So one question must be asked: can we really afford to do less than what I've proposed?

Today, we spend a third less of our gross national product on defense than under John Kennedy, yet some in Congress talk of even deeper cuts. Barely 6% of our nation's gross national product—that's all we invest to keep America free, secure, and at peace. The Soviets invest more than twice as much.

But now strip away spending on salaries, housing, dependents, and the like and compare. The United States invests on actual weapons and research only 2.6% of our gross national product, while the Soviet Union invests 11% on weapons, more than four times as much. This is the hard, cold reality of our defense deficit.

But it's not just the immense Soviet arsenal that puts us on our guard. The record of Soviet behavior, the long history of Soviet brutality toward those who are weaker, reminds us that the only guarantee of peace and freedom is our military strength and our national will. The peoples of Afghanistan and Poland, of Czechoslovakia and Cuba and so many other captive countries, they understand this.

Some argue that our dialogue with the Soviets means we can treat defense more casually. Nothing could be farther from the truth. It was our seriousness about defense that created the climate in which serious talks could finally begin.

Now that the Soviets are back at the table, we must not undercut our negotiators. Unfortunately, that's exactly what some Members of Congress have done. By banning any U.S. tests of an antisatellite system, Congress not only protected a Soviet monopoly, it unilaterally granted the Soviets a concession they could not win at the bargaining table.

Principles for Defense Program

So, our defense program must rest on these principles.

• First, we must be smart about what we build. We don't have to copy everything the Soviets do. We don't have to compete on Soviet terms. Our job is to provide for our security by using the strengths of our free society. If we think smart enough, we don't have to think quite so big. We don't have to do the job with large numbers and brute force. We don't have to increase the size of our forces from 2 million to their 5 million—as long as our military men and women have the quality tools they need to keep the peace. We don't have to have as many tanks as the Soviets—as long as we have sophisticated antitank weapons.

Innovation is our advantage. One example: advances in making airplanes and cruise missiles almost invisible to Soviet radar could neutralize the vast air defense systems upon which the Soviets—and some of their most dangerous client states—depend.

But innovation is not enough. We have to follow through. Blueprints alone don't deter aggression. We have to translate our lead in the lab to a lead in the field. But when our budget is cut, we can't do either.

• Second, our security assistance provides as much security for the dollar as our own defense budget. Our friends can perform many tasks more cheaply than we can. And that's why I can't understand proposals in Congress to sharply slash this vital tool. Military assistance to friends in strategic regions strengthens those who share our values and interests. And when they are strong, we're strengthened. It is in our interest to help them meet threats that could ultimately bring harm to us as well.

• Third, where defense reform is needed, we will pursue it. The Packard commission we created will be reporting in 2 days. We hope they will have ideas for new approaches that give us even better ways to buy our weapons. We're eager for good ideas, for new ideas—America's special genius. Wherever the commission's recommendations point the way to greater executive effectiveness, I will implement them, even if they run counter to the will of the entrenched bureaucracies and special interests. I will also urge Congress to heed the commission's report and to remove those obstacles to good management that Congress itself has created over the years.

• The fourth element of our strategy for the future is to reduce America's dependence on nuclear weapons. You've heard me talk about our Strategic Defense Initiative, the program that could one day free us all from the prison of nuclear terror. It would be pure folly for the United States not to press forward with SDI when the Soviets have already invested up to 20 years on their own program. Let us not forget that the only operational missile defense in the world today guards the capital of the Soviet Union—not the United States.

But while SDI offers hope for the future, we have to consider today's world. For too long, we and our allies have permitted nuclear weapons to be a crutch, a way of not having to face up to real defense needs. We must free ourselves from that crutch. Our goal should be to deter and, if necessary, to repeal any aggression without a resort to nuclear arms. Here, again, technology can provide us with the means not only to respond to full-scale aggression but to strike back at terrorists without harming innocent civilians.

Today's technology makes it possible to destroy a tank column up to 120 miles away without using atomic weapons. This technology may be the first cost-effective conventional defense in postwar history against the giant Red Army. When we fail to equip our troops with these modernized systems, we only increase the risk that we may one day have to resort to nuclear weapons.

These are the practical decisions we make when we send a defense budget to Congress. Each generation has to live with the challenges history delivers. And we can't cope with these challenges by evasion. If we sustain our efforts now, we have the best chance in decades of building a secure peace. That's why I met with General Secretary Gorbachev last year, and that's why we're talking to the Soviets today, bargaining—if Congress will support us—from strength.

We want to make this a more peaceful world. We want to reduce arms. We want agreements that truly diminish the nuclear danger. We don't just want signing ceremonies and color photographs of leaders toasting each other with champagne. We want more. We want real agreements—agreements that really work—with no cheating. We want an end to state policies of intimidation, threats, and the constant quest for domination. We want real peace.

I will never ask for what isn't needed; I will never fight for what isn't necessary. But I need your help.

We've come so far together these last 5 years—let's not falter now. Let's maintain that crucial level of national strength, unity, and purpose that has brought the Soviet Union to the negotiating table and has given us this historic opportunity to achieve real reductions in nuclear weapons and a real chance at lasting peace. That would be the finest legacy we could leave behind—for our children and for their children.

[1]Text from White House press release. ■

Visit to Grenada

President Reagan visited St. George's February 20, 1986, where he addressed the people of Grenada at Queen's Park.[1]

(White House photo by Pete Souza)

The President with Prime Minister Herbert Blaize (left) and Governor General Sir Paul Scoon (right).

Prime Minister Blaize, Governor General Scoon, distinguished Prime Ministers, and my dear Grenadian friends: I bring you the goodwill and affection of the people of the United States. It is my honor to be on this platform with these Caribbean leaders. We stand before you as friends who share a fundamental belief in democracy. Our commitment to humane and representative government is stronger than any tyrant's chains. And I'm certain that my colleagues approve when I say to you, we are grateful to God, today, that Grenada is once again safely within the ranks of free nations.

There is a freedom tide rising in our hemisphere. Your Prime Minister and these other elected leaders are testimony that the spirit of democracy is assuming its rightful role as the great unifier of the people. Democracy is based on respect for the rights and dignity of every person, whatever his or her station in life. In the last century, a champion of Grenadian independence, William Galway Donovan, put it well when he wrote, "A naked freedman is a nobler object than a gorgeous slave."

Now in a sense, and I mean this in a kind of geographical sense, we are, in a way, all Americans in this hemisphere, from the North Slope of Alaska to the tip of South America—these are known as the Americas—and it's our birthright to live in freedom. It is our heritage. In this quest, we stand together. And we shall always stand together.

Just in the last 5 years, Brazil, Argentina, Guatemala, Honduras, Bolivia, Uruguay, El Salvador, and, yes, Grenada, have returned to democracy. Today, 27 of 33 independent countries, countries with 90% of this hemisphere's population, are democratic or in transition to democracy. And we won't be satisfied until all the people of the Americas have joined us in the warm sunshine of liberty and justice.

In free societies, government exists for the sake of the people—not the other way around. Government is not directed by the whims of any dictator or the mandate of any clique but by the good sense of the people through a democratic vote. In free societies, people do not live in fear. They never worry that criticizing the government will lead to a late knock on the door, an arrest by some goon squad. When people are free, their rights to speak and to pray are protected by law and the goons are not running the jails: they're in the jails. In a free society, neighbors don't spy on neighbors; neighbors help neighbors. And that's the way God meant it to be.

As we rejoice in your new renewed freedom, let us not forget that there are still those who will do everything in their power to impose communist dictatorship on the rest of us. Castro's tyranny still weighs heavy on the shoulders of his people and threatens the peace and freedom of this hemisphere. Doing the bidding of his faraway master, he has shipped Cuba's young men by the thousands to fight and die in faraway lands. When one recalls the tons of military equipment that were captured here, we can thank God things were changed before young Grenadians too were sent off to fight and die for an alien ideology.

From the first days of my Presidency, I was aware of the growing trouble here in Grenada. We were worried about you and what appeared to be an attempt to turn your island into a staging area for subversion and aggression.

I can still remember being awakened early in the morning and told that six members of the Organization of Eastern Caribbean States, joined by Jamaica and Barbados, had sent an urgent request that we join them in an effort to protect lives and to restore order and democracy to your country. There were some 800 students from the United States whose lives were in danger. And there were more than 90,000 of you—Grenadians, friends, and neighbors—who were living in fear of never again regaining your freedom. Ladies and gentlemen, my dear friends, I will never be sorry that I made the decision to help you, and I made it before the sun came up.

There is a story—perhaps it's a legend—that in 1933 a group of young boys was in a swimming race across your harbor. And in the midst of the race, according to the story, to the horror of the crowd that watched, a shark appeared and surfaced directly under one young swimmer. For a few terrorizing minutes, the boy was carried on the back of the shark until the shark hit a wharf and the boy was knocked to safety and pulled out of the water by

his friends and neighbors. Dear people of Grenada, for a time it appeared that you were like that boy riding on the back of a shark. Your friends held their breath hoping and praying for you. And it was our honor to help you get off the shark. And—all of us up here—we're just glad we got here before it was time for his supper.

Today in Nicaragua, we see a chain of events similar to what happened here. We hear the same excuses made for the communists, while the people of Nicaragua see their freedom, slowly, but surely, eaten away.

Edmund Burke, a British parliamentarian who championed the cause of American independence, once wrote, "When bad men combine, the good must associate; else they will fall one by one...." Those words still ring true. That's why we came to your aid. And that is why the United States must help those struggling for freedom in Nicaragua. In the cause of liberty, all free people are part of the same family. We should stand together as brothers and sisters. And if we do, the Nicaraguan people will be able to free themselves from communist tyranny and win the liberty that you now enjoy in Grenada.

President Reagan lays a wreath at the memorial in St. George's honoring the U.S. servicemen killed in Grenada in October 1983.

(White House photo by Bill Fitz-Patrick)

There are those, of course, who claim we must give up freedom in exchange for economic progress. Pardon me, but anyone trying to sell you that line is no better than a three-card trick man. One thing becoming more clear every day is that freedom and progress go hand in hand. Throughout the developing world, people are rejecting socialism because they see that it doesn't empower people, it impoverishes them. In Cuba, Castro has turned a once thriving economy into a basket case. Lately, he's taken to haranguing his people, blaming them for the failures of his dictatorship.

Grenada—A Profile

People

Nationality: *Noun and adjective*—Grenadian(s). **Population** (1984 est.): 92,000. **Annual growth rate** (1977-82): 0.9%. **Ethnic groups:** Mainly black African descent. **Religions:** Roman Catholic, Church of England, other Protestant denominations. **Languages:** English (official), some vestigial French patois. **Education:** *Years compulsory*—6. *Literacy*—85% of adult population. **Health:** *Infant mortality rate*—16.7/1,000. *Life expectancy*—69 yrs. **Work force** (36,000): *Agriculture*—23.5%. *Industry*—24.1%. *Unemployment* (1984 est.)—30%.

Geography

Area: 344 sq. km. (133 sq. mi.); about twice the size of Washington, D.C. **Cities:** *Capital*—St. George's (pop. 30,000 est.). **Terrain:** Volcanic island with central mountainous rain forest. **Climate:** Tropical.

Government

Type: Independent state since February 1974; recognizes the British Monarch, Queen Elizabeth II, as chief of state. Administered by an interim government immediately following the ouster of the People's Revolutionary Government in October 1983, and returned to a Westminster-style parliamentary system through national elections in December 1984. **Independence:** February 7, 1974. **Constitution:** December 19, 1973.

Branches: *Legislative*—Parliament composed of a 15-seat directly elected House of Representatives and a 13-seat Senate appointed by governor general on the advice of the government and opposition. *Executive*—prime minister and Cabinet direct an apolitical career civil service in the administration of the government. *Judicial*—Supreme Court, composed of High Court of Justice and a Court of Appeals.

Administrative subdivisions: Six parishes and one dependency (Carriacou and Petit Martinique in the Grenadines).

Political parties: New National Party (NNP), Grenada United Labour Party (GULP), Maurice Bishop Patriotic Movement (MBPM), Grenada Democratic Labor Party (GDLP), Christian Democratic Labor Party (CDLP).

Central government budget (1985): $92.4 million. *Recurrent expenditures*—$45.6 million. *Capital expenditures*—$46.9 million. (Capital expenditures financed largely by foreign assistance.)

National holiday: February 7.

Flag: Red, yellow, and green with a nutmeg left of center.

Economy

GDP (1983 at market prices): $116 million. **Annual growth rate** (1983): -1.6%. **Per capita GDP** (1983): $1,261. **Avg. inflation rate** (1983): 6.1%, (1984 est.) 7%.

Agriculture (1983, 21% of GDP): *Products*—fruits and vegetables, cocoa, nutmeg, bananas, mace.

Industry (1983): *Types*—Manufacturing—4%. Tourism—3.6%. Construction—8.7%.

Trade: *Exports*—$18.9 million (1983), $17.4 million (1984 est.): fruits and vegetables, cocoa, nutmeg, bananas, garments, and mace. *Major markets* (1983)—CARICOM countries 38.7%, United Kingdom 25.7%, West Germany 11.1%, Netherlands 11.1%. *Imports* (1983)—$64.6 million: food, machinery and transport, manufactured goods, fuel. *Major suppliers* (1983)—West Indies 25%, UK 19.5%, US 17.4%.

Official exchange rate: Eastern Caribbean dollar (EC) $2.70 = US$1. *Standard bank rate*—EC$2.6882 = US$1.

Fiscal year: Calendar year.

Membership in International Organizations

UN and some of its specialized agencies, International Fisheries Service, Non-Aligned Movement, Organization of American States (OAS), Organization of Eastern Caribbean States (OECS), Latin American Economic System (SELA).

Taken from the *Background Notes* of July 1985, published by the Bureau of Public Affairs, Department of State. Editor: Juanita Adams. ■

(White House photo by Pete Souza)

While in St. George's, the President met with (front row, left to right) Prime Minister Eugenia Charles (Dominica), Prime Minister Edward Seaga (Jamaica), President Reagan, Prime Minister John Compton (St. Lucia); (middle row, left to right) Prime Minister Kennedy Simmonds (St. Christopher and Nevis), Prime Minister James Mitchell (St. Vincent and the Grenadines), Prime Minister Herbert Blaize (Grenada); (back row, left to right) Prime Minister Vere C. Bird (Antigua and Barbuda), Prime Minister George Chambers (Trinidad and Tobago), and Prime Minister Bernard St. John (Barbados).

I think it's time that we—the United States and the Caribbean nations working together—showed Castro and his gang how it's done. The foundation is already being laid. I had a conversation with Prime Minister Blaize a few months ago, and he asked if it were possible for the United States to extend more scholarships to Caribbean students. Prime Minister Blaize, I'm proud to announce today that over this year and the next two, we will roughly triple the funding for our training and education programs for the Caribbean. Our goal is to train 1,500 students from these islands each year.

And when these young people finish their education and training, we want to make certain that a growing, healthy economy is ready for them. Two years ago, we put in place the Caribbean Basin Initiative [CBI], aimed at spurring growth and investment in the Caribbean. The progress resulting from our efforts has been slow, but steady. But nothing good happens fast. It takes patience. It takes work on everyone's part.

Prime Minister Seaga has urged expanding the provisions of the CBI to permit greater access for Caribbean textiles in the U.S. market. This, he has said, would be a giant step for job creation through the Caribbean. I'm proud to announce today a special program that will guarantee access to the U.S. market for Caribbean-produced clothing made from cloth woven and cut in the United States. This will be good for the U.S. textile industry, but it will mean jobs for the people of the Caribbean.

And there's something else brewing that will be a big boost to the people of the Caribbean. Our Congress is considering a change in the tax code to permit funds in Puerto Rico's Development Bank to be used for investment loans elsewhere in the Caribbean. This proposal, worked out with Governor Hernandez Colon of Puerto Rico, has my endorsement and bipartisan support in our Congress. The Governor has spearheaded a drive to persuade U.S. firms in Puerto Rico to invest in plants in other parts of the Caribbean. And he is committed to the ambitious goal of $100 million in new investment into Caribbean Basin countries each year. Three major U.S. firms have already announced plans to place projects here in Grenada, and other projects are moving forward elsewhere in the Caribbean.

The tax provisions being considered by Congress are tied to the success of this investment program. We applaud Puerto Rico's contribution and urge congressional approval.

Finally, I would like to announce that the United States will be undertaking, in conjunction with Caribbean governments, a 5-year, $5.5 million program to help support the free and independent judicial systems of the Caribbean islands, recognized around the world as a pillar of your democratic traditions.

I'd like to take a moment to commend some people who are doing a terrific job in fostering the spirit of freedom and opportunity that I've been talking about—our Peace Corps volunteers and our Agency for International Development personnel. AID has been working on everything from repairing your roads and water system, to finishing up your new airport. Of course, it will be used to bring tourists and businessmen, instead of bombers and spy planes. Tourists are nicer, and they're a lot more fun.

The goodwill between our peoples can also be seen in the many private sector initiatives started here since the liberation. Having been in the film business, I am excited that the Discovery Foundation has provided the equipment and helped you set up a new television station. Thinking back to my past, I may have a few old movies around. Do you think anyone around here would like to see them? [Laughter and applause.]

There are many wonderful people-to-people projects that we could talk about. One of the most heartwarming is Project HOPE. The vast majority of those serving are volunteers, professionals who work hard at their regular jobs and then, in their time off, donate medical and health related services to you—truly out of the goodness of their hearts. These and other volunteers in the Caribbean make all of us back home very proud.

And a word of advice for my good friends. Whether the CBI succeeds and the economies of the Caribbean nations prosper depends as much on what you do as on what we do. High taxes, overregulation, artificially high exchange rates, and bureaucratic red tape kill enterprise and hope for the future. And I know that your Prime Minister feels the same way. There is much that should be done in these areas by Caribbean countries to put their economic house in order.

Needless to say, what you do to reform your systems and to create the environment for jobs and progress is up to you. That's the democratic challenge. But remember, whatever you do, the people of the United States are on your side. We want you to succeed and to prosper.

Personally, after talking with these leaders and meeting you today, I am optimistic. What problems you have can and will be solved. In the not too distant future, I see businessmen flocking to the Caribbean. When they do, they will find a bounty of opportunity, they'll find honest, hard-working people, happy and warm people. And they will find democratic government. That has to be a formula for good times.

And as I look around today, I know that St. George's has been a location for many a "jump up." And believe me, I will remember this one. I also know that Queen's Park was the location of a command post during the liberation 2½ years ago. The people of the United States sent our young men, our courageous soldiers—sailors, marines, and airmen—to protect our own and to save a neighbor in distress. Nineteen of our sons died here. Many were wounded. Our brave lads risked all because they believed in those ideals that we've spoken about today—justice, freedom, and opportunity. Let us pledge that their sacrifice was not made in vain. Let us recapture the joyous spirit of liberty that is truly the dream of all the Americas and spread it throughout this hemisphere. That is what our fallen heroes would have wanted.

I can't tell you how moved I have been from the first of you who waved a greeting to me since we've been here, and now those of you who we see here. I couldn't feel closer to anyone at this moment than I do to you. And I'm going to take the message back to those Americans back home who aren't here and tell them where we've got an awful lot of good friends. Thank you all and God bless you.

State of the Union Address

Excerpts from President Reagan's address before a joint session of the Congress on February 4, 1986.[1]

Thank you for allowing me to delay my address until this evening. We paused together to mourn and honor the valor of our seven *Challenger* heroes. And I hope that we are now ready to do what they would want us to do: Go forward America and reach for the stars. We will never forget those brave seven, but we shall go forward.

Mr. Speaker, before I begin my prepared remarks, may I point out that tonight marks the 10th and last State of the Union message that you've presided over. And on behalf of the American people, I want to salute you for your service to Congress and country. Here's to you.

I have come to review with you the progress of our nation, to speak of unfinished work, and to set our sights on the future. I am pleased to report the state of our Union is stronger than a year ago and growing stronger each day. Tonight we look out on a rising America, firm of heart, united in spirit, powerful in pride and patriotism. America is on the move!

. . . .

What is true for families in America is true for America in the family of free nations. History is no captive of some inevitable force. History is made by men and women of vision and courage. Tonight freedom is on the march. The United States is the economic miracle, the model to which the world once again turns. We stand for an idea whose time is now: Only by lifting the weights from the shoulders of all can people truly prosper and can peace among all nations be secure.

Teddy Roosevelt said that a nation that does great work lives forever. We have done well, but we cannot stop at the foothills when Everest beckons. It's time for America to be all that we can be.

We speak tonight of an "agenda for the future," an agenda for a safer, more secure world. And we speak about the necessity for actions to steel us for the challenges of growth, trade, and security in the next decade and the year 2000. And we will do it—not by breaking faith with bedrock principles but by breaking free from failed policies.

. . . .

I mentioned that we will meet our commitment to national defense. We must meet it. Defense is not just another budget expense. Keeping America strong, free, and at peace is solely the responsibility of the Federal Government; it is government's prime responsibility. We have devoted 5 years trying to narrow a dangerous gap born of illusion and neglect, and we've made important gains. Yet the threat from Soviet forces, conventional and strategic, from the Soviet drive for domination, from the increase in espionage and state terror remains great. This is reality. Closing our eyes will not make reality disappear.

We pledged together to hold real growth in defense spending to the bare minimum. My budget honors that pledge, and I'm now asking you, the Congress, to keep its end of the bargain. The Soviets must know that if America reduces its defenses, it will be because of a reduced threat, not a reduced resolve.

. . . .

As we knock down the barriers to growth, we must redouble our efforts for freer and fairer trade. We have already taken actions to counter unfair trading practices and to pry open closed foreign markets. We will continue to do so. We will also oppose legislation touted as providing protection that in reality pits one American worker against another, one industry against another, one community against another, and that raises prices for us all. If the United States can trade with other nations on a level playing field, we can outproduce, outcompete, and outsell anybody, anywhere in the world.

The constant expansion of our economy and exports requires a sound and stable dollar at home and reliable exchange rates around the world. We must never again permit wild currency swings to cripple our farmers and other exporters. Farmers, in particular, have suffered from past unwise government policies. They must not be abandoned with problems they did not create and cannot control. We've begun coordinating economic and monetary policy among our major trading partners. But there's more to do, and tonight I am directing Treasury Secretary Jim Baker to determine if the nations of the world should convene to discuss the role and relationship of our currencies.

. . . .

And the same technology transforming our lives can solve the greatest problem of the 20th century. A security shield can one day render nuclear weapons obsolete and free mankind from the prison of nuclear terror. America met one historic challenge and went to the Moon. Now America must meet another: to make our strategic defense real for all the citizens of planet Earth.

Let us speak of our deepest longing for the future: to leave our children a land that is free and just and a world at peace. It is my hope that our fireside summit in Geneva and Mr. Gorbachev's upcoming visit to America can lead to a more stable relationship. Surely no people on Earth hate war or love peace more than we Americans.

But we cannot stroll into the future with childlike faith. Our differences with a system that openly proclaims and practices an alleged right to command people's lives and to export its ideology by force are deep and abiding. Logic and history compel us to accept that our relationship be guided by realism—rockhard, clear-eyed, steady, and sure. Our negotiators in Geneva have proposed a radical cut in offensive forces by each side with no cheating. They have made clear that Soviet compliance with the letter and spirit of agreements is essential. If the Soviet Government wants an agreement that truly reduces nuclear arms, there will be such an agreement.

But arms control is no substitute for peace. We know that peace follows in freedom's path, and conflicts erupt when the will of the people is denied. So, we must prepare for peace not only by reducing weapons but by bolstering prosperity, liberty, and democracy however and wherever we can.

We advance the promise of opportunity every time we speak out on behalf of lower tax rates, freer markets, sound currencies around the world. We strengthen the family of freedom every time we work with allies and come to the aid of friends under siege. And we can enlarge the family of free nations if we will defend the unalienable rights of all God's children to follow their dreams.

To those imprisoned in regimes held captive, to those beaten for daring to fight for freedom and democracy—for their right to worship, to speak, to live, and to prosper in the family of free nations—we say to you tonight: You are not alone, freedom fighters. America will support you with moral and material assistance, your right not just to fight and die for freedom but to fight and win freedom—to win freedom in Afghanistan, in Angola, in Cambodia, and in Nicaragua.

This is a great moral challenge for the entire free world. Surely no issue is more important for peace in our own hemisphere, for the security of our frontiers, for the protection of our vital interests, than to achieve democracy in Nicaragua and to protect Nicaragua's democratic neighbors.

This year I will be asking Congress for the means to do what must be done for the great and good cause. As Scoop Jackson [the late Senator Henry M. Jackson], the inspiration for our Bipartisan Commission on Central America, once said, "In matters of national security, the best politics is no politics."

What we accomplish this year, in each challenge we face, will set our course for the balance of the decade, indeed, for the remainder of the century. After all we've done so far, let no one say that this nation cannot reach the destiny of our dreams. America believes, America is ready, America can win the race to the future—and we shall.

. . . .

[1]Text from Weekly Compilation of Presidential Documents of Feb. 10, 1986. ■

America's Agenda for the Future

Following are excerpts from President Reagan's message to the Congress of February 6, 1986.[1]

I. Introduction

On Tuesday night, I came personally before the Congress to review with you the progress of our Nation, to speak of unfinished work, and to set our sights on the future. In that address, I spoke of an America on the move—stronger than a year ago and growing stronger every day.

Almost 5 years ago I addressed a previous Congress and spoke of the need for policies that would promote economic growth and expansion, reduce the intrusion of government in areas where its role had grown too large, and strengthen our defense capabilities in order to protect the peace and fully meet our global commitments. These goals and that agenda have not changed, and although we have made significant progress, the work is not yet finished.

In addition to the proposals contained in my budget for FY 1987, this message—an *Agenda for the Future*—spells out in greater detail how we as Americans can continue to make progress in each of these areas and successfully meet the challenges of the next decade, the year 2000, and beyond.

. . . .

Antitrust Reform. If America hopes to compete successfully abroad, we cannot bind the hand of American business and industry at home. Therefore, we are asking the Congress to remove unreasonable constraints on U.S. competitiveness by reforming our Federal antitrust statutory framework to reflect the global nature of our markets. These changes will enhance the vigor and competitiveness of American businesses, while continuing to protect American consumers and businesses from adverse effects of practices such as monopolies, cartels, and price-fixing.

. . . .

Free and Fair Trade. As we knock down barriers to growth, we must redouble our efforts for freer and fairer trade. We have already taken actions to counter unfair trading practices and to open closed markets abroad. We will continue to do so. We will also oppose legislation touted as providing "protection" that in reality pits one American worker against another, one industry against another, one community against another, and that raises prices for us all. I believe that if the United States can trade with other nations on a level playing field, we can outproduce, out-compete, and out-sell anybody, anywhere in the world.

Trade is the life blood of the global economy. Growing world markets means greater prosperity for America and a stronger, safer, and more secure world for the family of free nations. We will continue to work to promote a free, fair, and expanding world trading system by continuing to seek legislation authorizing a $300 million fund for combating predatory tied aid credits by other countries. In addition, we will propose legislation to strengthen and broaden protection of intellectual property. We will continue to work with the Congress to put into place other changes that reflect the principles and policies of free and fair trade.

We will continue to enforce vigorously the laws that protect against unfair trade, in particular Section 301 of the Trade Act of 1974 and the anti-dumping and countervailing duty laws. The Strike Force on Trade will continue its efforts to identify unfair foreign practices.

We will aggressively renegotiate the Multi-Fiber Arrangement (MFA), currently scheduled to expire July 1, 1986, on terms no less favorable than present. We are consulting with the U.S. textile and apparel industries to ensure that their views will be represented during these negotiations.

We will continue the market-oriented sector-selective (MOSS) talks, working with the Japanese to identify all the trade barriers in specific sectors and encouraging the Japanese to remove them. The talks are making progress and markets are opening up in telecommunications, pharmaceuticals, and other sectors. We will continue to press for the removal of barriers in these and additional sectors. We also welcome Prime Minister Nakasone's expressed determination to move toward the restructuring of Japan's export oriented economy.

Our Administration is also working vigorously to launch a new round of multilateral trade negotiations through the Preparatory Committee established last November by the GATT [General Agreement on Tariffs and Trade]. Under the leadership of the U.S., the Preparatory Committee is developing the framework for negotiations that would strengthen the international trading system, eliminate unfair trade practices, and address major new problem areas in international trade such as services, intellectual property protection, and investment.

Our Administration hopes to begin discussions with Canada, our largest trading partner, to enhance freedom of trade between our two countries. We will work with the Congress to assure that a mutually beneficial agreement can be achieved.

In addition, we will engage some of our major trading partners in discussing the idea of establishing a multinational or regional patent office. Such an office could provide a higher level of common patent protection, including coverage and terms, and establish a more efficient system for gaining patent protection beyond United States borders.

Further, we will work to correct the deficiencies in the new farm bill, including: the provision mandating a reduction in the amount of sugar permitted to enter the United States; the 3-year payment-in-kind bonus export program; and the new dairy program, which taxes milk producers to fund a program that obligates the Government to pay farmers to liquidate their dairy herds and to buy the meat in order to support prices.

The Global Economy. Today, America is part of a global economy. The constant expansion of our economy and exports demands a sound and stable dollar at home and reliable exchange rates around the world. It also demands that our trading partners grow along with us.

We cannot race forward to the future if our friends and allies are lagging behind. Many of the trade problems we are experiencing today are caused by the imbalance between our low-tax, high-growth economy and the high-tax, low-growth economies of so many of our trading partners. Our dynamic, expanding economy is hungry for goods from abroad; but economies still suffering under excessive taxation, over-regulation, and top-heavy government simply cannot afford to buy from us.

Our Administration is working to promote growth in the world economy by strengthening economic policy coordination among our industrialized trading partners. I have directed Treasury Secretary James A. Baker III to determine if the nations of the world should convene to discuss the role and relationship of our currencies.

Many of the developing countries, where large debts further oppress struggling economies, are in particularly dire straits. Our Administration will vigorously pursue implementation of our proposed "Program for Sustained Growth" to address problems of debt and declining growth in the developing countries. This program calls for increased lending by commercial banks and an expansion of loans by multilateral development banks conditioned on structural reforms, including tax reforms, in the debtor countries.

I am looking forward to meeting with the other leaders of the industrialized nations at the Economic Summit this spring in Japan to discuss ideas and policies that can make the global economy stronger. These policies include removing structural rigidities in our economies that impede the capital and labor markets and improving the working of the free trade system, while resisting protectionism.

. . . .

V. Expanding the Family of Free Nations

In the area of foreign affairs, America will continue to encourage democracy, freedom, and respect for human rights around the world. We will be a strong and reliable ally to our friends, and a firm but hopeful adversary for those who, for now, choose not to be our friends. With the former we hope for continued harmony; with the latter, for progress toward that most elusive of goals, peace.

A Relationship Based on Realism. Our relationship with the Soviet Union must be supported by the twin pillars of hope and realism. The United States and the Soviet Union are not alike; we are not two equal and competing Superpowers divided only by a difference in our "systems." The United States is a free and open society, a democracy in which a free press and free speech flourish. The people of the Soviet Union live in a closed dictatorship in which democratic freedoms are denied. Their leaders do not respond to the will of the people; their decisions are not determined by public debate or dissent; they proclaim, and pursue, the goal of Leninist "revolution."

And so the tensions between us reflect differences that cannot be wished away. But the future is not predetermined. Knowing this, and truly desiring to make the differences between us smaller and more manageable, the United States continues to pursue progress in all aspects of our relationship with the Soviet Union.

Our Administration seeks to ensure that this relationship remains peaceful. We want restraint to be the Soviet leadership's most realistic option and will see to it that our freedoms and those of our Allies are protected.

We seek a secure future at lower levels of arms, particularly nuclear forces, through agreements that are equitable and verifiable. The soundness of our proposals, our renewed military strength, and our bipartisan determination to assure a strong deterrent create incentives for the Soviet Union to negotiate seriously.

We can move toward a better, more cooperative working relationship with the Soviet Union if the Soviet leadership is willing. This will require full Soviet compliance with the letter and spirit of both past and future agreements.

There is much work to be done. I will meet General Secretary Gorbachev later this year, and in preparation my Administration will pursue discussions with the Soviet government at all levels. I also hope to see greater communication and broader contact between our peoples. I am optimistic that if the Soviet leadership is willing to meet us halfway, we will be able to put our relations on a more cooperative footing in 1986.

Sustaining Our Strong Commitment to National Defense. In spite of our current discussions, the Soviet leaders are continuing a massive military buildup that threatens the United States and our free world allies. Real

arms reductions are possible only if the Soviets and others do not doubt our strength and ability to counter aggression.

Keeping America strong, free, and at peace is solely the responsibility of the Federal Government; it is Government's *prime* responsibility. We have devoted 5 years trying to narrow a dangerous gap born of illusion and neglect. And we have made important gains.

In the past 5 years, our Administration has reversed the decline in defense funding that occurred during the 1970s and has made significant progress in strengthening our military capabilities. Last year the Congress and I reached a deficit reduction agreement. We pledged together to hold real growth in defense funding to the bare minimum. My 1987 budget honors that pledge. It proposes defense levels that are essential simply to maintain the defense capability that we have achieved in the face of the continuing Soviet military buildup. I am now asking Congress to keep *its* end of the bargain. With the additional cuts under Gramm-Rudman-Hollings, FY 1986 budget authority for defense corresponds to more than a 5 percent real decline. This simply cannot continue. I am proposing 1987–1991 defense levels which provide the real program growth agreed to in last year's Budget Resolution. It is critical that these levels be supported. The world must know that if America reduces her defenses, it will be because of a reduced threat, not a reduced resolve.

We will continue vigorously to pursue our strategic modernization program in my 1987 budget—to modernize our bomber, ICBM [intercontinental ballistic missile], and missile-submarine forces so as to assure effective and stable deterrence.

Our Administration will also actively continue research into new technologies in search of secure strategic defense systems. The Strategic Defense Initiative offers the prospect of finding such systems, which threaten no one, to keep the peace, protect the United States and our allies in greater safety, and ultimately to eliminate the threat of nuclear weapons by making nuclear-armed missiles obsolete. We have invited allies to join us in this research effort. We have already agreed with Great Britain to undertake cooperative research and are laying the groundwork for cooperation with others.

We have witnessed in the past 5 years a remarkable improvement in personnel quality and retention throughout all components of the Military Services. My 1987 budget continues to ensure that the high quality of our forces is maintained.

Our Administration is strongly committed to improving management of our defense programs. I look forward to receiving the recommendations of my Blue Ribbon Commission, chaired by David Packard, which has been reviewing this issue. The Department of Defense will continue to root out waste and inefficiency and will aggressively initiate any new improvements necessary to assure that taxpayer dollars are well spent. We will also pursue organizational changes, where appropriate, to ensure the continued effectiveness of our Armed Forces.

While acknowledging the importance of the free flow of knowledge and information for commercial purposes, our Administration will not sacrifice our strategic technological advantages in the area of national security. We will forcefully administer the Export Administration Act.

Our Administration has pressed the governments of Indochina for the fullest possible accounting of the POW/MIA question. These efforts have shown significant progress and will continue. We will continue to pursue, with all resources available to us, reports of Americans who could still be held captive.

We will continue to support the nearly 28 million veterans who have given faithful service in defense of our Nation. We will provide quality medical care, fair and compassionate disability compensation, and other benefits for eligible veterans.

Support for a World of Hope. The United States continues to pursue a world of hope where people are free to choose the political system by which they will be governed. We seek to roll back the tide of tyranny; we seek to increase freedom across the face of this planet, for serving the cause of freedom also serves the cause of peace. It is for this reason that Americans have always supported the struggle of freedom fighters. It is also why I put forward my "regional initiative" at the United Nations last fall—a three-stage plan for ending a series of dangerous wars that have pitted a series of governments against their own people and their neighbors.

As we have in the past, America must actively wage the competition of political ideas—between free government and its opponents—and lend our support to those who are building the infrastructure of democracy. Failure to sustain other democracies will be very costly in the long run, both materially and spiritually.

In Afghanistan we must continue to help the forces fighting a Soviet invasion and an oppressive Communist regime. As a result of the Soviet Union's military presence and vicious campaign against the freedom fighters, a quarter of the Afghan population has been killed or has fled to refugee camps. The Afghan people will have our support as long as the Soviet Union continues its war against them.

In Latin America the trend toward elected civilian governments continues, with Guatemala as the latest new entry. Over 90 percent of the people of Latin America and the Caribbean now enjoy democratic rule. That compares to less than one-third only 5 years ago. However, Communist subversion and the insidious spread of narcotics trafficking continue to menace the region. In fact, they sometimes work hand in hand, as in Colombia, where insurgents are increasingly linked to drug traffickers and narcotics growers.

The Central American democracies need our help. Our assistance is crucial, as demonstrated by the success of El Salvador in preserving democratic institutions in the face of a Communist insurgency. The levels of economic and security assistance we will request for Central America are the absolute minimum needed to maintain progress toward the objectives set out in the report of the Bipartisan Commission on Central America.

For moral and strategic reasons, we must continue to support those seeking democracy in Nicaragua. The Nicaraguan resistance is fighting not only the Sandinistas, but Cubans armed with Soviet weapons. I will be asking the Congress to provide the Nicaraguan freedom fighters with the moral and material support they require to continue and expand their struggle. We will continue to press the Sandinistas to negotiate with their own people and to fulfill the promises made to them of genuine democracy. Reconciliation in Nicaragua, based on democratic elections, remains the key to peace in Central America.

In Africa, many countries have experienced deep economic distress and starvation in the past year, brought about in part by the drought and in some cases—particularly Ethiopia—by the brutal policies of a Communist regime. As the human cost of such policies mounts, we encourage African governments to take the lead in moving toward economic and political freedoms.

We are moved by the efforts of freedom fighters such as Jonas Savimbi and the members of UNITA [National Union for the Total Independence of Angola]. They deserve our support in their brave struggle against Soviet-Cuban imperialism in Angola. We will work with the Congress to determine the most effective way of providing support.

In South Africa, we stand forthrightly on the principle that the government must achieve freedom and justice for all its citizens. Apartheid, in our view, is doomed. We have a major stake—as elsewhere, both moral and strategic—in encouraging a peaceful transition and avoiding a terrible civil war. This is why we reject the approach of those on both sides who pursue violence and oppression. Our ability to affect the ultimate outcome is limited, but we will continue to employ our good offices—both official and private—to pursue dialogue and negotiation as the best way to change the system while protecting the future of all South Africans.

In Southeast Asia, the United States supports ASEAN [Association of South East Asian Nations] in its efforts to aid the struggle of the Cambodian people to free their country from foreign occupation while aiding Thailand, the ASEAN front-line state. As in other regions, we are prepared to contribute to a negotiated settlement of this war, in the context of the proposals I put forward at the U.N. General Assembly last year. We are implementing humanitarian measures in response to the refugee problems in the region.

We are concerned by the developments in the Philippines, our long-time ally, and will work to encourage political moderation, fair play, and the strengthening of democratic

institutions. Only on this basis can the people of the Philippines check and ultimately defeat an insurgency whose goal is to end democracy.

No discussion of peace and freedom can be complete without a reference to Europe's great and just hope: an end to the artificial division of the continent. The dividing line between freedom and oppression is one boundary that can never be made legitimate. The most significant way of making all Europe more secure is to make it more free.

We stand for the principles of freedom, democracy, the rule of law, unconditional human rights, and government with the consent of the governed. The cause of Poland's Solidarity continues to arouse the conscience of mankind. Solidarity will not die because its heartbeat is an indestructible truth that resonates in every human heart.

We can help those seeking democracy not only by economic and military aid, but with ideas and the active involvement of democratic parties and institutions. The National Endowment for Democracy has a creative role to play in fostering the ideals that make democracy work.

Alliances and Friendships. America's strength and staying power are the essential prerequisites for strengthening our alliances and friendships and for protecting the values and interests that bind us together. In Europe we have launched, together with our NATO allies, a Conventional Defense Initiative to find more effective means to improve our conventional deterrent; we are also seeking ways, with congressional support, to stimulate armaments cooperation. The alliance remains firmly on course in deploying NATO intermediate-range weapons to counter Soviet SS-20 missiles. We are also continuing alliance implementation of the decision to reduce by 1,400 the number of nuclear warheads available to NATO, bringing our theater-nuclear inventory to its lowest level in 20 years; this decision is being carried out despite the absence of reductions by the Soviet Union.

In our relations with Japan, we will expand our efforts to resolve bilateral trade issues through trade liberalizing solutions that open Japanese markets to American goods. We continue to rely on the United States-Japanese Mutual Security treaty as a pillar of Asian peace and stability.

Our commitment to the security of the Republic of Korea has never been stronger. We have a number of differences on trade issues but believe the market-opening steps being taken or under consideration by the Republic of Korea will alleviate these difficulties.

Elsewhere in Asia I will continue to expand and deepen cooperation with China, and improve our relationships in Southeast Asia and the dynamic Pacific Basin as a whole. Termination of United States Trusteeship over the Micronesian Territories, which I hope we can achieve this year, will be a landmark in our relations with the emerging Pacific Island nations and a symbol of our support for democracy and freedom everywhere.

One of the areas most critical to our security is the Middle East. Security assistance to the countries of the region is important to maintaining United States influence, to preventing Soviet intimidation and exploitation, and to giving friendly governments the confidence to move toward peace in the face of often violent opposition. We are helping Israel and Jordan to narrow their differences in the peace process. We will continue our efforts to facilitate direct negotiations between Israel and her Arab neighbors. We must also enlarge the gains already made between Israel and Egypt.

In South Asia major strides have been taken in the past year to advance regional peace and prosperity. A new regional association was inaugurated to grapple with the twin killers of narcotics and terrorism. The leaders of India and Pakistan have met frequently to address outstanding differences. The United States stands ready to promote regional peace and reduce the risk of a South Asian nuclear arms race in any way we can.

In terms of our legislative intentions, let me be clear: in all these regions of the world, a strong security assistance program is one of the most effective, and least costly, ways of protecting interests we share with allies and friends. I will work with the Congress to preserve this invaluable policy tool. I will also seek congressional approval of our requests to sell arms to Jordan and other pro-Western governments in the Mid-east.

Countering Terrorism and Espionage. Terrorism is a growing threat, as evidenced by the increased targeting of innocent civilians engaged in innocent pursuits. We are taking several measures to increase our capability to deal with this scourge. We are aware that it thrives with the support of nations such as Libya that provide funding, logistics, direction, and safehavens.

The Vice President's Task Force on Combating Terrorism, formed at my direction last July, has submitted its report to me with a series of recommendations. Our Administration has already begun to implement those recommendations that are within the purview of the Executive Branch. We will increase our intelligence cooperation with friendly nations to share information on terrorist plans and intentions. Our intelligence community will place greater emphasis on collecting information on terrorist groups and their state supporters. And we will increase our readiness to strike back at terrorists where they have been identified and their responsibility for actions against Americans has been determined. Those countries that support and direct the terrorists should know there is no refuge, there is no hiding place, there is no sanctuary that will keep them safe forever.

Our Administration will continue, on its own and in cooperation with allies, with private sector transportation companies, and with international organizations, to take preventive and response measures to counter the brutal, savage terrorist attacks on innocent people. Through the Federal Bureau of Investigation here at home and intelligence services abroad, we will act to head off terrorist incidents before they can occur. Our tightened security measures already include new regulations for checked baggage, cargo, and access to aircraft. We are working with the International Civil Aviation Organization and the International Maritime Organization to enhance security standards worldwide.

Our Administration will ask the Congress for legislation to further improve security measures, enhance anti-terrorism assistance programs, and in general enable us to meet our counter-terrorism responsibilities. We are requesting additional funds to improve the security of our diplomatic missions abroad and of foreign diplomats here in the United States. We are also asking the Senate to approve the Supplementary Extradition Treaty with the United Kingdom to allow the return of international terrorists for trial. This treaty will assure that our own courts cannot become a sanctuary for certain terrorists and will serve as a model for cooperation between nations.

Our Administration will continue to counter the threat posed by the worldwide activity of hostile intelligence services such as the KGB and GRU. We will follow a realistic approach to countering illegal technology acquisition, espionage, and the attempt to manipulate public opinion through active measures and disinformation. We will enhance our world effort to identify and neutralize the activity of intelligence services working against American interests or threatening our security.

VI. Conclusion

What we accomplish this year, in each challenge we face, will set our course for the balance of the decade, indeed for the remainder of the century. After all we've done so far, let no one say this Nation cannot reach the destiny of our dreams. America believes, America is ready, America can win the race to the future—and we shall.

RONALD REAGAN

News Conference of February 11 (Excerpts)

Excerpts from President Reagan's news conference of February 11, 1986.[1]

. . . .

Q. The observers you sent to the Philippines have just returned with reports that they witnessed fraud and violence. Doesn't this undermine the credibility of the election and strengthen the hand of communist insurgence on the island?

A. I am not going to comment on this process, just as they are not going to render an official report, until the counting has finally been finished. I don't think it would be proper to do so. Yes, they told me in just an interim few remarks and made it plain that they're not going to issue the official report yet. But they told me that there was the appearance of fraud, and yet, at the same time, said that they didn't have any hard evidence beyond that general appearance.

So we're going to wait. We're neutral. And then we hope to have the same relationship with the people of the Philippines that we've had for all these historic years.

Q. Did what they tell you give you concern about the credibility there and what the impact will be for U.S. interests in the Philippines?

A. I think that we're concerned about the violence that was evident there and the possibility of fraud, although it could have been that all of that was occurring on both sides. But at the same time, we're encouraged by the fact that it is evident that there is a two-party system in the Philippines and a pluralism that I think would benefit their people. And we're glad to see that particular thing happen and we'll wait until we hear the outcome.

. . . .

Q. Two weeks ago your Chief of Staff, Donald Regan, said that if Ferdinand Marcos was reelected and certified as such, we would have to do business with him even if he were reelected through fraud. Is that your policy?

A. What we have to say is that the determination of the government in the Philippines is going to be the business of the Philippine people, not the United States. And we are going to try and continue, as I said before, the relationship regardless of what government is instituted there by the choice of the people. And that is all I can answer.

Q. It is argued that there is a communist insurgency there; that the best way to play into the hands of the communists is to back someone—a dictator—who has been reelected by fraud, that the best way, it is argued, to oppose the communist insurgency is to back the forces of democracy. What about that?

A. We are backing the forces of democracy and the people there are voting and they are holding their own elections. The only party in the Philippines that boycotted the election was the Communist Party. So there is very great evidence that whatever takes place—you've got two parties and the evidence that a sizable percentage of each party has voted for a different candidate for the—of the two candidates. So there is a solid support for both candidates there. Now, as I said before, I'm not going to comment on any of these other things while this vote count is still going forward.

Q. The Soviets today released dissident Anatoliy Shcharanskiy, but of course there are thousands of other Soviets who would like to leave that country that the Soviets won't let leave. Do you regard today's release as a propaganda move, or do you see any real change in the human rights situation in the Soviet Union?

A. I don't have any way to determine what their motives are in doing this. I only know that since the Geneva meeting, there have been not only this but others released—more so than in a great many years. I am encouraged by this because I did talk at great length about the matter of human rights with the General Secretary. And all we can do is hope that this is a beginning—a sign for what is going to continue to take place.

Q. Mr. Gorbachev says that he cannot release another leading dissident, Andrey Sakharov, because of his knowledge of Soviet nuclear secrets. Do you see any legitimacy to that argument?

A. It is an argument they have used for a number of people—people who have, in their estimation, been close to some things that they feel are secrets for their own security and that they have said that they cannot let people go that have access to those secrets.

I have no way of judging how valid that is, but, as I say, they've made a start and I hope it is just a start and that they'll continue.

Q. Did the United States play any role in President Duvalier's decision to leave Haiti? And the second question, do you intend to increase economic aid to the new government there?

A. We are just faced now with what we can do—I can only tell you we hope we can be of help as this interim government goes forward to try to institute democracy there in Haiti. Our participation in Duvalier's leaving was that of providing an airplane to fly him to France.

Q. You didn't give him any sort of strong advice to leave, did you?

A. No. And he never asked us for any.

. . . .

Q. The United States, as you know, is beginning to resume the flight operations in the Mediterranean near Libya. Do you believe—and it's also designed to reassert our rights to patrol international waters. Why then haven't we crossed that line that Qadhafi calls the death line?

A. I don't know the nature of the operations that have been conducted. They conduct them in various parts of the Mediterranean. I don't know that they're all through yet. We have conducted operations there very early on in my Administration in which I was informed, because they thought I should be, that he had ordered that that was their waters—which was akin to us claiming all of the waters from the tip of Florida over to the border of Mexico and Texas—and that some of the maneuvers would entail some planes and some ships in crossing that line, but not getting into what are actually their waters.

And I gave the go-ahead on that. And I would again. I don't know—if they didn't cross it in any way this time, it must have been because the maneuvers did not call for it.

Q. Do you think, though, that resuming the operations at this time might be playing into Qadhafi's hand,

helping him project the image that he wants to, that he's being picked on by the United States?

A. It didn't add to his image the first time we did it. And as I say, it would be done not for any impression on him; it would be done because simply we believe that our squadrons which are there—the Navy—is going to have to conduct exercises and keep itself in fighting shape.

. . . .

Q. Your previous answer on the Philippines election left the impression that no matter what goes on in the election, the United States will accept the outcome. You didn't mean to say that an unprecedented fraud is going to be accepted by the United States, did you? Is there some limit where we stop?

A. No, I said that we're depending on the Filipino people to make this decision. This is their election, and we'll wait and see what the final count determines.

Q. But once they do make the decision, if it's quite obvious—and even some of the observers from your own commission are indicating that—if it's quite obvious that it's been a total steal, the United States isn't going to accept the outcome just as it is, are they?

A. You're asking me one of those "if" questions and I'm not going to answer "if" questions. I took my pattern from Franklin Delano Roosevelt when he was President and he held his first press conference, and he said "I will set down one ground rule..." which he never violated. He said, "I will not answer any 'if' questions."

Q. Some within your Administration are reported to be growing impatient with what they see as Soviet foot-dragging over setting a date for this year's summit. Do you share in that impatience?

A. I'd like to have it pinned down. They haven't come up with any other date. They mentioned another period, and we informed them that that was going to be running into our coming election and we would prefer the earlier date. No, we haven't seen any evidence that they're trying to get out of this or anything of the kind, because they've already invited me there for one in 1987.

Q. So, still in your view, there's no thought that possibly Mr. Gorbachev may be trying to win some concessions on arms control in exchange for an agreement on dates?

A. I don't think so. That kind of linkage wouldn't work.

. . . .

Q. Are the two U.S. bases in the Philippines of paramount importance when you consider U.S. policy for the Philippines? Or would you put the future of those bases at some risk if it meant standing up for democracy?

A. One cannot minimize the importance of those bases, not only to us but to the Western world and certainly to the Philippines itself. If you look at the basing now of the Blue Ocean Navy that the Soviets have built, which is bigger than ours, and how they have placed themselves to be able to intercept the 16 choke points in the world. There are 16 passages in the world—sea passages—through which most of the supplies and the raw material and so forth reaches not only ourselves but our allies in the Western world. And obviously the plan in case of any kind of hostilities calls for intercepting and closing those 16 choke points. And we have to have bases that we can send forces to reopen those channels. And I don't know of any that's more important than the bases on the Philippines.

Q. Has the United States given any consideration to other places in the region we might have bases, if the situation in the Philippines seems to become untenable?

A. I have to tell you, as good military will always do, and not just here, but in anything else—I am confident that our Navy has sought for and is looking for contingency plans for anything that might happen anyplace to us.

[1]Text from White House press release. ■

Vice President Bush Visits Guatemala and Honduras

We are committed to supporting the development of free, democratic governments throughout this hemisphere . . . .

Vice President Bush headed the U.S. delegations to the inauguration ceremonies of two Central American Presidents: Marco Vinicio CEREZO Arevalo of Guatemala on January 14, 1986 (above) and Jose AZCONA del Hoyo of Honduras on January 27, 1986.

(White House photos by Dave Valdez)

Nicaragua: Will Democracy Prevail?

Secretary Shultz's statement before the Senate Foreign Relations Committee on February 27, 1986.[1]

U.S. assistance to the Nicaraguan democratic resistance is an essential element in our efforts to defend Central America from aggression, to preserve recent democratic gains, and to improve prospects for renewed economic growth and equitable development. It is an important stimulus to a diplomatic solution to the Central American conflict. It contributes to our defense against Soviet and Cuban military intervention in this hemisphere. Finally, it can help to restore to the Nicaraguan people their right to self-determination denied by a minority that seeks to perpetuate itself in power by force of arms and totalitarian controls.

In short, the assistance the President requested on February 25 is needed. It is legally, morally, and strategically justified. And it can make a vital difference to the emergence of a democratic outcome in Nicaragua and throughout Central America.

WHAT IS THE PROBLEM?

In talking with foreign leaders and Members of Congress, I find that just about everyone agrees on what the problem is. It is that a democratic revolution has been betrayed by a violent minority willing and even eager to serve as an instrument of Soviet and Cuban strategic designs on the hemisphere, including armed aggression in the form of support for terrorism and subversion.

In 1979, Nicaraguan democrats and their sympathizers throughout the world believed that the end of the Somoza regime marked a new beginning for Nicaragua. Nicaraguans learned very quickly, however, that instead of democracy, they had fallen prey to what the Sandinistas say is "revolution by vanguard" and what the rest of us know is communist totalitarianism. The popularity of the overthrow of Somoza concealed the establishment of a new dictatorship that threatens the security of Nicaragua's neighbors and has brought the cold war to Central America.

Intervention

One of the most striking characteristics of Sandinista communism is its messianic impulse to violence. As Congress has repeatedly and formally found, Nicaragua has since 1980 been engaged in unlawful intervention, serving as the staging ground for arms shipments to guerrillas in El Salvador. Because so much attention has been focused on this arms flow to El Salvador, which has been sustained and occasionally massive, it is less widely known that at one point or another Sandinista intervention has touched virtually the entire hemisphere.

The map on page 33 depicts the breadth of Nicaragua's interventionist activities. (It also makes clear, incidentally, that the Nicaraguan communists are perfectly serious when they refer to their policy as one of "internationalism.") The map identifies the countries where the current Nicaraguan Government has shipped arms, to whose citizens it has provided military training, or the kinds of support necessary for terrorist operations. Managua has become a gathering place for terrorists from all over the world, including Europe and the Middle East as well as Latin America.

Two aspects of this pattern of intervention are worth emphasizing.

First, the intervention is strongest against Nicaragua's immediate neighbors, but it is not limited to Central America.

Second, the pattern is politically indiscriminate. Violence and subversion have been directed against democracies and even against Contadora countries as well as against dictatorships and more traditional military regimes.

Militarization

The Sandinistas like to portray themselves as nationalists, but their soldiers are trained and supported in combat by thousands of Cubans and other foreigners known as "internationalists." And this is why, despite its limited size and resources, Nicaragua is able to intervene so widely in the hemisphere: it has been armed by the Soviet Union and is manned by Cubans in key sectors from training and weapons use to intelligence and counterintelligence.

The first Cuban advisers entered Managua with the Sandinistas and took up positions in Somoza's bunker less than a week after he left it. As soon as the security apparatus was in place, Soviet-bloc arms began to arrive to give the Nicaraguan communists the capacity to repress their own people and to engage in unconventional warfare against their neighbors without risk of a conventional military response.

Chart I depicts the militarization of Nicaragua by this combination of Soviet-bloc weapons and Cuban manpower. The total of Cuban advisers has stabilized at slightly lower levels since October 1983, when the U.S. action in Grenada led the Cubans to seek a lower profile in Nicaragua. Soviet arms shipments peaked in the fall of 1984 with the delivery of HIND attack helicopters at a time when the resistance had been cut off from U.S. Government assistance. The reality is clear: Managua's military capabilities are closely tied to the Soviet Union and Cuba.

Cuban military and security officers, in fact, have done everything from helping with the establishment of political control structures in the armed forces and the state security apparatus to an active combat role with sophisticated Soviet weapons systems.

THE RISE OF THE RESISTANCE

When Daniel Ortega spoke in Havana on February 5 to the Congress of the Cuban Communist Party, he referred to "the blood of Cuban internationalists fallen on Nicaraguan soil." Ortega was talking about Cubans killed fighting Nicaraguans inside Nicaragua.

In this fact is a bitter truth: Nicaraguans who dissent must fight more than other Nicaraguans. And they must fight a sophisticated, heavily equipped, and pervasive security apparatus designed to deny power to all but the ruling communist vanguard. One

Sandinista Intervention

Group A: Countries where **arms** originating in Nicaragua have been found.

Group B: Countries some of whose citizens have received **military training** in Nicaragua.

Group C: Countries in which radicals have received **other support** (such as Safe Haven, Transit, False Documentation, etc.) from Nicaragua.

Includes all of the countries in groups **A & B.**

Group D: Countries not included in groups **A, B, or C.**

Note: Only independent countries are shown

Names and boundaries are not necessarily authoritative.

need look no further than the fate of Solidarity in Poland over the last few years to realize the difficulty of taking on such a formidable internal security apparatus.

Chart II (see p. 35) demonstrates the growth of armed resistance in the face of the new Nicaraguan police state. The resistance responds to a long series of repressive acts, some of which are listed chronologically in the chart. These go from the arrival of the Cubans and the establishment of the defense committees in the summer of 1979 to the start of censorship and the postponement of elections, the murder of opposition leader Jorge Salazar, and the burning of Indian villages in 1981. Catholic and Protestant church leaders were systematically attacked, and the Pope was insulted. Forced conscription came next, followed by stage-managed elections, Ortega's visit to Moscow, and finally the suspension of civil rights in the fall of 1985.

By betraying their promises of pluralism, the Nicaraguan communists have forced the citizens of Nicaragua to take up arms once again. Like Somoza, the Sandinistas don't seem to listen to anyone who isn't armed. And, like Somoza, they seek to blame outside forces for the resistance of their own people to their policies.

The Nicaraguan communists like to say that covert U.S. support created the resistance; that their opponents are all agents of the CIA [Central Intelligence Agency] and of the heirs of Somoza. This is ridiculous. It was Sandinista repression that in 1979, 1980, and 1981 destroyed the coalition that overthrew Somoza and sparked the resistance. In 1979, 1980, and 1981, the United States was providing aid to the Government of Nicaragua, not to the resistance.

From May of 1984 until late in 1985—well over a year—the U.S. Government provided no assistance to Nicaraguan resistance forces. As indicated in Chart II, the resistance grew by 50%, roughly from 10,000 to 15,000 during a period when there was no U.S. Government assistance.

The Sandinistas, of course, would like to create the impression that there is no viable alternative to them. Like Somoza before them, they have driven many of their opponents into exile. But these opposition groups represent a variety of political and programmatic viewpoints. They are committed to presenting those viewpoints to the Nicaraguan people in a competitive democratic process and would do so if given the opportunity.

Adolfo Calero, Arturo Cruz, and Alfonso Robelo lead the main resistance organization, the United Nicaraguan Opposition (UNO). All three actively opposed Somoza while he was still in power. Calero was jailed by Somoza; first Robelo then Cruz became junta members with the Sandinistas until they could no longer accept betrayal of democratic principles and of Nicaraguan national interests.

The largest guerrilla forces belong to the Nicaraguan Democratic Force (FDN), headed by Calero since 1983. Other important resistance organizations include ARDE [Democratic Revolutionary Alliance], built by Robelo and former Sandinista Comandante Eden Pastora, and MISURASATA [Miskito, Sumo, Rama, and Sandinista] and KISAN [United Indigenous Peoples of Eastern Nicaragua] guerrillas active among the Indians of the Atlantic coast.

Resistance fighters are overwhelmingly rural youths. Most are between 18 and 22 years old. They are fighting to defend their small plots of land, their churches, and in some cases their indigenous cultures. Some joined the resistance rather than be forced to fight for the Sandinistas against their friends and neighbors. In defending their families and communities, these young Nicaraguans are fighting for self-determination above all else.

The commanders are more likely to come from urban areas and have more diverse occupations and backgrounds. They include both former National Guardsmen and former Sandinista fighters, but most are civilians from the very groups the Sandinistas claim to represent: peasants, small farmers, urban professionals, and students. One was a primary school teacher; another, an evangelical pastor.

Chart III (see p. 38) depicts the backgrounds of the 153 most senior military leaders of the FDN as of last November. The FDN has the largest number of former military professionals; however, less than half the commanders have prior military experience. And notice a key fact that many have tried to hide: a full 20% of the FDN leaders joined the resistance after serving in the Sandinista army, militia, or security services.

The evidence irrefutably confirms that the Nicaraguan resistance is the product of a popular, pervasive, and democratic revolt.

Chart I

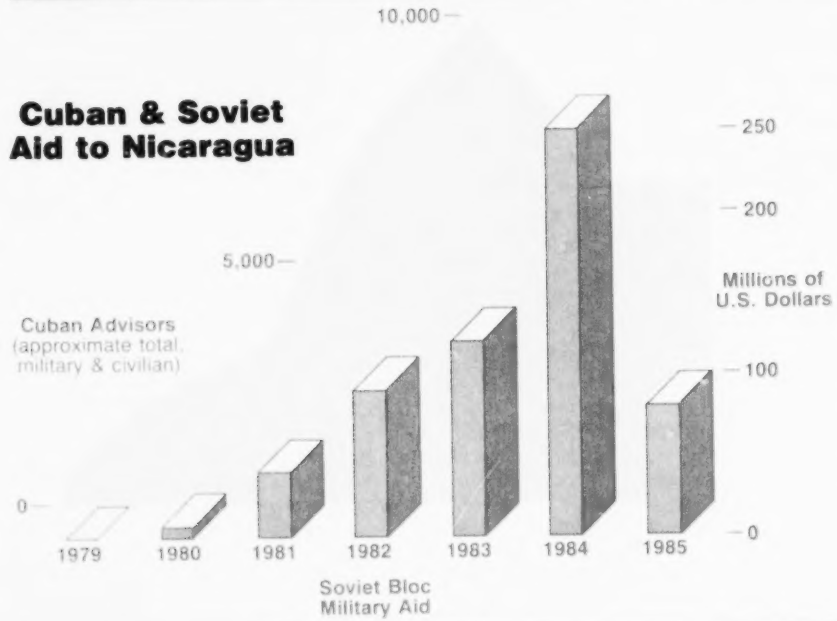

Chart II

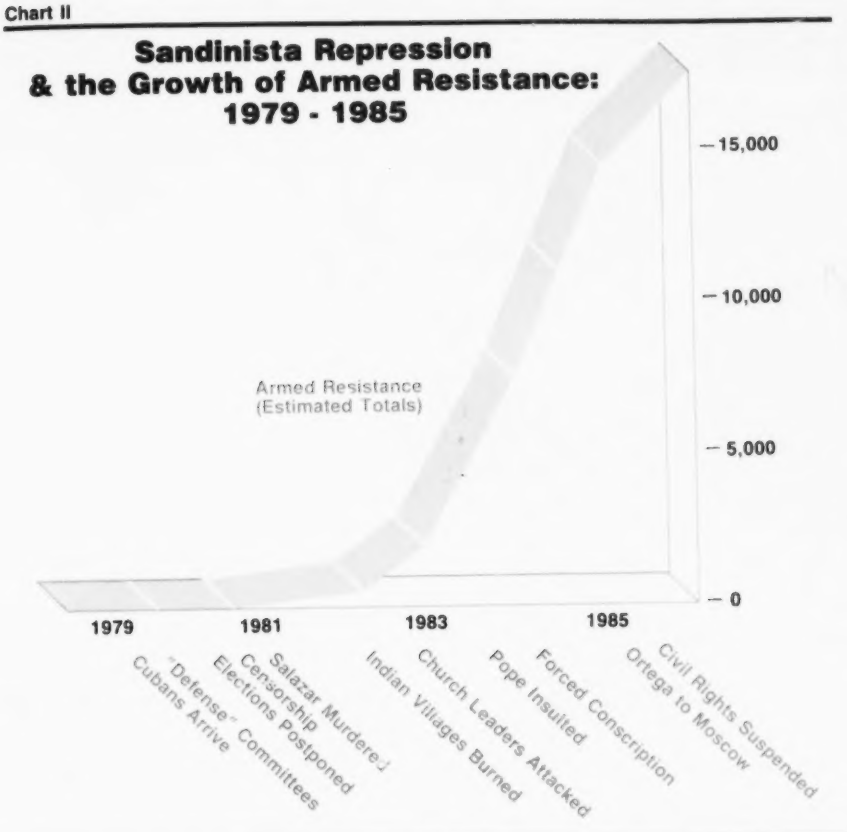

DEMOCRACY AS THE HEMISPHERIC ANSWER

Throughout these 6½ years while Nicaragua was trading one dictatorship for another, the rest of the hemisphere was making an unprecedented and historic turn toward democracy.

The maps on pages 36 and 37 illustrate the shift to democracy in Latin America and the Caribbean over the past 10 years. The map on the left shows the politics of the region in 1976, while the one on the right shows the situation today.

Largely or entirely democratic and open societies are green. Dictatorships or military regimes are shown in light brown. Three countries not readily categorized as either democracies or dictatorships are colored gray.

Ten countries (Argentina, Bolivia, Brazil, Ecuador, El Salvador, Grenada, Guatemala, Honduras, Peru, and Uruguay) joined the democratic column in this last decade.

Since the fall of Duvalier in Haiti, Nicaragua is one of only five dictatorships or military regimes left in all of Latin America (the others being Chile, Cuba, Paraguay, and Suriname).

The question is sometimes asked whether any Latin American country supports our Nicaraguan policy. But isn't a better question whether any Latin American country (other than Cuba) supports Nicaragua's policies? Differences between the United States and our allies, to the extent they exist at all, are not over policy goals but over how to achieve them.

Nicaragua poses very complicated issues for Latin Americans, as it does for us. Latin Americans are properly concerned about the defense of sovereignty and the rejection of foreign intervention. History has focused much of that rejection against past military interventions by the United States.

As Latin Americans, however, our neighbors also reject Cuban-Soviet intervention. And when Cuban pilots fly Soviet helicopters, it is not the United States that is injecting the East-West conflict into Central America. It is the Soviets, and that is how it is perceived in Latin America.

So Nicaragua poses a problem on two levels. The Latin American dimension they feel that they can and must deal with themselves; the Soviet dimension they believe only we are strong enough to deal with. This is a point they have made to us repeatedly. The Latin American foreign ministers told me when I met with them on February 10 that they agreed with us that Cuban-Soviet intervention in Nicaragua was unacceptable.

Of course, though nobody wants a second Cuba, most would oppose any direct U.S. military intervention in Nicaragua. But we are not making a case for direct U.S. military action. We are making a case for helping Nicaraguan democrats to help themselves. If our policy advances democracy, we will always have at least tacit support.

Latin American support—indeed, enthusiasm—for democracy is evident. I would hope that by now ours is, too.

WHY PRESSURE IS NECESSARY

If democracy is our objective, why do we want to pressure Nicaragua? The answer is simple: we want a political solution. The Nicaraguan communists do not. They want a political solution only if they can violate it militarily. Pressure is the one way to bring them to the bargaining table ready to bargain. Power and diplomacy must go hand in hand.

A vote for military assistance to the democratic resistance will give Contadora a *better* chance to succeed, because it will give the Sandinistas an incentive to negotiate seriously—something they have yet to do. They did not negotiate with the Carter Administration when the United States was Nicaragua's largest supplier of aid. And they did not negotiate seriously either with us or with their neighbors when the Congress suspended all aid to the resistance 2 years ago. On the contrary, in the fall of 1984, instead of bringing their political opponents back into the political process through competitive elections, the Sandinistas imported assault helicopters from the Soviet Union.

Military pressure is just as essential now to convince the Sandinistas to negotiate a political solution as it was critical in convincing them to agree to the Contadora process in the first place.

The United States can now help the Contadora process by doing two things simultaneously:

First, the United States must support Contadora politically and diplomatically, so as to help keep the negotiating process alive for the day when the Sandinistas finally do negotiate. This support must include cooperating in the staff work needed to ensure verification of any agreement. After the Sandinistas' record in repudiating their commitments to the Organization of American States, who would trust an agreement that is not enforceable?

Second, the United States must support the Nicaraguan resistance, so as to sustain pressure on the Sandinistas to accept meaningful negotiations toward a workable Contadora agreement. Why would the Sandinistas negotiate if there were no armed resistance?

WHAT WE ARE ASKING

Carefully thought-out and implemented assistance to the Nicaraguan democratic resistance can make a difference. The President transmitted his proposal to you 2 days ago only after we had consulted widely with our friends in Central America and in the Contadora Group as well as with the members of this committee and others in the Congress.

- $100 million would be made available to the Nicaraguan democratic resistance by transfer from the FY [fiscal year] 1986 Department of Defense Appropriations Act. Twenty-five percent would become available immediately, with an additional 15% released every 90 days through the end of September 1987, as reports are submitted to Congress.
- $30 million of the total $100 million package would be reserved for humanitarian assistance administered by the existing Nicaraguan Humanitarian Assistance Office (including $3 million specifically earmarked for human rights programs and activities). The President would be free to use the remaining $70 million for any kind of assistance he deems appropriate, using whatever agencies he desires, subject to normal procedures for congressional oversight. If properly led and trained, the armed resistance will be able to minimize the suffering of Nicaraguan noncombatants during military operations. The United States expects that the armed resistance will follow a code of conduct on the battlefield that will protect noncombatants and prisoners.
- In the event of a peaceful resolution of the conflict in Central America, any remaining balance of the $100 million could be used (through the end of FY 1987) for relief, rehabilitation, and reconstruction purposes in the countries of Central America, including Nicaragua.

All current statutory conditions on involvement by intelligence agencies would be satisfied by congressional approval of the President's request. At the same time, we are not breaking relations with the Sandinista government. This demonstrates our willingness to keep open the lines of communication. It strengthens the possibility of a peaceful settlement. It increases everyone's ability to cooperate. And it maintains the program's operational viability.

We are thus asking for an overt vote on a program that will operate within clearly defined parameters. We see these parameters, if Congress approves the President's request, as follows:

- U.S. policy toward Nicaragua will be based on Nicaraguan responsiveness to U.S. concerns about Soviet/Cuban ties, military buildup, support for sub-

Background of FDN Military Leaders: Late 1985

Total National Guard	**27%**
Total Sandinista	**20%**

version, internal repression, and refusal to negotiate.

• The United States will address these concerns through economic, political, and diplomatic measures, as well as support for the resistance. In particular:

— We will engage in simultaneous talks with Nicaragua if Nicaragua will also engage in internal dialogue as proposed by UNO (the UNO proposal includes a cease-fire and lifting of the state of emergency); and

— We will respond positively to other steps by the Government of Nicaragua toward meeting our concerns.

• Any easing of U.S. pressure on Nicaragua will be implemented, after consultation with Congress, by reference to observable Nicaraguan conduct (e.g., freedom of the press, reduced arms deliveries or foreign military presence, respect for a cease-fire).

• The U.S. actions shall be consistent with our right to defend ourselves and assist our allies for the purpose of achieving a comprehensive, verifiable Contadora agreement and democratic reconciliation in Nicaragua, without the use of force by the United States.

• The President will report to Congress every 90 days on diplomatic efforts, human rights, and use of appropriated funds. This is the same as current reporting requirements.

I should note that the objectives reflected in these undertakings are not those of the United States alone. Each of them, including national reconciliation through dialogue with the armed opposition, are agreed objectives of the Contadora process. We are asking the Sandinistas to do no more than what they themselves have ostensibly agreed are the steps essential to a lasting peace in Central America.

CONCLUSION

Either we are willing to act on a vital issue close to our shores at a critical moment when the world is watching, or we are not. Either we help Nicaraguans to gain their freedom, or we do not. In Europe and in the Middle East, in Afghanistan and in Cambodia, in South America and in southern Africa, our friends and our enemies will draw their own conclusions from what we decide.

The Sandinistas' record in dealing with Nicaraguans and other Central Americans makes clear that the resistance is the only constraint they recognize. As long as the Sandinistas are free to try to expand their revolution, the killing and misery will continue in Central America.

Only a democratic opening in Nicaragua can alter these dim prospects. And the resistance is the major element in the present equation that can help create that opening. Nicaraguans are disenchanted with the Sandinistas; more Nicaraguans are likely to join the resistance if they believe the United States will support the restoration of the revolution's original goals.

U.S. aid to the Nicaraguan resistance may intensify support for the Sandinistas among certain individuals who are already firmly in their camp, but we do not see the ranks of Sandinista supporters growing as a result of our backing of the resistance. On the contrary, our assistance will give heart to the vast majority of Nicaraguans who yearn for freedom.

Opposition to U.S. aid to the resistance is greatest *outside* Nicaragua, wherever people do not appreciate that the Sandinistas depend on violence as a political tool, or where they lack information about the extent of Sandinista abuses of human rights, or among those who do not realize that the true underdogs are the Nicaraguan people and their neighbors who are resisting violent minorities backed by military aid from Cuba and the Soviet bloc. Reactions among former Sandinista sympathizers suggest that the reality of the new tyranny in Nicaragua is being increasingly understood in Europe as well as Latin America and the United States.

The bottom line is this: absent a credible challenge to their militarized control of Nicaragua, the Sandinistas have no incentive to negotiate a lasting political solution to the conflict in Central America. The resistance can provide such a challenge—if we help. Without military aid to the resistance, the Sandinistas will simply monopolize power and continue to destabilize their neighbors. If the Central American house remains divided against itself, prospects for democracy would ultimately be doomed in the region as a whole as well as Nicaragua.

The United States has both moral and strategic interests in the consolidation of democracy in this hemisphere. To the extent that we support Latin Americans who are struggling for objectives similar to ours, we reduce the likelihood of having to intervene to protect our interests and defend our allies. If there were no armed resistance, we might ultimately confront choices even more difficult than this one.

Under the expedited procedures that Congress has provided, the President is entitled to a vote on his request. A positive vote is essential to protect our strategic interests, preserve opportunities for diplomacy, and assure that the progress made in recent years in El Salvador, Honduras, and Guatemala will not be reversed and that Costa Rica will maintain its democracy.

There are many uncertainties ahead in Nicaragua. We are fully aware of them. But we are also aware that there were many uncertainties in El Salvador, in Central America generally, and most recently in Haiti and the Philippines. We were right in El Salvador. Castro, and the Soviets, and the Libyans, and the Nicaraguan communists have clearly made their choice. Now it is up to us to make ours.

Foreign Policy Challenges

Secretary Shultz's statement before the House Foreign Affairs Committee on February 5, 1986.[1]

This decade continues to be a time of turbulence in the world—but I also see it as a time of great promise and opportunity for U.S. foreign policy. A year ago, I made a number of speeches and statements stressing that the world was changing and that our ways of thinking needed to keep up with new realities. Most of the new trends in the world were positive; thus, if we were imaginative and bold—and strong—we could help shape events in accordance with our vision of a better world.

Across the globe, we saw new evidence of the powerful appeal of liberty; we saw democracy take root in country after country, demonstrating the vitality and relevance of our ideals. We saw a kind of revolution in economic thinking, in which old truths about economic freedom and the true sources of economic progress were newly appreciated; with the dawn of a new era of technology, the open and free economic systems seemed to have an advantage.

We also learned some lessons about the relation between power and diplomacy and about how strength, staying power, and a willingness to negotiate were crucial if we were to help resolve political problems. On the negative side, we faced the continuing challenge from the Soviet Union, and we confronted the new scourge of terrorism—which required new ways of thinking in order to defeat it.

These are powerful trends. We have sought to meet them and shape them, and we have made some headway. Let me speak briefly today about how we have responded to some of these challenges and about the challenges likely to confront us in the coming months.

Democracy on the March

1985 confirmed what we have always felt and increasingly known to be true: that the yearning for political freedom, far from being culture-bound, is one of the most powerful forces across the planet. The past year confirmed, too, that the United States, as the strongest free nation on Earth, is a crucial source of inspiration and support to peoples aspiring to liberty.

The most dramatic example of this truth is Latin America, where Guatemala is only the latest in a series of countries that have abandoned military rule for elected civilian government. In the last 6 years, elected civilian leaders have replaced authoritarian regimes in Argentina, Bolivia, Brazil, Ecuador, El Salvador, Grenada, Guatemala, Honduras, Peru, and Uruguay. Over 90% of all people in Latin America and the Caribbean now enjoy democratic government, as opposed to less than one-third in the early 1980s.

A few years ago, critics of Central America and U.S. policy toward that region were skeptical that democracy could gain support in an environment where history and economic hardship seemed to impose such burdens. They are less skeptical now. They have seen the people themselves, in one free vote after another, demonstrate their belief that democracy is the road to a better life for themselves and their children. They have also seen that our moral support and economic and security assistance can help make the difference between the success and failure of this democratic experiment. If we truly believe in human rights and economic and social progress, we must keep that lesson in mind as the peoples aspiring to freedom turn to us for support in the coming months.

The most immediate danger to democracy in Central America ... is the assault on it from communist Nicaragua, aided by Cuba and the Soviet Union .... we must support, not abandon, the democratic resistance within Nicaragua....

The most immediate danger to democracy in Central America, of course, is the assault on it from communist Nicaragua, aided by Cuba and the Soviet Union. Democratic El Salvador is an outstanding example of a country that has managed to withstand a communist insurgency, and we have been privileged to play a part by our encouragement and help. So our policy—if we keep at it—is working. All the democracies of Central America look to us for help in defending themselves. We must support them. And we must support, not abandon, the democratic resistance within Nicaragua, which we support for both moral and strategic reasons. We will be discussing with the Congress what this moral and strategic imperative requires.

Toward Open Markets

The past few years have also confirmed the connection between freedom and economic progress. In the early 1980s, this Administration developed economic policies aimed at liberating the creativity of the American people. The results speak for themselves: 9 million new jobs in this country in the last 3 years, helping pull the world economy out of recession, and inflation running at a level one-third of that prevailing 5 years ago.

The world economy is still troubled. But nations everywhere are rediscovering the basic truth that the source of economic growth is individual creativity, not the state. The same laws of economics apply to developed and developing countries alike, and the countries that apply its truths are reaping the rewards.

Much remains to be done. The trade practices of our allies and friends are particularly important to us. Economic growth is one of the free world's greatest strengths. It is vital not only for our standard of living but also for our political cooperation and mutual defense. The Bonn economic summit last year showed a convergence of views on how to promote growth, jobs, and prosperity in the world economy. And the United States has recently taken the lead in developing a balanced approach to the challenges of debt and economic adjustment facing many developing nations.

I cannot overemphasize the importance of avoiding protectionism—a menace not only to our foreign policy partnerships but to any hopes of stimulating global growth. We continue to work vigorously to open markets throughout the world to U.S. goods and services.

Power, Diplomacy, and the Summit

Our liberty and our economic well-being both depend on our security. And our security depends on a policy of realism, strength, and a willingness to solve problems through diplomacy. The meeting last November between President Reagan and General Secretary Gorbachev was a good example, teaching some fundamental lessons about the conduct of diplomacy and negotiation in the modern age.

The Soviet Union continues to pose the most profound challenges to American and free world interests and ideals. Our countries are governed by irreconcilable views of the world. Nevertheless, the realities of the nuclear age mean that we must pursue constructive relations with the Soviets whenever we can do so without violating our principles. As the Geneva summit showed, constructive negotiations are possible.

In the 1970s, we let our defenses slip; for a time we seemed to shy away from a strong role of leadership; and the world became a more dangerous place. We had to make a major effort in the 1980s to rebuild our defenses, and I believe we have recovered our self-confidence as a nation. And it stands to reason that American strength and constancy of purpose are a prerequisite to successful negotiations and a more constructive relationship with the Soviet Union. Defense preparedness and maintenance of our strategic modernization program, including the MX [missile] and the Strategic Defense Initiative, remain crucial. Now is the time to support our basic interests and our negotiating position at what could be a promising moment in the quest for a safer world.

We approached the Geneva summit in a spirit of both aspiration and realism, and we will bring that spirit to our negotiations with the Soviets through the coming year. Our agenda, as before, embraces four sets of issues: arms reduction, regional conflicts, human rights, and bilateral relations. We will continue to seek agreements with the Soviets whenever they are in our interest. We will pursue the Geneva negotiations with energy and good faith and without artificial deadlines. We will also pursue them with a sense that we may be at a rare moment of opportunity.

Strength and diplomacy are not contradictory. In fact, they go hand in hand. And the same principle holds true in our efforts to promote political solutions to regional conflicts around the world, whether in southern Africa, Central America, Southeast Asia, or Southwest Asia.

Our agenda [with the Soviets], as before, embraces four sets of issues: arms reduction, regional conflicts, human rights, and bilateral relations. We will continue to seek agreements with the Soviets whenever they are in our interest.

Responding to Terrorist Warfare

Another challenge—one of the most important we face in 1986—is international terrorism. The December terrorist attacks on the Rome and Vienna airports, aided and abetted by the Libyan Government, are only the most recent reminder of this scourge of our age. And yet we have made headway—both in understanding what terrorism is and in formulating our responses to it.

We have all come to understand that terrorism is a form of warfare waged by political forces—including some sovereign states—that are hostile to democracy and determined to undermine the position of the West. We know it is not random violence but violence directed against our values and interests *and* against our diplomatic efforts for peaceful solutions to conflicts. There is a growing international recognition that a policy of appeasement of terror offers no protection.

We are not without recourse. We intercepted the aircraft carrying the *Achille Lauro* hijackers to ensure that they would be brought to justice. We took broad economic and other measures against Libya. And, as the President has pointed out, we and our friends have succeeded in foiling 126 planned terrorist attacks last year by acting in advance.

We also know that more needs to be done. We will continue to marshal all the weapons in our arsenal—nonmilitary and military—against the terrorist threat. We must continue to improve our intelligence capabilities and achieve closer cooperation and coordination with other governments. International law supports measures of self-defense and offers important avenues for effective international cooperation. The U.S. Government has strengthened itself organizationally. We amended our own criminal law in October 1984 to give us new tools against terrorism—an example of productive cooperation between Congress and the President.

This is an area, I know, in which the American people will want to see their government acting flexibly, swiftly, and effectively against terrorist threats.

No review of this subject would be complete without noting the six Americans who remain missing in Lebanon. Their safe return remains a priority concern for the U.S. Government. Our intensive efforts will continue until these missing Americans have returned home, safe and sound.

Our battle against terrorism will be long and arduous. But if we have the will, we can prevail over this challenge as we have over so many others in our history.

Gramm-Rudman-Hollings

Let me finish on a very practical note: the Department of State is determined to do its fair share, under the Gramm-Rudman-Hollings legislation, to cut the Federal budget deficit. Cutting that deficit is essential for many reasons, including the health of our own economy and the world economy.

The Department of State is intensively reviewing the way we do business at home and abroad in order to reduce costs and operate more efficiently and effectively. We have a special task force

to reassess our structure and operations. In the short run, we are reducing travel and stretching out equipment purchases; we will also review employment and new hiring; and we will reassess our number of posts abroad and the possibilities for streamlining their operations.

We recognize we have a burden of proof to meet in requesting more funds. The increases in our FY [fiscal year] 1987 request come mainly in improving protection of our diplomatic personnel and facilities abroad. Our security assistance request, which seems higher when compared to the post-Gramm-Rudman-Hollings levels of FY 1986, is essentially the same as was requested in FY 1986. We are not seeking large increases in security assistance; rather, we are continuing to seek a level of resources adequate to meet our international commitments and to pursue aggressively our national security interests. The President has determined that these are among the government's highest priorities. The resources we are requesting have been accommodated within the FY 1987 budget and the deficit target contained in the Gramm-Rudman-Hollings legislation.

The dangers to our personnel and facilities from rising terrorism are known to all; the level of economic and security assistance requested is essential to our foreign policy interests. However, we regard the increase in security assistance for FY 1987 as a transition: we are already shifting toward increasing the proportion of grant and concessional lending in our overall program. By increasing the true economic value of our program, we have been able to accommodate lower funding levels. But I must stress that any precipitous reduction in current levels, without giving time for adjustment to those countries which have long depended on us, could help our adversaries and do great damage to our security interests. I look forward to discussing these matters in depth with the committee in the future. We must work together to ensure that we and our aid partners derive the maximum economic value from the resources provided by Congress.

Prospects

In summary, the world remains a turbulent and sometimes dangerous place. But as we look ahead, we draw strength from our ideals, from our friends and the young democratic nations who have joined our ranks and now look to us for support. America remains a beacon to the freedom-loving peoples of the world. Powerful trends are on the side of freedom. That is one of the lessons of 1985.

Another major lesson is that realism, strength, and staying power are crucial prerequisites to meeting the challenges we face. History won't do our work for us. We have to be worthy of our opportunities.

And one key to our success will be bipartisanship. This noble tradition, which brought us so many dividends in the postwar years, does not ask any of us to abandon our principles. But it does require all of us to recognize how much harder it is to meet foreign challenges if we are not united at home. In recent years, we have seen signs of a rebirth of the postwar bipartisan consensus—based on a realistic understanding of the world as it is and of the need to negotiate differences where possible. I pledge my efforts, and those of the President, to work in a bipartisan spirit with all members of the Congress on behalf of the peace, freedom, and security of this country.

Enhancing Diplomatic Security

Secretary Shultz's statement before the Senate Committee on Foreign Relations on February 4, 1986.[1]

I am pleased to have this opportunity to speak in support of the Administration's proposals to strengthen the security of U. S. diplomatic operations. These proposals are based on the recommendations of the Advisory Panel on Overseas Security [Inman panel] and much work and thought in the Department and other interested agencies.

Over the past few years, the attention of the world has been riveted to terrorist dramas unfolding around the globe. This is a new and chilling phenomenon, one with which civilized nations and civilized peoples are inadequately equipped to deal. That can and must change. We must do everything we can to thwart those who seek to advance their ends through terror. We must protect official Americans and their dependents from these criminal activities.

We in the State Department and our colleagues from other agencies serving abroad are on the front line. Our friends and colleagues have been victims of this violence. But the challenge of terrorism has strengthened our determination. The courage and patriotism of our people and their families in the face of these dangers are inspiring.

We must spare no effort to ensure the safety of the people and facilities of all agencies abroad. In this period of budgetary stringency, this task *must* be a priority. Therefore, we have designed a program which, in our view, is prudent, thoroughly thought out, efficient in its commitment of resources—yet responsive to the inescapable necessity we now face.

The United States has always built handsome and accessible embassies and consulates abroad. Our object was to be easily accessible—to demonstrate to other peoples the openness of our society and the hand of friendship we extend to all. We wanted the local populace to see a "welcome" sign above our door and to feel comfortable in entering our buildings. This is the essence of the job we do overseas, and we have been highly successful at it.

We are now faced with a new situation: the current security and terrorist problems have left those same buildings vulnerable. Our challenge is to strengthen our security against the new dangers so that we can maintain our tradition of openness and accessibility. We will *not* let the terrorists win their victory by isolating us, forcing us to close our doors, or denying us our contacts with the peoples of the countries in which we are represented.

The Advisory Panel on Overseas Security

With this goal in mind, I formed the Advisory Panel on Overseas Security, chaired by Admiral Inman. I asked the panel to take a hard look at our security and counterterrorism programs. I didn't want or need an apologia; I wanted ideas and recommendations.

I am extremely pleased with the panel's report. The hard work and dedication of the panel is clearly reflected in the quality of its report. The panel exhaustively researched all aspects of our security and counterterrorism programs. Its recommendations have vision and, perhaps more importantly, are practical. They are recommendations which, with your support, are achievable.

The panel gave us 91 recommendations. We have implemented 45, and work is underway on 20 more. An additional 20 are awaiting the resources requested in this proposed legislation.

The recommendations focused on three central points:

- That a Bureau of Diplomatic Security with a Diplomatic Security Service be established in the Department to increase the professionalism of our security personnel and programs;
- That my overall responsibility and that of the Chiefs of Mission for overseas security programs be emphasized because such supervision is fundamental to good management; and
- That significant new resources be made available for a comprehensive worldwide security program to protect all government employees abroad. A key element here is a major multiyear construction program to rebuild or replace embassies and consulates overseas which fall significantly below our physical and technical security standards. Other elements are the upgrading of our communications to state-of-the-art technology so they are faster and more secure and improved intelligence-sharing with host governments and within our own government.

Actions Taken

The Bureau of Diplomatic Security and the Diplomatic Security Service have been established, with your support, through reprogramming of funds. In addition, using existing funds and authorities, we have already:

- Started an ambitious recruitment campaign to bring on board nearly 300 new security agents during fiscal year (FY) 1986 and to more than double the number of overseas security officers before the end of this fiscal year;
- Significantly improved training for security agents;
- Streamlined threat-alert procedures;
- Increased the number of local guards worldwide;
- Added more marines and marine guard detachments to posts;
- Nearly doubled the size of our armored vehicle fleet overseas;
- Made significant physical security improvements at 152 posts in 1985; and
- Dispatched mobile training teams to high-threat posts to provide specialized security training to U.S. Government personnel, dependents, and Foreign Service nationals.

Administration's Proposals

The Administration's proposals now before you will, in addition, do three things:

First, they would authorize a 5-year construction program to replace or upgrade our most vulnerable posts and further authorize improvements in communications and intelligence-sharing, all as recommended by the Inman panel.

Second, our proposals would complete the reorganization of our security program, as recommended by the Inman panel, by providing for a new Assistant Secretary of State to head a Bureau of Diplomatic Security and for a Director of the Diplomatic Security Service. The bureau would be responsible for all operational aspects of our security program. We would authorize certain special recruitment and performance standards for members of the Diplomatic Security Service and emphasize such operational matters as residential, perimeter, and technical security.

In one respect, we have gone beyond the recommendations of the Inman panel. Where the panel favored placing the policy arm of our counterterrorism effort with the Under Secretary for Political Affairs, we have, through reprogramming, created an Ambassador at Large for Counterterrorism, reporting directly to me. Before this reorganization last November 4, this policy function rested with an office reporting to the Under Secretary for Management. This reorganization demonstrates the high priority we place on counterterrorism; it strengthens the interagency role of this key office on the many issues on which the State Department is the lead agency.

Third, our proposals would revise and clarify the chain of command for overseas security, fixing supervisory responsibility directly on the chief of mission and the Secretary of State. They would also formalize and expand the current process by which responsible officials are held accountable for their actions—or inaction. We would now have an automatic investigation whenever there is a security breach that results in serious bodily injury, loss of life, or significant damage to our property.

Although the draft bill requests "such sums as may be necessary," the Administration's total authorization funding requirement for this program is $4.4 billion spread over 5 years. Of this total, $2.7 billion is for construction, and the balance is for related operating expenses including security officers, residential security improvements, and more secure communications equipment. In fiscal year 1986, the Administration is requesting $237 million for salaries and expenses and $455 million for construction. In FY 1987, the Administration is requesting $304 million for salaries and expenses and $1.1 billion for construction for this program.

The Construction Program

The Inman panel recommended several new security standards—a 100-foot set-back, for example. I have accepted these standards, and the set-back shall be the goal for our buildings, wherever feasible. Many posts do not meet these standards; thus, a new building program is needed.

Many posts front onto busy streets. Some have extensive glass facades. Often we share office buildings with other organizations and businesses. In still other cases, our embassies and consulates share walls with non-U.S. Government tenants. All this is clearly and generally undesirable and simply unacceptable in a great many situations.

The program places its highest priority on buildings at locations where the security threat is greatest and which are substantially below the new standards.

Great effort has gone into creating a security construction program which would ensure that buildings are designed and built to meet stringent security standards, on time and within budget. It was clear from the outset that a massive expansion of the staff of our Foreign Buildings Office to implement such a major program was not the answer. We have, instead, developed an implementation plan based on the following policies:

- Use of "fast track" and "design/build" methods to accelerate the design and construction process so that projects can be completed more quickly than was possible under previous programs;

• Use of risk analysis, constructability, and value engineering reviews to ensure that design requirements are compatible with local conditions, material availability, and technical capabilities and are cost-effective;

• Upgrade of construction contractor qualification requirements to ensure that construction awards are made to contractors with the financial, organizational, and technical qualifications necessary for successful completion of a major overseas building program;

• Allocation of sufficient resources to onsite construction oversight and inspection to ensure that buildings are constructed to required standards; and

• Use of recommendations from a major research program undertaken for our Foreign Buildings Office by the National Academy of Sciences; these provide the scientific and technical bases, in the form of performance-based security design criteria, for the design and construction of future embassy buildings.

The private sector will play a key role in ensuring effective management and implementation of the building program. We have published a synopsis of our program in the *Commerce Business Daily* with a request for particulars of qualification and experience from private sector firms interested in providing us with program, design and engineering, construction, and operations management services.

We will be ready to enter into a contract with our first private-sector program manager immediately upon receipt of an authorization and appropriation from the Congress.

Bureau of Diplomatic Security

As I said earlier, this legislation would complete the reorganization of security responsibilties in the Department recommended by the Inman panel by:

• Providing for an Assistant Secretary of State to head the new Bureau of Diplomatic Security;

• Creating a Director of the Diplomatic Security Service;

• Establishing several special job-related requirements for membership in the Diplomatic Security Service; and

• Increasing our emphasis on key operational security programs.

The new bureau will concentrate on improving:

• The security of the homes of our people and their families overseas;

• Perimeter security at our facilities;

• Technical security to update and improve our ability to cope with the unprecedented threat of sophisticated penetration systems used by hostile intelligence services against our facilities abroad;

• Protection of foreign dignitaries in the United States;

• Qualifications and performances of our local guards at overseas posts;

• Professionalism and training for our security personnel; and

• Security at Moscow and other East European posts by, among other things, substituting Americans for a substantial number of local employees now working in support positions.

Diplomatic Security Service

I envision the Diplomatic Security Service as a highly professional security organization with the recognition and respect that brings. The panel called for increased professional training, physical fitness standards, and an identifiable career structure within the Foreign Service for the Department's security cadre. I strongly support these recommendations.

The Diplomatic Security Service is to be staffed by drawing upon the existing Foreign Service and Civil Service personnel systems. This proposal will not create a new personnel system. Rather it identifies a category of employees in the same manner as do the designations "political officer" or "economic officer." Qualifications required for assignment or appointment to positions in the Diplomatic Security Service will be prescribed by the Secretary of State. In the case of security officers, the position qualifications may include minimum and maximum entry-age limitations—perhaps 21 years minimum and 35 years maximum. Such limitations are commonly found in organizations having security-related responsibilities.

In addition, the position qualifications for security officers will incorporate the standards now required by law to carry out our security functions and to exercise the Department's law enforcement authorities. As security officers perform such unique functions as protecting lives and carrying firearms in certain situations, the Secretary will be authorized to issue regulations providing for special disciplinary procedures. This is a common practice among organizations with security-related responsibilities.

The Chain of Command

The Inman panel concluded that management of the security program was overly fragmented and that the chain of command ought to be revised so that the resulting sharper supervisory focus would encourage better management and protection of U.S. Government personnel overseas.

Therefore, the Administration's proposed legislation fixes overall responsibility and authority for the management and direction of the U.S. security program overseas on the Secretary of State and, through him, the Ambassador at post.

We are working closely with other agencies to develop and agree upon appropriate security standards, procedures, and resource levels that are responsive to the needs of all U.S. Government agencies having facilities overseas, except for military bases. Physical security standards and procedures for USIA [United States Information Agency] libraries and relay stations, as well as AID [Agency for International Development] and other facilities located separately from embassies and consulates, may differ from those applied to embassies, consulates, and diplomatic residences. But the Ambassador at post and, through him, the Department will have central responsibility for security at these facilities as well as our embassies.

This proposal does not affect the Washington-based security offices of other agencies. There is sound management justification for each agency having its own security advisers in Washington. These advisers play an important role within their agencies, and we need their help in planning and implementing this program.

The Administration's proposal also does not affect the authority or responsibility of any other Federal, state, or local agency with respect to law enforcement, domestic security operations, intelligence activities as defined by Executive order, or the provision of protective services by the Secret Service.

In reviewing the security chain of command, the Inman panel recommended that we have a procedure established in law to draw lessons from security disasters or to fix individual responsibility, if any, for such incidents. The Administration agrees, and this proposal expands our current procedures by creating Accountability Review Boards to investigate incidents involving serious injury, loss of life, or significant destruction of property at or related to U.S.

Government missions abroad (other than military installations). Such boards would not only make findings relating to security generally, but they would also determine if a breach of duty by an individual employee contributed to the incident. The employing agency would review and act on the findings of the board.

Conclusion

The Administration is proposing a major, national program to improve the physical and technical security of all departments and agencies abroad, except for military bases, as well as the physical security of foreign missions and officials in this country. This proposed legislation is the product of long, hard work to which many agencies have contributed and is intended to meet their requirements. The most important contributions have come from AID, USIA, CIA [Central Intelligence Agency], Justice, Defense, OPM [Office of Personnel Management], OMB [Office of Management and Budget], Commerce, Agriculture, and Treasury.

Our proposal's overriding goal is to maintain the American tradition of overseas posts that extend the warm hand of welcome to the local population. The program I have outlined today is intended to ensure this openness in light of the dangers of today's world. We must not forget the purpose of our overseas presence is to spread our message and communicate our ideals to other nations, not to overwhelm our hosts with the aura of our power by erecting forbidding fortresses.

The Administration's proposed program will not solve all of our security problems, but we can minimize them. Our proposal is a comprehensive—and long overdue—security program which addresses our most basic security concerns. We will need to continue to supplement our limited resources with vigilance and effective intelligence to enhance the security of our posts and the effectiveness, as well as the safety, of our missions abroad.

The President and his Administration place the highest priority on this program. We recommend its early enactment.

International Affairs: FY 1987 Budget

Secretary Shultz's statement before the Senate Budget Committee on Feburary 19, 1986.[1]

I welcome the opportunity to speak in support of the President's fiscal year (FY) 1987 budget request for the international affairs function—budget function 150. Our request comes before this committee at a time of great debate over how to reduce our Federal budget deficit. As a former budget director, I know from experience that there are no easy choices. And I am determined to have the Department of State do its fair share in getting the Federal budget under control. In fact, the greatest single contribution the United States can make to the economic well-being of the developing world is to get our own economic house in order.

As recent history demonstrates, strong U.S. growth and lower U.S. interest rates are crucial to the rest of the world, and to the developing countries, in particular. For example, a fall of 2% in U.S. real GNP [gross national product] in 1982 resulted in a 13% decline in U.S. imports from developing countries, while 7% U.S. growth in 1984 was associated with an 18% rise in U.S. imports from the developing world. U.S. interest rates are translated directly into interest payments required from indebted nations. In 1983, the U.S. prime rate fell from 15% to 11%. That year, interest payments fell by almost $9.5 billion, while the debt outstanding from developing countries actually increased.

Greater fiscal discipline in the United States will help the U.S. economy stay on the moderate, noninflationary growth path projected by the Council of Economic Advisers. This will be a double benefit to the developing countries: we will be a good market for their exports, and lower interest rates will relieve some of their daunting burden of debt. Together, a 4% growth in the United States and another drop in U.S. interest rates should improve their external position by approximately $10.4 billion in 1986 alone.

One of my responsibilities as Secretary of State is to present to you the essential costs of conducting a successful foreign policy. These costs cannot be wished away. They are required if we are to safeguard our national security and international interests. We recognize we have a burden of proof to meet in requesting more funds. I can assure you that in preparing this budget every attempt was made to economize.

The increases over FY 1986 levels contained in our FY 1987 request come mainly in improving protection of our diplomatic personnel and facilities abroad. Were it not for the need to provide greater security for them, our current request for function 150 would be lower than the amount originally requested for FY 1986. In fact, our request is $3.9 billion less than the amounts actually appropriated by the Congress for the international affairs function in FY 1985.

Our security assistance request, which seems higher when compared to the post-Gramm-Rudman-Hollings levels of FY 1986, is essentially the same as we requested in FY 1986. We are not seeking large increases in security assistance; rather, we are continuing to seek a level of resources adequate to meet our commitments and safeguard our interests. As the President has observed, national security has to be our government's highest priority. The resources we are requesting have been accommodated within the FY 1987 budget and the $144 billion deficit target contained in the Gramm-Rudman-Hollings legislation.

The support that Congress has provided in the past has been invaluable in strengthening America's position in the world. As I shall explain later in greater detail, the growth and deployment of our diplomatic and foreign assistance assets have contributed to major foreign policy successes.

- The NATO alliance is strong.
- Democratic institutions have emerged throughout Latin America and in key countries elsewhere.
- We have an enhanced security posture in Central America, the Caribbean, and the Pacific Basin.
- There has been a dramatic shift in Third World economies away from statist solutions and toward free markets.

• We have maintained the peace process in the Middle East, by an active diplomacy but also by steady support for our friends on both sides who are being asked to take risks for peace.

• We have given effective support to those who fight for freedom and independence in their own countries.

. . . the greatest single contribution the United States can make to the economic well-being of the developing world is to get our own economic house in order.

We must consolidate and expand these accomplishments as we continue to explore new opportunities for peace and stability. To meet these objectives, we have constructed a budget which reflects our essential needs.

Budget Overview

The FY 1987 budget request for the international affairs functions totals $22.6 billion: $2.1 billion above the FY 1986 "postsequestration" levels; $1.4 billion above the amounts appropriated by the Congress for FY 1986; but $200 million *below* the amounts originally requested by the President for FY 1986. Let me first speak to the two major areas of increase over the postsequestration levels.

The largest increase—$1.5 billion for the State Department's operating budget—reflects the Administration's proposals to protect our people and diplomatic posts overseas from international terrorism. We in the State Department and our colleagues from other agencies serving abroad are on the front line. The courage and patriotism of our people and their families in facing the dangers of terrorism are inspiring. We must ensure their safety. The Congress urged us strongly to develop a comprehensive program. We have done so and are now presenting it to you.

The second major area of increase is to restore security assistance levels necessary to meet our international commitments and to pursue our priority foreign policy objectives. Helping our friends defend themselves is our first line of defense. As the President said last year: "Dollar for dollar, our security assistance contributes as much to global security as our defense budget." We must not succumb to false economizing—leaving ourselves and our friends more vulnerable in areas vital to international security. Vacuums that we create in countries or regions of strategic importance will soon be filled by those less interested in peace and stability than we are. In the long run, this will end up costing us much more than the short-term investments reflected in this request.

Let me address the major budget components and the objectives they serve. Our development and security assistance requests for $16.2 billion serve four main foreign policy objectives:

• Supporting the Middle East peace process;

• Strengthening our alliances and cooperative defense relationships;

• Promoting regional stability in Central America and the Caribbean; and

• Supporting economic reforms and democratic forces throughout the world.

These objectives are interrelated—and crucial.

Nearly 34% of these resources go to Israel and Egypt in support of our search for peace in the Middle East. Assistance to the base rights countries of Spain, Portugal, Greece, Turkey, and the Philippines and to military access and front-line states such as Kenya, Oman, Morocco, Korea, Pakistan, and Thailand represents another 26%. Our efforts to promote regional stability in Central America and the Caribbean take another 11%.

There are other countries of importance to us which share our democratic values, such as India and Colombia; or where new democracies have emerged, such as Bolivia and Uruguay; or where fundamental economic reforms are taking place, such as Ecuador and Senegal; or that are simply strategically important to us, like the island states of the South Pacific. When these countries prosper and remain free, they demonstrate to the world that the benefits of open societies and open economies transcend geographic size and cultural diversity. They deserve our moral and material support. The amount of funds we are seeking to support these countries is relatively small—some 17% of the total foreign assistance request. The real and symbolic importance of these resources, however, is considerable.

All other country programs account for only 3% of the total foreign aid request. Some are poverty-stricken African states to which we are directing our humanitarian and technical assistance programs. Others, like Mozambique, are moving from the Soviet bloc toward genuine nonalignment. Still others, such as Burma and Peru, are active partners with us in the war against international narcotics trafficking.

Finally, some 9% of our assistance goes to AID [Agency for International Development] noncountry programs and a number of generously beneficial efforts, including the Peace Corps, refugee assistance, and narcotics control efforts.

We have done some tough pruning and made hard choices to come up with these allocations. It is a lean budget and, in our considered view, a minimum budget. Further reductions would compound our risks, weaken our friends, and add to our dangers. Foreign assistance is a kind of insurance, shoring up our security. If we try to cut corners, we run the risk of greater dangers that could well exact much higher budgetary and foreign policy costs. If the FY 1987 budget is insufficient, as it is in FY 1986, to fund country programs adequately and to provide the flexibility necessary to meet new requirements in an everchanging world, we deny ourselves the opportunity to build and maintain constructive relationships with dozens of countries throughout the world serving a multiplicity of U.S interests.

Let me now do a brief tour of the world to discuss the specific policy objectives I outlined earlier.

The Search for Peace in the Middle East

Peaceful solutions in the Middle East will become possible when we and our friends make it clear that radical solutions get nowhere. Our commitment to Israel and its security is rock solid, and our levels of assistance must reflect that commitment. At the same time, we must continue to provide significant support to Egypt, which had the courage to

break ranks with the rejectionists and make peace with Israel. A sound Egyptian-Israeli relationship remains the cornerstone of our broader peace efforts and our regional security policy. We must also help our moderate friends in the Arab world defend themselves against the genuine security threats they face. Radical forces in the region are against negotiations, against peace. Thus, they lash out not only at Israel, whom they seek to destroy, but at any Arab country that shows the courage to seek peaceful solutions.

The necessary condition for further progress in the Middle East peace process is the willingness of both [Israeli] Prime Minister Peres and [Jordan's] King Hussein to pursue ways to enter into direct negotiations. Both leaders remain fully committed to this endeavor.

Two key issues remain to be resolved: how to structure international support for direct negotiations and how the Palestinian people are to be represented in those negotiations. Prime Minister Peres has accepted the idea of an international forum, and recent discussions with both sides have addressed specific arrangements. The question of Palestinian representation is particularly difficult, confronting King Hussein with the historic challenge of bringing forward Palestinians of good will who will support and associate themselves with efforts to reach a negotiated settlement.

Egypt is uniquely situated to interact constructively with all the parties and wants to help move the process forward. We value President Mubarak's assistance and support. At the moment, Egypt is engaged in talks with Israel aimed at resolving the Taba border dispute and other bilateral issues including the return of the Egyptian ambassador to Tel Aviv. We are hopeful these efforts will soon bear fruit.

Syria and Jordan have recently entered into a dialogue on bilateral relations as well as the peace process. Syria remains an important factor in the equation, and we are following the course of those discussions with great interest.

We are seeking $5.4 billion in economic and military assistance for Israel, Egypt, and Jordan. We are in the process of reviewing with our friends in the region their needs for defensive arms. Meeting their legitimate defensive requirements is critically important to maintaining the credibility of our security role throughout the region and to preserving our role as mediator in the search for peace. Above all, we must strengthen our friends in order to deny the Soviets any opportunities to subvert a region crucial to our interests.

Israel's Economic Reforms

Last year, we sought, and Congress appropriated, $1.5 billion in supplemental assistance to support Israel's economic reform program. Buttressed by this assistance, Israel has made significant progress in stabilizing its economy since last summer. Prime Minister Peres' July 1, 1985, measures included a 19% devaluation of the shekel, cuts in government expenditures leading to a marked reduction in the budget deficit, a sharp decline in real wages, and a restrictive monetary policy.

The combined impact of new fiscal and monetary policies on inflation has been dramatic. The monthly rate of inflation declined from 27.5% in July to 1.3% in December. This has enabled the Israeli Government to keep the shekel/dollar exchange rate stable. Meanwhile, the positive trend in the balance of payments, which began in late 1983, has continued. Israel ran a substantial civilian current account surplus in 1985 due to continued improvement in its balance of trade and substantial increase in transfers from abroad. This improvement resulted in more than a billion-dollar increase in official reserves, from the midyear low point, to about $3.2 billion at year's end. Israel's foreign debt stabilized and its maturity structure improved as short-term debt was repaid during 1985. U.S. economic support funds and disbursements from our FY 1985 supplemental appropriation for Israel made an important contribution. The remainder of our supplemental, which was a one-time emergency assistance measure, will be disbursed in FY 1986 in support of further Israeli reform efforts.

Notwithstanding the considerable progress made so far, Israel's stabilization program remains fragile. The major problem continues to be excessive government spending. The new Israeli budget moves in the right direction, but additional reductions in government spending are necessary. Recent wage increases are also cause for concern. While real wages have fallen sharply since last July, they are programed to increase in the December-March period; by April, real wages will be where they were last June. Unless offsetting measures are taken to contain the attendant increase in domestic demand and production costs, wage increases of this size could result in renewed inflation and higher unemployment. Future wage increases need to be linked to increases in labor productivity.

Over the longer term, the Government of Israel would do well to consider reforms in a number of other areas as a means of facilitating noninflationary growth. These include delinking financial assets from domestic price indices, labor market reform, and changes in investment and tax policies. Our recent bilateral discussions in the Joint Economic Development Group have focused increasingly on these and other economic and investment issues in recognition of their importance to Israel's long-term growth and prosperity. Our discussions with Israel in this forum underscore our commitment and partnership.

In the context of Israel's economic reform, we strongly endorse Operation Independence, a private sector effort to expand trade, encourage private investment, and reduce Israel's dependence on U.S. aid. Spearheaded by a group of dynamic American businessmen, this initiative has already produced tangible results in expanding Israel's exports.

Foreign assistance is a kind of insurance . . . If we try to cut corners, we run the risk of greater dangers that could well exact much higher budgetary and foreign policy costs.

Egyptian Economic Program

Last year, at the Administration's request, Congress also appropriated $500 million in supplemental assistance for Egypt. These funds, along with our regular assistance program, were in sup-

port of economic reform. In 1985, the Egyptian Government drew up a 13-point reform program. It raised prices for agricultural commodities, for example, and for a wide range of sensitive consumer items; it also raised electricity rates by more than a third and gasoline prices by 25%. These incremental actions, however, still fall far short of the comprehensive effort needed for long-term economic viability.

During 1986, we will time our disbursement of the remaining $150 million of the supplemental to support further reform measures. Priority areas for action include reducing the balance-of-payments and budget deficits, improving the system of debt management, and expanding the role of the private sector. Rapid progress in these areas is all the more urgent now, given the damaging impact on the Egyptian economy of the precipitous drop in oil prices.

The Persian Gulf

We continue to be concerned and vigilant about the Persian Gulf. Strategically located, this region is vulnerable to Soviet expansionism. It remains a major source of energy supplies essential to the economic health of the free world. Our naval force in the gulf expresses our interest in the security and stability of the region.

We and our Arab friends agree that they should be the first line of defense of the gulf. Thus, our role—an essential role—is to continue reinforcing the defensive capabilities and security of our friends in the Arabian Peninsula, both through commercial sales and security assistance. The security relationship we have built with Oman is a vital element of our Central Command strategy. Our military assistance to the Yemen Arab Republic, on the other side of the peninsula, is particularly important in view of the recent destabilizing events in South Yemen.

We are troubled by Iran's intransigent prolongation of its brutal war with Iraq, as well as by the dangers which this war poses for nearby neutral countries. We have offered vigorous support for all the numerous efforts, particularly that of the United Nations, to bring the war to a negotiated end with the sovereignty and territorial integrity of both sides intact.

Enhancing Defense and Security Relationships

Around the world, America's alliances and security relationships are sound. We have had some differences with our European allies during the past year. But alliances among free nations will always see expressions of differing perspectives. On the fundamental issues of our mutual security, the Atlantic alliance remains solid. In fact, we made gains in the past year—for example, in our bilateral discussions about participation in the research program of the Strategic Defense Initiative.

With the Soviet military threat to Central Europe and Southwest Asia continuing to grow, security assistance designed to improve the defense capabilities of countries on NATO's southern flank is of special importance. Our security assistance to key NATO allies also helps ensure continued access to strategically important military bases and sustains confidence in the "best efforts" commitments which are the foundations of our base agreements.

We cannot measure our interests in NATO's southern flank solely by our military links. The broad common commitment to Western values has a meaning that transcends these military ties. Spain and Portugal have now joined Europe; in an important symbolic sense, in joining the European Community. This is a triumph for the Western world. On the other side of the Mediterranean, we often hear of problems bedeviling our bilateral relationships with Greece and Turkey. Let us not forget the common interests and shared values that underlie these relations and that establish the basis for the resolution of our difficulties. I view my upcoming trip to these two countries as part of the process of building on our common objectives.

On the other side of the globe, we continue to regard the U.S.-Japanese Mutual Security Treaty as the pillar of Asian peace and stability. Japan has become our largest market after Canada, and both sides are working toward resolving our trade differences. We are also working with the Republic of Korea, whose security has never been more important to us, on trade issues and mutual security and resolving market access problems in our expanding two-way trade. While we have some serious problems with New Zealand, Australia remains a valued ally.

Our aid programs concentrate on the region's more threatened or vulnerable nations: the Philippines, the Republic of Korea, and Thailand.

The Philippines is experiencing serious economic and political problems. Ambassador Philip Habib is currently assessing the situation there for the President, and we expect his report to influence the course of our efforts to assist the Philippines through this prolonged crisis. In the meantime, we are taking care to ensure that our aid contributes to the structural reforms needed to put its economy back on the path of growth. Our military assistance to the Philippines remains our best and most useful tool to help promote the reform and development of a professional military. Whatever the near-term problems of the Philippines, there is no doubt that the presence of a strong, democratically oriented military is in our best interests. It is also time to fund military assistance at a level necessary for the Armed Forces of the Philippines to fight the insurgency successfully. We must also fulfill the President's "best efforts" commitment made in the context of the last 5-year review of the military bases agreement. The military facilities themselves remain vital to protecting the sea- and airlanes of the region and providing logistical support for our forces in the Indian Ocean and Persian Gulf.

The Republic of Korea continues to confront the greatest threat to its security from its communist neighbor to the north. Tension on the peninsula remains high, and continued American presence and support are crucial, especially over the next 3 years. Our Korean ally is already devoting a large portion of its GNP to defense, but continued FMS [foreign military sales] credits are needed if Korea is to meet key objectives of its Force Improvement Plan.

Like Korea, Thailand is an ally allocating substantial resources to military modernization and creating a credible deterrent to Vietnamese aggression. We need to support these efforts and assist Thailand in achieving its development goals so that it can maintain a healthy, balanced economy in the face of its increasing security needs. We need to do this not only because of the importance of Thailand itself but because we have an enormous stake in the independence, prosperity, and integrity of the group of ASEAN [Association of South East Asian Nations] nations of which Thailand is a part. The ASEAN nations sit astride vital sealanes joining Asia with the Middle East and Europe. The

United States—indeed, most of the free nations of the world—have a critical interest in keeping them peaceful and open. Our assistance programs in Malaysia, Singapore, and Indonesia help ensure stability and promote progress.

One very important element in our support for ASEAN is the effort to find a political solution in Cambodia. To this end, we are backing the noncommunist Cambodian groups resisting Vietnam's occupation of their country. Following the Vietnamese offensive a year ago that drove their camps away from the Thai-Cambodian border, these forces have concentrated on regrouping and training for guerrilla activity inside Cambodia.

Together, the Khmer People's National Liberation Force (KPNLF) and the Sihanoukist National Army have some 9,000 troops currently operating inside the country, with more scheduled to enter. Despite problems that include a serious split within the KPNLF leadership, military resistance leaders are optimistic about their prospects. We are now discussing with interested parties how the U.S. assistance funds for noncommunist groups provided in FY 1986 can best support resistance activities. We do not plan to provide lethal equipment, as the groups are already adequately supplied with weapons.

In the Pacific, we are in the process of establishing a new and unique relationship with the Freely Associated States of Micronesia. In the South Pacific we are facing, for the first time, the threat of increased Soviet interest and activity. The negotiation of a regional fisheries agreement with the nations of the South Pacific promotes U.S. interests in the area. We hope to reach a final agreement later this year.

In South Asia, the Soviet aggression in Afghanistan has continued for more than 6 years. Pakistan's staunch opposition to Soviet aggression and its generosity to more than 2 million Afghan refugees pose an enormous financial burden on Pakistan, which the United States has tried to alleviate through our current 6-year economic, 5-year military program of assistance. This program enters its final year in FY 1987. We must maintain that support, out of loyalty to a staunch ally that faces a direct Soviet threat and to maintain the pressure on the Soviets to move toward a negotiated settlement in Afghanistan.

Our assistance provides vital support for Pakistan as that country enters a new era of democratization, which began with the lifting of martial law on December 30, 1985. The new civilian government is looking to the United States, which has strongly encouraged a more representative government, to provide continued moral and financial support as the government copes with the continuing Soviet aggression in Afghanistan and the burden of refugees. Pakistan is a poor country, and our assistance also helps it pursue its economic development plans, even under the heavy burdens it bears.

We will not let the terrorists win their victory by isolating us, forcing us to close our doors, or denying us our contacts with the people of the countries in which we are represented.

Regional Stability and Security in Central America and the Caribbean

Events in Central America and the Caribbean over the past year have confirmed the important link that exists between foreign assistance and U.S. national interests. Our continuing policy of support to prodemocratic forces is enabling democracy to take root and to become self-sustaining.

Guatemala is the latest Central American country to have abandoned military rule for elected civilian government. Elected civilian leaders also have replaced authoritarian regimes in El Salvador and Honduras. Nicaragua is the only nondemocratic country remaining in that region.

A few years ago, critics of Central America and U.S. policy toward that region were skeptical that democracy could gain support in an environment where history and economic hardship seemed to impose such burdens. They are less skeptical now. They have seen the people themselves, in one free vote after another, demonstrate their belief that democracy is the road to a better life for themselves and their children. They have also seen that our moral support and economic and security assistance can help make the difference between the success and failure of this democratic experiment. If we truly believe in human rights and economic and social progress, we must keep that lesson in mind as the peoples aspiring to freedom turn to us for support in the coming months.

The most immediate danger to democracy in Central America, of course, is the assault on it from communist Nicaragua, aided by Cuba and the Soviet Union. Democratic El Salvador is an outstanding example of a country that has managed to withstand a communist insurgency, and we have been privileged to play a part by our encouragement and help. So our policy—if we keep at it—is working. All the democracies of Central America look to us for help in defending themselves. We must support them. And we must support, not abandon, the democratic resistance within Nicaragua, which we support for both moral and strategic reasons. We will be discussing with the Congress what this moral and strategic imperative requires.

The Caribbean, too, is fertile ground for democracy. Cuba is the most egregious exception. In Haiti, after decades of autocratic government and a stagnating economy, the people have new hope of seeing a government responsive to their needs and aspirations. Our policy toward Haiti is the same as our policy toward the rest of the hemisphere. We seek to promote progress toward democracy, greater respect for human rights, and rapid and equitable economic growth. We feel that the Haitian people should choose their own future, and we note that the new government has committed itself to this objective. We hope to be of help as the interim government goes forward with this effort.

On the economic side, the Caribbean Basin Initiative is succeeding in broadening and diversifying the production and export base of the region, laying the foundation for long-term recovery. Unfortunately, many of the gains have been offset by declines in the prices for traditional exports. In some cases, most notably sugar, the declines in prices are

aggravated by our farm bill, which will result in a loss of $52 million in export earnings by the Caribbean Basin countries. The restructuring of economies to make them less vulnerable to commodity price fluctuations requires a sustained commitment from the political leadership of these countries. It also requires sustained support from the international development community. We will continue to do our share.

Supporting Economic Reforms and Democratic Institutions

Looking beyond Central America and the Caribbean, across the globe, we see further evidence of the powerful appeal of liberty. Democracy is taking root in country after country, demonstrating the vitality and relevance of our ideals.

The past few years have also confirmed the connection between freedom and economic progress. In the early 1980s, this Administration developed economic policies aimed at liberating the creativity of the American people. The results speak for themselves: 9 million new jobs in this country in the last 3 years, helping pull the world economy out of recession, with inflation now one-third the rate of 5 years ago.

The world economy is still troubled. But nations everywhere are rediscovering the basic truth that the source of economic growth is individual creativity, not the state. The same laws of economics apply to developed and developing countries alike, and those that apply its truths are reaping the rewards.

India, the world's largest democracy, is a critical—and successful—test case that shows that democratic politics and economic development are not only compatible but mutually supportive. Under Rajiv Ghandi's able leadership, India is moving into an era of advanced technology and rapid economic growth, spurred on by liberal economic policies. It is not only an increasingly attractive market for American exports but is becoming a major factor in such areas as computer software and light industrial goods.

India has also assumed an increasingly important strategic role, as it takes its place as a major regional—and world—power. It has begun this process by strenghtening its ties with its regional neighbors—especially Pakistan, with which it has announced a major nuclear agreement. Our own relations with India have significantly improved this past year, and not at the cost of our ties to China and Pakistan.

In Argentina, Brazil, Ecuador, Uruguay, Bolivia, and Peru, democratic governments are faced with the daunting challenge of restoring economic stability and establishing the conditions for sustained economic growth. The task for the Andean countries is further complicated by narcotics trafficking and terrorism. In Colombia, one of the oldest democracies in South America, terrorists and narcotics traffickers are threatening to undermine years of economic growth and progress. We want to help Colombian efforts to meet these threats. To do so, we are seeking modest increases in our security assistance program.

In Peru, a ruthless terrorist organization and a well-entrenched narcotics industry threaten national stability. We applaud President Garcia's commitment to stamp out narcotics trafficking and his determination to end terrorism within the context of democracy and respect for human rights. A mutually constructive relationship with Peru, however, will require greater moderation and cooperation and meaningful economic reform by the Peruvian Government. If these actions evolve as we hope, we would need to find increased resources to support the Peruvian effort.

In Africa, young and fragile governments are struggling with the most profound economic crisis in the continent's modern history. Our adversaries have shown themselves willing to take advantage of the continent's plight, exploiting political-military conditions in such disparate areas as southern Africa, Chad, and the Horn. It is in our own interest to help Africa realize its potential: to fuel economic growth; to monitor and thwart the actions of Libya, the Soviets, and their surrogates; and to encourage adherence to improving standards of human rights.

Last year, the world witnessed the devastating effects of the drought which put over 30 million Africans at risk of starvation. The American response was extraordinary. Our government and private sector contributions provided unprecedented levels of food, as much as the rest of the world combined. The combined effort saved countless lives, and we can be justifiably proud of the results.

For the long term, we must encourage Africans themselves to promote the policies that lead to agricultural productivity, economic growth, and stability. There is cause for hope. Some African countries are starting to reject the statist economic policies which proved so disastrous, misallocating scarce resources and discouraging the productive private sectors of the economy.

Our bilateral AID programs are increasingly stressing policy reforms that stimulate private sector productivity. The African economic policy reform program made good progress in 1985 in promoting market-oriented reforms in Malawi, Mali, Mauritius, Rwanda, and Zambia. This year, we plan to start implementing the President's Food for Progress initiative, which will concentrate on reforms in the agricultural sector needed to provide farmers with adequate incentives.

Diplomacy in Southern and South Africa

Turning from purely economic to more general concerns, no region of Africa is the cause of more debate and concern, both in the United States and abroad, than southern Africa. We are committed to playing a positive role as the region grapples with the twin challenges of containing regional strife and bringing the abhorrent system of apartheid to an end.

In the regional conflict, our aim is to show that military solutions will not work. Unfortunately, the Soviet Union and its Cuban and Angolan allies still have illusions on this score. Over the last 2 years, the Soviets have delivered an extraordinary $2 billion in military equipment to the regime in Luanda and have engaged themselves directly in the fighting. The visit of Jonas Savimbi [President of the National Union for the Total Independence of Angola] to this country should make clear America's determination to ensure that no outside power will be allowed the opportunity to resolve on the battlefield the civil war that divides Angola. At the same time, we search for a negotiated solution. As long as negotiations continue, the path lies open to a settlement which would lead to the independence of Namibia and end the intervention of *all* foreign military forces in Angola.

We are particularly pleased by Mozambique's substantial move toward genuine nonalignment. This is reinforced by major new aid commitments from the West, of which our own aid program is an integral part. We want to encourage this favorable trend. I am concerned that the congressional restrictions on aid to Mozambique threaten to undo what has been a significant political accomplishment of U.S. foreign policy.

In South Africa, the goal of reform must be to end apartheid and to bring about a political system based on the consent of the governed. The President's Executive order of last September 9 was designed to convey the united opposition of the American people to the apartheid system. This is a message we continually reiterate in contacts with the South African Government. It is also a message we are sending in concrete ways as we move to build ties with the black community in South Africa. The aid program mandated by the Executive order works through private voluntary organizations to train black leaders for the future and to assist black entrepreneurs. We are also providing funds for direct legal assistance to the victims of apartheid and their families. The Human Rights Fund will provide $1.5 million for these and similar projects, while about $10 million will be available for scholarships for those disadvantaged by apartheid.

America continues to play a positive role in South Africa, but outside countries cannot, alone or in combination, resolve South Africa's problems. The government there must take the steps that will make it possible for black leaders to negotiate. In turn, these leaders must be willing to negotiate themselves. The alternative is the kind of violent upheaval that seldom produces just or democratic solutions.

Multilateral Development Banks and Programs

The multilateral development banks play an important and complementary role in many countries important to the United States. As developing countries seek to move from crisis management and austerity to a renewal of sustained economic growth, they will be competing for a finite supply of investment capital from the international financial community. These resources will flow where they are welcome—when conditions are hospitable. A true partnership based on mutuality of interest will have to be forged between the developing countries and the holders of development capital—the industrial countries, international lending institutions, and the commercial banks.

Last October, at the Bank-Fund [World Bank-International Monetary Fund] meeting in Seoul, [Treasury] Secretary Baker proposed a bold, new comprehensive approach to get debtor countries back on the path of sustained growth. The proposal envisaged a more vigorous World Bank role in facilitating and promoting economic reform and adjustment in debtor nations, as well as greater coordination between the Bank and the IMF in their country programs. The proposal also included a provision for enhancing World Bank and IMF cooperation in providing concessional financing to the poorest developing countries, most of which are located in sub-Saharan Africa.

When Secretary Baker outlined our approach, he stressed that the *sine qua non* of any comprehensive strategy was a more focused and determined effort of market-oriented structural reform aimed at greater efficiency, more domestic saving, and a more attractive climate for domestic and foreign investment. And, in conjunction with this, he addressed two other key elements designed to provide outside support and encouragement for structural reform: more substantial and better coordinated assistance from multilateral institutions and more support from commercial banks.

This was a creative effort, it seems to me, to bring the broader international community into the process of helping solve the debt problem. Both the World Bank and regional development banks are well placed to complement the continued central role of the IMF by providing financing and advice to countries taking the essential steps toward structural reform. The World Bank's considerable expertise can help devise programs for growth through structural reform. It can support these programs through increased lending to promote reform in inefficient sectors of the economy and through increases in policy-based lending. The Inter-American Development Bank is uniquely situated to help in this effort, as well, but improvements are needed in its institutional capabilities before this potential can be fully realized. Our participation in the multilateral development banks is an integral part of our assistance policy. Continued congressional support for our replenishment commitments will sustain our leadership role in these institutions.

The new commercial bank lending that Secretary Baker proposed—$20 billion over a 3-year period—is also a vital part of the near-term effort. Bank lending to the principal debtor countries has been declining, with very little new net lending having taken place in 1985. Increased lending can provide important support for policies to promote efficiency, competitiveness, and productivity—the true foundations of growth. Such lending, however, will only be forthcoming if there is a clear commitment to adopt and implement such growth-oriented policies.

In Seoul, Secretary Baker also proposed that the World Bank, IMF, and other donors develop joint programs to support medium-term structural adjustment in the world's poorest countries. Africa will be the chief beneficiary. The proposal calls for the coordinated use of $2.7 billion in IMF Trust Fund reflows, World Bank funds, IDA [International Development Association] monies, and possible increases in bilateral contributions for Africa to support comprehensive economic reform programs. This proposal merits our full support, as the development of consistent and coherent country economic reform programs is essential if we are to maximize the efficient use of scarce development capital.

The need for increased coordination between the Bank and Fund has been generally supported, and the U.S. initiative is gaining broad acceptance. We have addressed the concerns of Fund and Bank members regarding the need not to blur the distinctive roles of the two institutions while achieving closer cooperation and collaboration.

I do not want to leave the subject of efficient use of development capital without commenting on the need of the developing countries to take full advantage of the opportunities of the world trading system. This is essential if they are to achieve their great potential for expansion of output and export earnings.

Restrictive trade practices have only compounded the problems of many heavily indebted developing countries. All too typically, heavy foreign borrowing has supported fiscal deficits and overvalued exchange rates, putting a great burden on export competitiveness. Import barriers have been erected to protect favored domestic industries from foreign competition. These barriers have severely hampered the growth of trade *among* developing nations. The developing countries and the industrialized world have one thing in common: all of our peoples are winners if we have a stronger and fairer world trading system. We hope the developing countries will work with us on a new trade round to overcome the narrow interests that threaten our common progress.

The Battle Against Terrorism

I would like to conclude by elaborating on my earlier comments about the requested increase in our operating budget.

Over the past few years, the world's attention has been riveted to terrorist dramas unfolding around the globe. I have spoken frequently on this subject. Civilized nations and civilized peoples have been inadequately prepared for it. That can and must change. We must do everything we can to thwart those who seek to advance their ends through terror and to ensure the safety of our citizens abroad. Even in this period of budgetary stringency, this task *must* be a priority. We have designed a program which, in our view, is prudent and efficient in its commitment of resources, yet responsive to the inescapable necessity we now face.

The United States has always built handsome and accessible embassies and consulates abroad. Our object was to demonstrate to other societies the openness of ours and the hand of friendship we extend to all. We wanted other societies and their people to see a "welcome" sign above our door and to feel comfortable in entering our buildings. This is the essence of the job we do overseas, and we have been highly successful at it.

We are now faced with a new situation: the current security and terrorist problems have left those same buildings vulnerable. Our challenge is to strengthen our security against these new dangers so that we can *maintain* our tradition of openness and accessibility. We will *not* let the terrorists win their victory by isolating us, forcing us to close our doors, or denying us our contacts with the people of the countries in which we are represented.

With this goal in mind—and knowing of the great concern in the Congress—I formed the Advisory Panel on Overseas Security, chaired by Admiral Inman. I asked the panel to take a hard look at our security and counterterrorism programs.

The hard work and dedication of the panel is clearly reflected in the quality of its report. The panel exhaustively researched all aspects of our security and counterterrorism programs. Its recommendations have vision. Equally important, they are practical. They are recommendations which, with your support, we can act on.

The panel made 91 recommendations. We have implemented 45, and work is underway on 20 more. An additional 20 are awaiting the resources requested in our proposed authorization and appropriation legislation.

Using existing resources and authorities that the Congress has already provided, we have made progress in many areas highlighted by the panel. For example, we have started an ambitious recruitment campaign to bring on board nearly 300 new security agents during FY 1986 and to more than double the number of overseas security officers before the end of this fiscal year. In addition, we have:

- Added more marines to posts;
- Nearly doubled the size of our armored vehicle fleet worldwide;
- Made significant physical security improvements at 152 of our posts overseas in 1985;
- Consolidated the security functions of the Department into one office, the new Bureau of Diplomatic Security; and
- Also created an Office of the Ambassador at Large for Counterterrorism, which deals with policy matters and reports directly to me.

There is, however, a limit to what we can do with existing resources. We need additional legislative authorities and resources to implement some key recommendations of the Inman panel. We are seeking a significant part of the total resources in FY 1987.

The Administration's proposals will do three main things:

First, launch a comprehensive worldwide security program, key elements of which are improvements in communications and intelligence sharing and a 5-year construction program to replace or upgrade our most vulnerable posts;

Second, complete the reorganization of our security program as recommended by the Inman panel; and

Third, revise and clarify the chain of command for overseas security programs.

The program places its highest priority on buildings at locations where the security threat is greatest and which are substantially below the new standards. Great effort has gone into creating a security construction program which would ensure that buildings are designed and built to meet stringent security standards, on time and within budget.

But our proposals are more than a security construction program. We will also improve communications and counterintelligence. For example, we will improve security at Moscow and other East European posts by substituting Americans for a substantial number of local employees now working in support positions. Further, we are requesting resources to strengthen our capability to protect foreign missions and dignitaries in the United States.

We are working closely with other agencies to develop and agree upon appropriate security standards, procedures, and levels of resources responsive to the needs of all U.S. Government agencies having facilities overseas (other than military bases).

We are requesting $4.4 billion spread over 5 years. Of this total, $2.7 billion is for construction, and the balance is for operating expenses, including security officers, residential security improvements, and more secure communications equipment. In FY 1986, the Administration is requesting $237 million for salaries and expenses and $455 million for construction. In FY 1987, the request is $304 million for salaries and expenses and $1.1 billion for construction.

The Adminstration's proposed program will not solve all of our security problems; but we can minimize them. Our proposal is a comprehensive—and long overdue—security program which addresses our most basic security concerns.

Conclusion
